A 14-month pilot and plant scale sludge dewatering study was conducted at the Joint Water Pollution Control Plant (JWPCP) -- a 380 mgd primary treatment facility owned and operated by the Los Angeles County Sanitation Districts. Ocean discharge requirements on the effluent from this facility necessitated that at least 95 percent of the suspended solids be removed from the primary digested sludge for disposal by alternative means. The applicability of heat, polymers, chemicals and flyash was investigated as a means of conditioning digested sludge for dewatering. Sludge dewatering schemes utilizing horizontal scroll centrifuges, imperforate basket centrifuges, vacuum filters and pressure filter were thoroughly studied. Operational results were obtained from twenty conditioning-dewatering test systems of which five successfully produced the desired suspended solids removal. Full scale cost estimates were prepared for each of the five systems. Estimates were prepared for the requirements and costs associated with the ultimate disposal of dewatered sludges generated from each successful dewatering scheme. Three disposal alternatives were considered, namely, truck hauling of dewatered sludge from the JWPCP to a landfill; pipeline transport of digested sludge to a landfill with dewatering and disposal there at; and incineration at the JWPCP with truck hauling of the ash residue to a landfill. Combining the disposal costs with the dewatering costs yielded estimates for fifteen total sludge handling systems. Remote area transportation and disposal costs were derived for comparative purposes. It was concluded that a 2-stage centrifuge sludge dewatering scheme (polymer addition to the second stage) with truck hauling of dewatered sludge solids to a landfill was most suitable for the JWPCP. ALGAE OF SECONDARY SETTLING TANKS, (IN RUSSIAN),
Kharkov State Univ. (USSR). Dept. of Lower Plants.
T. V. Dohadina, and N. A. Chukhlibova.
Ukr Bot Zh. Vol 28, No 6, p 749-752. 1971. (English summary).
Identifiers: *Algae, Chlorophyceae, Cyanophyceae, Diatoms, Diversity, Euglenophyta, *Settling tanks, *USSR (Kharkov), Yellow-Green algae, Treatment facilities.

Results are presented of studying species composition, seasonal dynamics and quantity of algae in secondary settling tanks of 2 canalization stations of biological sewage treatment in Kharkov: Glavnaya and Bezlyudovskaya (USSR). In all 80 spp. and intraspecific taxa of 5 algae were found, among them 4 of Euglenophyta, 36 of Chlorophycae, 5 of yellow-green algae, 30 diatoms, 5 of Cyanophyceae. Most frequent algae species are presented. It was established that in the secondary settling tanks periphyton is more developed than phytoplankton with respect to both quantity and species diversity. Plankton and periphyton of the secondary settling tanks are formed due to wash out of algae of a biological film from biofilters.--Copyright 1973, Biological Abstracts, Inc.

REPORT TO THE GOVERNOR AND THE LEGISLATIVE COMMISSION: POLLUTION ABATEMENT PROJECT, LAS VEGAS WASH AND BAY.
Las Vegas Valley Water District, Nev.

December, 1972. 18 p, 1 fig, 1 tab, 3 append.

Descriptors: *Planning, *Water supply, *Water pollution, *Environmental effects, Treatment, Desalination, Water reuse, Evaporation, *Nevada.
Identifiers: Lake Mead, *Las Vegas Valley District (Nev), Las Vegas Wash.

In 1971, the Southern Nevada Water System to import Lake Mead water to Las Vegas Valley and Boulder City became operational under the management of Las Vegas Valley Water District (LVVWD). Lake Mead, now the source of about one-half of the Valley's potable water supply, could become the source of 85% within a few decades. This report is sixth in a series on the development of a plan to eliminate pollution of Lake Mead in the vicinity of Las Vegas Wash. The conceptual plan calls for a water reclamation program including demonstration wastewater treatment and desalt plants, the encouragement of in-valley uses of treated wastewater, the development of Las Vegas Wash as a recreational area and wildlife habitat, and the export of remaining waters to Dry Lake for evaporation. The abatement program is on schedule but legislative and gubernatorial approval of means to finance the project together with continued cooperation of government agencies and citizen groups is necessary to meet the proposed schedule. The Project Report and Design Index, which combined make up the definitive work on the project, plus the Environmental Assessment are summarized. Three related subjects are treated in the appendices: (1) chemical, physical and biological conditions of waters of Las Vegas Bay of Lake Mead; (2) ecology of Las Vegas Wash under alternative actions in water quality management, and (3) hydraulic characteristics of shallow groundwater flow system in lower part of the Valley. (Hoffman-North Carolina)

SEWER SYSTEM COST ESTIMATION MODEL.
Voorhees (Alan M.) and Associates, Inc., McLean, Va.

Prepared for Regional Planning Council, Baltimore, Md. April, 1969. 132 p, 5 fig, 11 tab, 13 ref.

Descriptors: *Planning, *Sewerage, *Computer models, *Cost analysis, *Maryland, Dynamic programming, Land use, Design criteria, Equations, Projections, *Regional analysis.
Identifiers: Land use plans, *Baltimore (Md).

A computerized model to estimate the cost of alternative wastewater collection systems is described. The model can be used as a planning tool in that it can project the cost of constructing and maintaining a given sewer system for a given land use pattern. The inputs to the model include a land use pattern or projection which is converted into expected wastewater flows, a digital description of the topography of the area, and a diagramatic plan of the proposed sewer system. The model uses dynamic programming and various engineering constraints and cost-estimating equations in an attempt to find the least cost solution. The outputs from the model include the size of each pipe in the sewer system, the location of pumps, and the cost of the system both in terms of present worth and operation and maintenance. The use of the model for regional planning is quite significant as it can quickly determine the impact of existing or future land use patterns on existing or proposed sewer systems, or conversely, can determine sewer system requirements for alternative land use plans. (Elfers-North Carolina)

SOLID WASTE MANAGEMENT PLAN, COWLITZ AND WAHKIAKUM REGION.
Cowlitz, Wahkiakum Regional Planning Commission, Kelso, Wash.

1973. 92 P, 24 FIG, 29 TAB, 4 APPEND.

Descriptors: *Solid wastes, *Landfills, *Washington, *Columbia River, Leaching, Waste disposal, Ravines, Marshes, Dikes, Urbanization.
Identifiers: Kelso-Longview Urban Area (Wash), *Cowlitz and Wahkiakum Region (Wash), Sanitary landfill, Tightlines, Hilltops, Riversides.

Needs are identified for disposing of solid wastes in a two-county region in the Columbia River Valley, including the Kelso-Longview Urban area, where manufacturing of aluminum, paper, lumber and wood products and agriculture are the basic industries. Alternative proposals for solid waste storage, collection, transportation, and disposal, are developed and evaluated. Criteria for determining acceptibility of alternatives were: (1) pollution of streams and rivers, (2) legal restrictions on garbage burning, (3) facilitation of vector and disease control, (4) location, maintenance, and operation so as to protect public health, prevent air and water pollution, and avoid creation of public nuisances, and (5) prevention of land pollution and economic resource conservation. Planning procedure included collection of data regarding current waste management practices, land resources, and potential waste generation. Recommendations for immediate action relevant to present practices are made. Eventual creation of one central sanitary landfill is favored; environmental hazards and economic costs of hilltop, ravine, riverside, and marsh landfill sites are evaluated. Potential for surface water contamination is considered. Consequently, tightlines are proposed for ravine sites and dikes, ditches, sumps, and retention ponds for riverside sites. A six-year capital improvements program and long-term administrative measures are recommended. Model ordinances for counties and towns regarding solid waste disposal are appended. (Stein-North Carolina)

LAMAR COUNTY: LAND USE SURVEY AND ANALYSIS, LAND USE PLAN, HOUSING, WATER AND SEWER, OPEN SPACE.
West Alabama Planning and Development Council, Tuscaloosa.

June, 1973. 272 p, 35 fig, 30 tab.

Descriptors: *Water supply, *Sewerage, *Waste water treatment, *Alabama, Planning, Water demand, Environmental effects, Financing, Costs, Coordination, Water quality, Urban land use, Rural areas.
Identifiers: *Utility extension, Lamar County (Ala.).

Objectives of the Lamar County Water and Sewer Plan are: to provide adequate water and sewer service to all county residents, to maximize the use of existing water resources, and to promote a coordinated approach to developing plans and designing a good area wide water and sewer system. Interests of the public and individual customers of water systems can best be served by self-sustained, utility-type enterprises whose gross revenue should cover operating and maintenance expenses, fixed charges on capital treatment, and system development. Proposed system changes must be approved by state health and water improvement agencies. Financing the expansion of a water system in areas of rapid growth is a problem. Incorporated areas, Beaverton, Detroit, Kennedy, Millport, Sulligent, and Vernon, have water supply systems. Only the last two have sanitary sewer systems. There is no county water system or sanitary sewer system serving rural areas. Storm drainage is a system of open ditches and culverts related to the railroad and highway system. Water from subsurface aquifers contains excessive iron. Proposed water service areas for the county, an inventory of the various existing water and sewer systems accompanied by appropriate maps and data, and a short range development program for each for the period 1972-1982 are presented, and the possibility of connecting some of the systems to achieve a joint water supply system is discussed. No area wide sewer system is feasible, based on present cost estimates and existing development pattern. (Edwards-North Carolina)

REGIONAL WATER SUPPLY/SEWAGE DISPOSAL PLAN AND SHORT-RANGE PROGRAM, 1973-1978.
Central New York Regional Planning and Development Board, Syracuse.

Report No. CNYRPDB-RP-72-HUD-246-03. November, 1972. 21 p, 2 fig, 2 tab. 424-1;424.2, NYP-246.

Descriptors: *Planning, *Water supply, *Sewerage, *Regional development, *New York, Land use, Urbanization, Administration, Project planning, Priorities.
Identifiers: *Urban guidance systems, Central New York Region.

The Regional Planning Board's primary objective in planning for regional water and sewerage systems is the promotion of orderly urban development in accordance with the Regional Land Use Plan. The Board views the major elements of water and sewerage systems, such as treatment plants and trunk lines, to have a region-shaping quality much more significant than traditional land use controls, e.g. zoning. Thus, the plans are closely related to land use plans and focus on existing, short-term, and long-term service areas. Unified area-wide water and sewerage systems are not presently possible because of the fragmentation of existing systems and administrative arrangements, but the Board is taking the lead to move in that direction via various coordination, information, and planning programs. The Board expects that the counties will play a key role in the implementation of regional systems. The Board presents a program of specific projects for the period 1973-1978. Projects are ranked in terms of importance on the basis of five criteria: effect on public health and sanitation, effect on water quality, conformance with regional comprehensive plans, relation to the provision of housing, and citizen approval and involvement. (Elfers-North Carolina)

Identifiers: *Flygtol process, *Retamix process, Germany, *Sweden, Polyacrylamide, Westerviks Pappersbruks AB. (Sweden), Board mills, Waste paper.

The Swedish 'Flygtol' process, a variant of the 'Retamix' process, is based on a patented Hungarian invention by Prof. Libor and makes use of a specially activated, complex-forming, and highly swellable bentonite having a surface area of 100-120 sq m/g, which is marketed by Erbsloeh und Co., Geisenheimer Kaolinwerke, Geisenheim/Rhein, West Germany. Its flocculating power derives from both Van der Waals adsorption forces and ion-exchange capacity, while its high specific gravity (2.6 g/cu cm) aids the rapid formation of microflocs which can be further coagulated by polyacrylamide or a similar polyelectrolyte, and separated by sedimentation or, in special cases, by flotation. The process is said to be insensitive to temperature variations between zero and 30C and to pH variations between 1 and 14. The process operates on an industrial scale at Westerviks Papperabruk AB., Sweden, which manufactures boxboard and linerboard from recycled waste papers. Waste waters containing 700-1700 mg/liter of insoluble solids are treated with 60 g/cu m of activated bentonite to achieve a solids reduction to an average of 2 mg/liter. The resulting sludge is reused as filler, and 20-75% of the clarified water is reused in the mill. The bentonite treatment also reduces the effluent BOD from 190-270 to 60-75 mg oxygen per liter. Capital plus operating costs of the installation total 6 German pfennigs per cu m. (Speckhard-IPC)

REDUCING EVAPORATION PLANT POLLUTION PLANT POLLUTION AND ITS TREATMENT,
Rosenlew (Oy. W.) A.B., Pori (Finland).
A. A. R. Ronnholm.
Paperi ja Puu (Papper och Tra), Vol 54, No 11, p 715-730, Nov. 1972. 12 fig, 3 tab, 13 ref.

Descriptors: *Pulp wastes, *Water pollution sources, *Evaporation, *Water pollution treatment, *Biochemical oxygen demand, *Economic feasibility, Incineration, Pulp and paper industry, Industrial wastes, Waste water (Pollution), Costs, Cost-benefit analysis, Byproducts, Capital costs, Operating costs, Fuels, Steam, Water pollution, Europe, Effluents, *Waste water treatment.
Identifiers: Furfural, Methanol (Or Methyl alcohol), Acetic acid, Kraft mills, Flue gas, Finland, Chemical recovery.

Prospects are discussed for low-pollution evaporators and evaporation processes for spent pulping liquors, including the purity and utilization of evaporator condensates, the treatment of noncondensable stack gases, and the removal or recovery of BOD-consuming condensate components, notable furfural, acetic acid, and methanol. It is concluded that currently available equipment and technology can achieve 100% return of condensates while lowering BOD constituents by 75%. At this maximum BOD reduction, the treatment of stack gases and concentrated partial condensates would require a capital investment of ca. 2400 Finnish marks plus operating costs (mainly for pump power and stripper steam) of ca. 0.25 mark per ton of evaporated water. By burning the removal methanol, which has about half the heating value of oil, operating costs can be lowered to 0.20 mark per ton. As example, a draft mill manufacturing daily 1500 tons of pulp and discharging dilute black liquor containing 0.6 g of methanol per cu m into a river-lake system 100 m wide, 2 m deep, and containing 5 g oxygen per cu m, could prevent the depletion of 2 g/cu m oxygen by recovering 75% of the methanol produced (240 kg/hr) which would otherwise consume 180 kg/hr of oxygen and require a water flow past the mill of about 4000 km/year. BANKS STUDY BASIN CLEANUP.

Environmental Science and Technology, Vol 7, No 8, p 802-803, September 1973. 2 tab, 1 fig.

Descriptors: *Financial feasibility, *Future planning, *Pollution abatement, *Costs, *River basins, *Economic feasibility, *Connecticut River, New England, Interstate Rivers, Financing, Mathematical models, Model studies, Capital costs, Operating costs, Forecasting, Economic prediction, Project planning, Water pollution control, Solid wastes, Air pollution.

The Connecticut River Basin Project, a consortium of banks in New Hampshire, Massachusetts, and Connecticut serving the fourteen-county Basin area, estimated that government plus industry will have to spend about $1.3 billion to clean up the air, water, and solid waste pollution in the Basin. The one-year study, supported partly by EPA, cost about $150,000, and was based on available geographic, demographic, and economic information plus a forecasting model developed by Chase Econometric Associates, Inc. Capital and operating cost data for existing plants and new industrial growth needed to abate air and water pollution are tabulated separately. Various alternatives for financing these expenditures are examined. (Brown-IPC)

KRAFT PULPERS AND POLLUTION PROBLEMS AND PRESCRIPTIONS,
R. L. Miller.
Chemical Engineering, Vol 79, No 28, p 52, 54, 56, Dec 11, 1972. 1 fig, 2 ref.

Descriptors: *Water pollution, *Pulp wastes, *Bleaching wastes, *Waste water treatment, *Water pollution sources, *Water pollution treatment, Water reuse, Pulp and paper industry, Air pollution, Sedimentation, Aerated basins, Activated sludge, Treatment facilities, Industrial wastes, Liquid wastes, Effluents, Biological treatment, Suspended solids.
Identifiers: Kraft mills.

Water and air pollution in the kraft pulping industry are discussed. Per ton of pulp manufactured, a kraft mill uses 15,000 to 35,000 gal of water for unbleached and 15,000 to 60,000 additional gal for bleached pulp. If discharged without pretreatment, these waters could contain 20-30 lb of solids per ton of unbleached plus 6-35 lb per ton of bleached pulp. Sedimentation, aerated basins, and activated sludge are the main external effluent treatment methods, but particulars of water-reuse systems vary from mill to mill. (Witt-IPC)

THE ABC WAY TO BETTER WASTEWATER TREATMENT,
Environmental Quality Engineering, Inc., Oakland, Calif.
J. F. Kerl.
American Dyestuff Reporter, Vol 62, No 8, p 24-25, August 1973. 1 fig, 1 illus, 2 ref.

Descriptors: *Waste water treatment, *Industrial wastes, *Municipal wastes, *Textiles, *Treatment facilities, Activated sludge, Aeration, Recycling, Suspended solids, Biochemical oxygen demand, Phosphates, Phosphorus, Flocculation, Sedimentation, Aerated basins, Sludge, Separation techniques, Sewage treatment.
Identifiers: *ABC (Accelerated Biological-Chemical)process, Clarifiers.

The ABC (Accelerated Biological-Chemical) process developed by the University of California Sanitary Engineering Research Laboratory involves brief (30-60 min) detection aeration in the presence of activated sludge, followed by rapid sedimentation and recycle of all but a small portion of the sludges from the sedimentation steps to the aeration unit. The process is not only cheaper and faster but also superior to conventional activated sludge treatments under shock loading and transient conditions. It consistently removes over 90% of BOD, suspended solids, and phosphorus from mixed municipal-industrial wastes at volume loadings of 400-500 lb/day/1000 cu ft of aeration basin capacity. The first-stage reactor (30-60 min retention time) comprises two or more aerated compartments with provision for return solids reaeration. The first-stage separator is designed to maintain the desired mixed liquor volatile suspended solids. The second process stage consists of a flocculator and a final clarifier, and the second-stage separator is a normal circular or rectangular clarifier. The ABC process is being demonstration-tested at American Enka Co.'s textile fiber plant, Enka, N.C. (Brown-IPC)

A NEW ERA FOR COOLING WATER TREATMENT,
Betz Labs., Inc., Trevose, Pa.
E. W. James.
The Betz Indicator, Vol 42, No 4, p 3-5, 8-10, July/August 1973. 5 fig. (Adapted from Plant Engineering, Nov 16, 1972).

Descriptors: *Cooling water, *Water treatment, *Industrial water, *Corrosion control, *Water pollution sources, *Chromium, *Toxicity, Zinc, Phosphates, Polymers, Calcium carbonate, Sludge, Dispersion, Nitrogen compounds, Phosphorus compounds, Surfactants, Lignins, Hydrogen ion concentration, Temperature, Waste water treatment, Aquatic life, Metallurgy, Steel, Chlorine, Oxidation, Fouling.
Identifiers: Corrosion inhibitors, Lignosulfonates, Tannins, Phosphonates, Polyphosphates, Sulfuric acid, Dispersants, Chromium compounds, Chromates.

In the selection of cooling water treatments for control of corrosion, scale, inorganic and microbiological deposits, and fouling, environmental quality standards must be considered along with water temperature, pH, chemical composition, and metallurgical factors. Effluents from chromate-treated waters may require special treatment of the blowdown by chemical reduction, followed by lime precipitation of chromic sulfate. Chromate doses in closed systems (200-300 ppm) can be reduced to 20-50 for open recirculating systems at pH 6.0-6.8 by addition of polyphosphate and zinc. An ultralow chromate treatment (5-10 ppm) has become feasible in conjunction with polymeric phosphonate dispersants which retain calcium carbonate in solution and eliminate the need for sulfuric acid. Nonchromate corrosion inhibitors are becoming more popular because of their lower toxicity to aquatic organisms. One such inhibitor is based on an organic nitrogen compound in mixture with polyphosphate and zinc for use at pH 6.5-7.0. Another formulation uses a phosphonate scale control agent together with a zinc-free polyphosphate for protecting steel at pH 7.5-8.5. Lignosulfonates and modified tannins have also been upgraded by addition of phosphonate/polymer dispersants, but suffer from ready oxidation (e.g., by chlorine) with formation of sludge-forming degradation products. (Brown-IPC)
W74-00777

POWER PLANT COOLING SYSTEM STILL USING SEWAGE EFFLUENT.
Zia Co., Los Alamos, N. Mex.

The Betz Indicator, Vol 42, No 4, p 6-7, July/August 1973. (Reprinted from Zia News, Vol 24, No 9, Dec 14, 1972).

Descriptors: *Cooling water, *Industrial water, *Corrosion control, *Waste water treatment, *Powerplants, *Water treatment, *Chromium, *Water pollution sources, *Water conservation, Toxicity, Effluents, Freshwater, Water consumption (except consumptive use), Legislation, Regulation, Water law, Pollution abatement.
Identifiers: Corrosion inhibitors, Chromates.

To conserve freshwater, about 121,000,000 gal/year of sewage effluent has been used to supply over 75% of the cooling water at the AEC Los Alamos nuclear power plant. Recent water quality regulations prohibiting the discharge of all but a minimum amount of chromium prompted the construction of facilities for removal of chromate corrosion inhibitor from the blowdown discharge. When chromium emissions were still too high to meet environmental standards, a chromium-free inhibitor formulation was substituted, which proved to be not only less toxic but also more economical and permitted higher solids concentrations in the cooling system, resulting in less effluent blowdown and still lower freshwater consumption. (Brown-IPC)
W74-00778

INFLUENCE OF EVAPORATION CONDENSATE ON BIOLOGICAL PURIFICATION OF PULP WASH WATERS (EINFLUSS VON EINDAMPFKONDENSAT AUF DIE BIOLOGISCHE REINIGUNG VON ZELLSTOFFWASCHWASSERN),
Technische Universitaet, Dresden (East Germany).
H-J. Walther, and D. Knaack.
Zellstoff und Papier, Vol 21, No 6, p 168-173, June 1972. 3 fig, 2 tab, 4 ref.

Descriptors: *Activated sludge, *Pulp wastes, *Biological treatment, *Waste water treatment, *Sulfite liquors, Biodegradation, Pulp and paper industry, Suspended solids, Effluents, Industrial wastes, Liquid wastes, Laboratory equipment, Foreign research, Europe.
Identifiers: Multistage processes, Wash water, Pulp washing, East Germany.

Laboratory studies indicated that the presence of diluted condensate from the evaporation of spent sulfite pulping liquor does not significantly reduce the biodegradation of solids suspended in pulp wash water during a two-stage activated sludge treatment. A high biological purification is achieved even when the composition of the activated sludge undergoes substantial changes as a result of variations in the effluent. (Speckhard-IPC)

ENZYME-ENHANCED TURBIDITY REMOVAL THROUGH PRIMARY TREATMENT,
Weyerhaeuser Co., Miquon, Pa.
P. A. Schwonke, and W. S. Davis.
Tappi, Vol 56, No 1, p 93-95, Jan 1973. 1 tab, 6 ref.

Descriptors: *Pulp wastes, *Water pollution treatment, *Enzymes, *Waste water treatment, *Flocculation, *Suspended solids, Filtration, Pressure, Pulp and paper industry, Pennsylvania, United States, Dispersion, Surfactants, Color, Water reuse, Turbidity, Treatment facilities, Biodegradation, Industrial wastes, Effluents.
Identifiers: Starch, Amylase, Dispersants, Waste paper, Recycling, Clarifiers, White water, Cationic compounds, Pulpers, Hydrapulpers.

At the nonintegrated fine-paper mill of Weyerhaeuser Co. in Miquon, Pa., complete flocculation of suspended solids in the white water during primary clarifier treatment was hindered by a cationic starch present in the effluent, which originated from repulping of surface-sized dry broke. The starch was found to lose its dispersing power as the length of its macromolecular chain was reduced by amylolysis. Hence amylase was added to the hydrapulper and then to the sewer pump ahead of the clarifier. This enzyme treatment improved the removal of suspended solids, including color bodies, with attendant reduction of effluent turbidity. In conjunction with pressure filtration, it enabled the white water to be recycled as papermaking process water. It may also permit future clarifier installations to be of smaller dimensions. (Brown-IPC)
W74-00783

RECYCLING FINE-PAPER MILL EFFLUENT BY MEANS OF PRESSURE FILTRATION,
Weyerhaeuser Co., Miquon, Pa.
W. S. Davis, R. S. Kraiman, J. M. Parker, and C. H. Thorborg.
Tappi, Vol 56, No 1, p 89-92, Jan 1973. 3 fig, 1 tab, 1 ref.

Descriptors: *Pulp wastes, *Waste water treatment, *Filtration, *Water reuse, *Treatment facilities, Pulp and paper industry, Pennsylvania, United States, Biochemical oxygen demand, Enzymes, Chlorination, Chlorine, Slime, Surfactants, Filters, Pressure, Water treatment.
Identifiers: Starch, Dispersants, Cationic compounds, White water, Paper mills, Amylase.

Sand and gravel pressure filtration improved the quality of primary clarifier effluent to the extent that the filtrate could be reused as process water in the manufacture of printing and other fine papers. The BOD reduction thus achieved was about 16%. The filter installation has a designed throughput rate of 9 gal/sq ft/min, equivalent to about 1 million gal/day, compared to a total water consumption of 3 million gal/day by the paper mill. The filtered water is further improved by adding an amylase enzyme (6 ppm) to destroy the dispersant power of cationic starch present in the white water, and by treatment with chlorine (6 ppm) to prevent slime deposits. (Brown-IPC)

CLARIFICATION OF NSC WASTE LIQUOR BY ACTIVE CARBON, ETC., (IN JAPANESE),
Hokkaido Univ., Sapporo (Japan). Dept. of Chemistry of Forest Products.
M. Hanzawa, S. Satonaka, K. Miura, S. Yasuda, and S. Ishida.
Research Bulletins of the College Experiment Forests Hokkaido University, Vol 29, No 2, p 361-371 + 4 plates, 1972. 6 tab, 8 photomicrographs, 19 ref. (English summary).

Descriptors: *Pulp wastes, *Waste water treatment, *Activated carbon, *Sulfite liquors, *Ion exchange, Color, Pores, Porosity, Drying, Adsorption, Bark, Wood wastes, Foreign research, Coagulation, Oxidation, Industrial wastes, Oak trees, Hardwood.
Identifiers: NSSC pulping, Spent sulfite liquor, Spent pulping liquors, Decoloring, Ion exchangers, Charcoal, Japan.

The spent cooking liquor from the pulping of Japanese oak wood (Quercus mongolica var. grosseserrata) by the neutral sulfite semichemical (NSSC) process was treated with activated carbons which had been prepared from the bark of the same wood by reacting it with 70% sulfuric acid at 150, 170, or 190 C for 0.5, 1, 2, 4, or 8 hr to give carbon yields of 46.7 to 60.4%. Colorimetric absorbances at 400 and 273 nm wavelengths indicated excellent adsorption properties for the carbon obtained at 190 C in 0.5 hr. Among three different drying methods used, solvent dehydration with ethanol gave the best carbon; next best was freeze-drying; oven drying at 105 C was the least satisfactory. The relative ion-exchange capacity of the best C preparation was 0.235 meq/g for calcium chloride and 0.116 meq/g for sodium chloride. The hydrated preparations contained 62.2-63.8% C and 3.6-4.0% H. They showed a porous granular structure in the scanning electron microscope, with pore diameters of about 0.1 micron, suggesting that the pores are filled with water under moist conditions. When the spent NSSC liquor was treated in three stages with coagulants (CaO, aluminum sulfate or chloride, or ferric sulfate), with oxidants (potassium permanganate or hydrogen peroxide), and with adsorbents (hydrated activated C), its residual color approached that of freshwater, although it retained small amounts of noncolored matter. (Brown-IPC)

UNIQUE WATER TREATMENT PLANT ENSURES PURITY OF LAKE BAIKAL,
N. Chistyakov.
Pulp and Paper International, Vol 14, No 7, p 29-30, July 1972. 1 illus. Trans. from Nauka i Zhizn, No 1, 1972.

Descriptors: *Pulp wastes, *Water pollution treatment, *Treatment facilities, *Waste water treatment, *Lakes, Waste water (Pollution), Pulp and paper industry, Byproducts, Discharge (Water), Industrial wastes, Filtration, Aeration, Oxygenation, Aerated lagoons, Biological treatment, Sedimentation, Coagulation, Color, Biochemical oxygen demand, Effluents, Water pollution, Water pollution sources, Activated sludge, Sludge disposal, Sludge treatment, Foreign countries.
Identifiers: *Lake Baikal (USSR), Dissolving pulps.

The Baikal pulp mill produces dissolving-grade pulp for viscose rayon tire cord. Using 435-600 cu m fresh water per ton of pulp, the mill may take 200 cu m per min from Lake Baikal on reaching its 600 ton-per-day capacity. About 93-95% of dissolved organic substances are recovered and made into by-products, such as fodder yeast protein. The remaining effluent is pre-aerated, neutralized, filtered, sedimented, subjected to activated sludge treatment and decoloration by coagulation with aluminum sulfate, sulfuric acid, and polyacrylamide, and oxygenated in a 24-hr total treatment cycle. The purified effluent contains not more than 3-6 mg BOD per liter. It is discharged into the lake 160 m from the shore at a depth of 40 m with intensive (30:1) dilution via a dispersing mixer. Although part of the spent activated sludge is coagulated with ferric chloride and lime and marketed as a dry powder, over 15,000 tons of sludge have accumulated in four years of operation, augmented by 50-60 tons/year, for which a commercial outlet is being sought. Pulp and Paper, Vol 46, No 9, p 90, Aug 1972. 2 tab, 7 ref.

Descriptors: *Bleaching wastes, *Soil disposal fields, *Irrigable land, *Irrigation effects, *Forest soils, *Microorganisms, *Waste water disposal, Waste disposal, Ultimate disposal, Industrial wastes, Liquid wastes, Irrigated land, Pulp and paper industry, Pulp wastes, Texas, United States, Irrigation, Chlorination.

Effluents from pulp bleaching plants, notably those discharged from the chlorination and alkaline extraction stages, were shown to have no detrimental effects on the activity of microorganisms in three Texan forest soils (a Eustis sand, a Mantachie fine sandy clay loam, and a Blake clay). These findings offer encouragement that bleaching wastes may, after some long-term research, be disposed of routinely as irrigation water on forested lands. (Witt-IPC)

CENTRIFUGE DEWATERS SLUDGE AT RATE OF 10 TONS PER DAY,
American Can Co., Ashland, Wis.
V. Schmidt.
Pulp and Paper, Vol 46, No 8, p 56-57, July 1972. 4 illus.

Descriptors: *Pulp wastes, Treatment facilities, *Sludge treatment, Water pollution treatment, *Centrifugation, *Waste water treatment, Solid wastes, *Waste disposal, *Landfills, Sludge disposal, Dewatering, Industrial wastes, Water pollution sources, Recycling, Wisconsin, Pulp and paper industry, Effluents, Suspended solids, Ultimate disposal.
Identifiers: Centrifuges, Paperboards, Waste paper, Napkins, Paper napkins, Boxboard, Repulping.

Waste paperboard from American Can Co.'s boxboard and carton factory is repulped and separated into fibers and contaminants. The reclaimed fibers are recycled into paper napkins. Clay, printing ink, plastic coatings, titanium dioxide pigment, and other contaminants are removed from the effluent in a clarifier. The clarifier sludge is dewatered in a model P5400 Sharples Super-D-Canter centrifuge and disposed of as landfill. (Witt-IPC)

Papir a Celuloza, Vol 27, No 6, p 121-123, 1972. 2 fig, 2 tab, 6 ref.

Descriptors: *Digestion, *Pulp wastes, *Sulfite liquors, *Water pollution, *Waste water treatment, Biochemical oxygen demand, Sodium compounds, Calcium compounds, Pulp and paper industry, Industrial wastes, Softwood, Conifers.
Identifiers: Pulp yield, Pulpwood, Spruce trees, Sulfite mills, Spent sulfite liquors, Raw material conservation, Multistage processes.

Experimental laboratory digestions of spruce wood were conducted in order to compare the relative water pollution loads of spent cooking liquors discharged in the conventional calcium-base sulfite process compared to a two-stage sulfite cook using sodium plus calcium bisulfites. At pulp yields of 55 and 60%, the five-day BOD of the two-stage spent liquor was found to be 20 and 30% lower, respectively, than that of the discharge from the single-stage calcium-base digestion to 50% pulp yield. Since the mixed-base process allows the wood to be cooked to higher yields without impairment of pulp quality, thus conserving more fibrous new material, it is highly recommended to sulfite pulp and paper mills having no spent liquor combustion facilities. (Trubacek-IPC)
W74-00789

FINNISH DIRECTIONS IN SOLVING WATER POLLUTION PROBLEMS,
Central Association of Finnish Woodworking Industries, Helsinki.
E. Malmi.
Paper Trade Journal, Vol 156, No 49, p 36-37, Nov 27, 1972. 1 tab.

Descriptors: *Pulp wastes, Water pollution control, *Pollution abatement, *Economic feasibility, Water pollution treatment, *Waste water treatment, *Investment, Capital cost, Costs, Pulp and paper industry, Europe, Foreign countries, Sulfite liquors, Biochemical oxygen demand, Suspended solids, Liquid wastes, Industrial wastes, Legislation, Regulation, Water law, Permits, Treatment facilities, Planning, Long-term planning, Future planning.
Identifiers: *Finland, Chemical recovery, Spent sulfite liquor, Spent pulping liquors, Sulfite mills, Kraft mills, Paper mills, Board mills.

Between 1960 and 1969, the production of sulfite pulp, kraft pulp, paper, and board in Finland has increased by 10, 130, 98, and 128%, respectively. Although the attendant discharge of BOD loads into water courses increased only 10%, it amounted to 407,000 tons in 1969, despite legal requirements imposing a discharge permit since the 1962 Finnish Water Act. The pollution-control program planned for the 1970's expects the industry to invest about $160,000,000 for effluent treatment facilities; two-thirds of this will go for mechanical treatment plants designed to halve the present annual discharge of 300,000 tons of suspended solids; the remainder will be used to increase the recovery of spent sulfite liquors from 76 to 85% or better in the country's fifteen sulfite mills. Only after internal control measures have been applied will the industry focus its attention on external treatment of effluents, spending an estimated $50,000,000 for reducing dissolved organic matter through chemical and/or biological processes. While some sulfite mills may be able to switch from calcium to a soluble-base cooking liquor and to pollution-free oxygen bleaching, other older or smaller mills may have to shut down. (Witt-IPC)

WATER REUSE IN INDUSTRY, PART I -- POWER GENERATION,
Sargent and Lundy, Chicago, Ill.
A. F. Aschoff.
Mechanical Engineering, Vol 95, No 4, p 21-25, April 1973. 9 fig.

Descriptors: *Water reuse, *Industrial water, *Powerplants, Cooling water, *Waste water treatment, Water pollution control, *Thermal pollution, Effluents, Water resources, Reverse osmosis, Ion exchange, Electrodialysis, Nuclear reactors, Waste water (Pollution), Nuclear wastes, Industrial wastes, Liquid wastes, Waste water treatment, Recycling.

By the year 2000, the U.S.A. will need over 1 trillion gal of water daily. With common sense and careful management, availability can be assured through steady attempts to close the loop by recycling or reuse in another function. The power industry, one of the largest industrial users of water, needs water mainly for condensation of exhaust steam from turbine generators, but also as a sluicing agent for disposal of bottom ach and flyash generated in coal-fired power boilers, for disposal of radioactive and other wastes from nuclear reactors, and as high-purity makeup water in the heat cycle of all types of power plants. Various modern technologies for treatment and reuse of polluted or thermally polluted waste waters in the power industry are discussed and illustrated, such as discharges from cooling lakes, wet and dry cooling towers, spray ponds, floating spray assemblies, ash basins, and boiling-water or pressurized-water reactors. Ion-exchange resins, electrodialysis, and reverse osmosis are examples of promising future water-treatment techniques. (See also W74-00795 thru W74-00798) (Brown-IPC)
W74-00794

WATER REUSE IN INDUSTRY, PART 2 -- TRANSPORT WATER,
Pavia-Byrne Engineering Corp., New Orleans, La.
E. H. Pavia, and A. D. Tyagi.
Mechanical Engineering, Vol 95, No 5, p 32-34, May 1973. 4 fig.

Descriptors: *Industrial water, *Water reuse, *Waste water treatment, Fish handling facilities, Transportation, *Food processing industry, Water pollution sources, *Hydrogen sulfide, Toxicity, Water pollution control, Recycling, Sulfides, Emulsions, Oil, Oil-water interfaces, Sedimentation, Industrial wastes, Pilot plants, Biochemical oxygen demand, Chemical oxygen demand.
Identifiers: Fish oil, Fish meal, *Transport water, *Fish-processing industry, Materials handling, Degasification, Dissolved gases.

In 1970 the U.S. produced 264,800 tons of fish meal and 96,850 tons of fish oil. The water used as transport medium in fish-reduction plants is highly contaminated and may exceed a five-day BOD of 40,000 and a COD of 400,000 mg/liter. Dissolved hydrogen sulfide poses a particular toxicity hazard. A water-recycling and pollution-control system developed at Zapata Protein Inc. is described. It was put into operation in August 1972 after pilot-scale testing. The installation is based on a degasification process which destroys the water-oil-dissolved gas emulsion, thus making the de-equilibrated components amenable to conventional separation by sedimentation. With steadily improved operation, the system permitted over 95% of water to be reused and its sulfide content to be held below 3 mg/liter. Further improvements are anticipated for the 1973 fishing season. (See also W74-00794) (Brown-IPC)
W74-00795

WATER REUSE IN INDUSTRY, PART 3 -- MINE WATER,
Environmental Protection Agency, Washington, D.C.
J. M. Shackelford.
Mechanical Engineering, Vol 95, No 6, p 32-34, June 1973.

Descriptors: *Mine water, *Acid mine water, *Water reuse, *Industrial water, *Waste water treatment, Government supports, Water pollution sources, Federal government, Neutralization, Dissolved solids, Sludge disposal, Iron compounds, Oxidation, Biological treatment, Electrochemistry, Reverse osmosis, Electrodialysis, Ozone, Freezing, Freeze drying, Foam fractionation, Distillation, Ion exchange, Lime, Limestones, Research and development.
Identifiers: *Neutralosis, Federal research.

Billions of gallons of polluted water are involuntarily released by the mining and mineral-extraction industries. The conversion and recycling of this drainage water have been the objects of a four-year-old EPA research program which has already yielded promising results, particularly for solving acid mine and drainage problems caused by ferrous and ferric sulfates and sulfuric acid from the oxidation of pyritic ores. The old technique of lime neutralization does not effectively remove total dissolved sulfur, generates a large amount of sludge, and requires large land impoundment areas. Limestone in lieu of lime has several advantages, but cannot precipitate ferrous hydroxide. Biological and electrochemical iron-oxidation methods and nuclearly generated ozone treatments are being researched, along with a two-stage limestone-lime treatment. Other project under study include reverse osmosis, neutralosis (a combination of neutralization and reverse osmosis), freezing, electrodialysis, foam fractionation, distillation, and ion-exchange processes. (See also W74-00794) (Brown-IPC)
W74-00796

WATER REUSE IN INDUSTRY, PART 4 -- METAL FINISHING,
Avco Corp., Wilmington, Mass. Avco Space Systems Div.
R. J. Campbell, and D. K. Emmerman.
Mechanical Engineering, Vol 95, No 7, p 29-32, July 1973. 2 fig, 2 tab.

Descriptors: *Industrial water, *Water reuse, *Desalination processes, *Freezing, *Freeze drying, Metallurgy, *Waste water treatment, Water pollution sources, Pollution abatement, Water pollution treatment, Heavy metals, Metals, Temperature, Dissolved solids, Energy, Costs, Operating cost, Demineralization.
Identifiers: *Metal finishing industry, Chemical recovery.

The technique of seawater desalination by freezing is eminently applicable to the treatment and recycling of metal-plating waste waters to minimize the discharge of heavy metals and dissolved solids. Its main advantages include low-temperature operation, low energy requirements, avoidance of membranes and other surfaces, and no volatiles carryover. A schematic description of the freeze-concentration and recovery process is presented, and its operating parameters and economic aspects are discussed. (See also W74-00794) (Brown-IPC)
W74-00797

WATER REUSE IN INDUSTRY, PART 5 -- THE WATER POLLUTION CONTROL ACT: REACHING TOWARD ZERO DISCHARGE,
Polytechnic Inst. of Brooklyn, N.Y.
D. F. Othmer.
Mechanical Engineering, Vol 95, No 9, p 32-37, September 1973. 1 fig.

Descriptors: *Discharge (Water), *Water reuse, *Water pollution treatment, *Waste water treatment, *Industrial wastes, *Pollution abatement, Legislation, Research and Development, Economic feasibility, United States, Aquatic bacteria, Dissolved oxygen, Biochemical oxygen demand, Oxidation, Oxygeneration, Recycling, Coagulation, Flocculation, Sedimentation, Biological treatment, Color, Phosphates, Enzymes, Activated sludge, Activated carbon, Chlorination.

The mandate given by Congress to the EPA under the Water Pollution Control Act envisions a goal of zero-pollution discharge into rivers within the next twelve years, beginning with immediate application of the best practical control technology available. Developing appropriate methods and standards will strain both the ingenuity of engineers and the pocketbook of industries. Nevertheless, in view of the dangers of continuing present levels of allowable pollution (such as bacterial hazards and oxygen depletion), the ancient philosophy of waste disposal by dilution must give way to optimized primary, secondary, and tertiary treatments for maximum product recovery and water recycling. Promising approaches to this direction are discussed, including clarification by coagulation, flocculation, and sedimentation of solids; activated sludge and other biochemical treatments; wet combustion and chemical oxidation, including oxygen- or enzyme-aided oxidations; and removal of phosphates, coloring matter, and other specific pollutants from municipal and industrial wastes by activated carbon adsorption, chlorination, and the like. (See also W74-00794) (Brown-IPC)
W74-00798

WATER SUPPLY AND WASTE DISPOSAL POLICY REVIEW.
Indian Nations Council of Governments, Tulsa, Okla.

Working Paper IWS-6, March, 1970. 31 p, 13 ref. HUD Oklahoma P-117.

Descriptors: *Water resources development, *Federal project policy, *Regional development, *Water policy, Water supply, Waste water disposal, Oklahoma, Cost sharing, Projects, Cost allocation, State governments, Administrative agencies, Interstate compacts.

A review of federal, state, and local policy for water supply and waste disposal is presented. It is noted that the federal government only recently became active in the environmental issues of sanitation. Although much legislation has been passed, especially for grant programs, this legislation has had several shortcomings. For example, money authorized to be spent is not alway appropriated by Congress. Secondly, the programs often require state and local governments to contribute to the funding; these government units often are already had pressed financially. The State of Oklahoma has set up what seems to be an adequate framework for water supply and waste disposal projects. The State has entered into interstate agreements for water resources development. It has also established departments to guide future water resources development within the State. Regionalization of plans is stressed, as it is on the federal level. Regional plans can include water supply and waste disposal, as well as flood control, stream regulation, land reclamation, and other water resources related projects. Funding, however, appears to be inadequate on the State level. (Poertner)

REMOVAL OF AMMONIA NITROGEN BY BREAKPOINT CHLORINATION USING AN ACTIVATED CARBON CATALYST,
New York State Dept. of Environmental Conservation, Albany.
W. N. Stasiuk, L. J. Hetling, and W. W. Shuster.
Technical Paper, No 26, April, 1973. 31 p, 7 fig, 1 tab, 1 appendix.

Descriptors: *Waste water treatment, *Nitrogen, *Ammonia, *Chlorination, Activated carbon, Laboratory tests, Water pollution, Water pollution control, Municipal wastes, Industrial wastes, Nitrogen compounds.
Identifiers: *Breakpoint chlorination.

The fate of ammonia nitrogen when chloramines were reacted with activated carbon was investigated in a laboratory study. Activated carbon catalyzed chloramine decomposition reactions and, depending on the pH and the ratio of chlorine to ammonia, 100 percent of the ammonia nitrogen could be removed at a chlorine-to-ammonia molar ratio slightly greater than 1.5. An end product of the reaction was found to be trace amount of nitrate, with nitrates increasing with an increased pH. The use of activated carbon by adsorption of chloramines was studied as an alternative to other methods of ammonia nitrogen removal. Removal of ammonia nitrogen is desirable as nitrogen can be the influencing factor on algae growth, and it has a direct oxygen demand. The alternative methods of nitrogen removal include: (1) biological nitrification-denitrification, (2) selective ion-exchange, (3) air stripping at elevated pH, and (4) breakpoint chlorination. This report describes the results of the breakpoint chlorination method using an activated carbon catalyst. (Poertner)
W74-00810

A GUIDE TO CHEMICAL AND CLARIFIER SELECTION FOR WASTE WATER TREATMENT,
New York State Dept. of Environmental Conservation, Albany.
T. J. Tofflemire, and L. J. Hetling.
Technical Paper No. 29, April, 1973. 12 p, 2 tab, 31 ref.

Descriptors: *Waste water treatment, *Reviews, *Sewage treatment, *Chemical precipitation, Documentation, Publications, Coagulation, Phosphorus, Treatment, Industrial wastes, Municipal wastes, Effluents.
Identifiers: *Chemical treatment, *Clarifiers, Phosphorus removal.

The increasing need for higher quality wastewater treatment and phosphorus removal has led to the consideration of chemical coagulation. Some of the coagulants that can be used include lime, alum, iron salts, and organic polymers. Many studies have been carried out on the use of each of these in individual situations. Although individual conditions will govern the use of a particular chemical, this publication is intended to serve as a guide in narrowing the available coagulants for final choice. Often the optimum chemical dosage for coagulation of sewage colloids is not the same as the optimum dosage for phosphorus removal; although the practical purposes the dosages are frequently in the same range. For example, suspended solids coagulation increases with increased lime dosage, and phosphorus removal is independent of dosages. An influent phosphorus content of 15 mg/l or 5 mg/l can both be reduced to 1 mg/l by the same lime dosage. For iron and aluminum salts, however, a ratio of 1:1 or 2:1, metal to P-mole ratio, is best. Increases beyond this level are often better for coagulation, although higher dosages can increase turbidity and colloidal solids. Other factors needing consideration are the point of chemical addition, design of clarifiers, effect of the chemicals on the handling of sludge, and effect of sludge on land. (Poertner)

ENHANCING TRICKLING FILTER PLANT PERFORMANCE BY CHEMICAL PRECIPITATION,
Richardson, Tex.
R. E. Derrington, D. H. Stevens, and J. E. Laughlin.
Copy available from GPO Sup Doc as EP1.23:670-73-060, $1.45; microfiche from NTIS as PB-224 929/0, $1.45. Environmental Protection Agency, Technology Series Report EPA-670/2-73-060, August 1973. 117 p, 45 fig, 6 tab, 10 ref. Grant No S800685. EPA Project 11010 EGL.

Descriptors: Biological treatment, *Chemical precipitation, Oxygen demand, *Phosphorus, Suspended solids, *Tertiary treatment, *Trickling filters, *Waste water treatment, Activated carbon, Biochemical oxygen demand, Chemical oxygen demand, Coagulation, Colloids, Data processing, Dispersion, Diurnal distribution, Domestic wastes, Feeding rates, *Filtration, Flocculation, Laboratory tests, Nutrient removal, Sedimentation, Sewage treatment, Sludge disposal, *Texas, Tracers, Treatment facilities.
Identifiers: *Richardson (Texas).

Two years of plant scale studies indicated metal addition was an effective effluent polishing technique at this conventional wastewater treatment plant. Effluent phosphorus (P), five-day BOD and suspended solids were reduced to 0.5, 5, and 7 microgram/l respectively. Aluminum sulfate was more effective than ferric chloride. Alum addition ahead of the final clarifier proved the best arrangement. An optimum mole ratio (metal/phosphorus) of 1.6 developed; this ratio shows moles of aluminum fed per mole of incoming total phosphorus. Chemical costs, of which one-third was for transportation, were 5 cents per 1,000 gallons of flow treated, or 36 cents per pound of phosphorus removed when in the 96 percent reduction range. Chemical addition doubled the volume of digested sludge but dewatering on

sand beds took half as long as previous conventional operations. During this demonstration the treatment system received some 1.6 mgd of typical domestic discharge, essentially its design loading. Hydraulic loading on clarifiers was minimized by drastic reduction of recirculation flows. (EPA)

ALUM ADDITION TO ACTIVATED SLUDGE WITH TERTIARY SOLIDS REMOVAL,
District of Columbia Dept. of Environmental Services, Washington.
A. B. Hais, J. B. Stamberg, and D. F. Bishop.
Copy available from GPO Sup Doc as EP1.23:670-73-037, $0.65; microfiche from NTIS as PB-225 028/0, $1.45. Environmental Protection Agency, Technology Series Report EPA-670/2-73-037, August 1973. 25 p, 7 fig, 5 tab, 8 ref. EPA Project 11010 EYM. Contract 14-12-818.

Descriptors: *District of Columbia, Pilot plants, *Aeration, Hydrogen ion concentration, *Waste water treatment, *Activated sludge, Biochemical oxygen demand, *Filtration, Sludge treatment, Suspended solids, Chemical precipitation, Phosphates, Filters.
Identifiers: Aluminum phosphate precipitation, *Alum addition, Step aeration, Multi-media filters.

The activated sludge system was operated with 4.0 hours aeration time (based on the influent flow) and an overflow rate in the secondary settler of 425 gal/ (day) (sq. ft.). Alum was dosed assuming an influent phosphorus concentration of 8.15 mg/l as P. Lime (25 mg/l) was added to the mixed liquor to stabilize the wastewater during periods of low alkalinity. The dual-media filter (24-inch bed depth) and the tri-media filter (40-inch bed depth), each loaded with secondary effluent at 2.4 gal/ (min.) (sq. ft.), regularly exhibited filter runs between 24 and 32 hours. When operating the step aeration with the usual final stage mixed liquor pH (6.7-6.9), the complete system with tri-media filtration removed 92% of the suspended solids, 96% of the BOD and 93% of the phosphorus from the primary effluent. Daily fluctuations in the final pass pH, however, corresponded to similar fluctuations in phosphorus removal. Furthermore, the removal of suspended solids, BOD and phosphorus all increased to 97% during those periods when the final pass pH was between 6.3 and 6.6. Operation at pH below 6.2 caused an upset in the activated sludge. (EPA)

PROCESS FOR TREATING WASTE WATER CONTAINING NITRILES,
Sumitomo Shipbuilding and Machinery Co., Ltd., Tokyo (Japan). (Assignee)
Y. Fujii, and T. Oshimi.
U.S. Patent No. 3,756,947, 4 p, 3 tab, 1 ref; Official Gazette of the United States Patent Office, Vol 914, No 1, p 281, September 4, 1973.

Descriptors: *Patents, *Activated sludge, *Waste water treatment, Water purification, Microorganisms, Bacteria.
Identifiers: *Cyanide, *Nitriles, *Achromobacter nitriloclastes, *Alcaligenes viscolactis.

At least one microorganism capable of degrading nitriles and cyanides, selected from the genera Alcaligenes and Achromobacter is added to an activated sludge to acclimate the microorganism to the sludge. The waste water containing nitriles and cyanides is passed through the activated sludge containing the acclimated microorganisms to purify the waste water. Two particularly useful strains Alcaligenes viscolactis S-2 ATTC (FERM-P No 759) and Achromobacter nitriloclastes S-10 ATCC 21697 (FERM-P No 760) were isolated. Diagnostic characteristics of the microorganisms are tabulated. Test information is included. (Sinha-OEIS)
W74-00957

METHOD OF PURIFYING SEWAGE EFFLUENT AND APPARATUS THEREFOR,
B. Greenberg.
U.S. Patent No. 3,756,933, 7 p, 7 fig, 10 ref; Official Gazette of the United States Patent Office, Vol 914, No 1, p 278, September 4, 1973.

Descriptors: *Patents, *Industrial wastes, *Sewage treatment, *Water purification, *Waste water treatment, Polyelectrolytes, Metals, Phosphorus, Nitrogen, Carbon, Aluminum, Calcium, Magnesium, Chlorides.
Identifiers: *Electrolytic treatment.

Sewage or industrial wastes are electrolytically treated by circulating the liquid past the cathode and upward with the cathode evolved hydrogen to raise the pH of the circulating liquid and precipitate, flocculate and float the alkaline earth products. The floated materials are separated from the liquid, and the liquid so depleted then flows downward, and any unfloated material is returned to the cathode upward liquid flow, and at least part of the liquid is withdrawn from the lower part of the downward flow. It is then exposed to the oxygen and chlorine bubbles evolved at the anode. Wastes treated refer particularly to organic materials which are anionic polyelectrolytes and their precursors, including compounds of phosphorus, nitrogen, carbon or other elements, and a dissolved polyvalent metal such as aluminum, calcium, or magnesium and chloride ions. (Sinha-OEIS)
W74-00958

SEWAGE TREATMENT PROCESS,
Biospherics, Inc., Rockville, Md. (assignee)
G. V. Levin, and G. J. Topol.
U.S. Patent No. 3,756,946, 2 p, 1 fig, 6 ref; Official Gazette of the United States Patent Office, Vol 914, No 1, p 280, September 4, 1973.

Descriptors: *Patents, *Sewage treatment, *Activated sludge, *Aeration, Biological Oxygen demand, Phosphates, Microorganisms, Anaerobic conditions, *Waste water treatment.

Sewage is mixed with activated sludge. The mixture is passed to an aeration zone where the BOD content is reduced and microorganisms take up phosphate. The product is then passed to a settling zone containing an anaerobic layer of sludge. In this zone phosphate-enriched sludge settles into the anaerobic lay of sludge and a substantially phosphate-free effluent is removed from above the layer of sludge. The sludge is maintained under anerobic conditions in the sludge layer of the settling zone for a time sufficient to cause the organisms in the sludge to release phosphate to the liquid phase of the sludge. Sludge containing soluble phosphate is removed from the settling zone. The sludge is then treated to separate a phosphate-enriched aqueous phase and to provide a sludge having a higher concentration of solids and a lesser concentration of phosphate. This sludge is recycled for mixing with influent sewage material. (Sinha-OEIS)
W74-00960

SEWAGE DISPOSAL EFFLUENT PURIFIER,
Moody Aquamatic Systems, Inc., Meadville, Pa. (assignee)
D. L. Moody, and V. R. Troglione.
U.S. Patent No. 3,756,410, 5 p, 6 fig, 4 ref; Official Gazette of the United States Patent Office, Vol 914, No 1, p 154, September 4, 1973.

Descriptors: *Patents, *Liquid wastes, *Sewage treatment, *Water purification, *Waste water treatment.

Liquid sewage is fed to a contact tank where it passes through a porous filter that removes any remaining solids. Ozone gas is bubbled through it to oxidize the impurities and remove objectionable odors. An ozone gas diffuser is mounted in the tank beneath the filter so that excess ozone will pass upward through the filter to keep it purified. (Sinha-OEIS)
W74-00962

SYSTEM FOR ELIMINATING ENVIRONMENTAL POLLUTION,
H. E. De Bord.
U.S. Patent No. 3,756,171, 4 p, 6 fig, 16 ref; Official Gazette of the United States Patent Office, Vol 914, No 1, p 94, September 4, 1973.

Descriptors: *Patents, *Incineration, Solid wastes, *Waste treatment, *Filtration, *Municipal water.

A system for the disposing of rubbish without polluting the environment includes an incinerator for initially burning the rubbish; this incinerator includes a water bath for catching and cooling the noncumbustibles therein. A conveyer belt conveys the noncombustible material from the furnace for refining and reuse. A blower takes a suction on the smoke in the fire box of the incinerator and draws it through a compression box where it is scrubbed with water, filtered and then deposited in a final bath tank. The water in the bath tank is subsequently purified in a filter box, and is then deposited directly into the municipal drain system. (Sinha-OEIS)

METHOD FOR BIOCHEMICAL TREATMENT OF INDUSTRIAL WASTE WATER,
S. V. Yakovlev, J. V. Voronov, V. N. Korenfov, A. B. Nevsky, and V. A. Dobrikova.
U. S. Patent No. 3,755,156, 6 p, 1 fig, 5 ref; Official Gazette of the United States Patent Office, Vol 913, No 4, p 1252, August 28, 1973.

Descriptors: *Patents, *Industrial wastes, *Municipal wastes, *Waste water treatment, Metals, Chromium, Chlorine, Activated sludge, *Oxidation, Chemical reaction, Biochemical Oxygen Demand.

Industrial waste water which contains combined oxygen in the form of inorganic compounds of hexavalent chromium, chlorine or mixtures thereof, is mixed with municipal sewage containing organic matter. The mixture is subjected to mechanical purification. The mixture is then fed to an unaerated tank to effect simultaneous biochemical reduction of the inorganic oxygen-containing compounds by the activated sludge and biochemical oxidation of the organic matter. The mixture is then fed to the settler, while the precipitated activated sludge is returned to the unaerated tank. (Sinha-OEIS)
W74-00966

PROCESS FOR TREATING INDUSTRIAL WASTES,
S. Bastacky.
U.S. Patent No. 3,755,102, 3 p, 4 fig, 8 ref; Official Gazette of the United States Patent Office, Vol 913, No 4, p 1240, August 28, 1973.

Descriptors: *Patents, *Industrial wastes, *Waste water treatment, Acids, Evaporation, *Electrolysis, Evaporation.
Identifiers: *Sulphuric acid, Spent pickle liquor.

A process is presented for treating spent sulphuric acid industrial wastes by a combination of

evaporation and electrolysis. The wastes are treated in cells having several alternately positioned positive and negative aluminum electrodes. The electrodes can be plate form, corrugated sheet form, pipe form or a combination of these. Direct current is applied and the polarity of the electrodes can be changed to preserve the electrodes. A solid residue forms which can be further reduced by an ignition step and the metal removed by cleaning or pickling can be reclaimed. (Sinha-OEIS)
W74-00967

INERT GAS STRIPPING OF CONTAMINATED WATER,
Texaco, Inc., New York. (assignee)
R. D. Kent.
U.S. Patent No. 3,754,376, 3 p, 2 fig, 1 tab, 5 ref; Official Gazette of the United States Patent Office, Vol 913, No 4, p 1069, August 28, 1973.

Descriptors: *Patents, *Waste water treatment, Ammonia, Carbon dioxide, Hydrogen sulfide, *Gases, Water pollution.
Identifiers: *Stripping process.

Water containing contaminating gases such as hydrogen sulfide, carbon dioxide and ammonia is freed of these contaminants by a closed system stripping process which employs an inert gas and steam. At a given temperature ammonia, carbon dioxide and hydrogen sulfide will be efficiently stripped if some inert gas is present. Solids will have less tendency to form since the equilibrium between solid such as ammonium bisulfide and ammonium carbonate, for instance, will be more in favor of the gases making up the solids. The mixture of inert gas stripped gases is passed through absorbing means to separate the inert gas from the stripped gas. The inert gas is then recycled by means of a compressor to be reused for stripping purposes. (Sinha-OEIS)

WATER AND SEWER SERVICE NEEDS OF LOW AND MODERATE INCOME HOUSEHOLDS IN METROPOLITAN WASHINGTON.
Metropolitan Washington Council of Governments, D.C.

Available from the National Technical Information Service as PB-217 529, $3.00 in paper copy, $1.45 in microfiche. Housing Information Report No 2. Final Report. December, 1972. 70 p, 3 append.

Descriptors: *Planning, *Coordination, *Plumbing, Administration, Institutional constraints, Financing, Costs, Water allocation (Policy), Domestic wastes, Water demand, *District of Columbia.
Identifiers: Service coordination and delivery, Plumbing needs, Planning strategy, *Washington, D.C.

Over 16,000 households in the Washington Metropolitan Area do not have access to adequate water and sewer service because of a lack of complete plumbing facilities. The task of alleviating this problem is hindered by three major difficulties: (1) there is a conflict between development policies aimed at planning the orderly growth of the metropolitan area and the provision of necessary services to low income residents living in rural or low density areas; (2) there are high costs to both residents without services and the local jurisdiction or agency empowered with authorizing water and sewer service; (3) federal, state, and local funding is often inadequate and definitions of program eligibility are narrow. Current federal, state, and local programs are analyzed. Development of a program strategy is primarily dependent on coordination of information, of development goals with human resource goals, and coordination and expansion of federal, state, and local programs. Contained in the appendices are data on the water and sewer problem, a schedule of connection and plumbing installation costs, and examples of local assistance programs. (Hoffman-North Carolina)

ENVIRONMENTAL IMPACT STUDY FOR EXPANSION ON THE VILLAGE CREEK SEWAGE TREATMENT PLANT,
Advanced Technology Center, Inc., Dallas, Tex.
E. M. Wilkins, D. H. Petersen, and J. D. Suggs.
Available from the National Technical Information Service as PB-220 024, $4.25 in paper copy, $1.45 in microfiche. Prepared for Department of City Planning, Arlington, Texas. September, 1972. 41 p, 6 fig, 6 ref, 3 append. HUD CPA-TX-06-16-1046.

Descriptors: *Odor, *Path of pollutants, *Dispersion, Effluents, Methodology, *Texas, *Air pollution.
Identifiers: *Climatic effects, *Temperature inversion, Temperature lapse conditions, Odor concentration, Arlington (Tex), Trinity River basin (Tex).

Temperature lapse conditions (Type B) and temperature inversion conditions (Type E) were chosen as representative of the two major types of diffusion regimes. Winds follow the Trinity River basin during inversion conditions, affecting the city of Arlington 22% of the time annually. Wind directions are not stable during non-inversion conditions, although the effect on the city would total 20% annually. Sewage treatment plant expansion would have little effect on calculated odor concentration isopleth patterns; the important difference would be the increase in the emission rate. The 'effective source strength' concept was utilized for analysis. The threshold odor concentration at a known downward distance from the source was observed, with the magnitude of the source required to account for the observed concentration computed using diffusion theory. Under Type B conditions, the expanded plant emission rate was calculated as 1.87 x 108 odor units/second. Under Type E conditions, the rate of vertical mixing of the effluent with the air stream is very slow, and therefore less condusive to long-distance transport of odorous gases than the temperature lapse condition. However, this could also result in a temporary 'fumigation' downwind once the inversion condition ceased besides possible oxygen starvation in the stagnation area. The new emission rate would be 1.47 x 106 odor units/second. Generally, odor concentrations would be increased by as much as a factor of five. The amount of inhabited area covered by above threshold conditions would be increased by more than a factor of 8. Tables detail the exact figures for both Type B and Type E conditions. (Hoffman-North Carolina)

WATER AND SEWER PLAN UPDATE, (GRAY, GEORGIA).
Middle Georgia Area Planning Commission, Macon.

Available from the National Technical Information Service as PB-219 464, $3.50 in paper copy, $1.45 in microfiche. Report No. MG APC-72-8. April 1973. 19 p, 2 maps, 4 tab. CPA-GA-04-04-1001.

Descriptors: *Water supply, *Sewerage, Costs, Planning, *Georgia.
Identifiers: Water system expansion, *Sewer system expansion, *Gray (Ga.).

A status evaluation is presented of the 11 uncompleted water and sewer programs which have been approved by the Middle Georgia Area Planning Commission through the A-95 review process. Each program is described, with total cost and proposed methods of financing included. Four projects--Gray, Forsyth, Jeffersonville and Perry--are proceeding with final construction plans. Factors that have prohibited development of other projects are: (1) freeze on water and sewer financial assistance programs and (2) prior to the freeze lack of grant money in federal water and sewer assistance programs. Proposed methods for financing the uncompleted projects are given. The improvement program for the city of Gray, which includes additions to both the water system and the sewer system, is summarized. Two additional wells will supplement the present water supply. The water treatment capacity is to be doubled, and a ground storage reservoir will be constructed. Tables detail costs. (Hoffman-North Carolina)
W74-01036

A SUMMARY REPORT MASTER WATER AND SEWERAGE PLAN.
CIM, Inc., San Luis Obispo, Calif.

Prepared for San Luis Obispo County, Calif. December, 1972. 34 p, 5 tab, 8 maps.

Descriptors: *Water supply development, *Sewerage, *California, Desalination processes, Groundwater, Planning, Costs, Networks, Coordination, Water reuse, Treatment facilities.
Identifiers: *San Luis Obispo County (Calif.), Water system expansion, Sewerage system expansion, *Nacimiento Dam (Calif).

The objective was to prepare a county-wide plan of coordinated expansion of water and sewerage systems. The extensive size of the county and the presence of major mountain ranges within the county precluded any single generalized approach. Economic evaluations compared capital requirements for alternate water supply and sewerage facilities. For water supply facilities, a factor for comparison of the net cost per unit of water delivered to users in each specific service area was used to determine equivalent unit water costs. Development of water from Nacimiento Reservoir and from the State Water Project was deemed the most feasible combination for water supply sources. Scheduling, size, capacity, and construction costs for proposed facilities are included. The comprehensive sewerage plan emphasizes the need for elimination of ocean discharge of treated effluent from existing wastewater treatment plants in favor of a wastewater reclamation program. Specific recommendations for the individual service areas are included. (Hoffman-North Carolina)

SEWERAGE MASTER PLAN, EUGENE-SPRINGFIELD URBANIZING AREA.
Edmundson, Kochendoerfer, and Kennedy, Portland, Oreg.; and Daniel, Mann, Johnson, and Mendenhall, Portland, Ore.

Prepared for Lane Council of Governments, Eugene, Oregon. 1970. 164 p, 57 fig, 52 tab, 25 ref, 6 append. ORE.P-116.

Descriptors: *Sewerage, *Planning, *Oregon, *Urban hydrology, Water quality control, Projections, Costs, Coordination, Urbanization.
Identifiers: *Sewerage system expansion, Eugene (Ore), Springfield (Ore).

To define the need for new sewerage facilities, estimates of sewerage flows and characteristics were made. High infiltration not only complicated

flow projections but were the source of present, and possibly future, excessive flows. Due to anticipated increased water quality standards by 1990, plants were designed to provide secondary treatment of all wastes with BOD and SS removals over 95% by 1990. The study area was divided into 2 parts: the central study area of 160 square miles, including Springfield and Eugene; and subareas consisting of the 7 outlying communities. Because of the distance from the present urbanized area and small populations, the outlying communities were not included in central sewerage system short-term plans but were considered separately. The recommended plan included: a single regional sewerage treatment plant to ultimately serve the entire study area; a system of interceptor sewers; and pumping stations as required for lifting the sewerage for delivery to the regional treatment plant via the trunk system. A major sewer cleaning, inspection, and sealing program, preceded by a project to review present sealing techniques, was recommended. Prevailing construction costs were used to compare alternative projects on a first and annual cost basis. (Hoffman-North Carolina)

AREAWIDE WATER AND WASTE WATER PLANNING STUDY FOR THE ST. CHARLES MESA, RYE-COLORADO CITY, AND BEULAH SECTORS OF PUEBLO COUNTY.
Sellards and Grigg, Inc., Lakewood, Colo.

Prepared for the Pueblo Regional Planning Commission, Pueblo, Colorado. March, 1973. 110 p, 27 fig, 27 tab, 15 ref, 2 append.

Descriptors: *Water supply, *Sewerage, *Planning, *Water quality control, Land use, Water demand, Water quality standards, Water sources, Water rights, Design criteria, Costs, *Urbanization, Treatment facilities, Projections, Colorado.
Identifiers: Joint facilities, Pueblo County (Colo), St. Charles Mes (Colo.), Rye-Colorado City (Colo.).

An engineering-oriented water supply and wastewater disposal study is described for three planning areas in Pueblo County. The plans are closely related to the comprehensive land use planning for the County and are based largely on future urban growth and demands, engineering criteria, and water quality standards and requirements. Each of the three planning areas is treated separately with the analyses including (1) discussions of the existing water and sewer systems in terms of water demand, water rights, water storage, water distribution, sewage treatment and disposal, and adequacy of receiving streams to accept wastes; (2) investigations of the possibilities of joint and/or multiple use of system facilities; and (3) recommendations for specific facilities and programs for both the short term (1978) and the long term (1993). The need for flexibility over the long term to meet changing standards and technology is emphasized. Some of the considerations and criteria used in the analyses include population projections, land use plans, water demands, stream flows, water quality standards, water rights, and past system performances. Water supply sources include shallow wells, deep wells, and diversions from rivers. Two possible waste disposal alternatives are land disposal and temporary retention of effluent during low flow periods. (Elfers-North Carolina)

COMPLEMENTARY ROLE OF IRON (III), SULFATE AND CALCIUM IN PRECIPITATION OF PHOSPHATE FROM SOLUTION,
Rutgers - The State Univ., New Brunswick, N.J. Dept. of Soils and Crops.
P. H. Hsu.
Environmental Letters, Vol 5, No 2, p 115-136, 1973. OWRR A-031-NJ (2).

Descriptors: *Phosphate, *Nutrient removal, Chemical precipitation, *Iron compounds, *Calcium compounds, *Sulfates, *Waste water treatment.

The purpose of this research is to find more economical and reliable ways of eliminating phosphate from waste water by means of compounds of iron. The effectiveness of iron (III) to precipitate phosphate varied greatly with the P/Fe ratios present. For a given P/Fe ratio, effective precipitation was observed only in a certain range of OH/Fe ratios. The solution acidity corresponding to the optimum OH/Fe ratio varied from nearly netural with P/Fe mole ratio ± 0.2 to pH 2.6 - 2.9 with P/Fe mole ratio ± 2. The effectiveness of phosphate precipitation was greatly improved on the acidic side of the optimum region by the addition of SO4± and the alkaline side by addition of Ca2+. When both SO4± and Ca2+ were present, phosphate was effectively precipitated throuh/fe ratios investigated, corresponding to a pH range of 2.6 to 8. Also, with low P/Fe ratio in preparation, the residual phosphate concentration was low but the amount of phosphate precipitated per mole of iron (III) was also low. With high P/Fe ratio in preparation, nearly one mole of phosphate was removed per mole of iron (III), but a considerable amount of phosphate remained in solution.

5E. Ultimate Disposal of Wastes

PERMEABILITY RESTORATION IN UNDERGROUND DISPOSAL RESERVOIRS,
Alabama Univ., University. Natural Resources Center.
D. M. Grubbs, C. D. Haynes, and G. P. Whittle.
Available from the National Technical Information Service as PB-224 915/9, $9.25 in paper copy, $1.45 in microfiche. Report 733, September 1973. 138 p, 27 fig, 8 tab, 16 ref, 2 append. OWRR A-032-ALA (1).

Descriptors: *Waste disposal wells, *Permeability, *Industrial wastes, *Underground storage, Underground waste disposal, Boreholes.
Identifiers: *Pre-injection treatment, Borehole reaming.

Conclusions on permeability restoration include: The injection of reactive liquid wastes into underground disposal reservoirs will impair permeability as a result of the interaction of waste liquids and the rock matrix and pore materials. The decline in permeability will generally stabilize and maintain an asymptotic relationship to the low value reached. Permeability and hence the capacity of a reservoir to accept wastes without resorting to excessive input pressures can be improved by one or more of several restoration techniques. Reaming of the face of the borehole is generally an effective means of permeability restoration. Chemical treatment by injection of acids (such as dilute hydrochloric) is effective in restoring permeability in sandstone reservoirs. Underreaming of the borehole in the laboratory investigation was effective in the restoration of permeability in carbonates much the same as the improvement in permeability in sandstone reservoirs. In designing liquid waste disposal systems, laboratory studies employing reservoir rock specimens and samples of the waste to be injected may lead to the selection of appropriate and effective procedures for permeability restoration. The capacity of the reservoir to accept a given volume of waste within the design criteria for pressure requirements should then contribute to the economic feasibility of this method of waste disposal. A broader use of underground waste disposal will complement the national effort to rid surface streams of their role as carriers of noxious wastes.

OCEAN WASTE DISPOSAL IN SELECTED GEOGRAPHIC AREAS.
Interstate Electronics Corp., Anaheim, Calif. Oceanics Div.

Available from the National Technical Information Service as PB-224 793, $8.00 in paper copy, $1.45 in microfiche. Interim Report 4460C 1541, July 1973. 394 p, 29 fig, 31 tab, 129 ref. EPA Contract 68-01-0796.

Descriptors: *Waste disposal, Coasts, Sites, Outlets, Management, Harbors, Municipal wastes, Oceans.
Identifiers: *Ocean waste disposal, *Coastal zone management, Dredge spoil disposal, Hazardous materials.

Results are presented of an intensive face finding survey of ocean waste disposal practices in six geographic areas. The areas were the New York Bight; Charleston, South Carolina; segments of the Gulf of Mexico Coast; Southern California; San Francisco; and Puget Sound. Ocean disposal sites within these areas were selected to provide a representative cross section of ocean waste disposal practices in the United States.ncurrent with a field survey and personal interview program, detailed data and information research was performed. The information obtained by this coordinated program was used to establish a data base,

which will be used to recommend guidelines for the control of ocean waste disposal. (EPA)

A BILL TO BE KNOWN AS THE 'SAFE DRINKING WATER ACT OF 1973'.

Senate Bill 433, 93rd Cong, 1st Sess (1973), 35 p.

Descriptors: *Potable water, *Public health, *Water purification, *Water quality standards, *United States, Legislation, Water pollution treatment, Odor, Pollutants, Organic wastes, Governmental interrelations, Planning, Government finance, Research and Development.
Identifiers: *Hazardous substance, *Safe Drinking Water Act of 1973, Administrative regulation.

Increasing quantities and types of chemicals, bacteria, toxic metals, and other contaminants are entering the public water systems that serve as sources which supply the American people with water for drinking. Many of these contaminants are either not detected or are not removed by established water testing and treatment methods and they are thus consumed by or come in contact with the public, thereby presenting hazards to the public health. The federal government has the responsibility of establishing minimum national drinking water standards for all public water systems. The Administrator of the Environmental Protection Agency (Administrator) is charged with formulating and issuing such standards which shall prescribe the maximum permissible levels of any contaminants. States are given the primary enforcement responsibility for the standards, but if the Administrator finds any state failing to comply with the prescribed standards, he may request the Attorney General to take action against the state. There is established in the Environmental Protection Agency a National Drinking Water Council which shall make recommendations to the Administrator on matters relating to drinking water standards. The Administrator is authorized to make grants to the states to assist them in establishing and maintaining adequate programs to assure the safety of public drinking water. (McKnight-Florida)

REDUCTION OF HIGH NITRATE CONTENT FROM WELL WATER IN A REMOTE ESKIMO VILLAGE,
Artic Health Research Center, College, Alaska.
B. B. Benson.
Journal of Environmental Health, Vol 30, No 2, p 164-170, September-October, 1967. 3 fig, 3 tab, 9 ref.

Descriptors: Wells, Water wells, Water quality, Hardness, *Nitrates, *Public health, *Water treatment, *Demineralization, Potable water.
Identifiers: *Nunivak Island, *Methemoglobinemia, Nitrate poisoning.

The well water in the village of Mekoryuk is very high in nitrate: 266 mg/l in the village well and 75 mg/l in the school well. This nitrate concentration can cause methemoglobinemia in infants under two months of age if ingested. Due to village conditions and the economic situation, it is not practical to treat the entire village water supply, but only that portion used by nursing mothers and infants. By passing the water through small demineralizers made for use with steam irons, the nitrate concentration can be reduced to safe levels. The change in color of the resin from purple to yellow eliminates the need for chemical tests on the effluent to determine when the demineralizer is exhausted. (Campbell-NWWA)

CORROSION CONTROL IN WATER WELLS,
Black, Crow and Eidsness, Inc., Gainesville, Fla.
A. P. Black, J. I. Garcia-Bengochea, and J. R. Hurtado.
Chemical Engineering Progress Symposium Series, Vol 64, No 90, p 187-190, 1968. 3 fig, 2 tab, 6 ref.

Descriptors: Wells, *Water wells, Corrosion, Damages, Chemical reactions, *Corrosion control, Chemical analysis, *Water treatment, *Carbon dioxide.
Identifiers: *Neutralization, *Saturated lime water, Calcium carbonate scale.

The municipal water supply of the city of Maracaibo, Venezuela, is obtained from more than forty wells penetrating sand strata. While water from the various wells differs somewhat in chemical quality, water from most is very high in carbon dioxide (60 to 100 ppm) and has pH values in the range 6.1 to 6.5. Corrosion is rapid and severe, and annual replacement costs have exceeded $100,000. Field tests indicate that this condition can be corrected and corrosion practically eliminated by the addition of a saturated solution of lime water at a point in the well somewhat below the pump section. The lime saturator and the method of preparing and feeding the lime solution are described. An initial test of the method, with a new pump and column, over a period of 81 days showed that practically no corrosion took place during that period, and a second test over a period of approximately 6 months confirmed the first results. (Smith-NWWA)

PRELIMINARY RESULTS OF THE PROJECT FOR CONTROLLING AND PREVENTING SCHISTOSOMIASIS IN THE LOWER MANGOKY (MALAGASY REPUBLIC),
Institut Tropical Suisse, Basel.
A. A. Degremont, R. Geigy, and P. Perret.
Acta Trop, Vol 29, No 2, p 101-174, 1972, Illus, English summary.
Identifiers: Bulinus-liratus, Bulinus-obtusispira, Control, *Malagasy Republic (Mangoky), *Niridazole, Parasit-drug, Schistosoma-haematobium, Schistosoma-mansoni, *Schistosomiasis, Vector.

The aims of the Mangoky Project for controlling and preventing schistosomiasis in Lower Mangoky, Madagascar were two-fold: to check endemic schistosomiasis in the irrigated Samangoky area by simultaneously combining all the methods of schistosomiasis control: chemotherapy using niridazole; chemical treatment, using N-trityl-morpholine, of all the water where intermediate hosts were found; health education and supervision of the installation of irrigation and development of new areas and to try to define the methods of controlling and preventing schistosomiasis over newly-developed irrigated area to calculate the profitability of such a project and to plan its organization. Almost all (85%) of the approximately 10,000 inhabitants were examined and those found infected underwent treatment with niridazole. The number of Schistosoma mansoni cases diagnosed during systematic examinations was 698 (3.7%) while the number of S. haematobium cases diagnosed was 2844. Monthly or quarterly malacological investigations of about 400 habitats revealed the existence of 9 aquatic molluscs. Bulinus obtusispira was considered the main intermediate host of S. haematobium in Lower Mangoky. B. liratus was not involved in transmission of S. haematobium, although future risk of transmission by B. liratus was not completely negligible. The anti-schistosomiasis campaign carried out over 5 yr was very effective; the infection rate dropped from 13%-3% in the whole area. This project can serve as model for preventing and controlling schistosomiasis in other newly-developed irrigated regions of Madagascar and Africa.--Copyright 1973, Biological Abstracts, Inc.

Descriptors: *Waste disposal, *Pesticides, *Water pollution control, Methodology, Chemical degradation, Biodegradation, Underground waste disposal, Insecticides, Herbicides, Evaluation.
Identifiers: *Thermal degradation, *Army surplus pesticides, Chemical treatment.

The disposal of Department of the Army surplus pesticides of all types presents serious problems. Significant among the various types of pesticides are large quantities of organochlorine insecticides and phenoxy acid herbicides. Thermal degradation or ground deposition are the disposal methods with the greatest potential for handling large quantities of material in these categories. Chemical treatment has disposal potential for some pesticides on a small-scale basis, and may have application in the decontamination of empty pesticide containers. Recommendations are made concerning research to determine: methods for the small-scale disposal of all types of pesticides and empty pesticide containers; thermal degradation temperatures for organochlorine insecticides and phenoxy acid herbicides, including methods for the secondary disposal of ash and scrubbing liquids; and criteria for the ground disposal of pesticides by deposition in a sanitary landfill or other special excavation, or by deposition in chemically or biologically active soils. Available from NTIS, Springfield, Va., 22151 as AD-760 217; Price $3.00 printed copy; $1.45 microfiche. Final Contract Report, October 1972. 23 p, 3 fig, 6 tab, 2 ref, 2 append. USCG Contract MIPR-Z-70099-0-00584.

Descriptors: *Oil spills, *Oil pollution, *Oily water, *Separation techniques, *Water pollution control, Model studies, Laboratory tests, Sorption, Coasts, Estuaries, Oil-water interfaces, Sampling, Monitoring, Water pollution, *Pollutant identification, Pollution abatement.
Identifiers: Oil pollution baselines.

A sample flow-through device has been developed which, in conjunction with a skimmer and pump, can process 100 to 200 liters or more of surface water, removing any oil present in a separate phase. Thus concentrated, the oil can be extracted at a laboratory, its quantity and nature determined, and when related to the volume of water processed through the sampler, provide oil concentration data on a time integrated basis. Key to the development of this device was identification of a sorbent material which would quantitatively remove oil from a moving water stream and permit simple extraction of that oil in a laboratory. A laboratory apparatus was designed to generate a flowing water stream containing various quantities of oil. Experiments showed that 5-25 ppm oil in a flowing water stream is quantitatively absorbed by the sorbent. The concentrated oil is easily removed from the sorbent with carbon tetrachloride used as solvent and a Soxhlet extractor. The sorbent is regenerated by this process and can be reused many times. Concentration of the extracted oil is determined by infrared spectrophotometry. (Woodard-USGS)

MARKET PROBLEMS IN THE DISTRIBUTION OF EMISSION RIGHTS,
Environmental Protection Agency, Washington, D.C. Office of Research and Monitoring.
M. Rose.
Water Resources Research, Vol 9, No 5, p 1132-1144, October 1973. 3 fig, 23 ref, 4 append.

Descriptors: *Distribution, *Permits, *Bids, *Marginal costs, *Pollution abatement, Treatment, Prices, Control, Optimization, Mathematical models, Marketing, Systems analysis.
Identifiers: *Emission rights, *Waste discharge, *Cost minimization, Waste loads, Calculus.

Some of the market problems inherent in developing a system of emission rights are considered. Cases are analyzed in which there are single and multiple dischargers and in which the supply of available permits is fixed, variable, or variable up to a specified limit. An auction-type bidding process is analyzed. A public authority distributes permits providing the right to discharge specified waste loads into a medium. Potential purchasers of the permits may perceive themselves as having some measure of control over the permit prices through their bids. It is shown that given sufficient information on the nature of bidding strategies, the authority can infer the firms marginal treatment cost functions from their bidding behavior and may therefore be in a position to impose the optimal solution of discharges. In cases in which the optimal number of rights is not known but the marginal damage costs are known, the auction market can generate information that allows determination of the optimal price and number of rights to make available. The public authority should: Maximize the difference between the value of pollution damages avoided and the cost of reducing the damages (minimize the sum of the remaining damages and required treatment). This process is modeled using calculus. (Bell-Cornell)

MICHIGAN WATER RESOURCES ENFORCEMENT AND INFORMATION SYSTEM,
Michigan Dept. of Natural Resources, Lansing. Water Resources Commission.
G. Guenther, D. Mincavage, and F. Morley.
Copy available from GPO Sup Doc as EP1.23 73-020, $1.75; microfiche from NTIS as PB-224 800, $1.45. Environmental Protection Agency Socioeconomic Study Series, Report EPA-R5-73-020, July 1973. 161 p, 70 exhibits. EPA Project 16090 FSR.

Descriptors: *Information retrieval, Data storage and retrieval, *Data processing, Water pollution control, Monitoring, State jurisdiction, *Michigan, Data collections, Documentation, Information exchange.
Identifiers: *Water quality enforcement, Exception reporting, Computer graphics, *Information systems, STORET system.

The project demonstrated an interactive Federal/State water-pollution control, enforcement, and information system, including interactive computer graphics as a method of output presentation. Two systems were interfaced--Michigan's Water Information System for Enforcement (WISE) and EPA's STORET system. The WISE system is used to alert enforcement personnel to problems through exception reporting, and to provide follow-up information on these problems. STORET is utilized as a storage and retrieval system for water quality and inventory information. As information enters WISE, certain inputs are coded for storage in STORET. The interface mechanism is a common numbering system. Because WISE is modular in design, it can be used in part or in total by other agencies. The demonstration indicated that careful consideration should be given to the information that will comprise the computer file. Administrative, procedural, and auditing techniques should be completely set down before proceeding with management's commitment to the system. Microfilm should be used when feasible, both as Computer Output Microfilm (COM) and in manual files. (EPA)

DEVELOPMENT OF A SELECTIVE ALGAECIDE TO CONTROL NUISANCE ALGAL GROWTH,
Dow Chemical Co., Freeport, Tex. Texas Div.
B. L. Prows, and W. F. McIlhenny.
Copy available from GPO Sup Doc as EP1.23; 660-73-006, $1.50; microfiche from NTIS as PB-225 027/2, $1.45. Environmental Protection Agency, Ecological Research Series, Report EPA-660/3-73-006, August 1973. 126 p, 27 fig, 28 tab, 45 ref. EPA Project 16010 EDJ, Contract 68-01-0076.

Descriptors: *Algicides, *Algal control, *Nuisance algae, *Cyanophyta, Assay, *Biocontrol, *Chem control, Phaeophyta, Organic compounds, Pesticides, Aquatic weed control.
Identifiers: Selective algicide, *Anabaena, *Microcystis, Analogs, Test compound, Phagocytic, Selective screening, Ochromonas.

The objective was to develop a compound which would effectively and economically control the growth of nuisance species of blue-green algae with a minimum impact on desirable forms of life in the aquatic environment. A computerized structure search of more than 100,000 compounds was made to select the analogs of the following four Phase I prime candidates: 2,5-Dichloro-3,4-dinitrothiophene; (5-Chloro-2- (p-nitrophenoxy)phenyl)phenyliodoniumchloride; 4-Amino-2,5-dibromophenylthiocyanate; and 1,1-Dimethyltetradecylamine, hydro-chloride. Through this endeavor 1309 compounds were selected, 41 of which emerged from a rapid, agar-plate screening as candidates for final laboratory screening tests. A golden-brown flagellate, Ochromonas ovalis, which exhibited phagocytic activity against the blue-green alga, Microcystis aeruginosa, was discovered during Phase I. Further research and development of biological-chemical control system included studies involving several species of Ochromonas and conditions which would enhance their phagocytic activity against Microcystis aeruginosa, with Ochromonas ovalis proving to be the most voracious feeder. QUALITY MANAGEMENT FOR WISCONSIN: A REPORT ON PRESERVING AND IMPROVING THE QUALITY OF THE AIR, LAND AND WATER RESOURCES.

National Resources Council of State Agencies, Madison, Wisconsin, March 1971. 118 p.

Descriptors: *Wisconsin, *Air pollution, *Land use, *Water resources, *Water quality, Governmental interrelations, Legislation, Environmental sanitation, Standards, Soil conservation, Monitoring, Solid wastes, Comprehensive planning, Municipal wastes, Taxes, Industrial wastes, Zoning, Waste disposal, Farm wastes, Litter, Flood plain zoning, Aesthetics, Mining, Forests, Optimum development plans, Parks, Highway beautification, Burning, Dredging, Inland waterways, Dams, Rivers, Groundwater, Recreation, Eutrophication, Thermal pollution, Pesticides.
Identifiers: Motor vehicle emissions, Industrial emissions, Highway littering, Billboards.

Functions of agencies delegated by Wisconsin Legislature to protect, develop, and manage Wisconsin air, land and water are reported. The State program--problems, laws, regulations, and present procedures are elucidated and those of counties and municipalities, all as affected by federal legislation. Regarding soil conservation, major accomplishments, soil surveys, budget, legal constraints, and present activities with future needs are discussed. Solid waste disposal problems in municipal, industrial, and private areas are presented. Although there are laws and regulations in relation to agricultural effects upon water pollution, greater involvement of local people is needed in identifying pollution sources and correcting problems. Examination of highway littering and floodplain-shoreland management prompts formulation of state policy on land development. Although ordinances are directed toward mining and subsequent land rehabilitation, a Mineral Conservation and Surface Mining Reclamation Act is being formulated. Aesthetic amenities--billboards, scenic easements, highway beautification, forest and park lands--are presented with recommendations. Surface and ground water quantity and quality, wild and scenic rivers, and public water supply were studied and recommendations given. Basic considerations involve need for an interagency coordinating council, a long-range comprehensive state water resources plan, interagency effort, and expansion of information systems. STUDY OF THE EXTRACELLULAR POLYSACCHARIDES PRODUCED BY A BLUE--GREEN ALGA, A-37,
Mississippi State Univ., State College. Dept. of Microbiology.
W. S. Wang, and R. G. Tischer.
Archiv fur Mikrobiologie, Vol 91, No 1, p 77-81, 1973.

Descriptors: *Biochemistry, *Cyanophyta, Anabaena, Chromatography, Polymers, Carbohydrates.
Identifiers: *Anabaena flos-aquae, *Polysaccharides (Extracellular).

Separation of neutral and acidic polysaccharides from the heteropolymers produced by Anabaena flos-aquae A-37 is described and their monosaccharide composition elucidated. Molar ratio of the constituent monosaccharides of the polymers varies widely from species to species and variation even occurs within the same species under different conditions. Two types of polysaccharides were separated from the extracellular polysaccharide by ion exchange chromatography. The neutral polysaccharide is composed of mainly glucose with minor amounts of xylose in a molar ratio of 8:1. Glucose is believed to constitute the polysaccharide core to which xylose is attached. The acidic polysaccharide is composed of glucose and uronic acid as the major monomers with equal amounts of xylose and ribose as the minor constituents. The molar ratio of the monomers found in the acidic polymer is 6:1:1:10 as glucose:xylose:ribose:uronic acid. Chemical analyses showed that the extracellular polysaccharide consists of more neutral polymer (62%) than the acidic polymer (38%). The high proportion of glucose found in the neutral fraction suggests the major role of this monosaccharide acting as the core structure of the polymer. (Jones-Wisconsin)

PROTECTING OUR WATER ENVIRONMENT.
Denver Regional Council of Governments, Colo.

1973. 13 P, 1 APPEND.

Descriptors: *Water quality control, *Planning, *Sewerage, *Environmental effects, Water quality standards, Evaluation, Waste water disposal, Vegetation effects, Social aspects, Ecology.
Identifiers: *Denver (Colo).

Information is provided to the public on the Denver Water Quality Management Planning Program in preparation for 5 county public meetings. The Water Quality Program is concerned with the quality of the region's rivers and streams, the quality of the environment near these water resources, and wastewater disposal systems. The reasons for planning for water quality, criteria involved in designing wastewater disposal systems, the present system and alternative plans for improving the system, and an environmental evaluation of three of the alternatives are presented. Criteria discussed include environmental considerations such as geology, soils, vegetation, fauna, archaeology, and aesthetics, regulatory standards at both state and federal levels, and operational criteria involving economics and technology. The main alternatives considered involve the consolidation of the existing system of over 30 treatment plants to 3 or 4 large plants. One of the 4-plant alternatives was determined to have the least detrimental environmental effects. Recommendations to minimize detrimental impacts include the use of various environmental experts to survey proposed facility locations, the avoidance of certain land uses, vegetation types, and habitats, and the development of an overall environmental management plan for the region. SOME ASPECTS OF WEED CONTROL IN VINEYARDS, (IN ITALIAN),
A. Martinoli.
Not Mal Piante. 85 p, 111-130, 1971, Illus. (English summary).
Identifiers: Control, Drainage, *Herbicides, Mulch, Pyridyls, Rainfall, Soil, *Vineyards, *Weed control.

The concept of controlled weeding is discussed, including the products which can be used and the aspects which characterize the continual use of these desiccants. The spread and control of resistant weeds, the preparation of natural mulch with desiccated weeds, the stability of soil structure and the possibility of 'utilizing' the benefits of a weed cover during adverse weather conditions and alternating mowing with chemical desiccation are described. (Penetration of the rain in the soil is facilitated by the presence of a sod toether with better drainage during extensive periods of rainfalls.) A description is given of the functions and mechanism of action of special low pressure fan nozzles, used to reduce the danger of spray drift. The availability of a rapid acting desiccant capable of scorching the green parts of weeds in any phase of development and at any time of the year without the danger of phytotoxic accumulation in the soil, provides the prospects of new interesting techniques. Residual herbicides, at reduced doses, can thus be used with increased crop safety and the partially controlled weeds can be completely killed by the bipyridyls.--Copyright 1973, Biological Abstracts, Inc.

GAS REQUIREMENTS TO PRESSURIZE ABANDONED DEEP MINES,
NUS Corp., Pittsburgh, Pa. Cyrus Wm. Rice Div.
J. D. Robins.
Copy available from GPO Sup Doc as EP1.23:670-73-054, $2.00; microfiche from NTIS as PB-224 931/6, $1.45. Environmental Protection Agency, Technology Series Report EPA-670/2-73-054, August 1973. 192 p, 36 fig, 50 tab, 18 ref. EPA Project 14010 EFL.

Descriptors: *Mine drainage, *Water pollution control, Pyrite, Oxidation, *Pennsylvania, Acid mine water, Gases.
Identifiers: *Mine pressurization, *Leak detection, Oxygen free atmospheres, Ohiopyle State Park (Penn), Inert gas.

The objective was to determine the gas injection rates needed to develop and maintain slight pressures within a mine over ambient conditions during changes in the barometric pressure. The ultimate aim of the project was to determine the feasibility of blanketing an abandoned deep mine with an inert gas in order to eliminate the acid mine drainage. Pressurization tests were conducted at two typical abandoned deep mine sites in southwestern Pennsylvania. The study also included a state-of-the-art evaluation of existing technology which could be used to locate points of gas leakage from deep mines. The findings of this literature survey were implemented in several full-scale leak detection experiments. While pressurization tests conducted at the larger (50 acres) test mine site were generally inconclusive, the final test results obtained at the smaller (15 acres) mine site were encouraging. Slight positive differential mine pressure could be maintained over extended periods of time at air injection rates as low as 150 cfm. It was also found that barometric pressure fronts had little or no effect on differential mine pressures and that mine pressure differentials immediately dissipated at the cessation of air injection. The experimental data collected throughout this study is presented in the Appendix. (EPA)

THE DRAFT UNITED NATIONS CONVENTION ON THE INTERNATIONAL SEABED AREA--AMERICAN PETROLEUM INSTITUTE POSITION,
American Petroleum Inst., New York.
L. W. Finlay.
Natural Resources Law, Vol 4, p 73-83, January 1971. 4 ref.

Descriptors: *International laws, *United Nations, *Oil, *Mining, *Seabeds, Continental shelf, Legal aspects, Exploitation, Mineralogy, Governments, Legislation, Planning, Law of the sea, Water resources development.

The draft undertakes to establish a comprehensive petroleum and mining code for the entire seabed area of the high seas beyond the depth of 200 meters. A representative of the Petroleum Institute maintains that the draft convention is critically defective in its failure to provide adequate protection to United States off-shore mineral interests and that a further statement of presidential policy for the transitional period is urgently needed. Moreover, with appropriate administrative action, existing legislation is sufficient to encourage increased efforts in the recovery of seabed resources. Because of the killing effects of the proposed renunciation of all rights of the U.S. to natural resources of the continental margin beyond the 200-meter isobath, the problem cannot be solved by minor changes in the draft. ARE OCEAN POLLUTERS SUBJECT TO UNIVERSAL JURISDICTION--CANADA BREAKS THE ICE,
J. C. Klotz.
International Law, Vol 6, No 4, p 706-717, October 1972. 58 ref.

Descriptors: *Canada, *International law, *Law of the sea, *Pollution abatement, *Conservation, *Arctic Ocean, Resources, Legal aspects, Oil spills, Jurisdiction, Governments, Regulation, Damages, Ecosystems, Ecology, Administration, Legislation, Interest.
Identifiers: *Coastal waters, *Territorial waters.

The legality on the international level of Canada's Artic Waters Pollution Prevention Act is discussed. By this Act Canada asserts jurisdiction over activities in its Artic waters through a national regime governing everything from penalties for polluters to the construction of ships of any nation traversing the international waters of the Canadian Arctic. The Act defines 'Arctic waters' as all those waters above latitude 60 north within 100 miles of shore plus continental shelves or other substrata that Canada has the right to exploit. The legality of Canada's action is evaluated by comparing it with customary jurisdiction over ocean waters exercised by nation states. The areas of comparison are: (1) territorial principle--territorial sea and contiguous zones, (2) protected interest principle--extraterritorial effect of laws to conduct affecting security, (3) nationality of the offender, (4) nationality of victim, (5) universality principle--protect universal interests and punish offenses against the law of nations. The legislation is a valid excuse to protect universal interests, but the necessity of international regulation to protect ocean resources is stressed. (Napolitano-Florida)

EFFLUENT NEIGHBORS: THE MEXICO--UNITED STATES WATER QUALITY DILEMMA,
C. R. Johnston, Jr.
California Western International Law Journal, Vol 3, No 1, p 152-173, December 1972. 114 ref.

Descriptors: *Water pollution, *International law, *Drainage basins, Water quality standards, Legal aspects, Governments, Legislation, Governmental interrelations, Water resources development, Federal government, Rio Grande River, Colorado River, United States, Mexico.

Water pollution problems shared by the United States and Mexico as a result of sharing three international drainage basins: the Rio Grande, Colorado and Tijuana river systems are discussed. Recognizing the contemporary problems international water quality control, the concepts and principles of international law which apply to drainage basins are described. The provisions that the United States and Mexico have made concerning water quality control of the subject drainage basins are discussed. A proposed solution to the Mexican-United States water quality dilemma is submitted. The American and Mexican govern-

ments must officially recognize the geographic unity of an international drainage basin and the application to such basins of the principle of equitable utilization in order to solve their present international water quality dilemma. Basin agencies would then provide for the realistic control of international drainage basin water quality. (Mockler-Florida)
W74-00869

WATER POLLUTION--USER OF CITY SEWER SYSTEM CREATES NUISANCE AGAINST LOWER RIPARIAN,
J. E. Crowe, Jr.
Missouri Law Review, Vol 38, p 161-170, Winter 1973. 59 ref.

Descriptors: *Arkansas, *Missouri, *Riparian rights, *Sewage disposal, *Water pollution control, Damages, Reasonable use, Public utilities, Contracts, Benefits, Third party effects, Waste disposal, pollution abatement, Legal aspects, Judicial decisions.
Identifiers: *Hazardous substances (Pollution), *Nuisance (Legal aspects).

Possible liability of the users of a city sewer system to a lower riparian in an action based upon nuisance is discussed. Plaintiff-appellant sought damages as lower riparian against defendent-appellee for discharging certain noxious wastes into the city sewer system thereby overloading the sewage treatment plant and polluting a creek to plaintiff's detriment. Plaintiff alleged defendent was under a contract with the city to eliminate from its deposits into the sewer system 'all offensive and noxious waste products' and further alleged that the purpose of the contract was to prevent overloading the system and, in turn, harm to riparian downstream from the sewage facility. The state supreme court reversed holding that a party who owes no obligation to third persons or the public in general may contract to assume an obligation to use due care toward such third persons or the public in general. Rights of lower riparians based upon nuisance and reasonable use theory, liability for pollution caused by discharge into a municipal water system, control of discharge, and possible applications of the subject case in other situations are discussed. (Napolitano-Florida)

REPORT OF PROCEEDINGS AT PUBLIC HEARING RELATING TO AN APPLICATION FILED BY AROUSED RESIDENTS OF CROWDERS CREEK INC. REQUESTING RECLASSIFICATION OF CROWDERS CREEK, CATAWBA RIVER BASIN, CLEVELAND AND GASTON COUNTIES .

Water and Air Quality Control Committee, North Carolina Board of Water and Air Resources, Raleigh, May 19, 1972. 63 p.

Descriptors: *North Carolina, *Legislation, *Water quality standards, *Recreation, Water pollution sources, Industrial wastes, Sewage administration, Water pollution control, Water law, Commissions, Impaired water quality, Municipal wastes, Public health.

The application requested reclassification of Crowders Creek so that it may be protected as suitable for water-body contact recreation. The petition for reclassification emphasized that the stream and its tributaries are presently used and have been used by at least two municipalities and no fewer than nine North Carolina businesses and industries as an outlet and outfall sewer for municipalities and industrial wastes. Moreover, on numerous occasions, overflow of municipal raw sewages and deliberately dumped raw industrial wastes, both organic and inorganic, have taken place to the detriment of the stream and to the untold damage of the lower riparian owners and users. (Mockler-Florida)

RESTORE RURAL WATER AND WASTE DISPOSAL GRANT PROGRAMS.
Hearings--Comm. on Agriculture, U.S. House of Representatives, 93rd Cong, 1st Sess, February 19-20, 1973. 54 p.

Descriptors: *Legislation, *Water quality standards, *Sewage treatment, *United States, Governments, Waste treatment, Environmental sanitation, Public health, Sewage effluents, Water treatment, Water pollution sources, Sewage, Sewage systems, Grants.
Identifiers: *Congressional hearings, *Consolidated Farm and Rural Development Act.

These hearings concerned the bill to restore the rural water and sewer grant program under the Consolidated Farm and Rural Development Act. Testimony at the hearings indicated that there is no other federal program which small villages and towns can turn to for grant assistance in bridging the sizable gap between what is required by way of water treatment facilities and what is fiscally practical. The program is needed to enhance the quality of rural America's natural environment and safeguard the health and physical well-being of the millions of U.S. citizens residing in small rural communities. Most rural communities cannot carry the bonded indebtedness for the whole cost of the needed water and sewer systems, and, as a result, representatives of many towns appeared to give testimony at the hearings on this proposed legislation. In the past, this program has materially contributed to the construction of about 6500 rural water and sewage treatment plants. The testimony indicated that it would be unwise, unrealistic, and unfair to terminate the Rural Water and Sewer Grant Program. (Mockler-Florida)

OPTIMAL ALLOCATION OF ARTIFICIAL AERATION ALONG A POLLUTED STREAM USING DYNAMIC PROGRAMMING,
California Univ., Los Angeles. Dept. of Engineering Systems.
S. Chang, and W. W-G. Yeh.
Water Resources Bulletin, American Water Resources Association, Vol 9, No 5, p 985-997, October 1973. 3 fig, 9 ref.

Descriptors: *Water quality control, *Stream improvement, *Dissolved oxygen, *Dynamic programming, Algorithms, Optimization, Resource allocation, Mathematical models, Systems analysis, Costs, Numerical analysis.
Identifiers: *Artificial aeration, *Cost minimization, Mass balance equation, Langrange multiplier.

When a series of aerators are used to raise the level of dissolved oxygen in a polluted stream through instream artificial aeration augmentation, the system is governed by the basic dissolved oxygen mass balance equation with the existence of artificial aeration as its boundary conditions. A mathematical model is developed for the optimization of the allocation of aeration capacity to each of the series of aerators subject to a limitation on total available aeration capacity. The objective function is to minimize the sum of the squares of the aeration costs and the costs incurred by damaging or unnecessarily improving the system. The original constrained allocation problem is simplified by converting it to an unconstrained one via use of Lagrange multipliers. A discretized dynamic programming algorithm is formulated for finding the optimal allocation policy. A typical optimal aeration capacity allocation policy and its corresponding dissolved oxygen sag profile for the illustrated numerical example is presented, and the relationship between the total available aeration capacity and Lagrange multiplier is also developed treating weighting factors as parameters. (Bell-Cornell)

NONLINEAR EFFLUENT CHARGES,
California Univ., Riverside.
T. A. Ferrar.
Journal of the Institute of Management Science: Application, Vol 20, No 2, p 169-178, October 1973. 3 fig, 14 ref.

Descriptors: *Regions, Effluents, *Taxes, *Pollution abatement, *Standards, Resource allocation, Information, Water pollution control, Costs, Constraints, Algorithms, Mathematical models, Systems analysis, *Pollution taxes (Charges).
Identifiers: *Environmental quality, Incentive-feedback algorithm, Cost minimization.

An effluent taxation structure for meeting a specified standard of regional environmental quality is derived. The significant operational weakness of the effluent charge technique in environmental management is its fundamentally static applicability. A nonlinear effluent taxation policy is developed which will alleviate this weakness. It is demonstrated that the nonlinearity of the proposed charge scheme displays equilibrium results identical to linear user-charge programs but elicits superior dynamic characteristics. Moreover, through use of an iterative stimulus-response algorithm, the technical information transfer among sectors is minimized by mapping response surfaces for polluter behavior. These continuously updated response patterns are then used to guide the system to a social optimum. The allocation procedure involves an incentive-feedback algorithm that iteratively rations the available environmental resource among the polluters in accordance with a cost-minimization objective. The progressive taxation program developed induces polluters to modify their effluent discharge levels in accordance with an environmental control board's specifications while insuring that these specified levels are not violated. Recognizing the stochastic nature of the optimal allocation of environmental resources and the need to reckon the existence of adjustment lags within any operational context, it is argued that meaningful policing of environmental quality will require the nonlinear taxation approach. METHOD AND MEANS FOR ABSORBING CRUDE OIL AND THE LIKE FOR TRANSPORTATION AND RECOVERY,
Grantley Co., Jefferson, Ohio. (Assignee)
J. Weinberg.
U.S. Patent No. 3,756,948, 3p, 6 ref; Official Gazette of the United States Patent Office, Vol 914, No 1, p 281, September 4, 1973.

Descriptors: *Patents, *Oil spills, Water pollution sources, Treatment, *Absorption, Plastics, *Pollution abatement, Water pollution control.
Identifiers: Polystyrene.

The material used is a foamed polystyrene plastic which is of closed cell-type, made by inflating cells of polystyrene with aire. The foam has a density between 1.4 and about 2.0 pounds per cubic foot and an average cell size between about 1.0 mm and 3.0 mm, and absorbs about nineteen times it weight of crude oil. It has a selective absorption for oil when subjected to a mix of oil plus water, and does not soil upon contact after absorbing a saturated load of crude oil out of a bath of water. The absorbent foam is prepared by shredding to open up the cells for better oil absorption. Crumbs of the foam are spread upon the oil layer where they become saturated with about nineteen times their own weight in crude oil within about one minute. In addition to being used for cleaning up oil spills on a body of water, it might be used to clean up a sandy beach polluted by crude oil, and to absorb crude oil at a well head leakage. (Sinha-OEIS)
W74-00959

OIL SKIMMER MODULE,
Crisafulli Pump Co., Inc., Glendive, Mont.
A. J. Crisafulli.
U.S. Patent No. 3,756,414, 3 p, 5 fig, 4 ref; Official Gazette of the United States Patent Office, Vol 914, No 1, p 155, September 4, 1973.

Descriptors: *Patents, *Oil spills, Water pollution sources, *Skimming, Water pollution control, *Pollution abatement.

The skimmer module is adapted to be mounted in front of a floating barge or other vessel for removing the surface layer from a body of water when the surface contains oil or other pollutants. The module has an open front receptacle with a horizontally inclined edge defining a weir that is able to be raised or lowered for varying the depth of the weir in relation to the surface of the body of water. Each module has a pump for removing water and pollutants collected in the receptacle and discharging them into a storage area. (Sinha-OEIS)
W74-00961

WATER DISPOSAL CAISSON AND METHOD OF USING SAME,
C. J. Carmichael, and A. G. Franklin.
U.S. Patent No. 3,756,409, 3 p, 11 fig, 4 ref; Official Gazette of the United States Patent Office, Vol 914, No 1, p 154, September 4, 1973.

Descriptors: *Patents, *Oil pollution, Water pollution sources, *Waste water disposal, Separation techniques, Water pollution control, Pollution abatement.

An offshore water disposal caisson for separating oil from waste water comprises the following parts: An outer caisson with an open bottom for communicating with the body of water; an oil collection tube having a closed bottom and a side wall oil filling opening through which oil is introduced proximate its upper end, the tube being of a diameter less than that of the outer caisson within which it is set; a waste water introduction tube for introducing the waste water below the oil-water interface within the caisson; and a pump to pump oil from the collecting tube as it approaches the tube's total capacity. (Sinha-OEIS)
W74-00963

SELF-RIGHTING FLOATING BOOMS,
M. F. Smith, and A. V. Anusauckas.
U.S. Patent No. 3,756,031, 7 p, 13 fig, 2 ref; Official Gazette of the United States Patent Office, Vol 914, No 1, p 58, September 4, 1973.

Descriptors: *Patents, *Oil spills, Water pollution sources, Floats, Equipment, *Pollution abatement, Water pollution control.
Identifiers: *Oil booms.

A self-righting floating boom is constructed by mounting on a vinyl fin several polymer floats. The polymer float is rectangular in shape with a shelf-like portion extending laterally from the flat side surface of the float and running the length of the float, with its ends being 'raked', to reduce drag during rapid endwise deployment. The shelf-like portion extends a distance at least equal to the float thickness and is positioned along the lower half of the float height. The bottom surface of the shelf-like extension of the float incorporates sloped surfaces along its terminating ends. This provides a lifting surface causing each float to skim or 'plane' on its shelf during end-wise deployment and eliminates any submergence tendency during endwise towing. (Sinha-OEIS)
W74-00965

APPARATUS AND METHOD FOR COLLECTION OF OIL FROM SURFACE OF THE SEA,
S. M. Verdin.
U.S. Patent No. 3,754,653, 4 p, 7 fig, 6 ref; Official Gazette of the United States Patent Office, Vol 913, No 4, p 1140, August 28, 1973.

Descriptors: *Patents, *Oil spills, Water pollution sources, Pollution, *Separation techniques, Equipment, *Pollution abatement.
Identifiers: *Oil scoops.

Oil is removed from the surface of water in the presence of waves by mechanically scooping in large quantities of oil-contaminated surface water. The oily water is guided directly to the separation tank. The oil-rich phase may be passed over a weir into a storage compartment before it is directed into a separation tank. The scoop is disposed in the sea with its sidewalls extending down into the water and projecting above the surface of the water. The correct elevation of the scoop structure relative to the sea is maintained by means of ballast tanks. (Sinha-OEIS)

DEVELOPMENT OF A DYNAMIC WATER MANAGEMENT POLICY FOR TEXAS,
Texas A and M Univ., College Station. Water Resources Inst.
W. L. Meier, J. C. Helm, and G. L. Curry.
Available from the National Technical Information Service as PB-224 844, $5.50 in paper copy, $1.45 in microfiche. Completion Report No. 52, June 1973. 215 p, 8 fig, 13 tab, 99 ref, 2 append.

Descriptors: Water resources, *Long-term planning, Reservoir operation, *Multiple-purpose reservoirs, *Linear programming, *Stochastic

processes, Model studies, *Storage capacity, Expansion, Optimization, Evaluation, Construction, Timing, Scheduling, Water management (Applied), Project planning, Systems analysis, *Texas.
Identifiers: *Cost minimization, Operating policy, Change constraints, Integer programming, Bender's decomposition technique, Continuity equation, Hydrologic uncertainty, Economic uncertainty.

Optimization techniques are developed to assist in the implementation of long-range water resource plans. A stochastic programming formulation for obtaining an operating policy for single, multi-purpose reservoirs based on the continuity equation, stochastic inflow and demand, and chance constraints is developed. The chance constraints are converted to an equivalent linear deterministic set of contraints by a material balance equation. The formulation is then extended to a linked, multiple-purpose reservoir system. Both linear and quadratic objective functions are used with the equivalent linear constraint set. The problem addressed is to select reservoir storage capacities, schedule construction timing, and establish an operating policy which minimizes the total cost of a linked system of multi-purpose reservoirs. This mixed integer-continuous linear programming problem is separated into a linear programming problem and an integer programming problem using Bender's decomposition technique. The methodology is applied to Cypress Creek Basin in northeastern Texas. (Bell-Cornell)

T. L. Morin.
Water Resources Research, Vol 9, No 5, p 1178-1185, October 1973. 1 fig, 3 tab, 16 ref.

Descriptors: *Dynamic programming, *Algorithms, *Sequencing, Water resources development, Capital, Investment, Planning, Mathematical models, Systems analysis.
Identifiers: *Nonoptimality, *Capacity expansion, *Imbedded state space approach.

Two cases in which a conventional dynamic programming algorithm may produce nonoptimal solutions to an important class of sequencing problems encountered in water resources development are identified. The pathological behavior of the conventional dynamic programming algorithm is analyzed and illustrated with a counterexample. The use of the imbedded state space approach in the determination of optimal solutions in the two cases is discussed and illustrated by solution of the counterexample. Extension of the imbedded state approach to the solution of more general selection and scheduling problems is also discussed. In the case of capacity expansion sequencing and scheduling, seemingly straightforward applications of dynamic programming fail because they overlook the combinatorial nature of such problems. The imbedded state space approach actually exploits the combinatorial nature of the expansion problems, thus guaranteeing that the optimal solution will always be found. (Bell-Cornell)

AN EVALUATION OF THE WATER-RELATED ECONOMIC RESOURCE DEVELOPMENT OF APPALACHIA-IN-MISSISSIPPI,
Mississippi Research and Development Center, Jackson.
T. A. Herrin.
Tombigbee River Valley Water Management District, Tupelo, Mississippi, December, 1967. 234 p, 22 fig, 76 tab, 3 append.

Descriptors: *Water resources development, *Regional development, *Economic impact, *Comprehensive planning, Mississippi, Appalachian Mountain Region, Costs, Benefits, Wages, Regional economics.
Identifiers: *Tennessee - Tombigbee Waterway.

The proposed development of the Tennessee-Tombigbee Waterway is expected to have a major influence on the economic development of the 20-country Appalachia area in northeastern Mississippi. This area, like all other Appalachia areas, lags the nation in economic development and in educational and health facilities. Recognizing this and to promote economic development, the U.S. Congress direcred the Secretary of the Army to prepare a comprehensive plan for the development and efficient utilization of water resources in Applachia. This study evaluates the economic framework of the Mississippi Appalachia area and estimates the impact of the proposed Tennessee-Tombigbee Waterway project on the area's economy. In 1960, the area's population was 406,187. It is estimated to grow to 1,392,000 by 2020, based on employment expansion from 134,040 to 500,000. Per-capita income is expected to rise from $940 to 6,310. The Tennessee-Tombigbee Waterway project is estimated to cost $325 million, with an annual cost of $16.9 million over a 50-year life. Annual benefits are estimated to average $521 million of which $496 million is attributed to payroll benefits resulting from economic growth. (Poertner)
W74-00799

RECREATION/TOURISM DEVELOPMENT PROGRAM FOR THE MISSISSIPPI APPALACHIAN AREA.
Noblin Research, Jackson, Miss.

Mississippi Research and Development Center, Jackson, Mississippi, June, 1970. 113 p, 12 fig, 8 tab.

Descriptors: *Water resources development, *Regional development, *Recreation demand, *Economic impact, *Appalachian mountain region, Mississippi, Comprehensive planning, Tourism, Recreation facilities, Economics.

The economic development of the Tombigbee River Valley Water Management District is dependent on the development of recreational facilities and water resources. The development of water resources will stimulate the development of recreation and tourism in the area. This study was undertaken to identify existing recreational facilities and suggest future facilities for fulfilling the recreational needs of area residents and tourists. The area involved is in the northeastern section of Mississippi and includes 20 countries. The area falls under the jurisdiction of the federal Appalachian Regional Development Act, which directs the Secretary of the Army to prepare a comprehensive plan for the development and efficient utilization of water and related resources of the area for improving the economic conditions. A program for the development of recreational facilities and tourist attractions was estimated to cost $206.1 million in new capital investment. Income generated would be $442.6 million and 17700 jobs would be created. It was suggested that historic sites be developed as well as a major attraction comparable to Disneyland. (Poertner)
W74-00800

OPEN SPACE AND RECREATION PLAN.
Coastal Area Planning and Development Commission, Brunswick, Ga.

Prepared for the Department of Industry and Trade, Atlanta, Georgia, May, 1973. 119 p, 13 fig, 12 tab, 7 ref. HUD CPA-GA-04-04-1002.

Descriptors: *Water resources development, *Comprehensive planning, *Recreation demand, *Recreation facilities, Georgia, Data collections, Water sports, Water resources, Natural resources, Water resources development.

Open space and recreational facilities were studied as part of a comprehensive development plan. The area involved includes 8 countries in southeastern Georgia, bordered by Florida to the south and South Carolina to the north. It is predominately rural and comprises a total area of 3,775 square miles and a population of about 300,000. The region has a diversified industrial base and many natural resources including an abundance of wildlife, a variety of vegetation and many rivers and marshlands. The existing features of the area are inventoried in this study and projected needs are estimated for the period 1973 to 1991. During these years, the population is expected to double and provision for facility use by persons outside the area must be taken into consideration. The area has many attractions of historic interest. It is recommended that: local governments set aside a minimum of 10 acres of open space and recreational land per 1000 people, that professional recreation-management personnel be hired in each country, and that private enterprise be encouraged to supply recreational facilities. (Poertner)
W74-00801

PROGRESS REPORT ON THE PROPOSED YELLOW CREEK PORT PROJECT TISHOMINGO COUNTY, MISSISSIPPI.
Tombigbee River Valley Water Management District, Tupelo, Miss.

January 23, 1969. 98 p, 3 fig, 4 tab.

Descriptors: *Regional development, *Water resources development, *Harbors, *Economic feasibility, Economic impact, Economics, Mississippi, Regional economics, Planning, Transporation, Ships.
Identifiers: *Yellow Creek (Mississippi).

A port in the northeast corner of the State of Mississippi would greatly improve economic conditions and has been a topic of discussion for many years. A feasibility study completed in 1967 showed that 13 countries would benefit from port development on Yellow Creek in Tishomingo County. It is estimated that direct benefits to existing firms would be about $1.4 million over the life of the port. In addition, new firms would be attracted to the area, providing new jobs and an increased tax base also, freight rates for rail transportation would probably decrease from the competition between railroads and water transport companies. Total benefits are estimated at over $44.6 million, with a project benefit-cost ratio of 6.07. Because of the attractiveness of this project, local legislators encouraged state-enabling legislation, which was adopted. The legislation established the governing structure for the project. Several counties fulfilled these requirements and the project has progressed closer to reality, although action has not progressed beyond the planning stage. (Poertner)

COMPREHENSIVE WATER AND SEWERAGE PLAN FOR OUACHITA PARISH.
Sample, Jenkins and Madden, Monroe, La.

The Ouachita Council of Governments, Monroe, Louisiana, 1973. 76 p, 5 fig, 14 tab, 13 ref. HUD LAO6-48-1010.

Descriptors: *Comprehensive planning, *Water supply, *Sewerage, Storm drains, Louisiana, Water resources development, Costs, Construction costs, Planning, Data collections, Waste water treatment.
Identifiers: *Ouachita Parish (Louisiana).

A comprehensive plan for water and sewerage was prepared for the Ouachita Parish, Louisiana. Existing water, sewer and storm drainage systems were inventoried. Design criteria were described, and a plan was established for improvement of the existing system. Seventy-two public water systems (each serving more than 10 people) were campgrounds, etc. These systems pose problems of monitoring of health standards. Water is taken from both ground and surface supplies, and all but one system violates one or more Public Health Service standards (usually color). Sewage treatment is often accomplished with the use of oxidation ponds, a favorable arrangement where land is inexpensive. There are many small systems which pose monitoring problems for the health department. The major system in the City of Monroe is also threatened by structural failure of a sewer main, plant overloads, odors, and corrosive action by hydrogen sulfide. Storm drainage appears to be adequate in the parish. In some areas, open channels are used and periodic cleaning is required to maintain the channel capacity. Based on an increase in population from 97,500 in 1970 to an ultimate population of 250,925, detailed projects are cost-estimated with a list of 18 priority projects. (Poertner)

ADDITIONAL SOURCES FOR WATER SUPPLY FOR THE TOWN OF WELLESLEY.
Coffin and Richardson, Inc., Boston, Mass.

Board of Public Works, Wellesley, Massachusetts, October 18, 1966. 31 p, 2 fig, 3 tab, 3 append.

Descriptors: *Water resources development, *Forecasting, *Planning, *Water demand, Water supply, Massachusetts, Water requirements, Dependable supply, Water shortage, Imported water, Political aspects, Institutions, Urbanization, Water contracts.
Identifiers: *Wellesley (Massachusetts), *Boston (Massachusetts).

The Town of Wellesley, Massachusetts, located within 10 miles of Boston, is faced with an impending water shortage. The town had a 1966 population of about 27,000 and is expected to grow to a population equivalent of about 36,600 by the year 2000. Water consumption per person is also expected to increase, and total water consumption is expected to increase from the 1965 level of 3.10 mgd average (7.64 mgd maximum) to about 5.9 mgd average (18.0 mgd maximum) in year 2000. Six wells, that serve the town have a combined available water quantity of less than 7.7 mgd for extended periods of time. Alternatives include joining the Metropolitan District Commission (MDC) of Boston and developing additional groundwater supplies. Joining the MDC would require the expenditure of from $1.19 to $1.34 million and the purchase of land and rights-of-way. The Town of Wellesley would also be obligated to purchase a minimum of one-third of their water from the MDC at the rate of $120 per million gallons. Groundwater supplies furnishing 10 mgd could be developed for a total of $737,000 excluding land and rights-of-way. One problem which must be settled is a state law which prevents any town within a 10-mile radius of the State House (which includes Wallesley) from developing new supplies--they are obligated to join the MDC. It is debatable whether this water source is a new supply or part of the supply already tapped by other wells. (Poertner)

FINDINGS OF THE NATIONAL WATER COMMISSION,
National Water Commission, Arlington, Va.
T. M. Schad.
Paper presented at the American Society of Civil Engineers, National Water Resources Engineering Conference, Washington, D. C., January 29-February 2, 1973. 11 p.

Descriptors: *Comprehensive planning, *Water requirements, *National Water Commission, *Water resources development, Forecasting, Planning, Water allocation (Policy), United States, Alternative planning.

The National Water Commission recently completed an 1100-page report including many recommendations for future water development in the United States. Two general recommendations are: (1) that the country should plan for future water use in terms of alternative futures rather than to project past trends indefinitely into the future, and (2) that the nation's water institutions are recognized to be experiencing a 'cultural lag' in that past programs have not been evaluated in terms of present requirements, but have been followed blindly. A major recommendation is that the beneficiaries of water resource development, and not the general taxpayer, pay the cost of such development. Water planning should not be an end in itself. It should be an adjunct to land use planning. Water quality planning must go hand-in-hand with water quantity planning. Over 208 specific recommendations were presented in the report. (Poertner)
W74-00812

PHASE I COMPREHENSIVE WATER AND SEWER PLAN.
Mid-Missouri Regional Planning Commission, Jefferson City.

September, 1971. 114 p, 18 fig, 43 tab.

Descriptors: *Comprehensive planning, *Data collections, *Natural resources, Missouri, Evaluation, Agriculture, Water resources, Population, Facilities.

The development of a comprehensive water and sewer plan for the Mid-Missouri Regional Planning Commission requires that an inventory of existing conditions first be prepared. The region includes 8 counties with a 1970 population of about 225,000 which is expected to grow to about 279,000 by 1990. The area has been--and will continue for some time to be - agricultural in nature. However, farm employment and population has declined sharply as the result of farm consolidation and mechanization. Average family income is $4,304 compared to the St. Louis average of $7,527. A complete inventory was made of the following: (1) economic conditions; (2) natural resources, including minerals, timber, agriculture, water, and soil type; and (3) community and transportation facilities. The area relies on both groundwater and surface water and both seem to be in good supply. Communities most often rely on groundwater for municipal supplies. Only 6 communities rely on surface water from the Missouri River or other impoundments. Groundwater is generally hard. (Poertner)

N. Buras.
Environmental Sciences Series, American Elsevier Publishing Company, Inc., New York, N.Y. 1972. Asit K. Biswas, Editor. 197 p, 38 fig, 2 tab, 260 ref.

Descriptors: Water resources, Engineering, *Water quality, *Water quantity, *Dynamic programming, *Linear programming, *Simulation analysis, *Stochastic processes, Optimization, Water utilization, Design, Operation and maintenance, Water resources development, Operations research, Mathematical models, *Water allocation (Policy).

The state-of-the-art of water resources engineering is surveyed, embracing a broad spectrum of issues: quantity aspects as well as quality aspects within a systems approach. The field of water resources engineering is defined, emphasizing its natural and social sciences components. The systems approach to water resources problems is described and illustrated in the context of the design and operation of water systems. Then, three broad categories of water engineering are identified and discussed: Development, design, and operation problems. The remainder, and

greater part, of the book explores operations research methods used in solving such problems. Discussed are: (1) probability techniques and their application to water storage problems; (2) linear programming applications to water quality management, reservoir operation and design, and aquifer management; (3) basic ideas of dynamic programming, the method best suited to sequential decision processes; (4) applications of dynamic programming to derive optimal operating procedures for a variety of systems, from relatively simple ones to complex systems involving multiple purposes, many structures, and surface and ground water; and finally (5) simulation techniques, including the methods of synthetic hydrology and Monte Carlo. SYSTEMS ENGINEERING APPROACH,
Texas Water Development Board, Austin. Systems Engineering Div.
A. O. Weiss.
Water for Texas, Vol 2, No 1, p 3-9, October, 1971. 5 fig.

Descriptors: *Mathematical models, *Analytical techniques, *Computer models, Computers, Model studies, Research and development, Technology, *Synthetic hydrology, *Water management (Applied), Routing, Water resources, Water supply.
Identifiers: Hydrologic analysis, *Systems engineering.

The Systems Engineering Approach is more than a set of computerized modeling capabilities. It is a philosophy of analysis and problem solving which with the aid of computers evaluates complex systems. The Systems Engineering Approach can be used to help planners in their effort to consider the myriad hydrological, physical, economic, environmental and social aspects involved in water resources development in a comprehensive and systematic manner. The systems modeling capabilities are not designed to provide a detailed quantitative solution to every problem, nor do they represent an exact simulation of the prototype. They represent a set of mathematical techniques that approximate the prototype at various degrees of fidelity and provide information at varying levels of accuracy, in a manner helpful to the evaluation of and selection between viable alternatives. Equipment models used by the Texas Water Development Board in its regional water resources management programs are discussed. (Hunt-NWWA)

WILD RIVER PECEPTION AND MANAGEMENT: A STUDY OF USERS AND MANAGERS OF THE MIDDLE FORK OF THE SALMON RIVER,
Idaho Univ., Moscow. Dept. of Agricultural and Forest Economics.
R. L. Peckfelder.
Available from the National Technical Information Service as PB-224 832, $4.25 in paper copy, $1.45 in microfiche. M.S. Thesis in Forest Recreation, Idaho Water Resources Research Institute, Moscow, Scenic Rivers Study, N.Y. August 1973. 108 p, 1 fig, 37 tab, 24 ref, append. OWRR C-3342-(3718) (2).

Descriptors: *Idaho, *Forest management, *Wild rivers, *Attitudes, Water users, *Census, *Recreation, Fishing.
Identifiers: *Salmon River (Idaho).

Evidence indicates that foresters who manage the Middle Fork of the Salmon River are very much in tune with floaters in their personal outlook on river management; they correctly predicted user reaction to more than therefourth of the questionnaire statements presented in this study. Questionnairs from 253 of 367 floaters and all Forest Service personnel were returned. Eighty percent of the statements were correctly perceived by managers. Forest Service personnel, however, did not accurately perceive many of the characteristics of users. Managers did not feel as strongly about environmental issues as did users. Users responded more intensely than managers to the importance of Solitude in the wild river experinece. Managers appeared to be more development-oriented than did users. Forest Service personnel stressed stronger feeling toward the need for controls on the Middle Fork than did users. The responses to management alternatives were not generally perceived by managers. Middle Fork managers appear to be similar in their responses to those of users which indicates knowledge of the Middle Fork user. Needs include (1) additional information on all factors that may be a result of increasing use, (2) establishing guidelines that will determine when the maximum number of people is attained and controls imposed to correct it, and (3) continual information flow from users.

SUBURBAN AMERICA: POPULATION DYNAMICS AS RELATED TO WATER RESOURCES PLANNING,
Wapora, Inc., Washington, D.C.
B. Wachter, B. Baratz, and G. Beeland.
Available from the National Technical Information Service as PB-225 050/4, $4.75 in paper copy, $1.45 in microfiche. Completion Report. October, 1973. 143 p, 10 fig, 11 tab, 65 ref, 5 append. OWRR C-3384 (3740) (1).

Descriptors: *Census, *City planning, *Decision making, Land development, Local governments, *Long-term planning, Municipal wastes, Municipal water, Project planning, Public benefits, Erosion control, Sediment control, Soil erosion, *Urbanization, Water management (Applied), Zoning, Human population, Land use, Relocation, District of Columbia.
Identifiers: Transportation planning, *Suburban development.

In the past decade, suburban living has rapidly attracted a major fraction of the American population. The current study investigated the degree to which water resources planning was incorporated into the suburbanization phenomenon. To meet this end, personnel of county governments, regional planning commissions, water and sewage agencies, developers etc. were solicited for their appropriate data and experiences. A broad nationwide questionaire survey was performed to develop an overall view of the problem and the solution approaches (if any) that were taken. Also, extensive personal interviews were conducted in Metropolitan Washington, D.C. with responsible officials active and/or knowledgeable in the subject area. The results of the questionnaire and Metro Washington, D.C. surveys indicated several, important areas for consideration. Specifically, the factors of soil condition, transportation planning, industrial relocation, and overlapping of local government interests, all influenced suburban development patterns. These factors were then examined in depth by personal interviews at the following major metropolitan areas: Cleveland, Ohio, Milwaukee, Wisc., Houston, Texas, Pittsburgh, Penn. All of the above efforts resulted in a series of guidelines for water resources planning in suburban areas. These guidelines were designed to provide a useful framework for those engineers and urban designers who are engaged in the future plans for suburban America.

SOCIAL AND CULTURAL IMPACT OF A PROPOSED RESERVOIR ON A RURAL KENTUCKY SCHOOL DISTRICT,
Kentucky Water Resources Inst., Lexington.
C. R. Smith, and P. Drucker.
Available from the National Technical Information Service as PB-224 833, $5.25 in paper copy, $1.45 in microfiche. Research Report No. 60, 1973. 180 p, 23 tab, 6 ref, 2 append. OWRR B-027-KY (1). 14-31-0001-3595.

Descriptors: *Attitudes, Education, Social aspects, *Social change, Social function, *Social impact, Social values, *Kentucky, *Urbanization, Pre-impoundment, Multiple-purpose reservoirs, *Rural sociology, Area redevelopment.
Identifiers: Anthropological concepts, Cultural change, *Cultural values, Urban intrusion.

This study uses anthropological concepts and research methods to study attitudes toward education and the educational system of a central Kentucky school district with the goal of predicting the impact on it of a proposed multi-purpose (flood-control), recreation, etc.) reservoir, and of proposing options for forestalling dysfunctional social aspects of that impact. The social impact will result from the fact that although the county is now rurally oriented, the proposed reservoir will attract (has already begun to attract) urbanite residents from Louisville, Kentucky's largest city, who can be expected to bring urban values concerning education, as well as other urban social values. Massive social change and cultural change can be anticipated. To assess probable directions of change in education, a school in an upper middle class suburb in Louisville, the sort of milieu from which most of the urban intrusion will come, was also studied. This research is another step in the study of changing social function, and changing cultural values in general, in the program, 'Anthropological analysis of sociocultural benefits and costs from stream-control devices.' (Grieves-Kentucky)
W74-00557

IMPACT OF A PROPOSED RESERVOIR ON LOCAL LAND VALUES, ANTHROPLOGICAL ANALYSIS OF SOCIAL AND CULTURAL BENEFITS AND COSTS FROM STREAM CONTROL MEASURES - PHASE 3,
Kentucky Research Inst., Lexington. Water Resources.
P. Drucker, C. R. Smith, and A. C. Turner.
Available from the National Technical Information Service as PB-224 982/9, $4.25 in paper copy, $1.45 in microfiche. Research Report No. 51, 1972. 101 p, 12 map, 4 tab, 8 ref, append. OWRR A-031-KY (1). 14-31-0001-3217.

Descriptors: *Rural sociology, Multiple-purpose reservoir, *Land appraisals, Pre-impoundment,

*Kentucky, *Attitudes, Condemnation, Real property, *Regression analysis, *Relocation, Rural areas, Social change, Social impact, *Social values, *Urbanization, *Benefits, Area redevelopment, Costs.
Identifiers: Anthropological concepts, Anxiety patterns, Dislocation of persons.

This project was designed to study the social impact and economic impact of private pre-construction acquisition of real property in a Central Kentucky rural area in which a multi-purpose dam is planned. The research design was built around use of anthropological concepts and research techniques. By these means it was possible to analyze the attitudes toward, and social values of land to traditionalist residents, among which social and economic security concepts are paramount. Recent land purchases locally believed to have been made for speculative purposes by 'outsiders,' (urbanites from Louisville, Ky), at prices out of line in terms of local agricultural worth, have been extremely unsettling, contributing to the anxiety patterns typical of persons facing forced relocation by sale or condemnation. A newly developing pattern of land purchase, with values related to residential convenience and access to the urban center, rather than to traditional agricultural criteria, is identified through regression analysis. Social change manifested in a partial urbanization is evident among a segment of the local population who try to take advantage of urban economic opportunities while participating in rural society and activities. (Grieves-Kentucky)

A METHODOLOGY FOR ASSESSMENT OF WATER RESOURCES DEVELOPMENT: A COMPETITIVE EVALUATION MODEL FOR WATER RESOURCES DEVELOPMENT PLANNING,
Oklahoma Univ., Norman. Bureau of Water Resources Research.
G. W. Reid, and S. Y. Law.
Available from the National Technical Information Service as PB-224 825, $5.50 in paper copy, $1.45 in microfiche. Oklahoma Water Resources Research Institute, Stillwater, Completion Report, July 1973. 186 p, 20 fig, 44 tab, 30 ref. OWRR A-036-OKLA (1). 14-31-0001-3836.

Descriptors: *Water Resources Development, Evaluation, Planning, *Benefits, *Decision making, Priorities, Regional analysis, Methodology, System analysis, Measurement, Cost-benefit analysis, River basins, Model studies.
Identifiers: *Competitive evaluation, *Cost-effectiveness analysis, *Game theory, Decision theory, Heuristic gaming, Strategies, Weighting factor, Utility numbers, Expected value.

The purpose was to develop an effective evaluation methodology for assisting in water resources development planning. A new model was contemplated for solving two principal problems associated with the present practices of water resources development planning - the considering of individual development as isolated entity and the using of the benefit and cost ratio as the only analysis in the evaluation process. The model was developed by using game theory concepts. The principal tactics employed in the model are the competitive measuring between benefit categories and the competitive evaluation of the development objectives. The procedure used in the model enables the identifying of the following: the overall system of water resources development as well as the individual or local development, the relationship and priorities of developments in different locations and between various purposes of development. The model is also able to recognize the competitive nature of water resources development and to augment some new measurements. The model as a whole provides a new approach for summarizing a large number of data into a simple and meaningful form in order to formulate systematic recommendations for the decision-maker.

HONOLULU BOARD OF WATER SUPPLY ANNUAL REPORT FOR THE YEAR ENDED JUNE 30, 1972.
Honolulu Board of Water Supply, Hawaii.

1972. 24 P, 1 FIG, PHOTOS, 4 TAB.

Descriptors: *Water management (Applied), *Administration, *Financing, *Hawaii, Water supply, Coordination, Water analysis, Water delivery, Water distribution (Applied), Water policy, Water rates.
Identifiers: *Honolulu (Hawaii), Quality monitoring.

Projects in planning, resources, and research are discussed. Through negotiations with federal, state, and county agencies and private water users, rules and regulations were adopted for coordinated protection, development, and conservation of water resources. A program for tracing and dating groundwater is in progress. Contamination of water by organic chemicals, as judged by the amount of carbon extractable by chloroform, was negligible. Computer models have been developed to analyze water distribution systems. The Chemical Laboratory has conducted pollution studies, such as pesticide monitoring of sources, and water quality studied, including seepage investigations and system surveillance for water quality deterioration due to stagnation in water mains. Financial statements, as well as operation and pumping information are presented. (Hoffman-North Carolina)

SUBJECTIVE DECISION-MAKING FOR URBAN WATER RESOURCES DEVELOPMENT,
Rockwell International Corp., Anaheim, Calif.
J. H. Dean, and C. S. Shih.
Water Resources Bulletin, American Water Resources Association, Vol 9, No 5, p 942-949, October 1973. 3 fig, 9 ref.

Descriptors: Water resources development, *Decision making, *Alternative planning, *Municipal water, *Water supply, Waste water treatment, Dams, Optimization, Engineering, Costs, Water quality, Water quantity, Systems analysis.
Identifiers: *Bayesian decision theory, *San Angelo (Texas), Delphi method, Utility theory, Probability assessments, Public response, Sensitivity analysis, Uncertainty.

The soliciting of expert and general public opinion is indispensable in making choices for the welfare of the general public from alternative courses of action under uncertainty. Bayesian decision theory is utilized to consider engineering alternatives, quality, quantity, cost, and the intangible public response for the selection of optimal strategies in urban water resources development. This approach is capable of incorporating seemingly unquantifiable, abstract factors into the decision-making process. It is a systematic solution procedure used to identify and rank the best alternatives in accordance with the quantitative assessments. The basic elements of the method--decision flow diagrams, judgmental probability assessment, and utility theory--are discussed and illustrated. The analysis is applied to the city of San Angelo in central Texas where alternatives for supplementing a dwindling water supply are being considered: Groundwater development; a waste treatment plant capable of producing potable water; and the building of an additional dam. Use of the Delphi method--an iterative questionnaire technique featuring anonymity, iteration with feedback, and statistical group response--is described. (Bell-Cornell)

THE HARVARD PROGRAM: A SUMMING UP,
North Carolina Univ., Chapel Hill.
M. M. Hufschmidt.
In: Water Research, Resources for the Future, Washington, D.C. 1966. A. V. Kneese and Smith, S. C. editors, p 441-455. 6 ref.

Descriptors: *Planning, *Water resources, *Analysis, Analytical techniques, *Decision-making, *Methodology.
Identifiers: System design, Basic research, Applied research, *Harvard Water Program.

Initial objectives of the Harvard Water Program for multidisciplinary research and advanced training for public servants in water resources planning and development, were to test the validity and utility of certain new methods and techniques of economic, engineering, and governmental analysis,' with the problems of system design and operation related 'to broader economic data, overall engineering design and economic analysis, public policies, and legal and institutional factors affecting water resources development.' Major research topics developed during Phase I included: the multiple-dimension nature of the social welfare function; the use of concepts of social rate of time discount and opportunity costs; structure of a public investment decision-model for water resources incoprorating the nations of objective function, design criteria, cost-input functions, benefit-output functions, production functions and dynamic analysis; system planning techniques for simulation and mathematical models; and a normative model of political decision-making on public investment. Phase II involved testing of methodology and techniques on realistic planning cases, plus continuing basic research on (a) setting objectives and deriving and applying planning

criteria for field-level planning; and (b) the process of field level planning, including techniques of analysis applicable to complex systems. Some conclusions are that continuity played a major role in the strength of the program, advanced computer technology aided analysis techniques, and university research groups function better on basic research problems than on problems of application. (Edwards-North Carolina).

(THE POTOMAC 1972).
Interstate Commission on the Potomac River Basin, Washington, D.C.

1972. 25 p, 7 fig, photos.

Descriptors: *Water quality, *Water supply, Pollution, *Inter-agency cooperation, *Potomac River, Maryland, Virginia, Pennsylvania, West Virginia, *District of Columbia, Waste water treatment, Flood control, Energy, Financing.
Identifiers: *Intergovernmental coordination, Interstate Commission on the Potomac River Basin (ICPRB), State planning, Washington Area Interstate Water Resources Program, Potomac River Basin Compact, *Washington, D.C.

With no operational, regulatory or enforcement authority, the impact of the Interstate Commission on the Potomac River Basin (ICPRB) is felt through providing liason and assistance to public and private agencies, coordinating programs for use, conservation, and of development of water and land resources, and pollution control. In 1972 ICPRB requested designation by the federal government and the states of Maryland, Pennsylvania, Virginia, West Virginia, and the District of Columbia as the official coordination agency for both water quality and water resources. The proposed Potomac River Basin Compact to develop water resources planning by a single comprehensive agency has not been approved by all the states. A task force from Md., Va., and D.C. recommended approaches for cleaning up the river and ensuring water supply for metropolitan Washington 'perhaps to the year 2000.' Proposals call for inter-connecting 3 major water supply systems, construction of Verona and Six Bridges Reservoirs, and development and expansion of water treatment and finishing water storage facilities. Advanced treatment of waste must be completed by all treatment plants in the area. Controlling discharges of raw sewage, construction of new treatment plants and implementation of a monitoring system are vital. Sediment problems, water quality, energy supply, B and O Canal, and 1972 Potomac Flood are also discussed. (Hufschmidt-North Carolina)
W74-01032

NORTH CAROLINA WATER PLAN-PROGRESS REPORT, CHAPTER 35-NEW RIVER BASIN.

Draft Progress Report March, 1970. 64 p, 22 tab, 32 ref, 1 append. WRC.

Descriptors: Water resource development, *Planning, *Project planning, *Research priorities, *North Carolina, Coordination, *River basin development.
Identifiers: *Federal-state coordination, *New River Basin (N.C.).

The New River Basin in North Carolina is the head of the New River watershed, a major tributary of the Kanawha River which flows into the Ohio River. Water resources in the Basin are presented, primarily in a tabular format. North Carolina's responses to the Ohio River Basin Comprehensive Survey Report, the Kanawha River Basin Comprehensive Study, and the procedure for the Appalachian Power Company license application to construct the Blue Ridge Hydro-Electric Project are evaluated. The recreation plan of the Blue Ridge Project originally showed 3 park areas in North Carolina and several boat lauching sites. However, according to North Carolina and Virginia, Department of Interior requirements for water quality storage would have destroyed the proposed recreational aspects. This generated a study by the Federal Power Commission, resulting in increasing the size of the reservoirs. Conclusions on water resource development were: (1) major structural projects in or affecting North Carolina will provide greater benefits of power generation, flood control, and low flow augmentation in states other than North Carolina, (2) some existing trout waters will be removed from classification by reservoir characteristics of major impoundments affecting North Carolina, (3) scenic and fishery characteristics need special efforts for preservation or enhancement, and (4) land and population resources are not favorable to either large or water-intensive industry. State and local planning efforts must recognize that the resource needs of the North Carolina portion of the New River Basin will probably be subordinate to larger regional requirements. (Hoffman-North Carolina)

MASTER PLAN FOR MAJOR DRAINAGE: HENRY'S LAKE AREA, SUBBASIN 1-31-55-01-01.
Denver Regional Council of Governments, Colo.

Available from the National Technical Information Service as PB-218 959, $3.00 in paper copy, $1.45 in microfiche. Project Reuse Final Report (Supplement). October, 1971. 89 p, 19 fig, 14 tab. COLO-USE-1. DHUD-H-1392.

Descriptors: *River basin development, *Environmental engineering, *Regional analysis, *Colorado, *Planning, Runoff, Pollution, Drainage, Urban planning.
Identifiers: Major drainage, *Henry's Lake (Colo.), Master planning, *Urban systems engineering.

As the first application of the methodology, criteria, and existing situation description developed under Project REUSE (Renewing the Environment through Urban Systems Engineering), this report was designed to serve as a prototype and standard for future multi-jurisdictional preventive master planning in the Urban Drainage and Flood Control District. The systems engineering approach used is based on a functional description of the urban drainage system. Runoff analyses for existing and various possible future conditions defined the physical magnitude of the system requirements and established a frame of reference for selecting a major drainage concept. An Environmental Design Team reviewed significant problems encountered and assisted in analyzing and evaluating potential concepts. From this, a plan for major drainage was prepared that provides for effective functioning of the major drainage system and orderly development of the Henry's Lake area. Detailed master plan and implementation recommendation are included. The appendix summarizes Project REUSE mathematical models for urban drainage and flood control. (Hoffman-North Carolina)
W74-01037

ANALYSIS OF PORT DEVELOPMENT POTENTIALS AT GREAT SODUS BAY.
Genesee/Finger Lakes Regional Planning Board, Rochester, N.Y.

Descriptors: *Planning, *Harbors, Marinas, Great Lakes, *Lake Ontario, *New York, Recreation demand, Camping, Recreation facilties.
Identifiers: *Recreation development, Resorts, Development potential, *Great Sodus Bay (N.Y.).

Port development potentials of Sodus Bay, an enclosed and naturally protected harbor midway between Rochester and Oswego, New York on the south shore of Lake Ontario are assessed. Until 1967, the Pennsylvania Railroad operated a coal dock on an elevated deep-draft loading pier constructed of heavy creosoted timbers. Increased railroad price structures, a lack of coal storage facilities, and failure to improve harbor facilities gave a competitive advantage to Lake Erie ports. After studying the potential for revival of coal transshipment, the prognosis for revival is negative. With obsolescent facilities and the remoteness of Great Sodus Bay from urban centers, the future for any port facilities is dim. It is possible, but unlikely, that a large-scale bulk commodity-absorbing cement plant, steel mill, electrical power plant, or chemical plant might locate in the vicinity at a future time. Recreational potential for the area is more promising; demands are identified for 150 additional boat slips by 1975 and 330 by 1980, a resort-type lodge of 140 rooms in 1975 or 280 rooms by 1980, 70 to 90 transient housing units immediately, and 455 campsites by 1985. An antique railroad museum is a possibility for the old railroad yeards. Land area requirements are projected for identified recreational needs. Intergovernmental coordination and cooperation are called for to promote recreational development. (Stein-North Carolina)

WATER SUPPLY AND SEWAGE FACILITIES PLAN UPDATE-1970.
Lehigh-Northampton Counties Joint Planning Commission, Lehigh Valley, Pa.

September, 1971. 129 p, 21 tab, 12 maps, 6 append.

Descriptors: *Water supply development, *Projections, *Sewerage, *Pennsylvania, Planning, Networks, Forecasting, Costs, Methodology.
Identifiers: *Priority evaluation, *Lehigh-Northampton Counties (Penn.), Expansion.

The purpose was to update the 1966 Plan and to develop a priority program for 1970-1980. Implementation of water supply facilities had been variable, with only Bethlehem and Easton Water Supply Systems following the 1966 Plan in both substance and timing. Plan revisions were based on new trends in existing water supply system expansion, new population and population density distribution projections, and the narrowed time focus of the update. Trexler Dam and Reservoir, with a new Lehigh Water Supply System as the primary user of this source of water, remained a major recommendation. Proposed expansion of Bethlehem Water Supply System was greater than originally recommended, with a 10.0 mgd. increase source main capacity deemed necessary. Several proposed rural systems were eliminated. All recommendations are tabulated. Including new construction and expansion, approximately 10% of the 1966 Plan recommendations for sewage

treatment facilities were carried out. The 1970 update recommends fewer and larger sewer treatment systems (21 instead of 24). Tables detail the present capacity of sewage treatment works, projected service area population and waste water volume, and recommended new construction, including costs. A numerical evaluation system for water and sewer projects was developed. Points were assigned to each project based on selected criteria. Tables list the rankings of each project, with the Eastern Part of Bethlehem Township ranking highest (88 out of a possible 100 points). (Hoffman-North Carolina)

WATER-RELATED FACILITIES STUDY FOR THE COMPREHENSIVE REGIONAL PLAN OF COLUMBUS AND FRANKLIN COUNTY (OHIO).
Burgess and Niple, Ltd., Columbus, Ohio.

Prepared for Franklin County Regional Planning Commission, Columbus, Ohio. 1969. 137 p. Ohio P-46 (G) X-1105-2.

Descriptors: Planning, *Water supply, *Flood control, Sewerage, Drainage, Flood plains, Water demand, *Comprehensive planning, *Urbanization, Financing, Administration, *Ohio.
Identifiers: Flood Plain Management, Columbus (Ohio), Franklin County (Ohio).

This study focuses on the Columbus, Ohio metropolitan area which includes all of Franklin County plus parts of adjacent counties expected to be urbanized by 1985. The study is closely related to the metropolitan comprehensive planning program and covers water supply, flood control, sewerage, and drainage. The water supply plan emphasizes the full development of local sources of water before turning to major diversions, e.g. from the Ohio River. The flood control program consists of small reservoirs, channel maintenance, and flood plain management. Existing sanitary sewers are expected to be adequate through 1985, but the formulation of policy for future service extensions is important now. Thus, the sections on sewerage and drainage are policy-oriented and cover relations to urbanication and land use planning. A final section discusses financing and implementation of the plans and policies and recommends the creation of a single metropolitan wide agency with both administration and construction powers. (Elfers-North Carolina)

CLASSIFICATION AND EVALUATION OF FRESHWATER WETLANDS AS WILDLIFE HABITAT IN THE GLACIATED NORTHEAST,
Rhode Island Univ., Kingston. Dept. of Forest and Wildlife Management.
F. C. Golet.
In: Transactions of the Northeast Section, The Wildlife Society, Mt. Snow, Vermont, 1973. p 257-279, 5 fig, 2 tab, 22 ref. OWRR B-023-MASS (7). 14-31-0001-3596.

Descriptors: *Wetlands, *Wildlife habitats, *Classification, Evaluation, *Northeast U.S., *Massachusetts, Decision making, Vegetation.

A detailed classification system for freshwater wetlands is presented along with ten criteria for the evaluation of wetlands as wildlife habitat. The results are based on a two-year field study of over 150 wetlands located throughout the State of Massachusetts. The major components of the classification system include wetland classes and subclasses, based on the dominant life form of vegetation and surface water depth and permanence; size categories; topographic and hydrologic location; surrounding habitat types; proportions and interspersion of cover and water; and vegetative interspersion. These components are combined with wetland juxtaposition and water chemistry to produce criteria for wetland evaluation. Using a system of specifications and ranks, wetlands can be arrayed according to their wildlife value for decision-making. (Larson-Massachusetts)
W74-01052

DIFFERENTIAL REPRODUCTION AS A CRITERION FOR EVALUATING DEVELOPMENT DECISIONS,
Oregon State Univ. Corvallis.
C. L. Smith.
Human Organization, Vol 32, No 2, p 177-183, Summer 1973. 1 tab, 16 ref. OWRR-B-023-ORE (3), 14-31-0001-3324.

Descriptors: *Decisionmaking, Planning, Social aspects, *Oregon, *Alternative planning.
Identifiers: *Willamette Valley (Ore), *Differential reproduction, *Housing development.

Differential reproduction, the mechanism by which natural selection operates, is a criterion against which development decisions can be evaluated. The specific decision for which the criterion is used is in determining the relationship between alternatives open to the developers and the mechanisms of social control available to regulatouated a housing development along the Willamette River, Oregon. Accepting a global perspective, based on the systems modeling of Forrester, leads to the conclusion that for this housing development and other developments like it, alternatives should be managed to promote rehabilitation and reuse of land and resources, and mechanisms of social control should be established to limit continued resource exploitation. A global perspective, however, is unlikely in development decisions which are made to benefit specific groups of people until the global impacts of their actions can be shown to affect them.

SYSTEMATIC ERRORS IN COST ESTIMATES FOR PUBLIC INVESTMENT PROJECTS,
North Carolina Univ., Chapel Hill.
M. M. Hufschmidt, and J. Gerin.
In: The Analysis of Public Output, National Bureau of Economic Research, New York. 1970. J. Margolis, editor, p 268-315, 6 fig, 9 tab.

Descriptors: *Tennessee Valley Authority, *Estimated Costs, *Construction costs, Administration, Coordination, Projects.
Identifiers: *Cost overrun, Water-resource construction agencies, Errors, *Public investment projects.

The extent, nature and causes of error in estimating costs of public investment are discussed. Analysis is based on cost experience of the 3 largest U. S. water-resource construction agencies: the Army Corps of Engineers, Bureau of Reclamation and TVA--from 1933 to the early 1960's. With no adjustments for construction price levels, TVA cost overrun for dams and reservoirs is 22% of original estimated cost; Corps overrun is 124% for projects built or building prior to 1950, 36% for those completed between 1951 and 1964; while Reclamation overrun is 177% for projects build or building prior to 1955, 72% for all those built or building in 1960. Frequency of cost overruns were: TVA dams and reservoirs, 45%; Corps projects complete 1951-1964, 72%; all Reclamation projects built or building prior to 1955, 85%, for projects built in 1960, 75%. With adjustments for construction price levels, overrun tendencies are less. The first are price increases or authorized project extensions of changed local needs. Underlying factors may be further grouped in two classes: (1) those related to the project and the timing of survey and construction, and (2) those related to the administrative and institutional framework. Tentative conclusions are: that organizational and administrative context is the important variable; that agencies have achieved considerable improvement since the 1950's so that current performance shows no significant bias toward cost underestimation; and that recent agency experience reveals persistence of a sizable variance of error in spite of improvements. Implications for policy and administration are presented. (Edwards-North Carolina)

THE ECONOMICS OF THE CATTLE FEEDING INDUSTRY IN ARIZONA,
Arizona Univ., Tucson. Dept. of Agricultural Economics.
E. L. Menzie, W. J. Hanekamp, and G. W. Phillips.
Arizona Agricultural Experiment Station Tucson, Technical Bulletin 207. Oct. 1973. 82 p, 36 fig, 57 tab, 35 ref.

Descriptors: *Feed lots, *Farm wastes, *Cattle, *Zoning, *Cost analysis, Marketing, *Arizona, Legal aspects, Water pollution sources, Environmental effects, Economics.

Major objectives were to determine changes in the growth and structure of the cattle feeding industry, costs of operation, costs of custom feeding, production problems affecting the competitive nature of the industry, and to analyze the nature of growth and development in beef markets. Data are based on 1972 information, and projections have been made to 1982. Considerable attention is paid to the Arizona feed situation, supply of feeder cattle for Arizona, controls affecting livestock feeding; sources, methods, and costs of finance for feedlots and feeding, marketing of fat cattle and beef, and an assessment of Arizona's competitive position in beef production and marketing, along with the role of changing technology in the industry. The section on controls includes a review of health and sanitation problems of Arizona feedlots, the control of feed supplements, and environmental issues. A particular case involving a suit brought by a land developer against a cattle feeding operation with a non-conforming prior usage right is described; the developer was required to pay for costs involved in the relocation of the feedlot. Consideration of the effect of feedlot wastes on water quality has given rise to a number of research investigations relating to recycling, conversion to other products, confinement feeding, etc., all of which should be accelerated because of the rising demand for beef at the same time that feedlot controls are creating limitations on this type of beef production. A REPORT OF PROGRESS AND CONCLUSIONS, (WASHINGTON, D.C. METROPOLITAN AREA WATER RESOURCES).
Washington Area Interstate Water Resources Program, D.C.

Available from NTIS, Springfield, Va., 22151 as PB-214 959 Price $3.00 printed copy; $1.45 microfiche. January 1973. 35 p, 7 fig, 1 tab.

Descriptors: *Water resources, *Surface waters, *Groundwater resources, *District of Columbia, Water demand, Water supply, Projections, Water quality, Hydrologic data, Reviews, Evaluation, Water treatment, Potomac River, Tributaries, Estuaries, Water utilization, Human population.
Identifiers: *Washington, D.C. metropolitan area.

In recent years the Washington metropolitan area has experienced an explosive growth in population. Construction of housing, highways and shopping centers has resulted in widespread erosion and increased volumes of stormwater from ever-expanding roof and paved areas. Also, this growth has been accompanied by increasing demands for normal services such as water supply and wastewater treatment. Yet, no provision has been made for adequate water supply, and wastewater treatment facilities, badly in need of expanding and upgrading, continue to pour pollutants into streams which are already degraded below applicable stream standards. The Governors of the States of Maryland and Virginia and the Commissioner of the District of Columbia recognized the critical need for concerted action on a regional basis. By joint resolution they formed a policy committee and a task force of representatives of the three jurisdictions and the Metropolitan Washington Council of Governments to develop an action program which would provide solutions to the water resources problems of the area. Since August 16, 1972, the task force has performed an intensive review of previous investigations, prepared a detailed analysis of future needs and existing facilities, and consulted with as many of the officials of local jurisdictions and citizen groups as time would permit. A summary of the analysis of needs vs facilities is included. (Woodard-USGS)

EL PASO'S WATER RESOURCES,
El Paso Water Utilities, Tex.
J. T. Hickerson.
Presented at: Planning Seminar 'El Paso's Challenge: Reality or Myth,' February 8, 1966, El Paso, Texas. 18 p, 7 fig.

Descriptors: *Water supply, *Water sources, *Water requirements, *Projections, *Water reuse, *Texas, Planning, Groundwater, Water rights, Desalinization, Water users, Water rates.
Identifiers: *El Paso (Tex), Rio Grande River.

For the El Paso region indicate that per capita use of water by 2020 will be 250 gallons per day and that the population will be about 900,000. Total accumulated water reauirements to 2020 are projected and additional sources of water to meet this demand are discussed. Present water supply sources are the Rio Grande River and local groundwater. River flows are quite variable and groundwater is used largely for peak demand, especially in the summer. Possible additional sources of water include the importation of water from other areas, the desalinization local brackish water (possibly from the Lower Valley Area), the blending of brackish water with good quality water (already being done in some cities), and the reclamation of wastewater. Two other possibilities are the expanded use of the present river and groundwater resources; the former would require new legal arrangements while the latter would involve increased mining of the groundwater, i.e. withdrawing it faster than it is being replenished naturally. PUBLIC WATER SUPPLIES OF NORTH CAROLINA, PART I NORTHERN PIEDMONT,
Geological Survey, Raleigh, N.C.
N. M. Jackson, Jr.
North Carolina Office of Water and Air Resources, Raleigh. July, 1972. 277 p, 4 fig, 63 maps, 45 tab, 5 ref.

Descriptors: *Water supply, *Water sources, *Water quality, Water storage, Water pumping, Planning, Chemical analysis, *North Carolina.
Identifiers: *Piedmont (NC), Public Water Supply Systems.

An inventory is presented of the public water supply systems in 18 counties in the northern Piedmont of the state of North Carolina. This area includes several major urban areas such as Greensboro, Winston-Salem, High Point, Raleigh, and Durham. Data presented are useful to planners and water managers interested in water availability, water resources development, and water quality. A county-by-county inventory (including maps) are presented. Information is provided on the population served, source of water, estimated allowable draft, industrial water use, raw and finished water storage, raw and finished water pumping capacity, future plans for expansion, chemical analyses of the raw and finished water, and an appraisal of the water supply source. Various categories of data presented and of the inventory procedures are explained. (Elfers-North Carolina)

Descriptors: *Planning, Legal aspects, *Water rights, *Decision making, Standards, *Water law, State governments.
Identifiers: *Environmental law trends, Environmental standards.

Basic legal questions are gaining increasing attention in environmental actions in courts. The directions courts will take can have substantial impact on governmental decision-making bodies responsible for water resources planning. This study identified and discussed patterns and potential trends in four major areas of environmental law with twenty-one legal experts. Areas of consensus on developing patterns of significance for agency planning are reported. Broadened standing to sue requirements in state and federal courts suggest that agencies should not rely on lack of standing of individuals or groups to keep an environmentally significant decision from being litigated. Increased legislative and judicial protection of citizen rights to participate in agency decision-making and to force compliance with regulatory standards will also have an impact on agency decision-making procedures. Results in two remaining areas, expansion of Constitutional rights to include a right to a healthy environment and new interpretations of present common law doctirnes and/or promulgation of new doctrines including public trust, were not as indicative of consensus on trends or their potential impact on agency activities. Evolution in legal doctrine is difficult to ascertain. But, given the import of trends in environmental law on decisions resulting in allocation of scarce national resources and this study's demonstration of the feasibility of identifying areas of consensus among legal experts, the development of indices of legal patterns as an input for agency decision-making models should be further investigated.

WALSH V. SPADACCIA (PROCEEDING TO SET ASIDE DETERMINATION OF TOWN BOARD APPROVING CONSTRUCTION PLANS WHICH DID NOT CONSIDER POLLUTION OF LAKE).

343 N.Y.S.2d 45-55 (Sup Ct, Westchester County 1973). 11 p.

Descriptors: *Zoning, *Septic tanks, *New York, *Sewage effluents, Project planning, City planning, Judicial decisions, Land use, Land development, Water pollution sources, Legal review, Administrative decisions, Legislation, Local governments.
Identifiers: Administrative regulations.

Plaintiffs, two unincorporated associations of homeowners and four individual homeowners, brought suit to vacate the approval by the town board of the site plan for a large apartment complex. Plaintiffs alleged that the board had acted arbitrarily and capriciously in rendering its approval in that it had not given consideration to the effect of the apartments on the pollution of an adjacent lake resulting from septic tanks. The plans submitted to the board did not meet local standards in many respects, particularly in regard to the sewer system. This was becuase, in making its decision, the board had relied on the County Health Department as far as sewage requirements were concerned, and the Health Department was unaware of the stringent requirements of this particular township. The court found that the town board had acted arbitrarily and capriciously in disregarding the township requirements relevant to septic systems and therefore annulled the approval of the site plan. INCREASING PROTECTION FOR OUR WATERS, WETLANDS, AND SHORELINES: THE CORPS OF ENGINEERS.

Seventeenth Report--Comm. on Government Operations, 92d Cong, 2d Sess, August 10, 1972. 49 p, 1 append.

Descriptors: *Wetlands, *Shores, *Navigable waters, *Water resources development, Legal aspects, Jurisdiction, Rivers and Harbors Act, Water quality standards, Exploitation, Jurisdiction, Water pollution sources, Landfills, Dredging, Permits, Administrative agencies.
Identifiers: *Corps of Engineers, Coastal waters, Coastal zone management, Fill permits.

The report is based on several hearings and ongoing studies conducted by the Subcommittee concerning the role of the Corps of Engineers in Administering and protecting the Nation's wetlands and waterways. The hearings and studies revealed that the Corps in the past has exercised its responsibilities over navigable waters with a more restrictive view of its responsibilities than is required by law; and that this self-imposed limitation has resulted in less effective protection for many waters, wetlands, and shorelines. Recent developments in the Corps' efforts to broaden its protection of waters and wetlands are reviewed, and additional steps which should be taken to accomplish that objective are discussed. The Corps of Engineers has major statutory responsibilities affecting these waterways, shorelines, and wetlands. The Corps approves annually thousands of applications for permits and letters of permission under the Rivers and Harbors Act of 1899 to dredge, fill, construct structures in or discharge refuse into navigable waters. A list of conclusions and principal recommendations is included. (Mockler-Florida)

A BILL TO AUTHORIZE CONSTRUCTION OF THE LITTLE CYPRESS LAKE AND RESERVOIR, TEXAS.

House Bill 5297, 93rd Cong, 1 st Sess (1973), 2 p.

Descriptors: *Legislation, *Texas, *Reservoirs, *Reservoir construction, Lakes, Reservoir sites, Legal aspects, Planning, Water resources development, Federal budget.

The bill authorizes the construction of the Little Cypress Lake and Reservoir, Texas, by the Secretary of the Army, acting through the Chief of Engineers, in accordance with existing, specified plans. Construction is not to be initiated until it has been approved by the Secretary of the Army and the President. (Reed-Florida)
W74-00861

A BILL TO PROVIDE FOR THE ESTABLISHMENT OF THE LOWELL HISTORIC CANAL DISTRICT NATIONAL CULTURAL PARK.
House Bill 4514, 93rd Cong, 1st Sess (1973). 5 p.

Descriptors: *Massachusetts, *Legislation, *National Historic Parks, *Recreation, *United States, Education, Legal aspects, Planning, Administration, Contracts, Governmental interrelations, Local governments, Recreation facilities.
Identifiers: *National Cultural Parks, *Tort liability, *Indemnification.

The proposed bill authorizes the Secretary of the Interior to establish the Lowell Historic Canal District National Cultural Park in Lowell, Massachusetts. The Secretary is authorized, with the concurrence of the Lowell Historic Canal District Commission established under this proposed act, to designate certain properties in the city of Lowell for establishment as the park. The means by which the Secretary may acquire the necessary lands and personal property are specified. The bill authorizes the Secretary to cooperate and enter into agreements with the Commission, State and local public bodies, and private interests relating to the acquisition, planning, development or use of real and personal property for educational, cultural, historic or recreational purposes. The Secretary may agree to indemnify any private individual partnership or corporation, which entered into an agreement with the Secretary to construct, maintain and operate a public facility in accordance with plans and standards established by the Commission. (Reed-Florida)

A BILL TO AMEND THE RIVER AND HARBOR ACT OF 1973 RELATING TO THE CHICAGO RIVER, ILLINOIS.

House Bill 271, 93rd Cong, 1st Sess (1970). 2 p.

Descriptors: *Legislation, *Channel improvement, *Rivers and Harbors Act, *Illinois, Rivers, Navigation, Flood control, Water pollution control, Water pollution, Legal aspects, Water resources development, Flood protection.
Identifiers: *Unsightliness.

The proposed bill provides for the amendment of the Rivers and Harbors Act so as to authorize the Secretary of the Army to undertake measures to clear the channel of the North Branch of the Chicago River, Illinois, of objects which contributes to flooding, unsightliness and pollution of the river and to maintain the channel free of such objects. The proposed amendment also specifies appropriation limitation for the project. (Reed-Florida)
W74-00863

A BILL TO PROVIDE FOR THE ESTABLISHMENT OF THE POTOMAC BASIN NATIONAL RIVERWAYS.

House Bill 1884, 93rd Cong, 1st Sess (1973). 11p.

Descriptors: *Legislation, *River basin development, *Recreation, Comprehensive planning, Land use, Aesthetics, Legal aspects, Water quality standards, Water pollution control, Aquatic habitat, Wildlife conservation, Federal government, Governmental interrelations.

This bill seeks to preserve and develop for the enjoyment of all the waters of the Potomac River Basin and adjacent land areas. The legislation further provides that the Secretary of the Interior (Secretary) shall encourage state, regional, country, and municipal bodies to adopt and enforce adequate master plans and zoning ordinances which will promote the use and development of private property within and adjacent to the national riverways in a manner consistent with the Act. He is authorized to provide technical assistance to such bodies in the development and adoption of such plans. Moreover, the Secretary shall permit hunting and fishing on lands and waters under his jurisdiction within the boundaries of the Potomac Basin National Riverways in accordance with the appropriate federal and state laws, except that he may designate zones where, and establish periods when, no hunting or fishing shall be permitted for reasons of public safety, administration, fish or wildlife management, or public use and enjoyment. (Mockler-Florida)
W74-00864

A BILL TO AUTHORIZE THE ACQUISITION OF THE BIG CYPRESS NATIONAL FRESH WATER RESERVE.
House Bill No 46, 93rd Cong, 1st Sess (January 3, 1973). 6 p.

Descriptors: *Legislation, *Florida, *Swamps, Environmental effects, Recreation, Wildlife habitat, Aquatic environment, Wetlands, Marshes, Aquatic habitats, Mangrove swamps, Standing waters, Freshwater fish, Wildlife, Small game.

This bill would authorize the acquisition of the Big Cypress National Fresh Water Reserve in the State of Florida because the unique natural environment of this area should be protected from further development which would significantly and adversely effect its ecology. The proposed bill would authorize the Secretary of the Interior to: acquire by donation, purchase with donated or appropriated funds, transfer from any other federal agency, or exchange land and interests within the area in question. The proposed boundaries of the area may not encompass more than five hundred and forty-seven thousand acres of privately owned land. Property owned by the State of Florida or any political subdivision thereof may be acquired only by donation. The Secretary shall permit hunting, fishing, and trapping on lands and waters under his jurisdiction within the reserve in accordance with the applicable laws of the U.S. and the State of Florida except that he may designate areas and times in which no hunting, fishing, or trapping will be permitted for reasons of public safety or public use and enjoyment. (Mockler-Florida)
W74-00865

COMMONWEALTH V. BARNES AND TUCKER COMPANY (SUIT FOR MANDATORY INJUNCTION REQUIRING DEFENDANT TO TREAT ACID MINE DRAINAGE FROM MINE).
303 A.2d 544-575 (Pa. Cmwlth. 1973).

Descriptors: *Judicial decisions, *Mining, *Drainage, *Legal aspects, *Pennsylvania, Nuisance, Acid mine water, Mine drainage, Mine wastes, Mine water, Waste dumps, Public health, Water quality standards, Water law.
Identifiers: Nuisance (Legal aspects).

This case involved a complaint in equity for a mandatory injunction brought by the complainant-state against the defendent mine owner requiring the defendent to treat acid mine drainage discharging from the company's mine, as the discharge did not meet the minimum water quality standards. The court held for the defendent who held a time-extended mine drainage permit under the 1965 amendment to the Clean Streams Law. The court held the defendant did not assume the responsibility, by reason of the provisions of the Clean Streams Law or regulations promulgated thereunder then in effect, for any mine drainage discharge after the cessation of mining and that it was not the responsibility of the defendant to abate the water's polluting qualities. Moreover, the court indicated that the mine water discharge consituted neither a public nuisance under the Clean Streams Law nor a common-law nuisance for which the defendent would be responsible. NATURAL RESOURCES DEFENSE COUNCIL INC. V. GRANT (ACTION TO PERMANENTLY ENJOIN CONSTRUCTION OF WATERSHED PROJECT).

355 F. Supp 280-290 (E.D.N.C. 1973).

Descriptors: *North Carolina, *Environmental control, *Environmental effects, *Judicial decisions, *Federal jurisdiction, Sediment control, Sediment discharge, Watershed management, Regulation, Administrative agencies, River and Harbors Act, Eutrophication, Legal aspects, Ecology, Aquatic habitats, Judicial review.
Identifiers: *National Environmental Policy Act, *Injunctive relief, *Environmental impact statement.

Plaintiffs, private environmental groups, sought injunctive relief claiming that defendents, government officials, failed to satisfy the requirements of the National Environmental Policy Act of 1969 (NEPA) and that implementation of the project would violate section 13 of the Rivers and Harbors Act of 1899. The preliminary injunction was granted until an environmental impact statement was filed according to NEPA. After filing of the final impact statement the injunction was dissolved. Plaintiffs moved for new injunction pending appeal. The Court of Appeals remanded for a preliminary hearing on the adequacy of the final statement. The court on remand found: (1) the statement misrepresented the adverse environmental effects of the project upon fish habitat. (2) misrepresented effect upon fish resources, (3) ignored effect on potential eutrophication problems in Tar Pamlico estuary, (4) failed to disclose maintenance history of PL 566 Projects, (5) ignored serious environmental consequences of proposed use of Kudzu, (6) did not disclose or discuss cumulative effects, (7) failed to fully disclose or adequately discuss alternatives. The court therefore found the final statement was not a 'full disclosure' as required by NEPA and granted the new preliminary injunction. (Napolitano-Florida)

PROJECTS PROPOSED FOR INCLUSION IN OMNIBUS RIVER AND HARBOR AND FLOOD CONTROL LEGISLATION--1972.

Joint Hearings--Subcomm. on Rivers and Harbors and Subcomm. on Flood Control and Internal Development--Comm. on Public Works, U.S. House of Representatives, 92d Cong, 2d Sess, February and March 1972.

Descriptors: *Federal government, *Legislation, *Rivers and Harbors Act, *Flood control, Navigation, Erosion, Wildlife habitat, River basin development, Resources development, Environmental effects, Comprehensive planning, Water resources development.

Testimony was given in joint congressional hearings to consider projects proposed for inclusion in the Omnibus River and Harbor and Flood Control legislation of 1972. The committee heard testimony from representatives of the U.S. Corps of Engineers, members of Congress, and citizens concerning 26 new flood control and river and harbor projects costing over $205 million. This number includes six projects dealing with navigation and beach erosion control, 18 on flood control and hurricane protection, and 2 for fish and wildlife projects. Specific projects considered included the Edwards Underground Reservoir in San Antonio, Texas, the Arkansas River Basin Project, the Pecos River project near Alpine, Texas, the North Shore project in Long Island, New York, and the Hoorah Harbor Project in Alaska. Alternatives to the proposed projects as well as adverse environmental effects of the proposals are given, and charts, graphs, and other illustrations are included. (Mockler-Florida)

DESIGNATION OF WILDERNESS AREAS, PART II.
Hearings--Subcomm. on Public Lands--Comm. on Interior and Insular Affairs, U.S. House of Representatives, 92d Cong, 2d Sess, 1972. 301 p.

Descriptors: *Legislation, *National forests, *Wildlife, *Wildlife conservation, *United States, Administration, Governments, Legal aspects, Planning, Regulation, Boundaries (Property), Contraints, Montana, Oregon, Colorado.
Identifiers: *Wilderness areas.

The purpose of the hearings was to consider several bills dealing with wilderness areas. The bills would authorize and direct the Secretary of Agriculture to classify as wilderness the national forest lands in certain parks of Montana; add and modify the boundaries of the Wellowa National Forest in Oregon; and authorize the Secretary to review as to its suitability for preservation as wilderness, the Indian Peaks area in Colorado. Reports from the Departments of Agriculture and Interior were made to the subcommittee as were statements from various interested private conservation and wildlife organizations. Statements were also given by a number of representatives from governmental agencies. (Reed-Florida)

ARKANSAS SOIL AND WATER CONSERVATION COMMISSION.

Arkansas Stat. Ann. secs 9-101 thru 9-128 (Supp. 1971).

Descriptors: *Legislation, *Water resources development, *Conservation, *Arkansas, Administration, Interstate waters, Watershed management, Flood control, Soils, Navigation,

Water quality management, Governmental interrelations.

This act creates the Arkansas Soil and Water Conservation Commission. The Commission shall consist of seven members to be appointed by the Governor and approved by the Senate. Each congressional district shall be represented by membership on the Commission. The Act provides that the Commission shall have the authority to enter into negotiations with the duly authorized representatives of adjoining states as to the protection and use of interstate waters in streams, lakes, reservoirs, or natural or artifical channels of impoundments. The Commission is empowered to employ a water resources engineer. In addition, the Commission shall cooperate with federal agencies in the development of their plans for federal public works under the Public Works Acceleration Act, or other federal law of similar import, in such projects as small watersheds, river and harbor, flood control, soil conservation, river navigation, and hydroelectric power. Moreover, the Commission may take such other action as it shall deem necessary or desirable to carry out the purposes and intent ofthe Act. (Mockler-Florida)

LOUISIANA GOVERNMENT AND THE COASTAL ZONE-1972.
March, 1972. 45 p, 4 fig.

Descriptors: *Planning, *Coastal marshes, *Environmental effects, *Ecosystems, Wetlands, Urbanization, Land use, Administration, Coordination, Institutions, *Louisiana.
Identifiers: *Coastal zone management, State agencies.

Louisiana Act 35 of 1971 charged the Louisiana Advisoty Commision on Coastal and Marine Resources to prepare a Coastal Zone Management Plan by September 15, 1973. This is the first progress report on the planning efforts. Emphasis is on describing the nature of Louisiana's coastal zone including the problems related to the strong pressures for industrial development and analyzing the state institutional structure for management of the coastal zone. The coastal zone is a delicately balanced and highly vulnerable ecosystem. Thus, uncoordinate activities including urban and industrial development and flood control projects have changed natural processes and adversely affected fish and wildlife. The Coastal Zone Management Plan would promote orderly development, protect environmental resources and processes, and coordinate state and private agencies and groups. A key problem in the past has been a lack of state policy on coastal zone management and the lack of coordination among state agencies with regard to activities related to ecologic processes, for example, water quality management. Thus, 23 state agencies whose activities have a significant effect on coastal and marine resources are analyzed. (Elfers-North Carolina)

6F. Nonstructural Alternatives

FLOOD MANAGEMENT PLAN--WARNING, DAMAGE, COORDINATION.
Denver Regional Council of Governments, Colo.

Available from NTIS, Springfield, Va. 22151 as PB-218 963 Price $3.00 printed copy; $1.45 microfiche. Project Reuse Report DRCOG-72-009, June 1972. 46 p, 2 fig, 1 tab, append. HUD Contract 1392.

Descriptors: *Flood control, *Flood forecasting, *Flood data, *Hydrologic data, *Cclorado, Flood damage, Flood plain zoning, Flood routing, Erosion control, Sediment control, Streamflow, Rainfall-runoff relationships, Flow characteristics, Flow augmentation, Flood profiles, Flood protection.
Identifiers: *Flood management plan (Colo), *Denver region (Colo).

A review of the status of existing mechanisms for flood warning and prediction within the Denver region was undertaken to define the degree of responsibility of various federal, state and local agencies for flood warning and protection. Current efforts of the Colorado Department of Natural Resources, through the State Engineer's Office, to automate the collection and recording of information on streamflows and water right diversions, were reviewed to provide compatibility between the flood warning system and the State Engineer's administrative data collection procedures. The responsibility and current capability of the National Weather Service (Weather Bureau) have also been investigated, to provide for their continued inclusion in, and coordination with, the program. In support of a broad flood management program, encompassing prevention of future losses as well as warning of impending danger, a method of monitoring, recording, and analyzing actual damage is described. (Woodard-USGS)
W74-00817

A PROGRAM FOR STORM DRAINAGE AND FLOOD CONTROL-1971-1990: DAMAGE PREVENTION, MAJOR DRAINAGEWAYS, MASTER PLANNING, REGIONAL MANAGEMENT.
Denver Regional Council of Governments, Colo.

Available from the National Technical Information Service as PB-218 961, $3.25 in paper copy, $1.45 in microfiche. Project REUSE Final Report (Supplement). August, 1972. 94 p, 14 fig, 10 tab. COLO-USE-1. DHUD-H-1392.

Descriptors: *River basin development, *Regional analysis, *Flood plain zoning, *Storm runoff, Criteria, Standards, Forecasting, Flood control, Runoff, Coordination, *Colorado, Urban runoff, Urban drainage.
Identifiers: Preventive master planning, Detention ponding, *Denver SMSA (Colo), Design master planning.

The Denver Standard Metropolitan Statistical Area, Adams, Arapahoe, Boulder, Denver and Jefferson Counties, is drained by the South Platte river and its tributaries. Urbanization, heavy runoff from snowmelt, and high intensity localized storms combine to create severe flooding. This proposed major drainage program to provide up to 100 year frequency and flood runoff protection is divided into a short-range program (through 1975) with emphasis on preventive multi-jurisdictional master planning and design master planning, and the long-range program (1976-1990), where emphasis will shift to construction. Short range objectives are: completion of 320 channel miles of preventive master planning and 97 miles of design master planning concentrated on high and moderate potential flood damage areas; (2) reduction of backlog of major drainage needs; (3) protection from a 100 year frequency storm for 42% of the area by preventive measures, facilities, and/or flood insurance; and (4) development and enforcement of a runoff control ordinance. During the construction period emphasis will shift to attainment of 100 year protection for all areas except in areas where costs are prohibitive. Here flood insurance coverage can be provided. Programs for each period are detailed including project scheduling and timing. Implemention stratey and recommendations are based on criteria developed under Project REUSE (Reviewing the Environment through Urban Systems Engineering). Financing, organization, flood plain zoning and insuracne, and detention ponding are discussed. (Hoffman-North Carolina)

BODEGA: A CASE HISTORY OF INTENSE CONTROVERSY,
J. W. Hedgpeth.
In: Environmental Quality and Water Development, W. H. Freeman, and Co. San Francisco, 1973. C. R. Goldman editor, p 438-454, 3 fig, 7 ref.

Descriptors: *Recreation, *Shores, *Powerplants, *Thermal pollution, *Nuclear powerplants, Earthquakes, Political aspects, *California, Radioactivity, Safety.
Identifiers: Sonoma County (Calif), San Andreas Fault, *Bodega Head (Calif).

Bodega Head, a small peninsula north of San Francisco Bay adjacent to the San Andreas fault, was announced in the late 1950s as the proposed site for an atomic power plant by Pacific Gas and Electric Company (PG and E). At the same time the University of California expressed an interest in the site for a marine sceicne laboratory. The controversy generated by these announcements and court actions which followed as PGandE exercised its right to eminent domain is described from the vantage point of personal participation. Sonoma County Harbor Commission and Sonoma County Commissioners remained relatively neutral. The conflict was characterized by a lack of information about geological conditions, offshore currents, and mixing patterns as they related to power plant thermal pollution. The marine science laboratory was built while the controversy over the power plant continued. By 1962 the Sierra Club and other conservationists were engaged in the battle against PG and E. Revelations of old rock fractures on the site and discovery of a complex faulting structure offshore together with awareness of earthquake danger and radiation leakage apparently played a part in the decision-making process. In 1964 AEC refused to grant a license to PGandE based on safety requirements. The site was later acquired as a part of the state park system. The significance of the controversy in terms of citizen participation and the problems involved in dealing with conservation and preservation issues are discussed. (Edwards-North Carolina)

07. RESOURCES DATA

7A. Network Design

NEEDS AND USES FOR A GROUND WATER QUALITY DATA SYSTEM,
Minnesota Univ., St. Paul. Agricultural Extension Service.
L. Hanson.
In: Proceedings of Conference on Toward A Statewide Ground Water Quality Information System and Report of Ground Water Quality Subcommittee, Citizens Advisory Committee, Governors Environmental Quality Council: University of Minnesota Water Resources Research Center Mimeographed Report, p 102-105, February 1973. 5 ref. 14-31-0001-3823.

Descriptors: *Data collections, *Hydrologic data, *Minnesota, Network design, Planning, Water management (Applied), Water quality, Water pollution, Monitoring, Warning systems.

The major objective of Minnesota's proposed groundwater quality information system is to provide an early warning system to alert State agencies with responsibility for management of this resource of future problems. This is extremely important because of the long-time frame involved in groundwater movement. Surface contamination may effectively destroy a water supply or make necessary expensive treatment processes for the affected communities. The investment of a modest amount of State resources to develop such a system would essentially be an inexpensive insurance policy designed to protect a State resource worth billions of dollars. Priority objectives for the information system are early warning of deterioration of groundwater quality for responsible governmental agencies; providing base line information on natural or present water quality; providing guide for land use planning and land use controls as related to groundwater quality; providing a basis for educational programs on groundwater resources; providing service to individuals, engineers, water well contractors and local government regarding best well locations and formations for water supply; and providing scientific and technical data for a variety of uses such as tracing of groundwater movement and prospecting for other economic resources. SOME SIMPLE METHODS FOR LIMNOLOGICAL STUDY IN SHALLOW WATER,
Institut Royal des Sciences Naturelles de Belgique, Brussels.
G. Marlier, G. Gallez, G. Hachez, and C. Wattiez.
Bull Inst R Sci Nat Belg Biol, Vol 48, No 5, p 1-11, 1972, Illus, English summary.
Identifiers: Dredges, Limnological studies, Methods, Nets, *Productivity (Plankton), *Plankton sampler, *Sampling (Shallow-water).

A simple plankton sampler is described which avoids the drawback of clogging of nets. It is used in shallow waters of ponds during studies on productivity. Another type of plankton sampler made of a narrow net is also depicted, the features of which are also intended to avoid clogging. It is used under the same conditions and gives comparable results to the first device. Then, 2 methods are proposed for splitting plankton samples not large enough for using the commercially available plankton-splitters. Lastly, a small quantitative dredge for benthic organisms to be used in shallow ponds or littoral waters, is described.--Copyright 1973, Biological Abstracts, Inc.

TIME-TABLES AS A METHOD TO RECORD CHANGES IN PLANKTON COMPOSITION,
Research and Advisory Inst. for Field Crop and Grassland Husbandry, Wageningen (Netherlands).
B. J. Hoogers, and H. G. Van Der Weij.
Inst Biol Scheik Onderz Landbouwgewassen Wageningen Meded, 451, p 19-27, 1971.
Identifiers: Plankton data, Records, *Time tables, Methodology, *Phytoplankton, *Zooplankton.

In 1967 Hoogers introduced the use of time-tables to record the development throughout the year of ditch vegetations. A method is introduced to record in a similar way the composition of phytoplankton and zooplankton. Of the phytoplankton and zooplankton samples that are taken at regular intervals the numbers of specimens of individual species observed in 100 optical fields are expressed in scale values and introduced on a time scale. The method is demonstrated by means of data obtained in a fertilization experiment.--Copyright 1973, Biological Abstracts, Inc.
W74-01010

EVALUATION OF A REMOVAL METHOD FOR ESTIMATING THE NUMBERS OF ROCK POOL CORIXIDS (HEMIPTERA, CORIXIDAE),
Helsinki Univ. (Finland). Dept. of Zoology.
V. I. Pajunen.
Ann Zool Fenn. Vol 9, No 3, p 152-155. 1972.
Identifiers: Corixidae, *Corixids, Hemiptera, Heteroptera, Methodology, *Rock pools, *Nets.

The numbers of larval and adult corixids in small rock pools were estimated by a removal method. Standardized net sweeps were used as units of catch, each removing 8-20% of the numbers remaining; the total catch comprised 50-85% of the total numbers. Estimates based directly on daily catches varied greatly, but acceptable results were obtained by using parameters estimated from pooled data of 3 yr. Significant differences in catchability were found between earlier and later developmental stages. By pooling the information for different stages and for different rock pools, 95% confidence limits differing by 10-50% from point estimates of total numbers were obtained.--Copyright 1973, Biological Abstracts, Inc.

WATER WELL RECORDS AND INFORMATION SYSTEM NEEDS,
Minnesota Dept. of Health, Minneapolis. Div. of Environmental Health.
E. H. Ross.
In: Proceedings of Conference on Toward A Statewide Ground Water Quality Information System and Report of Ground Water Quality Subcommittee, Citizens Advisory Committee, Governors Environmental Quality Council: University of Minnesota Water Resources Research Center Mimeographed Report, p 106-124, February 1973. 10 fig, 2 tab. 14-31-0001-3823.

Descriptors: *Water quality, *Groundwater, *Data collections, *Monitoring, *Minnesota, Sampling, Well data, Water wells, Planning.

In Minnesota, standards are established for the design, location, and construction of water wells within the State. The driller is required to submit well record information on each well drilled which includes data on geology, water quality and quantity, construction methods, and equipment. State Health Department laboratory staff performs chemical and biological analyses on water samples. The Department of Natural Resources uses the data for furthering their information on location and distribution of groundwater resources and their allocation. The Geological Survey uses the data for refinement of the geological mapping of the State. The Health Department uses the data to assist in evaluating the degree to which the water well contractors are complying with the provisions of the law for licensing and regulation and more specifically for compliance with the regulations on standards for well construction. SUBSURFACE GEOLOGIC INFORMATION SYSTEM IN MINNESOTA: A STATUS REPORT,
Geological Survey, Minneapolis, Minn.
G. B. Morey.
In: Proceedings of Conference on Toward A Statewide Ground Water Quality Information Systems and Report of Ground Water Quality Subcommittee, Citizens Advisory Committee, Governors Environmental Quality Council: University of Minnesota Water Resources Research Center Mimeographed Report, p 125-141, February 1973. 8 fig, 2 tab, 4 ref. 14-31-0001-3823.

Descriptors: *Data storage and retrieval, *Data collections, *Minnesota, *Hydrologic data, Geology, Hydrogeology, Data processing.

An efficient data storage and retrieval system was established in Minnesota for geologic information. The Minnesota Geological Survey maintains a central file for the State by storing it in a digital computer system capable of printing out data as required. The well log data includes name, age, depth to top, and thickness of each lithologic unit encountered; and a description of each unit, including bedding characteristics, color, grainsize, sorting and other characteristic textures, type and amount of cement, porosity, permeability, and mineral composition. The system is capable of retrieving data in several ways. A printout summarizes data from one drill hole, or a printout summarizing all available data is available. Specific data may be obtained for a specific area. The computer, interfaced with various automatic plotters, will provide data in an interpretable form, such as contour maps or graphs, directly to the user. (See also W73-09113) (Knapp-USGS)
W74-00575

GROUND WATER QUALITY INFORMATION SYSTEMS - EXPERIENCES IN OTHER STATES,
Minnesota Univ., Minneapolis. School of Public Health.
C. P. Straub.

In: Proceedings of Conference on Toward A Statewide Ground Water Quality Information System and Report of Ground Water Quality Subcommittee, Citizens Advisory Committee, Governors Environmental Quality Council: University of Minnesota Water Resources Research Center Mimeographed Report, p 142-180, February 1973. 1 tab, 2 append. 14-31-0001-3823.

Descriptors: *Data storage and retrieval, *Data collections, *Hydrologic data, Geology, Hydrogeology, Data processing.

Information on State systems for the collection and retrieval of groundwater data was requested from the 50 States, Puerto Rico, and the Virgin Islands. In response to the initial enquiry, replies were received from 45 States and two territories. Only 10 States reported that they had automated data collection and retrieval systems or that such systems were under development. Three of these states were geared solely to the collection of water-resources information. Five states had cooperative collection and retrieval systems with the U.S. Geological Survey. A number of states indicated that a manual collection and data retrieval system was being used based on data files maintained over a considerable period of time. The data available on existing information systems, the analytical services available for characterizing the quality parameters of the water supplies, and other information are listed. There is no single agency in state government that is basically responsible for the collection and dissemination of data on groundwater quality. (See also W73-09113) (Knapp-USGS)

UTAH'S GROUND WATER QUALITY INFORMATION SYSTEM,
Utah State Div. of Health, Salt Lake City.
L. M. Thatcher.
In: Proceedings of Conference on Toward A Statewide Ground Water Quality Information System and Report of Ground Water Quality Subcommittee, Citizens Advisory Committee, Governors Environmental Quality Council: University of Minnesota Water Resources Research Center Mimeographed Report, p 181-190, February 1973. 4 fig. 14-31-0001-3823.

Descriptors: *Utah, *Data storage and retrieval, *Hydrologic data, *Groundwater, Well data, Data processing, Water quality, Water management (Applied).

In Utah, environmental quality matters are within the Division of Health, with policy guidance of three statutory bodies: The State Board of Health, State Air Conservation Committee, and State Water Pollution Committee. Computerized inventories of water pollution sources and similar inventories of municipal water supplies are in use. Including quality and quantity characteristics of all individual sources contributing to these supplies will greatly enhance the value of computer records. Present procedure also includes publishing annually all chemical and radiological laboratory analysis information in chronological tabulation. Bacteriological analyses performed primarily on some 335 municipal supplies, and not identified as to source, are tabulated for each municipality on an annual basis to determine compliance with drinking water standards. A few separate groundwater sources may be monitored for coliforms if chlorination is depended on for purification and if there is some question about level of pollution. FEDERAL WATER INFORMATION SYSTEMS,
Geological Survey, Washington, D.C. Office of Water Data Coordination.
W. W. Doyel.
In: Proceedings of Conference on Toward A Statewide Ground Water Quality Information System and Report of Ground Water Quality Subcommittee, Citizens Advisory Committee, Governors Environmental Quality Council: University of Minnesota Water Resources Research Center Mimeographed Report, p 191-209, February 1973. 8 fig, 18 ref. 14-31-0001-3823.

Descriptors: *Information exchange, *Data storage and retrieval, *Information retrieval, Data collections, Hydrologic data, Environment, Documentation, Networks, Land use, Planning, Management.

Systems are being developed to give information on the environment and assist in putting together all the facts and figures for proper decisionmaking. The National Water Data Exchange (NAWDEX) is an example of a decentralized system. Collector agencies act as ongoing data centers with little, if any, change in operating procedures. A combination of centralized and decentralized approaches is exemplified by the Resources and Land Information program (RALI) being developed within the Department of the Interior. This program will provide (1) a broad data acquistion capability; (2) a National Information System Network utilizing libraries as well as computer systems; and (3) interpretation, analysis, and translation of the data into products that are applicable by the user. The RALI program will operate with a national center in the Washington, D.C. area, regional centers, and links to state and local centers. The Geological Survey established the Office of Data Coordination (OWDC) in its Water Resources Division to carry out the coordinating, planning, and cataloging functions, to complement its function of data acquisition. The principal functions are: to design and operate a national network for acquiring water data; to organize the network data; to coordinate national network and specialized water data activities; to prepare an annual Federal Plan for acquisition of water data; and to maintain a central catalog of information. (See also W73-09113) (Knapp-USGS)
W74-00578

RELATION OF GROUND WATER QUALITY INFORMATION SYSTEM AND OTHER SYSTEMS IN MINNESOTA,
Minnesota State Planning Agency, St. Paul.
D. Hamernick.
In: Proceedings of Conference on Toward A Statewide Ground Water Quality Information System and Report of Ground Water Quality Subcommittee, Citizens Advisory Committee, Governors Environmental Quality Council: University of Minnesota Water Resources Research Center Mimeographed Report, p 211-216, February 1973. 3 ref. 14-31-0001-3823.

Descriptors: *Information exchange, *Data storage and retrieval, *Minnesota, *Information retrieval, Data collections, Hydrologic data, Environment, Documentation, Networks, Land use, Planning, Management.

Several information systems are presently being developed by State agencies in Minnesota. The Minnesota Pollution Control Agency initiated data systems for river and air quality data and has access to a Federal system, STORET. The State Department of Health computerizes statistics of the past decade and has a system for dealing with municipal water quality data. The Minnesota State Planning Agency is sponsoring a data bank for land-use information and has completed a lakeshore inventory. To assure maximum compatibility between these systems, overall coordination through a central agency is necessary. The primary goal of the Minnesota Land Management Information System (MLMIS) Project is to improve the quality of public- and private-sector decisions about the environment. MLMIS is doing this by providing extensive information, previously unavailable, on present land use and economic and social conditions. This means combining in compatible computer systems a broad range of data now collected routinely and maintained separately by government agencies in their regular licensing, regulating, and management functions. SURFACE WATER SUPPLY OF THE UNITED STATES, 1966-70: PART 9. COLORADO RIVER BASIN--VOLUME 2. COLORADO RIVER BASIN FROM GREEN RIVER TO COMPACT POINT.
Geological Survey, Washington, D.C.

Available from GPO, Washington, D.C., 20402 Price $3.20. Water-Supply Paper 2125, 1973. 634 p, 1 fig.

Descriptors: *Streamflow, *Flow measurement, *Hydrologic data, *Surface waters, *Colorado River basin, Basic data collections, Arizona, Colorado, New Mexico, Utah, Wyoming, Gaging stations, Flow rates, Average flow, Low flow, Peak discharge, Stream gages, Lakes, Reservoirs, Water levels, Crest-stage gages.
Identifiers: *Colorado River Basin (Wyo to N Mex).

This volume of surface water data for the Colorado River basin from Green River to Compact Point is one of a series of 37 reports presenting records of stage, discharge, and content of streams, lakes, and reservoirs in the United States during the 1966-70 water years. The tables of data include a description of the gaging station, and daily, monthly, and yearly discharges of the stream. The description of the station gives the location, drainage area, records available, type and history of gage, average discharge, extremes of discharge, and general remarks. For most gaging stations on lakes and reservoirs a description of the station and a monthly summary table of stage and contents are given. Data for partial-record stations include measurements at low-flow partial-record stations and annual maximum stage and discharge at crest-stage stations. (Woodard-USGS)

SOME ASPECTS OF NONORTHOGONAL DATA ANALYSIS, PART II. COMPARISON OF MEANS,
Du Pont de Nemours (E. I.) and Co., Wilmington, Del.
R. D. Snee.
Journal of Quality Technology, Vol 5, No 3, p 109-119, July 1973. 3 fig, 8 tab.

Descriptors: *Regression analysis, Statistical methods, *Data processing.
Identifiers: *Analysis of covariance, *Missing data, *Comparison of means, Unequal replicates, Multiple regression.

Since the effects of factors and their interactions cannot be evaluated by the ususal analysis of variance technique when there are unequal replicates of missing data, alternative methods are required. The use of multiple regression in the analysis of this type of data and analysis of covariance problems is discussed. Suggested procedures are illustrated. (Little-Battelle)
W74-00612

ESTIMATING A CORRELATION COEFFICIENT WHEN ONE VARIABLE IS NOT DIRECTLY OBSERVED,
Virginia Polytechnic Inst. and State Univ., Blacksburg. Dept. of Statistics.
L. S. Mayer.
Journal of the American Statistical Association, Vol 68, No 342, p 420-421, June 1973. 1 tab, 9 ref.

Descriptors: *Correlation analysis, Statistical methods.
Identifiers: *Correlation coefficients, *Monotonic transforms.

A simple method is presented for estimating the correlation between two bivariate normal variables when one variable is directly observed and a montonic transform of the other variable is observed. The concept of best monotone regression is defined and a monotone correlation coefficient is introduced. It is shown that this coefficient is a consistent estimator of the true correlation between the two bivariate normal random variables. An application is presented. (Little-Battelle)
W74-00619

A SYSTEMATIC APPROACH TO THE ANALYSIS OF MEANS. PART I. ANALYSIS OF TREATMENT EFFECTS,
General Electric Co., Cleveland, Ohio.
E. G. Schilling.
Journal of Quality Technology, Vol 5, No 3, p 93-108, July 1973. 7 fig, 13 tab, 15 ref, 2 append.

Descriptors: *Statistical models, Data processing, Statistical methods.
Identifiers: *Data interpretation, *Analysis of means, Treatment effects, Algorithms, Crossed design, Incomplete block design, Nested design, Split-plot design, Experimental design.

The analysis of means is a method for the graphical analysis of the means resulting from a designed experiment. The basic procedure, which was developed by E. R. Ott of Rutgers University, has been extended. This part of the series provides an algorithm to simplify application of analysis of means, extends the analysis from the present crossed-fixed effects designs to other forms such as balanced incomplete blocks, and discussed the role of random factors. Several examples are included. (Little-Battelle)

ALTERNATING CURRENT POLAROGRAPHY IN THE HARMONIC MULTIPLEX MODE. OBSERVATIONS ON THE USE OF DIGITAL SIGNAL CONDITIONING WITH THE FAST FOURIER TRANSFORM ALGORITHM,
Northwestern Univ., Evanston, Ill. Dept. of Chemistry.
D. E. Gover, and D. E. Smith.
Analytical Chemistry, Vol 45, No 11, p 1869-1877, September 1973. 7 fig, 25 ref.

Descriptors: *Fourier analysis, *Instrumentation, *Data processing, Polarographic analysis, Efficiencies, Methodology, Data collections, Measurement, Cadmium, Zeta potential, Automatic control, Algorithms.
Identifiers: *AC polarography, *Fast Fourier transformation, Digital signal conditioning, *Data acquisition, Harmonic multiplex mode, Analog to digital converters, Chromic cyanide, Minicomputers.

Digital signal conditioning based on the Fast Fourier Transformation (FFT) is applied to ac polarography in the harmonic multiplex mode. The FFT is used in two capacities. First, it is applied to the discrete, digital representation of the cell current time domain waveform, which is obtained by analog-to-digital conversion. Through this operation, the digital FFT provides the means for separation and quantitative characterization of the direct current, fundamental harmonic alternating current, and second harmonic alternating current polarographic responses. Second, polarograms resulting from measurement of the response as a function of the dc potential are smoothed by a FFT smoothing technique. Results show that the foregoing digital signal conditioning scheme provides at least comparable measurement fidelity, together with superior efficiency and convenience, compared with a previously-described procedure which relies more heavily on analog signal conditioning. HEC-1, FLOOD HYDROGRAPH PACKAGE--USERS MANUAL, COMPUTER PROGRAM 723-X6-L2010.
Hydrologic Engineering Center, Davis, Calif.

January 1973. 186 p.

Descriptors: *Flood discharge, *Synthetic hydrology, *Systems analysis, *Computer models, *Computer programs, Input-output analysis, Methodology, Hydrographs, Hydrologic data, Forecasting, Statistical methods, Computers, Flood routing, Rainfall-runoff relationships, Flood damage, Watersheds (Basins).
Identifiers: Fortran IV.

This computer program represents a major revision of the October 1970 version of the Flood Hydrograph Package, HEC-1. The computational methods used by the program remain basically unchanged; however, the input and output formats have been almost completely restructured. These changes were made in order to simplify input requirements and to make the program output more meaningful and readable. The program is capable of performing five major types of flood hydrograph analyses: (1) optimization of routing parameters; (2) optimization of unit hydrograph and loss rate parameters; (3) generalized precipitation, runoff, routing and combining operations to simulate the hydrologic response of a watershed and its stream network; (4) stream system computations for specified precipitation depth-area storm relationships for the entire watershed or region; and (5) specialized precipitation streamflow network simulation relative to multiple floods for multiple plans of basin development and the economic analysis of flood damages. This version of the Flood Hydrograph Package has been developed and tested primarily on the UNIVAC 1108 and the Control Data Corporation 6600 computer systems. It was then adapted for use of the GE 400 series computers. (Woodard-USGS)

COMPUTER PROGRAM 723-X6-L202A, HEC-2, WATER SURFACE PROFILES--USERS MANUAL.
Hydrologic Engineering Center, Davis, Calif.

February 1972. 134 p.

Descriptors: *Streamflow forecasting, *Flood forecasting, *Systems analysis, *Computer programs, *Synthetic hydrology, Flood profiles, Computers, Computer models, Methodology, Environmental effects, Engineering structures, Hydraulic structures, Bridges, Culverts, Weirs, Embankments, Dams, Flood control.
Identifiers: Fortran IV.

This computer program (723-X6-L202A) is a modification of program 723-G2-L214A (first issue dated December 1968) developed in The Hydrologic Engineering Center. The program computes and plots (by printer) the water surface profile for river channels of any cross section for either subcritical or supercritical flow conditions. The effects of various hydraulic structures such as bridges, culverts, weirs, embankments, and dams may be considered in the computation. The principal use of the program is for determining profiles for various frequency floods for both natural and modified conditions. The latter may include channel improvements, levees and floodways. Input may be in either English or Metric units. The program was written for use in the CDC 6600 computer but may be used with minor modifications on other high-speed computers having four or more magnetic tapes plus input and output units such as the IBM 360, IBM 7094, and GE 437. Various versions of the original program 723-G2-L214A can be used on smaller computers such as the IBM 1620, GE 225, and IBM 1130. (See also W74-00823) (Woodard-USGS)
W74-00822

COMPUTER PROGRAM 723-X6-L202A, HEC-2, WATER SURFACE PROFILES--PROGRAMMERS MANUAL.
Hydrologic Engineering Center, Davis, Calif.

June 1973. 188 p, 7 fig, 4 tab.

Descriptors: *Streamflow forecasting, *Flood forecasting, *Systems analysis, *Computer programs, *Synthetic hydrology, Flood profiles, Computers, Computer models, Methodology, Environmental effects, Engineering structures, Hydraulic structures, Bridges, Culverts, Weirs, Embankments, Dams, Flood control.
Identifiers: Fortran IV.

This computer program (723-X6-L202A) is a modification of the 1964-1968 (first publication dated 1968) versions of program 723-G2-L214A (formerly 22-J2-L212), developed in the Hydrologic Engineering Center. The program computes and plots (by printer) the water surface profile for river channels of any cross section for either subcritical or supercritical flow conditions. The effects of various hydraulic structures such as bridges, culverts, weirs, embankments, and dams may be considered in the computation. The principal use of the program is for determining profiles for various frequency floods for both natural and modified conditions. The latter may include channel improvements, levees and floodways. Input may be in either English or Metric units. A supplementary program (723-G1-L202B) is available to convert input data prepared for the older program 723-G2-L214A for use in the new program. A data edit program (723-G1-L202C) which reads the data cards for the new program 723-X6-L202A and checks the data for various input errors is also available. The program was written for use on various high-speed computers having four or more magnetic tapes, plus input and output units, such as the IBM 360/50, UNIVAC 1108, GE 437, and CDC 6600. Various versions of the original program 723-G2-L214A can be used on smaller computers such as the IBM 1620, Ge 225, and IBM 1130. (See also W74-00822) (Woodard-USGS)
W74-00823

WATER RESOURCES DATA FOR NEW YORK, 1972: PART 1. SURFACE WATER RECORDS.
Geological Survey, Albany, N.Y.

Basic Data report, 1973. 313 p, 14 fig, 3 ref.

Descriptors: *Water resources, *Surface waters, *New York, *Streamflow, *Flow measurement, Flow rates, Hydrologic data, Basic data collections, Gaging stations, Stream gages, Water yield, Lakes, Reservoirs, Water levels, Elevation, Inflow, Discharge (Water), Crest-stage gages.
Identifiers: *Surface water records (NY).

Surface-water records for the 1972 water year are presented for New York, including records of streamflow, reservoir storage or lake elevations at gaging stations, partial record stations, and miscellaneous sites. Records for a few pertinent gaging stations in bordering states are also included. These data represent that portion of the National Water Data System collected by the U. S. Geological Survey and cooperating state and federal agencies in New York. The tables of data include daily discharge records for 206 gaging stations; daily or monthly data on stage or contents for 44 lakes and reservoirs; discharge measurements for 434 sites, 188 of which are low-flow, partial-record stations and the remainder, miscellaneous sites; and annual maximum stages and discharges for 123 crest-stage, partial-record stations. (Woodard-USGS)

ESTUARIES, BAYS AND COASTAL CURRENTS AROUND PUERTO RICO,
Puerto Rico Univ., Mayaguez. Water Resources Research Inst.
E. F. Colon.
Available from the National Technical Information Service as PB-224 871, $3.00 in paper copy, $1.45 in microfiche. Partial Completion Report No. 8 (UPRICO-WRRI-PR-71-31-8), May 1972. 40 p. OWRR A-031-PR (8).

Descriptors: *Currents (Water), Coasts, *Ocean currents, *Bays, *Estuaries, *Puerto Rico, Data collections, Measurement, Instrumentation.

Three model 502 In-situ Current direction, temperature, and velocity meters, manufactured by Hydro Products in California were used simultaneously in a triangular pattern or in line. In some cases, all three instruments were used vertically at different depths. A one half moon cycle period was taken for each station and a continuous recording was obtained for all three instruments. This data is shown by vectors every 10 degrees on a magnetic rose and in tabular form indicating the relative volume of water passing through the station every 10 degrees during the entire study period.

METHODS OF COLLECTING AND INTERPRETING GROUND-WATER DATA.
Geological Survey. Washington, D.C.

Geological Survey Water Supply Paper 1544-H, Compiled by R. Bentall. 1963, 97 p, 26 fig, 20 tab.

Descriptors: Groundwater resources, Drillers' logs, *Sampling, Logging (Recording), Observation wells, *Water level recorders, Water level fluctuations, Permeability, Induced infiltration, Artesian aquifers, Management, Ground water movement, Methodology.
Identifiers: Deep aquifers, Shallow aquifers, *Groundwater velocity, Groundwater temperature, Streambed percolation.

Six papers pertaining to widely differing phases of ground water investigation comprise this contribution. The first paper desceibes methods of collecting, examining, and describing rock cuttings and some of the uses made of subsurface information obtained by drilling. Equipment used and the procedure followed in installing shallow water-level observation wells by a combination of jetting and rotary-drilling methods is described in the second paper. The phenomenon of reverse water-level fluctuations is discussed in the third paper. The fourth paper relates the distribution of underground temperatures to the velocity of the ground water. Factors that should be considered in designing a water-supply installation that is to be supplied by stream bed percolation are discussed in the fifth paper. In the sixth paper a long-term record of water-level fluctuations in a single well is used as the basis for developing a water budget for the artesian aquifer tapped by the well. (Campbell-NWWA)

SELECTED WATER-QUALITY RECORDS FOR TEXAS SURFACE WATERS, 1971 WATER YEAR,
Geological Survey, Austin, Tex.
J. A. Schulze, A. J. Dupuy, and E. McPherson.
Texas Water Development Board Report 176, August 1973. 268 p, 2 fig, 152 tab, 13 ref.

Descriptors: *Water quality, *Water analysis, *Texas, *Surface waters, *Chemical analysis, Inorganic compounds, Organic compounds, Nutrients, Biochemical oxygen demand, Dissolved oxygen, Pesticides, Water temperature, Basic data collections, Gaging stations, Streamflow, Flow rates.

Data collected by the U.S. Geological Survey from a network of daily and periodic chemical-quality stations on streams in Texas are presented for the 1971 year. The program is in cooperation with the Texas Water Development Board and other State, federal, and local agencies. To supplement the information being obtained on the inorganic quality of the surface-water resources, determinations of BOD, dissolved oxygen, selected nutrients, and pesticides were made at selected sites on streams throughout the State. Water-quality records are tabulated by station according to standard stream order, progressing downstream within each river basin and in clockwise river basin sequence beginning with the most northerly river basin. Records for stations on tributaries are listed between stations on the main stream in the order in which those tributaries enter the main stream. (Woodard-USGS).

HEC-4, MONTHLY STREAMFLOW SIMULATION, COMPUTER PROGRAM 723-X6-L2340.
Hydrologic Engineering Center, Davis, Calif.

Generalized Computer Program 723-340, February 1971. 97 p.

Descriptors: *Streamflow forecasting, *Flow rates, *Synthetic hydrology, *Systems analysis, *Computer models, Computer programs, Input-output analysis, Methodology, Monthly, Hydrologic data, Statistical methods.
Identifiers: Fortran IV.

This streamflow-simulation computer program was prepared in The Hydrologic Engineering Center, Corps of Engineers. The program will analyze monthly streamflows at a number of interrelated stations to determine their statistical characteristics and will generate a sequence of hypothetical streamflows of any desired length having those characteristics. It will reconstitute missing streamflows on the basis of concurrent flows observed at other locations and will obtain maximum and minimum quantities for each month and for specified durations in the recorded, reconstituted and generated flows. It also will use the generalized simulation model for generating monthly streamflows at ungaged locations based on regional studies. There are many options of using the program for various related purposes, and it can be used for other variables such as rainfall, evaporation, and water requirements, alone or in combination. This program requires a FORTRAN IV compiler, a random number generator, and a fairly large memory. (Woodard-USGS)

ENGINEERING REPORT ON SPECIAL ASSESSMENT STORM SEWER DISTRICT FOR THE NORTHEAST INDUSTRIAL DISTRICT, CITY OF KANSAS CITY, MISSOURI.
Riddle Engineering, Inc., Kansas City, Mo.

Kansas City Department of Public Works, Kansas City, Missouri, June 9, 1972. 52 p, 10 fig, 8 tab, 8 append.

Descriptors: *Sewers, *Storm drains, *Separated sewers, *Urban drainage, Urbanization, Outfall sewers, Missouri, Costs, Construction costs, Ponding, Urban hydrology.
Identifiers: *Kansas City (Missouri).

The Northeast Industrial District of Kansas City, Missouri, is a rapidly developing area that is experiencing problems of flooding from urban drainage. The District covers 355 acres of flat river bottom land in the Missouri River bottoms. Although protected by flooding from the Missouri River by levees, the area has problems of street flooding due to an inadequate drainage system. No major flooding damages occur in the area, primarily because basements are either non-existent, or are protected by waterproofing. The study inventoried existing systems and outlined criteria and design schemes for improvements. It was recommended that a design storm of the 2-year frequency be used. Total costs for the system range from between $2.1 million and $6.6 million, with the recommended system costing $4.6 million. This plan includes an all-gravity collection system with discharge to the Missouri River. Such a plan would: improve the economic conditions of the area by reducing impediments to traffic, have the highest benefit-cost ratio, and be the easiest system to construct. Other recommendation include regrading of portions of the street and enforcement of local building codes to reduce flood damages. (Poertner)
W74-00802

PRELIMINARY STUDY FOR CENTRAL INDUSTRIAL DISTRICT SEWERS, DEPARTMENT OF PUBLIC WORKS, KANSAS CITY, MISSOURI.
Shafer, Kline and Warren, Kansas City, Mo.

Kansas City Department of Public Works, Kansas City, Missouri, 1972. 28 p, 4 fig, 2 tab.

Descriptors: *Sewers, *Separated sewers, *Storm drains, *Urban drainage, Urbanization, Pumping plants, Outfall sewers, Missouri, Costs, Construction costs, Sewerage, Urban hydrology, Ponding.
Identifiers: *Kansas City (Missouri).

The location and condition were studied of existing storm sewers in the Central Industrial District of Kansas City, Missouri, and recommendations were made for supplemental sewers. Supplemental sewers are needed to eliminate surcharging of the present system which has caused both surface and basement flooding. The existing sewers were primarily of sound construction, having been built in the late 1800's. Alignment and structural strength is still good. But many of the trunk sewers are constructed of stone or brick, and the coefficient of roughness is too high for efficient operation, today. In addition, the sewers are, in some places, almost level, while in their lower extremities they have excessive slope. The combined sewage is carried by gravity to pumping stations, where it is pumped to treatment plants during dry weather. By-passes of sewer flows at the pumping station discharge into the Kansas and Missouri Rivers during periods of surcharge. A four-phase program of construction costing a total of $5.3 million was recommended. A 10-year storm was chosen for design purposes and the Rational Formula was selected for making computation of stormwater runoff rates. (Poertner)

FLOOD STUDIES FOR SAFETY OF TVA NUCLEAR PLANTS: HYDROLOGIC AND EMBANKMENT BREACHING ANALYSIS,
Tennessee Valley Authority, Knoxville.
D. W. Newton, and M. W. Cripe.
Paper presented at American Society of Civil Engineers, National Water Resources Engineering Meeting, Washington, D.C., January 29 - February 2, 1973. 37 p, 12 fig, 2 tab, 12 ref.

Descriptors: *Nuclear power plants, *Flood forecasting, *Tennessee Valley Authority, *Safety, Dam failure, Probable maximum precipitation, Flood routing, Flood recurrence intervals, Flood protection, Maximum probable flood, Flood profiles, Flood damage.

Design standards for nuclear power plants contain provisions for plant safety for the maximum possible flood. This in turn requires accurate determination of maximum floods. A TVA nuclear power plant was analyzed for the maximum probable flood under a variety of flood-causing conditions. Flood levels were examined for conditions of upstream dam failure by embankment breaching or be seismic failure, under assumed conditions of the probable maximum precipitation creating the probable maximum flood. It was found that seismic failure of upstream dams would not cause the worst flood conditions. Breaching of a dam embankment, followed by total failure of the dam, would cause the worst possible flood. The rate of dam failure was computed by assuming that overflow had begun at a notch of a specified size. However, theories on overtopping of embankments are not well developed and some quantities had to be assumed for flood analysis. A rough probability

analysis was performed, and the probability of the conditions of dam failure under the probable maximum precipitation producing the probable maximum flood was estimated to be extremely remote. (Poertner)

INSTITUTIONAL IMPLICATIONS OF DEEP-WATER PORTS.
Institute for Water Resources (Army), Alexandria, Va.

Report, June 1973. 14 p.

Descriptors: *Harbors, *Engineering structures, *Design criteria, *Ships, Reviews, Rivers and Harbors Act, Water quality control, Dredging, Navigation, Oil industry, Oil spills, Economics, Planning, Administrative decisions, Federal Government.
Identifiers: *Deepwater ports.

Federal responsibility for planning, constructing, and maintaining harbor and channel depths, and responsibility for reviewing and issuing permits for non-Federal developments in navigable waters of the United States resides primarily with the Army Corps of Engineers. As a result, the Corps of Engineers is concerned with the recent and rapid increases in ship size and water depth requirements. The institute for Water Resources contracted with Robert R. Nathan Associates for a study of '... the institutional implications of planning, constructing and operating U.S. deep harbors...' in August 1972. The report was completed in June 1973. (Copies will be available from National Technical Information Service, Department of Commerce, Springfield, Virginia 22151.) This summary of the major findings and conclusions of the report was prepared to fill the immediate need of interested parties for information on the principal results of the study, particularly in the light of current attention to deepwater port problems by the Executive Branch, Congress, State and local governments, and the petroleum and related industries. (Woodard-USGS)

CONSIDERATION OF THE CHARACTER OF SURFACE-GROUNDWATER RELATIONSHIPS AND STREAMFLOW IN ESTIMATES OF YIELDS FROM INFILTRATION GALLERIES (UCHET KHARAKTERA SVYAZI PODZEMNYKH VOD S POVERKHNOSTNYMI I REZHIMA RECHNOGO STOKA PRI RASCHETAKH INF IL'TRATSIONNYKH VODOZABOROV),
Akademiya Nauk SSSR, Moscow. Institut Vodnykh Problem.
Ye. L. Minkin, and B. M. Zil'bershteyn.
Vodnyye Resursy, No 1, p 186-201, 1973. 6 fig, 4 tab, 5 ref.

Descriptors: *Infiltration galleries, *Infiltration, *Surface-groundwater relationships, *Streamflow, *Estimating, Rivers, Valleys, Channels, Water wells, Water levels, Drawdown, Aquifers, Model studies, Analog models, Unsteady flow, Equations, Water yield.
Identifiers: USSR.

New procedures are described for simple analytical computation of yields from horizontal conduits in river valleys. Allowance is made for surface runoff, possible changes in the character of surface-groundwater relationships, resistance of channel deposits to infiltration, and differences in infiltration properties of alluvium and bedrock comprising the valley sides. To check applicability of the working relations proposed, analog modeling was performed on the ABM MCM-1 equipped to simulate unsteady flow. Good agreement was obtained from a comparison of the results of analytical computations and modeling of 5 typical variants. (Josefson-USGS)

DESIGN OF SMALL DAMS.
Bureau of Reclamation, Denver, Colo. Engineering and Research Center.

Available from GPO, Wash, D.C. 20402 on Bur. of Reclamation, Denver Federal Center, Denver, Colo. 80225, Atten: 922 Price $12.65. A Water Resources Technical Publication. 1973 (second edition). 816 p.

Descriptors: *Project planning, *Dams, *Reservoir design, *Dam design, Benefits, Cost-benefit analysis, Feasibility studies, Project feasibility, Dam construction, Hydraulics, Streamflow forecasting, Dam foundations, Ecology.
Identifiers: *Small dams.

Instructions, standards, and procedures are presented for use in the design of small dams. They are intended to serve primarily as a guide to safe practices for those concerned with the design of small dams in public works programs in the United States. The book will serve this purpose in three ways: (1) It will provide engineers with information and data necessary for the proper design of small dams, (2) it will provide specialized and highly technical knowledge concerning the design of small dams in a form that can be used readily by engineers who do not specialize in this field, and (3) it will simplify design procedures for small earthfill dams. Damete gravity, earthfill (rolled-type), and rockfill dams. Emphasis is placed on the design of rolled earthfill dams because they are the most common type. Simplified design methods are given to avoid the complex procedures and special investigations required for large dams or for unusual conditions. Adequate but not unduly conservative factors of safety are used in the simplified design methods. See also W74-01059 thru W74-01070) (Knapp-USGS)
W74-01058

PROJECT PLANNING,
Bureau of Reclamation, Denver, Colo. Div. of Project Investigations.
A. F. Johnson.
In: Design of Small Dams; A Water Resources Technical Publication, p 1-19, 1973 (second edition). 3 ref.

Descriptors: *Project planning, *Dams, *Reservoir design, *Dam design, Benefits, Cost-benefit analysis, Feasibility studies, Project feasibility, Dam construction, Hydraulics, Streamflow forecasting, Dam foundations, Ecology.
Identifiers: *Small dams.

The investigations and studies made for dams must be considered in relation to the function they perform in accomplishing the purposes of the project as a whole. Each project purpose and each increment of its size or scope must justify inclusion in the project by some appropriate measure of feasibility or justification which is usually related to the benefits it produces, the need it serves, or the investment it can repay with or without interest. Feasibility stidies of dams and reservoirs should always consider possible objections from a public health and nuisance standpoint. The environmental and ecological aspects of the project should be studied and provisions made to minimize any deleterious effects. (See also W74-01058) (Knapp-USGS)
W74-01059

ECOLOGICAL AND ENVIRONMENTAL CONSIDERATIONS,
Bureau of Reclamation, Denver, Colo.
E. A. Seaman, and L. W. Davidson.
In: Design of Small Dams; A Water Resotion, p 21-36, 1973 (second edition). 14 fig, 30 ref.

Descriptors: *Reservoir design, *Project planning, *Dams, Ecology, Recreation, Environment, *Environmental effects, Dam design.
Identifiers: Smal dams.

One of the most important aspects of dealing correctly and completely with the ecological and environmental impact of any structure is proper planning. If possible, an environmental team should be formed of representatives from groups who will be affected by the structure and experts from various scientific fields who can contribute their ideas and experience. The placement of a dam or canal within the environment should be done with due consideration of the effects on the fish and wildlife populations of the specific area. Provisions should be made to obtain the maximum recreational benefits from the completed reservoir and a future development plan should provide for area modifications as the recreation use increases. (See also W74-01058) (Knapp-USGS)
W74-01060

FLOOD STUDIES,
Bureau of Reclamation, Denver, Colo. Flood Hydrology Section.
D. L. Miller, R. A. Clark, and S. Schamach.
In: Design of Small Dams; A Water Resources Technical Publication, p 37-95, 1973 (second edition). 22 fig, 7 tab, 68 ref.

Descriptors: *Design flood, *Reservoir design, *Dam design, Hydrograph analysis, Design storm, Streamflow forecasting, Rainfall-runoff relationships, Probable maximum precipitation, Maximum probable flood.
Identifiers: Small dams.

Methods are given for determining the floodflows to be expected from the drainage area tributary to the reservoir site, for which provision must be made in the design of a dam. In most instances, particularly for structures impounding considerable storage, the inflow design flood is the maximum probable food, which is defined as the largest flood that can reasonably be expected to occur on a given stream at a selected point. Determination of tble flood is based on rational consideration of the chances of simultaneous occurrence of the maximum of the several elements or conditions which contribute to the flood. A major consideration is the determination of the runoff that would result from an occurrence of a probable maximum storm based on meterological factors. This hydrometeorological approach is necessary because streamflow records are of such relatively short duration in the United States that statistical analyses thereof do not provide reliable bases for estimates of maximum probable floodflows.

Methods of determining the magnitude and frequency of floods as indicated by statistical analyses of streamflow records are primarily for use in connection with estimating diversion requirements during construction, establishing frequency of use of emergency spillways used in conjunction with outlets or small spillways, determining peak discharge estimates for diversion dams, or providing other information useful to the designers. (See also W74-01058) (Knapp-USGS)
W74-01061

SELECTION OF TYPE OF DAM,
Dureau of Reclamation, Denver, Colo. Div. of Design and Construction.
H. G. Arthur.
In: Design of Small Dams; A Water Resource Technical Publication, p 97-105, 1973 (second edition). 4 fig.

Descriptors: *Dams, *Reservoir design, *Dam design, Legal aspects, Economics, Cost-benefit analysis, Dam construction, Planning.
Identifiers: Small dams.

Dams may be classified into a number of different categories, depending upon the purpose of the classification. For the purposes of choosing which to use, it is convenient to consider three broad classifications according to use, hydraulic design, or materials of the structure. It is only in exceptional circumstances that an experienced designer can say that only one type of dam is suitable or most economical for a given damsite. Except in cases where the selection of type is obvious, preliminary designs and estquired for several types of dams before one can be shown to be most economical. The selection of the best type of dam for a particular site calls for thorough consideration of the characteristics of each type, as related to the physical features of the site and the adaptation to the purposes the dam is supposed to serve, as well as economy, safety, legal and esthetic limitations. Usually, the greatest single factor determining the final choice of type of dam will be the cost of construction. (See also W74-01058) (Knapp-USGS)
W74-01062

FOUNDATIONS AND CONSTRUCTION MATERIALS,
Bureau of Reclamation, Denver, Colo. Div. of Design and Construction.
J. W. Hilf.
In: Design of Small Dams; A Water Resources Technical Publication, p 107-204, 1973 (second edition). 68 fig, 6 tab, 18 ref.

Descriptors: *Dams, *Dam design, *Construction materials, *Foundation investigations, Dam foundations, Foundation rocks, Soil investigation, Earth materials.

Information relating to foundation conditions and to the natural materials available for construction is essential for the design of small dams. For efficiency, the search for data must be properly planned. Subsurface explorations should not be started until all available geological and soils data have been evaluated. The investigator should know how to classify soils and rocks and should have an understanding of the geological and engineering characteristics of landforms. This background and a knowledge of the capabilities and limitations of the various methods of subsurface exploration will lead to selection of the most appropriate field methods, thereby avoiding time and effort lost through ineffectual procedures. The investigator should be familiar with logging and sampling methods and with the field and laboratory tests used for small dams. Procedures for investigation of foundations and of the various types of construction materials are given in detail. (See also W74-01058) (Knapp-USGS)
W74-01063

EARTHFILL DAMS,
Bureau of Reclamation, Denver, Colo. Div. of Design and Construction.
H. G. Arthur.
In: Design of Small Dams; A Water Resources Technical Publication, p 205-299, 1973 (second edition). 83 fig, 7 tab, 69 ref.

Descriptors: *Dam design, *Dam construction, *Earth dams, Earth materials, Soil mechanics, Dam foundations, Construction materials.

Design procedures are given for small earthfill dams which are of the rolled-fill type of construction is now being used almost entirely for the construction of small dams, to the exclusion of semihydraulic and hydraulic fills. Procedures for the design of earthfill dams include (1) thorough preconstruction investigations of foundation conditions and materials of construction; (2) application of engineering skill and technique to design; and (3) carefully planned and controlled method of construction. Proper construction methods include adequate foundation preparation and the placement of materials in the dam embankment with the necessary degree of compaction under an established procedure of testing and control. (See also W74-01058) (Knapp-USGS)
W74-01064

ROCKFILL DAMS,
Bureau of Reclamation, Denver, Colo. Earth Dams Section.
R. W. Bock, and L. W. Davidson.
In: Design of Small Dams; A Water Resources Technical Publication, p 301-328, 1973 (second edition). 23 fig, 44 ref.

Descriptors: *Rockfill dams, *Dam design, Dam construction, Dam foundations, Construction materials, Rockfill, Earth materials.

Rockfill dams can prove economical when any of the following conditions exist: (1) large quantities of rock are readily available or will be excavated in connection with the project such as from a spillway or tunnel; (2) earthfill materials are difficult to obtain or require extensive processing to be used; (3 seasons prevail; (4) excessively wet climatic conditions limit the placement of large quantities of earthfill material; or (5) the dam is to be raised at a later date. In addition, uplift pressures and erosion due to seepage through the rockfill material do not generally constitute significant design problems. An impervious membrane is used as the water barrier and can be placed either within the embankment or on the upstream slope. Rockfill dams may be classified into three groups, depending on the location of the membrane, as follows: (1) central core, (2) sloping core, and (3) upstream membrane. (See also W74-01058) (Knapp-USGS)
W74-01065

CONCRETE GRAVITY DAMS,
Bureau of Reclamation, Denver, Colo. Hydraulic Structures Branch.
A. T. Lewis, J. S. Conrad, L. M. Christiansen, and E. L. Watson.
In: Design of Small Dams; A Water Resources Technical Publication, p 329-344, 1973 (second edition). 11 fig, 9 ref.

Descriptors: *Gravity dams, *Concrete dams, *Dam design, Dam design, Dam construction, Stress, Reservoir design.

A concrete gravity dam is a structure proportioned so that its own weight provides the major resistance to the forces exerted upon it. The forces which act on concrete gravity dams and the requirements for stability are discussed. Additional considerations in connection with concrete structures on pervious (soil) foundations are presented and current practices regarding miscellaneous details of design are briefly described. (See also W74-01058) (Knapp-USGS)
W74-01066

SPILLWAYS,
Bureau of Reclamation, Denver, Colo. Spillways and Outlet Works Section.
C. J. Hoffman.
In: Design of Small Dams; A Water Resources Technical Publication, p 345-447, 1973 (second edition). 73 fig, 12 tab, 25 ref.

Descriptors: *Dam design, *Spillways, *Design flow, Hydraulics, Dam construction, Overflow, Flood forecasting, Streamflow forecasting, Spillway crests, Drops (Structures).

Spillways are provided for storage and detention dams to release surplus or floodwater which cannot be contained in the allotted storage space, and at diversion dams to bypass flows exceeding those which are turned into the diversion system. Ordinarily, the excess is drawn from the top of the pool created by the dam and conveyed through an artificial waterway back to the river or to some natural drainage channel. Ample capacity is of paramount importance for earthfill and rockfill dams, which are likely to be destroyed if overtopped, whereas concrete dams may be able to withstand moderate overtopping. In addition to providing sufficient capacity, the spillway must be hydraulically and structurally adequate and must be located so that spillway discharges will not erode or undermine the downstream toe of the dam. The spillway's bounding surfaces must be erosion resistant to withstand the high scouring velocities created by the drop from the reservoir surface to tailwater, and usually some device will be required for dissipation of energy at the bottom of the drop. The frequency of spillway use will be determined by the runoff characteristics of the drainage area and by the nature of the development. (See also W74-01058) (Knapp-USGS)
W74-01067

OUTLET WORKS,
Bureau of Reclamation, Denver, Colo. Spillways and Outlet Works Section.
C. J. Hoffman.
In: Design of Small Dams; A Water Resources Technical Publication, p 449-505, 1973 (second edition). 69 fig, 5 tab, 12 ref.

Descriptors: *Dam design, *Outlet works, Hydraulics, Dam construction, Outlets, Spillways.

An outlet works serves to regulate or release water impounded by a dam. It may release incoming flows at a retarded rate, as in the case of a detention dam; divert incoming flows into canals or pipelines, as in the case of a diversion dam; or release stored waters at such rates as may be dictated by downstream needs, evacuation considerations, or a combination of multiple-purpose requirements. The hydraulics of outlet works usually involve either one or both of two conditions of flow--open channel (or free) flow and full conduit (or pressure) flow. Analysis of open channel flow in outlet works, either in an open waterway or in a part full conduit, is based on the principle of steady nonuniform flow conforming to the law of conservation of energy. Full pipe flow in closed conduits is based on pressure flow, which involves a study of hydraulic losses to determine the total heads needed to produce the required discharges. Hydraulic jump basins, baffle or impact block dissipators, or other stilling devices normally are employed to dissipate the energy of flow at the downstream end of the outlet works. DIVERSION DURING CONSTRUCTION,
Bureau of Reclamation, Denver, Colo. Earth Dams Section.
E. R. Lewandowski.
In: Design of Small Dams; A Water Resources Technical Publication, p 507-519, 1973 (second edition). 11 fig, 2 ref.

Descriptors: *Dam construction, *Diversion structures, Dam design, Chutes, Diversion tunnels, Dams, Hydraulic structures, Streamflow forecasting, Design flood.

The design for a dam which is to be constructed across a stream channel must consider diversion of the streamflow around or through the damsite during the construction period. The extent of the diversion problems will vary with the size and flood potential of the stream; at some damsites diversion may be costly and time consuming and may affect the scheduling of construction activities, while at other sites it may not offer any great difficulties. The scheme selected ordinarily will represent a compromise between the cost of the diversion facilities and the amount of risk involved. The proper diversion plan will minimize serious potential flood damage to the work in progress at a minimum of expense. The following factors should be considered in a study to determine the best diversion scheme: characteristics of streamflow; size and frequency of diversion flood; methods of diversion; and specifications requirements. MAINTENANCE AND OPERATION,
Bureau of Reclamation, Denver, Colo. Div. of Design and Construction.
H. G. Arthur.
In: Design of Small Dams; A Water Resources Technical Publication, p 521-525, 1973 (second edition).

Descriptors: *Reservoir operation, *Maintenance, *Operation and maintenance, Dams, Dam construction.
Identifiers: Dam maintenance.

Arrangements should be made, immediately following the completion of a dam, for periodic inspection of the structure and all of the operating equipment. Written instructions for maintenance and operation of the structures and equipment should be prepared as part of the design function and furnished to the owner or operating agency. These instructions should establish the frequency of and describe the extent and nature of inspections. The instructions should also provide for the routine servicing of mechanical equipment where gates and valves are provided, and should include such instructions furnished by the manufacturer. The instructions should also include detailed discussions of the proper operation of gates and valves from both mechanical and functional viewpoints. If a spillway is controlled by manually operated gates, specific instructions should be given regarding the operation of the gates during flood inflows into the reservoir. NUMERICAL SIMULATION OF UNSTEADY FLOWS IN RIVERS AND RESERVOIRS,
North Carolina State Univ., Raleigh. Dept. of Civil Engineering.
M. Amein.
Available from NTIS, Springfield, Va. 22151 as COM-73-10674 Price $3.00 printed copy; $1.45 microfiche. Contract Report to National Weather Service, December 31, 1972. 73 p, 26 fig, 10 tab, 19 ref. NOAA-NWS Contract 0-3528.

Descriptors: *Open channel flow, *Unsteady flow, *Fluid mechanics, Rivers, Reservoirs, Channel flow, Numerical analysis, Analytical techniques, Equations, Model studies, Flood flow, Low flow, Channel morphology, Streamflow forecasting.

Unsteady flow in rivers and reservoirs is computed by numerical simulation of the equations of unsteady flow in open channels consisting of the equations for the conservation of mass and momentum. The simulation is based on an implicit finite difference representation of the primary partial differential equations using a centered difference scheme for distance and a forward difference scheme in time. The finite difference equations are nonlinear and are solved by Newton interation method. Applications are given to slowly varied and rapidly varied flows in natural channels and reservoirs. The size of the time step was determined by the nature of the problem ranging from 3 minutes for rapidly varied discharge to several hours for floodflows of long duration. There is excellent agreement between observed and computed values. (Woodard-USGS)

MODIFIED SOLUTIONS FOR DECREASING DISCHARGE WELLS,
California Univ., Davis. Dept. of Irrigation.
M. A. Abu-Zied, V. H. Scorr, and G. Aron.
Journal of the Hydraulics Division, American Society of Civil Engineers, Vol 90, No. HY6, p 145-160, November, 1964. 8 fig, 5 tab, 1 append.

Descriptors: *Wells, Groundwater, Aquifer characteristics, Transmissivity, Drawdown, Water yield, Water storage.
Identifiers: *Nonsteady flow conditions, Steady flow condition, Theis method, Jacob method, *Artesian aquifer.

Several modified solutions are proposed for the problem of nonsteady flow to a well of decreasing discharge which completely penetrates an extensive artesian aquifer. The solutions reduce the computations required in using a general solution. A particular modified solution depends on the magnitude of the discharge and aquifer characteristics. Field data, obtained from an experimental well operating at decreasing discharge, were used to test the validity of the general and modified solutions for the aquifer characteristics. For comparison, Theis' and Jacob's methods for steady flow conditions were applied to the same well test data, and data from a controlled steady flow test in the same well were analyzed. Advantages and limitations of the steady and nonsteady flow methods are considered. (Campbell-NWWA)

MECHANISM OF FLOW AND CONTROLLED DISSOLUTION OF SALT IN SOLUTION MINING,
Texas Univ., Austin.
H. Kazemi, and F. W. Jessen.
Society of Petroleum Engineers Journal, Vol. 4, No 4, p 317-328, December, 1964. 19 fig, 8 ref.

Descriptors: *Underground storage, *Leaching, *Mining, *Sodium chloride, Solvent extraction, Aqueous solutions, Storage, Salts, Pumping, Diffusion, Convection.
Identifiers: *Storage cavity, Solution-control blanket, Dissolution process, Spherical cavity.

A controlled washing technique was developed to form a spherical cavity in salt (such as might be used for LPG storage). A study was made of the flow patterns and the concentration distribution of brine during the dissolution of the salt. The general process of forming a spherical cavity involves control of the fluid motion in the cavity, the concentration distribution of brine, the rate of dissolution at the walls of the cavity, and the setting of the inlet and outlet pipes. An inert fluid (lighter than water) such as an oil, gas or air is injected through the annular space between the original hole and the casing. Fresh water is introduced through the innermost pipe (tubing) and brine returns through the casing in the direct circulation scheme. In the reverse-circulation method, the fresh water enters through the casing-tubing annulus and the brine returns through the tubing. Solution of salt is greatest at the point of entry of the fresh water. Reverse circulation is used to ensure divergence of the cavity in the uppermost portion when dissolving a spherical cavity. The controlled downward movement of the inert blanket maintains the upper edge of the expanding cavity exactly on the surface of the projected sphere. An empirical equation expressing the functional relationship between rate of flow in the model and that of the prototype is offered. (Gray-NWWA)

MAXIMIZING WATER YIELD THROUGH WELL DEVELOPMENT--TECHNICAL MEMO NO. 2,
J. F. Howard, and W. R. Holtzhauser.
Water Well Journal, Vol 27, No 4, p 51-53, April, 1973.

Descriptors: Wells, Water wells, *Aquifers, *Drilling equipment, Well screens, *Water yield.
Identifiers: *Water well construction, Water well development, Underreaming, *Acid treatment, Water producing horizons, Double-inflatable packer.

High yield industrial well projects attempt to produce maximum reliable water supplies from a given property through an extensive well development program. Down-hole well development procedures are discussed primarily. Development procedures are divided into two operations, preliminary development and post drilling development, both of which are discussed. Equipment required for development and special procedures for peculiar situations such as the penetration of multiple aquifers are presented. (Smith-NWWA)

DEAD END PORE VOLUME AND DISPERSION IN POROUS MEDIA,
Jersey Production Research Co., Tulsa, Okla.
K. H. Coats, and B. D. Smith.
Society of Petroleum Engineers Journal, Vol 4, No 1, p 73-84, March, 1964. 7 fig, 6 tab, 23 ref.

Descriptors: *Porous media, *Diffusion, Flow, *Dispersion, Mathematical models, Cores, Sandstones, Sands, Laboratory tests, Absorption, Heterogeneity, Laplaces equation, Reynolds number.
Identifiers: *Dead-end pores, *Capacitance model, Concentration profile, Formation resistivity factor.

Axial dispersion -- the mixing accompanying the flow of miscible fluids through porous media -- has been considered on the basis of the diffusion model in spite of the deviations between the observed asymmetrical effluent concentration profiles and the predicted symmetrical ones. A laboratory study was made of the displacement of sodium chloride solution by calcium chloride solution from Wassau sand, Ottawa sand, Torpedo sandstone and Alundum. The effluent concentration profile from the two consolidated cores showed considerable asymmetry, while the two unconsolidated cores yielded nearly symmetrical profiles. Breakthrough of the 50% concentration occurred in all tests significantly before one pore volume was injected. The effluent concentration data were compared with the standard diffusion model, a differential form of Dean's finite-stage capacitance model, and a differential capacitance model developed by the authors. The differential capacitance model matched the data significantly better than the diffusion model. The capacitance model allowed the determination of the amount of dead-end pore space in a porous matrix (10% in the Torpedo sandstone) and an estimation of the effect of velocity on the rate of diffusion into this space. (Gray-NWWA)

THE EFFECT OF RESTRICTED FLUID ENTRY ON WELL PRODUCTIVITY,
Shell Oil Co., Los Angeles, Calif.
F. Brons, and V. E. Marting.
Journal of Petroleum Technology, Vol 13, No 2, p 172-174, February, 1961. 4 fig, 2 tab, 6 ref.

Descriptors: *Productivity, *Inflow, *Flow rates, Flow, Hydraulics, Orifices, Flow resistance, Casings, *Wells.
Identifiers: Skin effect, *Perforated casing, Muskats' equations, Pseudo skin factor.

Productivity impairment that results when part of the productive formation is blocked off completely is considered mathematically in terms of 'pseudo skin factors.' The conditions of incomplete penetration of the productive formation and exclusion of parts of the productive zone by blank casing are treated in terms of two parameters. Calculations showed that better productivity is obtained from an interval open in the middle of a productive zone than from the same open interval located at either the top or bottom of the zone. The larger the number of intervals for a given total-penetration ratio, the higher the productivity. Applying the theory qualitatively to a well producing through perforations, the conclusion was that above a certain perforation density the productivity is almost unimpaired and that increasing the number of perforations above this density will add little to the productivity. RIPRAP SLOPE PROTECTION FOR EARTH DAMS: A REVIEW OF PRACTICES AND PROCEDURES,
Bureau of Reclamation, Denver, Colo. Engineering and Research Center.
F. J. Davis, L. R. Burton, A. B. Crosby, L. D. Klein, and E. R. Lewandowski.
Available from NTIS, Springfield, Va. 22151 as PB-219 834; Price $3.00 printed copy; $1.45 microfiche. Report REC-ERC-73-4, March 1973. 23 p, 17 tab, append.

Descriptors: *Earth dams, *Riprap, *Slope protection, Reviews, Methodology, Design criteria, Engineering structures, Rocks, Slope stability, Quarries, Gradation, Maintenance costs, Economics, Dam construction, Hydraulic structures, Materials.

Bureau of Reclamation practices and procedures for investigation, sampling, testing, and field control of riprap slope protection for earth dams are reviewed. Approximately 50 case histories of riprap slope protection were studied. Economics of providing upstream slope protection, including original and lifetime maintenance costs, is the predominant factor in selecting, designing, and constructing the upstream slope protection. Although experience indicates that rock fragments larger than 1 cu yd would be required on many Bureau earth/dam structures to protect slopes against occasional severe storms, few rock sources can provide fragments of that size. Hence, a 36-inch blanket of riprap graded up to 1 cu yd is considered the maximum protection that can be reasonably obtained. Specifications should be revised to include: (1) a gradation that contains more of the larger sizes, (2) stricter placing requirements to obtain/a denser riprap blanket, (3) greater selectivity of quarry material, and (4) closer control of quarry blasting techniques. Detailed instructions to investigators of riprap sources are included. (Woodard-USGS)

A STOCHASTIC MODEL FOR PREDICTING VARIATIONS IN RESERVOIR ROCK PROPERTIES,
Alberta Univ., Calgary.
D. W. Bennion, and J. C. Griffiths.
Society of Petroleum Engineers Journal, Vol 6, No 1, p 9-16, March, 1966. 14 fig, 2 tab, 22 ref.

Descriptors: *Porosity, *Permeability, *Mathematical models, *Stochastic processes, *Rock properties, Deposition (Sediments), Fourier series, Cores, Frequency analysis, Mathematics, Computer.
Identifiers: *Orthogonal polynomials, Frequency distribution, Bartlett's test.

A mathematical model was developed that predicts both lateral and vertical variations of reservoir rock properties. The model segmented the reservoir horizontally into areas of common variance; then divided it vertically into strata (if strata were present). Next, trend surface techniques were used to determine the lateral extent and variation of each stratum. The model was tested on two reservoirs. The sandstone reservoir consisted of a sand section and a conglomerate section, although the latter was so sporadic that it was not included in the test. A total of 60,000 samples had been taken from 2000 cored wells. The limestone reservoir consisted of a 'marly' and a 'vuggy' section, with 24,000 samples taken from 430 cored wells. Frequency distributions for porosity were approximately normal but those for log-permeability were generally skewed to the right and leptokurtic. Within the areas of common variance tested, the model was able to distinguish four separate lithological units in the sandstone reservoir; four in the marly section and seven in the vuggy section of the limestone reservoir. The model was able to determine a system of equations for predicting the lateral extent, thickness and mean porosity for each zone. (Gray-NWWA)

A SONIC METHOD FOR ANALYZING THE QUALITY OF CEMENTATION OF BOREHOLE CASINGS,
Schlumberger Surenco S.A., Caracas (Venezuela).
M. Grosmangin, F. P. Kokesh, and P. Majani.
Journal of Petroleum Technology, Vol 13, No 2, p 165-171, February, 1961. 17 fig, 1 ref.

Descriptors: *Cement grouting, *Logging (Recording), *Sound waves, *Well casings, Pipes, Acoustics, Attenuation, Bonding, Boreholes.
Identifiers: *Cement Bond log, *Sonic pulse, Squeeze cementing, Amplitude, Water shut-off.

Bonding of cement to the casing is an important factor in satisfactory well completion. The Cement Bond log operates on the principle that the attenuation of a sonic pulse transmitted by a casing is greatly increased when that casing is bonded to an outer annulus of hard material (such as set cement) which has an appreciably smaller sonic wave velocity than that of the casing. The downhole tool contains a source of recurrent sound pulses which are detected by a receiver spaced a few feet from the source. The amplitude of the detected casing-borne pulse is measured, and the resulting signal is transmitted to the surface where it is recorded for corresponding depths. Because amplitude is a function of attenuation, the log is readily interpreted. Laboratory studies showed that cement that had not set or was not bonded to the casing had little attenuating effect. Field examples show that the log shows not only the top of the cement but also variations in cementation quality. Increase in bonding with time and after squeeze cementing are shown by logs. ERRORS IN PIEZOMETRIC MEASUREMENT,
Geological Survey, Washington, D.C. Water Resources Div.
W. W. Emmett, and J. R. Wallace.
Journal of the Hydraulics Division, American Society of Civil Engineers, Vol 90, No. HY6, p 45-61, November, 1964. 11 fig, 1 tab, 11 ref, 2 append.

Descriptors: *Piezometry, Wells, Groundwater, Aquifer characteristics, *Open channel flow.
Identifiers: *Piezometric measurement, Rough channel tests, Smooth channel tests.

Engineering investigations of fluid flow in open channels usually require the measurement of piezometric head. Often the measurement is made by recording the pressure at a piezometer opening on the wall or floor of the channel. An accurate interpretation of the measurement depends on a knowledge of the performance of the piezometer and of the characteristics of the flow being measured. A laboratory investigation was conducted to study the accuracy of piezometric depth measurements in open channels. Influences of boundary geometry and flow characteristics on the piezometric measurements were evaluated. The results of over 3,000 observations indicate that errors in piezometric measurement of depth in smooth, open channels are a function of mean velocity and piezometer hole diameter. For a given piezometer size, the error is expressed as a constant percentage of the mean velocity head. Roughness added to the test channel tended to reduce the magnitude of the error, while mechanically generated surface waves did not influence the piezometric measurement. (Smith-NWWA)

WHAT YOU SHOULD KNOW ABOUT PUMPING TESTS. TECHNICAL MEMO NO. 1,
Illinois State Water Survey, Urbana.
W. H. Walker.
Water Well Journal, Vol. 27, No. 2, p 26-27, March, 1973. 2 fig.

Descriptors: Aquifer characteristics, Hydraulics, Wells, *Water wells, Ground water, *Data collections, *Testing procedures, Analytical techniques, Recharge.
Identifiers: Cone of depression, Barrier boundaries, *Well efficiency.

Much has been written about the analysis of pumping data, without explaining the why and how of the test or the data needed for analysis. The how and why become apparent when a few basic principles of ground water hydrology and the definition of key terms such as: cone of depression; recharge and barrier boundaries; well efficiency and 'hydraulic characteristic' are understood. Basic principles and definitions are explained. The Illinois State Water Survey's procedure for data acquisition for their three-part analysis, constant rate test, recovery test and step test is presented. (Campbell-NWWA)

CORROSION CONTROL IN LARGE VOLUME PUMPING BRINE WELLS,
Oilwell Research, Inc., Long Beach, Calif.
C. C. Wright.
Materials Protection and Performance, Vol 11, No 1, p 23-26, January, 1972. 1 tab, 7 ref.

Descriptors: *Corrosion, Pitting, *Electrolysis, Scaling, Water chemistry, Bacteria, Materials, Bactericides, Analytical techniques, Wells, *Water wells, Dissolved oxygen.
Identifiers: *Incrustation, Oxygen scavangers, *Corrosion inhibitors, Acid treatments, Monitoring programs.

Large volume salt water wells are being increasingly used for cooling waters, water for secondary recovery of oil, and the extraction of minerals. Production of large volumes of brines from pumping wells poses corrosion problems which are either absent or minimized in fresh water wells and in low volume brine wells. Recognition of the differences i.e. large casings, high water velocities, high dissolved gas content; the causes of corrosion, i.e., highly corrosive natural waters, D.O. from cascading water, electrolytic cell formation, bacteria; and preventative measures, i.e., proper material selection, use of oxygen scavangers, corrosion inhibitors, and bactericidal treatments can save sizeable sums of money. Customary control procedures, recommended facility modifications and a continuing monitoring program are described. (Hunt-NWWA)
W74-00937

PULSE TESTING: A NEW METHOD FOR DESCRIBING RESERVOIR FLOW PROPERTIES BETWEEN WELLS,
Esso Production Research Co., Houston, Tex.
C. R. Johnson, R. A. Greenkorn, and E. G. Woods.
Journal of Petroleum Technology, Vol 18, No 12, p 1599-1604, December, 1966. 8 fig, 1 tab, 8 ref.

Descriptors: Flow, *Unsteady flow, *Transmissibility, Storage, *Pressure measuring instruments, Pressure, Oil reservoirs, Heterogeneity, Fractures (Geologic).
Identifiers: *Pulse testing, *Well pair, Differential pressure gauge, Interference tests, Response amplitude, Pulse interval.

The basic element in pulse-testing is the well pair. At the pulsing well a series of flow disturbances is generated by alternate intervals of flow and shutin. A corresponding series of pressure transients propagates through the reservoir and arrives at an adjacent responding well. If the responding well has some wellhead pressure, the slight pressure changes are detected by a sensitive differential-pressure gauge (sensitivity about 0.001 psi). Pulses of a few hours in duration will generate a measurable response in most reservoirs. Consequently, many well pairs can be tested in a short period of time with little disturbance of field operations. Comparison of pulse-test results to conventional testing methods showed that the pulses obeyed unsteady-state, compressible-flow theory and thus gave a measure of both transmissibility and storage. In addition, the method was used qualitatively to describe communication across faults and between zones, and the direction and magnitude of fracture trends. (Gray-NWWA)

HOW TO FIND ABANDONED OIL AND GAS WELLS,
Bureau of Mines, Bartlesville, Okla. Bartlesville Energy Research Center.
K. H. Johnston, H. B. Carroll, R. J. Heemstra, and F. E. Armstrong.
For sale by the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402. Price $0.75. Information Circular No 8578, 1973. 46 p, 25 fig, 3 tab, 4 append.

Descriptors: *Wells, Oil wells, Technology, *Well regulations, *Methodology.
Identifiers: Electronic metal detectors, Methane detectors, *Abandoned wells, *Search techniques, Coal deposits, Gas wells, Law enforcement.

This guide was written to furnish the coal industry with a description of techniques, instruments, and clues on how to find abandoned oil and gas wells that have penetrated coal seams. Specific information is included on searching techniques currently in use by several coal mining companies, gas-transmission companies, and waterflood operators, as well as information on State agencies responsible for the enforcement of laws and the preservation and distribution of data pertaining to the drilling, development, and abandonment of oil and gas wells. Comparative tests were performed with several commercial electronic metal detectors to determine the feasibility of using them to aid in the search for abandoned wells and to determine the instrument most suited for the particular use. The role of methane detectors to locate abandoned wells is described, including a case history. Tests were made to develop an efficient procedure to follow in systematically searching an area for metallic clues or hydrocarbon evidence to abandoned wells. The guide describes, in detail, a search sequence, including the collection of basic data, preparation of the selected area, and the physical search. Methods are given for evaluating the results. (Hunt-NWWA)
W74-00941

DETECTION AND ESTIMATION OF DEAD-END PORE VOLUME IN RESERVOIR ROCK BY CONVENTIONAL LABORATORY TESTS,
California Univ., Berkley.
I. Fatt, M. Maleki, and R. N. Upadhyay.
Society of Petroleum Engineers Journal, Vol 6, No 3, p 206-212, September, 1966. 12 fig, 1 tab, 14 ref.

Descriptors: *Permeability, *Porosity, *Laboratory tests, Cores, Limestones, Porous media, Rock properties, Capillary action, Flow.
Identifiers: *Formation factor, Dead-end pores, *Oomolidic limestone, Mercury injection, Miscible displacement, Pressure transients.

Equations conventionally used to describe reservoir flow behavior contain the implicit assumption that all connected pore spaces contributed to both porosity and permeability. Laboratory studies were made on two limestones suspected of having dead-end pore spaces, and on a sandstone believed to have little or no dead-end pore spaces. Using 3/4-inch diameter core plugs, measurements were made of the electric logging formation factor, mercury injection capillary pressure, miscible displacement, and pressure transient behavior. Methods are described and results are shown graphically. These tests indicated that about 20% of the measured pore volume in the two limestones was not taking part in fluid flow. The size of the neck connecting dead-end pores to the main flow channels was estimated from the pressure transient tests. The formation factor and mercury injection tests can be made at relatively low cost on reservoir rock samples. From results of these tests, samples suspected of having dead-end pore space can be selected for the more diagnostic miscible displacement and pressure transient tests. (Gray-NWWA)
W74-00944

WELL EFFICIENCY AND SKIN EFFECT,
Maryland Univ., College Park.
Y. M. Sternberg.
Journal of the Irrigation and Drainage Division, American Society of Civil Engineers, Vol 99, No IR2, p 203-206, June, 1973. 2 append, 8 ref.

Descriptors: *Wells, Water wells, *Aquifer characteristics, Permeability, Hydraulics, Mathematical studies, Equations.
Identifiers: Radius of influence, Laminar flow, *Hydraulic conductivity, Head loss, *Well efficiency.

A technique is presented for determining the skin effect using previously derived flow equations. This technique is applicable only to wells affected by losses due to laminar flow (both the normal losses and those in the damaged zone) and does not account for turbulent losses that may be present in large capacity wells. Drawdown data taken at an observation well and at the pumped well, operating at constant discharge, are required in this method. The condition of a well can be determined by comparing actual drawdown at the pumped well to the calculated values using the aquifer characteristics determined from an observation well. (Hunt-NWWA)

NEW MUDS DESIGNED TO IMPROVE DRILLING RATE, HOLE STABILITY,
G. R. Gray.
World Oil, Vol 176, No 6, p 84-86, May, 1973. 1 fig, 36 ref.

Descriptors: Wells, *Well drilling, *Drilling fluids, Mud, *Rock mechanics, Hydraulics, Chemical reactions, Polymers.
Identifiers: *Low solids, Drilling fluids, Balanced pressure drilling, *Borehole stability, *Organic polymers, Shale hydration.

Maximum drilling rate with good hole conditions is being sought by intensive studies of factors affecting penetration rate and hole stability. Balanced pressure drilling, minimum solids, drilling fluids, and control of shale hydration have practical applications as part of a minimum cost drilling program. Currently the emphasis is on the use of minimum solids muds for maximum penetration rate, coupled with organic polymers for hole stability. Advantages of balanced pressure drilling have been amply documented. The types and uses of low solids drilling fluids to achieve maximum penetration, prevent shale hydration and improve hole stability are presented. (Campbell-NWWA)

THE RANGE OF VALIDITY OF THE LINEAR POLARIZATION METHOD FOR MEASUREMENT OF CORROSION RATES,
Noranda Research Centre, Pointe Claire (Quebec).
R. L. Leroy.
Corrosion, Vol 29, No 7, p 272-275, July, 1973. 6 fig, 11 ref.

Descriptors: *Corrosion, Mathematical studies, *Graphical methods, *Analytical techniques.
Identifiers: *Linear polarization, Corrosion potential, *Tafel slopes.

The validity of the linear polarization method for determining corrosion rates is critically examined. It is shown that curvature of polarization curves at the corrosion potential does not negate the value of this technique. Diagrams are presented which show the matrix of anodic and cathodic Tafel slopes for which the linear polarization method can be used to derive the corrosion current, within a stated error limit. Several examples demonstrate the utility of these diagrams for both anodic and cathodic linear polarization measurements. (Smith-NWWA)

CORROSION AND INCRUSTATION - GUIDELINES FOR WATER WELLS,
Universal Oil Products. St. Paul, Minn. Johnson Div.
J. L. Mogg.
Water Well Journal, Vol 27, No 2, p 30-33, 35-36, March, 1973. 1 fig, 6 tab, 4 ref.

Descriptors: Corrosion, Scaling, Well screens, Materials, *Corrosion control, *Iron bacteria, *Bactericides, Water quality, Chemicals, *Water wells, Sulfur bacteria.
Identifiers: *Incrustation, *Sulfate-reducing bacteria, Ryznar Stability Index, Chemical corrosion, Electrochemical corrosion, Electromotive series, Acid treatments.

Corrosion, incrustation and bacterial plugging are defined and discussed with respect to their causal effects on water well failure. The two processes of corrosion, chemical and electrochemical, and the relationship of water chemistry and the electromotive series to metals as the cause of corrosion is presented. Guidelines for selecting the most corrosion resistant metal by use of the Ryznar Stability Index for Material are presented. The parameters for probable occurrence of iron and sulfate-reducing bacteria and methods for reducing or eliminating the effects of incrustation and bacterial plugging are presented. (Hunt-NWWA)
W74-00948

WHAT'S NEW IN DOWNHOLE OPERATING TECHNOLOGY,
Institut Francais du Petrole, des Carburants et Lubrifiants, Rueil-Malmaison (France).
R. Desbrandes.
World Oil, Vol 176, No 7, p 74-75, 78, June, 1973. 3 fig, 22 ref.

Descriptors: *Geophysics, *Borehole geophysics, *Logging, Resistivity, Gravity studies, Technology.
Identifiers: Nuclear magnetism log, Unbound case fluids, Spherically focused log, Sheer wave velocities.

Important advances in tools for analyzing well potential and performance have been made since last year's comprehensive review, World Oil, April, 1972. Downhole logging techniques for determining formation properties in drilling wells and new completions, and improvements in geophysical surveying are emphasized. Information on several drilling and production aids, such as a downhole 'listening' device to detect sand production and a unique electronic method for continuously measuring amount of drill pipe in the hole are presented. Logging while drilling, open hole logging, cased hole logging, logging for geophysics and transmitting and handling log data are discussed. (Smith-NWWA)

BOREHOLE LOGGING INVESTIGATIONS IN THE CHALK OF THE LAMBOURN AND WINTERBOURNE VALLEYS OF BERKSHIRE,
Institute of Geological Sciences, London (England).
T. K. Tate, A. S. Robertson, and D. A. Gray.
Research Rept No. 5, 1971. 23 p, 13 fig, 3 tab, 7 ref, 2 append.

Descriptors: *Geophysics, *Electrical well logging, Borehole cameras, Boreholes, *Geothermal studies, *Resistivity, Subsurface investigations, Subsurface waters, Wells, *Groundwater movement.
Identifiers: Great Britain, Regional groundwater flow.

The results of borehole investigations made in nine production and ten observation boreholes sunk in the Chalk of the Lambourn and Winterbourne Valleys, Berkshire, Great Britain, are described. Electrical resistivity, temperature, electrical conductivity, and borehole fluid velocity are examined. Evidence suggests that the level at which pump suction is placed influences the yield drawn from different contributory levels, even though the total amount of water withdrawn may be the same. It is concluded that the principal inflows of groundwater to the boreholes occur at or near the bottom of the casing, with relatively small contributions from fractures at depth. Inflows take place at such restricted levels that generalized assumptions concerning the thickness of the aquifer may be unwarranted. The significance of these observations in terms of regional ground water flow is briefly discussed. (Hunt-NWWA)

8I. Fisheries Engineering

SALTWATER POND RESEARCH,
Texas Parks and Wildlife Dept., Austin.
L. L. Elam.
Available from NTIS, Springfield, Va., 22151 as COM-72-11292 Price $3.00 printed copy; $1.45 microfiche. Completion report for NOAA, National Marine Fisheries Service, May 1972. 62 p, 28 tab, 7 ref. 2-78-R.

Descriptors: *Marine fish, *Ponds, *Saline water, *Fisheries, *Fish management, Investigations, Testing procedures, Growth rates, *Texas, Marking techniques, Trout, Oysters, Shrimp, Spawning, Fish diseases, Mortality, Ecology, Biology.
Identifiers: *Saltwater ponds, Red drum, Spotted seatrout, Southern flounder, Black drum, Sheepshead.

Pond culture experiments were initiated in Texas at the Marine Research Station in the fall of 1969. Postlarval brown and pink, and juvenile brown, pink and white shrimp were stocked at various rates, different durations of study periods, different feeding levels, and various salinity ranges. Research on marine fishes included: studies to evaluate selected fish tagging methods, studies to determine mortality rates of fish released after capture with commercial fishing gear, studies concerning the propagation of selected fishes, and pond studies on marine fishes adaptable to pond culture. Species studies included red drum, spotted seatrout, southern flounder, black drum, and sheepshead. Research concerning oyster growth, survival, adaptability to pond environment, and disease resistant capabilities were conducted. Replicate studies were conducted in a clay and an asphalt bottom pond to determine the suitability of weathered asphalt as a bottom substrate for oyster culture operation. Oyster mortalities in the asphalt bottom pond were similar to those which occurred in the clay bottom ponds but growth in the clay bottom ponds was better. Moderate Labyrinthomixa sp. infections were recorded in all pond-held oysters sampled. Light infection intensities were recorded from oysters held in the bay. (Woodard-USGS)
W74-00815

HISTORY OF IMPORTING RAINBOW TROUT, PARASALMO GAIRDNERII (RICHARDSON, 1836) INTO BOHEMIAN COUNTRIES, (IN CZECH),
Ceskoslovenska Akademie Ved, Praque.
L. Kalal.
Identifiers: History, Parasalmo-Gairdnerii, *Rainbow trout, *Trout rearing, *Czecoslovakia.

The rainbow trout P. gairdnerii has been reared in Bohemian Countirs since the year 1888. The end of World War II (army transfers) dealt a heavy blow to the rearing of this fish. New generative material was reared from fish eggs and yearlings imported from Denmark from 1946-1949. Trout rearing of the State Pisciculture and in most cases also of the Anglers' Association have therefore a uniform material in general, which proved well. New imports did not take place until the middle sixties. One import was realized from the USA, 3 imports from Denmark, one from Poland. The origin of fish imported from the USA has been impossible to find, from Denmark, according to information of the importers the form 'kamloops' was obtained, the fish from Poland originate from fish eggs imported from the station of the Seattle University, Washington (USA). Fish from new imports are being observed and until their rearing qualities are determined, their spreading is not recommended. For rearing and especially breeding reasons it is necessary to keep an exact account of them and of future imports.--Copyright 1973, Biological Abstracts, Inc.
W74-01019

EXPERIMENTAL STUDIES OF POLYCULTURE IN 1971,
Fish Culutre Research Station, Dor (Israel).
A. Yashouv, and A. Halevy.
Bamidgeh. Vol 24, No 2, p: 31-39. 1972.
Identifiers: *Carp, Cultures, Polyculture, *Silver carp, *Tilapia-Aurea, *Tilapia-Vulcani.

Experiments were carried out on polyculture of carp, silver carp and tilapias under fertilization and with and without supplementary feedings. Yields obtained in 187 days' growth without supplementary feeding reached 2350 kg/ha with biweekly fertilization and 1980 kg/ha with weekly fertilization. Experiments with weekly fertilization and supplementary feeding gave the following results in 223 days of growth: 9140-10, 620 kg/ha in ponds with Tilapia vulcani and 8570-9450 kg/ha in ponds with T. aurea. Weekly fertilization without supplementary feeding gave increased carp and silver carp yields, but not Tilapia yields. Supplementary feeding (pellets) increased carp yields 4-fold, and the Tilapia yield 7-fold. The silver carp were hardly influenced by the pellets. The coefficient of exploitation of supplementary feed (pellets) was 1.25 in ponds with Tilapia vulcani and 1.39 with T. aurea.--Copyright 1973, Biological Abstracts, Inc.
W74-01021

EFFICIENCY OF MULLET GROWTH IN FISHPONDS,
Fish Culture Research Station, Dor (Israel).
A. Yashouv.
Bamidgeh. Vol 24, No 1, p: 12-25. 1972.
Identifiers: Cyprinus-Carpio, *Fish growth, Mugil-Capito, Mugil-Cephalus, Ponds, *Mullet growth, Tilapi Aurea.

Gray mullet (Mugil cephalus) was grown in monoculture in ponds, and also in polyculture with Mugil capito, Tilapia aurea and Cyprinus carpio. The ponds were fertilized with superphosphate and ammonium sulfate and with chicken manure. There was no clear effect of crowding on the growth of gray mullet in monoculture, but this species showed enhanced growth when grown in polyculture with the other species. The other species, however were somewhat stunted on their growth in the presence of gray mullet.--Copyright 1973, Biological Abstracts, Inc.
W74-01022

REMARKS ON THE STOCKING OF THE DAM RESERVOIR AT PRZECZYCE WITH LAKE TROUT SALMO TRUTTA M LACUSTRIS L,
Polish Academy of Sciences, Krakow. Zakland Biologii Wod.
Z. Wajdowicz.
Acta Hydrobiol. Vol 14, No 2, p 205-212. 1972. Illus.
Identifiers: Dams, Lakes, *Poland (Przeczyce), Reservoirs, Salmo-Trutta-M-Lacustris, Spawning, *Stocking, *Trout.

As the result of stocking the dam reservoir at Przeczyce (Poland) numerous young lake trout were found in the river above the dam and individual adult specimens were found in the reservoir. During autumn a few spawning migrations of mature lake trout from the reservoir to the river were observed. Individual spawned females were found, but no spawning traps. Smolts of lake trout were bred from artificially inseminated spawn. The emptying of the reservoir interrupted the process of acclimatization. Some factors impeding full acclimatization, which is determined by natural spawning, are described.--Copyright 1973, Biological Abstracts, Inc.

WEIGHT-LENGTH RELATIONSHIP AND GROWTH OF CHANOS CHANOS (FERSSKAL) GROWN IN FRESHWATER PONDS,
Institute of Fisheries Development and Research, Diliman, Quezon City (Philippines).
R. O. Juliano, A. U. Baes, R. F. Ventura, and A. O. Isidro.
Nat Appl Sci Bull. Vol 22, No 3/4, p 113-131, 1970. Illus.
Identifiers: Carp, *Chanos-chanos, Freshwater ponds, Growth, Length, Ponds, *Red carps, Weight, *Milkfish.

Based on data regularly sampled on a monthly basis in 4 freshwater ponds, the weight-length relationship equations of milkfish covering a size range from 80 mm to 200 mm are as follows: Log W ± 5.73591 + 3.31866 log L for Pond 4, log W ± -5.17666 + 3.5995 log L for Pond 6 (1968), log W ± -5.01705 + 2.96479 log L for Pond 5, and log W ± -5.07492 + 3.00273 log L for Pond 6 (1969). The culture period ranged from 2-5 mo. Analysis of the variance of condition factor (K) of the fish at different lengths and in different ponds showed no significant difference. Isometric growth is apparently exhibited by the milkfish within the size range in the experiment. Growth increments in length and in weight are as follows: 91.8 mm and 7.6 grams (5 mo. rearing) in Pond 4, 98.2 mm and 52.8 grams (4 mo. rearing) in Pond 5,90.1 mm and 43.4 g (2 mo. rearing) in Pond 6 (1968), and 101.6 mm and 55.2 g (4 mo. rearing) in Pond 6 (1969). The use of the Walford growth transformation curve to predict the L seems not practical on monthly sampled data. Mixing of red carps with milkfish in one of the ponds did not inhibit the rate of growth of milkfish.--Copyright 1973, Biological Abstracts, Inc.
W74-01080

OBSERVATIONS ON THE DEVELOPMENT OF COREGONUS PELED (GMEL.) FRY IN PONDS,
Panstwowy Instytut Hydrologiczno-Meteorologiczny, Mikolajki (Poland).
S. Bernatowicz.
Acta Hydrobiol. Vol 14, No 2, p 165-172, 1972.
Identifiers: *Coregonus-Peled, *Fry, Ponds, *Stocking, Growth rates, Fish parasites.

The main difficulty encountered in the production of stocking material of C. peled in ponds are high losses in the first year of age. Observations were made on the growth of C. peled fry in the period from spring to autumn. Growth rate, condition, survival and parasites were also considered.--Copyright 1973, Biological Abstracts, Inc.

ALGAE FEEDING OF YOUNG OF CERTAIN FISH SPECIES OF THE KAIRAK-KUMSKII RESERVOIR, (IN RUSSIAN),
Akademiya Nauk Tadzhikskoi SSR, Dushanbe. Institut Zoologii i Parazitologii.
S. A. Andrievskaya.
Izv Akad Nauk Tadzh Ssr Otd Biol Nauk. 1, p 49-53, 1972.
Identifiers: *Algae, Bacillariophyta, Chlorophyta, Cyanophyta, Euglenophyta, Fish foods, Plankton, Reservoirs, Species, USSR (Kairak-Kumskii reservoir), Zooplankton.

Contents of 195 intestines of 11 spp. of fish young were studied in order to evaluate consumption of algae by larvae, fry and current brood (1963-1964). Composition of food lumps was analyzed visually in terms of percentage of total food. Research showed that during the summer fish young eat benthos, zooplankton, and plant organisms. Species of algae found were enumerated, including 7 spp. of Cyanophyta, 34 of Bacillariophyta, 2 of Euglenophyta, and 19 of Chlorophyta. Plant detritus and slime were observed in intestines of all species to different degrees. It is concluded that during the summer, some species feed primarily on crustaceans and midge larvae; other species feed primarily on algae, plant residue, slime stritus.--Copyright 1973, Biological Abstracts, Inc.

EXPERIMENTAL STUDIES ON FEEDING THE COMMON CARP CYPRINUS CARPIO L. IN EGYPT,
Cairo Univ., Giza (Egypt). Faculty of Science.
H. M. Bishai, W. D. Labib, and M. M. Ishak.
Bull Instoceanogr Fish. 2: p 275-295. 1972. Illus.
Identifiers: Bran, *Carp, Cottonseed, Cyprinus-Carpio, *Egypt, *Fish foods.

Feeding tests for the common carp C. carpio fingerlings of about 3 mo. old were carried out for a period of 8 mo., from Oct.-June. The test feeds were rice bran, cotton seed-cake and 4 diet-mixtures of different proportions of rice bran and cotton seed-cake. During the experimental period, the monthly water temperature ranged between 14.7 and 31.4C. Cotton seed-cake gave a better growth for the fish than rice bran feed. However, cotton seed-cake is not recommended as the sole diet for carp due to the relatively high cost of production and due to changes in the flavor of the fish flesh. For both feeds, increasing the level of feeding from 10-20% daily of the fish weight did not significantly increase the growth rate of the fish. The addition of cotton seed-cake to rice bran improved the efficiency of rice bran as a diet for carp. The diet mixture composed of 75% rice bran and 25% cotton seed-cake gave the highest gain in weight at a relatively low cost, comparable to cotton seed-cake. In spite of the abundant supplementary food given to the fish, they did not show appreciable gain in weight during the winter months of Dec.-Feb. The natural diet alone present in the cement experimental ponds failed to satisfy the requirements of maintenance and growth for the experimental fish.--Copyright 1973, Biological Abstracts, Inc.

AMAZONAS
Kinonchulus Sattleri N.G.N.Sp. (Enoplida, Tripyloidea), An Aberrant Freeliving Nematode from the Lower Amazonas,
W74-00974 2I

AMINO ACIDS
Effect of Retardant Chlorocholine Chloride on Content of Protein Components in Plant Leaves During Drought (In Russian),
W74-00996 3F

AMMONIA
Removal of Ammonia Nitrogen by Breakpoint Chlorination Using an Activated Carbon Catalyst,
W74-00810 5D

AMMONIUM ELECTRODES
An Ammonium Ion-Specific Electrode,
W74-00636 2K

AMPHIBIAN TAXONOMY
Amphibians of the Chesapeake Bay Region,
W74-00917 2L

AMPHIBIANS
Amphibians of the Chesapeake Bay Region,
W74-00917 2L

ANABAENA
Development of a Selective Algaecide to Control Nuisance Algal Growth,
W74-00702 5G

Nitrogen Fixation by Anabaena cylindrica. I. Localization of Nitrogen Fixation in the Heterocysts,
W74-00713 5C

Glutamine Synthetase of the Nitrogen-Fixing Alga Anabaena cylindrica,
W74-00717 5C

The 'Palmelloid' State in a Blue-Green Alga, Anabaena sp. I. Preliminary Report,
W74-00723 5C

ANABAENA CYLINDRICA
Nitrogen Fixation by Anabaena cylindrica. I. Localization of Nitrogen Fixation in the Heterocysts,
W74-00713 5C

Glutamine Synthetase of the Nitrogen-Fixing Alga Anabaena cylindrica,
W74-00717 5C

ANABAENA FLOS-AQUAE
Study of the Extracellular Polysaccharides Produced by a Blue-Green Alga, A-37,
W74-00734 5G

ANAEROBIC BACTERIA
Biodegradation of Nitrilotriacetate (NTA) By Bacteria-I. Isolation of Bacteria Able to Grow Anaerobically with NTA as a Sole Carbon Source,
W74-00644 5A

Biodegradation of Nitrilotriacetate (NTA) By Bacteria-II. Cultivation of an NTA-Degrading Bacterium in Anaerobic Medium,
W74-00645 5B

ANAEROBIC CONDITIONS
Biodegradation of Nitrilotriacetate (NTA) By Bacteria-I. Isolation of Bacteria Able to Grow Anaerobically with NTA as a Sole Carbon Source,
W74-00644 5A

Biodegradation of Nitrilotriacetate (NTA) By Bacteria-II. Cultivation of an NTA-Degrading Bacterium in Anaerobic Medium,
W74-00645 5B

ANALYSIS
An Assessment of the Assimilation of Elemental Phosphorus by Newfoundland Marine Organisms in the 1969 Pollution Problem and in 1970 Monitoring Operations,
W74-00709 5C

The Harvard Program: A Summing up,
W74-01030 6B

ANALYSIS OF COVARIANCE
Some Aspects of Nonorthogonal Data Analysis, Part II. Comparison of Means,
W74-00612 7C

ANALYSIS OF MEANS
A Systematic Approach to the Analysis of Means. Part I. Analysis of Treatment Effects,
W74-00626 7C

ANALYTICAL TECHNIQUES
Analysis of Elemental Phosphorus and Some of Its Compounds by Gas Chromatography,
W74-00712 5C

Sampling and Analysis of Chemical Pollutants in River Water,
W74-00773 5A

Analysis of Waste Waters and Interpretation of the Results,
W74-00779 5A

The Identification of Sources of Oil Spills,
W74-00780 5A

Proposal of a Simplified Manometric Method for Measuring Biochemical Oxygen Demand -- Results and Problems (Vorschlag einer vereinfachten manometrischen Methode zur Messung des biochemischen Sauerstoffbedarfs -- Ergebnisse und P robleme),
W74-00782 5A

Possibilities of Using Geophysical Methods in a Study of Freshwater Discharges in Littoral Zones of Seas (O vozmozhnostyakh geofizicheskikh metodov pri izuchenii razgruzok presnykh vod v pribrezhnykh zonakh morey),
W74-00847 2F

Systems Engineering Approach,
W74-00940 6A

The Range of Validity of the Linear Polarization Method for Measurement of Corrosion Rates,
W74-00947 8G

Water Quality Assessment Practice in Australia,
W74-01089 2K

ANIONS
Anion Selectivity Studies on Liquid Membrane Electrodes,
W74-00650 5A

ANNUAL
Variability of Annual Runoff and Precipitation Values (Ob izmenchivosti godovykh velichin stoka i osadkov),
W74-00844 4A

The Influence of Meteorological Elements on the Annual Rhythm of Height Growth in Pines, (In German),
W74-01077 2I

ANTIBIOTICS (PESTICIDES)
Some observations on the Incorporation of Novobiocin Into Hektoen Enteric Agar for Improved Salmonella Isolation,
W74-00617 5A

APPALACHIAN HIGHLANDS
Soils and Water,
W74-00698 3B

APPALACHIAN MOUNTAIN REGION
Recreation/Tourism Development Program for the Mississippi Appalachian Area.
W74-00800 6A

APPLE TREES (PALMETTE)
The Dependence of Water Regimen of Palmette Type Apple Trees on the Watering Method, (In Russian),
W74-00981 3F

AQUATIC ALGAE
The Influence of Environmental Factors on the Distribution of Freshwater Algae: An Experimental Study. II. The Role of pH and the Carbon Dioxide-Bicarbonate system,
W74-00639 5C

The Influence of Environmental Factors on the Distribution of Freshwater Algae: An Experimental Study. III. Effects of Temperature, Vitamin Requirements and Inorganic Nitrogen Compounds on Growth,
W74-00640 5C

The Influence of Environmental Factors on the Distribution of Freshwater Algae: An Experimental Study. IV. Growth of Test Species in Natural Lake Waters, and Conclusion,
W74-00641 5C

Electron Microscope and Physical Chemical Characterization of C-Phycocyanin from Fresh Extracts of Two Blue-Green Algae,
W74-00652 5A

Benthic Macroalgae of the Maryland Portion of the Chesapeake Bay,
W74-00897 2L

Macroalgae of the Chesapeake Bay,
W74-00898 2L

AQUATIC BACTERIA
Utilization of Iron Gallate and Other Organic Iron Complexes by Bacteria from Water Supplies,
W74-00660 5B

A Medium for Counting Aquatic Heterotrophic Bacteria in Polluted and Unpolluted Waters,
W74-00663 5B

AQUATIC FAUNA
Biota of Freshwater Ecosystems Identification Manual No. 10 Genera of Freshwater Nematodes (Nematoda) of Eastern North America,
W74-00563 2I

Biota of Freshwater Ecosystems Identification Manual No. 11 Freshwater Unionacean clams (Mollusca:Pelecypoda) of North America,
W74-00564 2A

AQUATIC FUNGI
Fungi of the Chesapeake Bay,
W74-00894 2L

AQUATIC HABITATS
Southern California's Deteriorating Marine Environment, An Evaluation of the Health of the Benthic Marine Biota of Ventura, Los Angeles and Orange Counties,
W74-00877 5C

AQUATIC LIFE
Phytoplankton Populations in Brackish Water Ponds, A Revised Report--Part II of Studies on Brackish Water Phytoplankton,
W74-00591 5C

Vascular Plants of the Chesapeake Bay,
W74-00903 2L

Priapulida of the Chesapeake Bay,
W74-00908 2L

Tardigrada of the Chesapeake Bay,
W74-00909 2L

Kinorhyncha of the Chesapeake Bay,
W74-00910 2L

Digenetic Trematodes of the Chesapeake Bay,
W74-00911 2L

Molluscs of the Chesapeake Bay,
W74-00912 2L

Polychaetes of the Chesapeake Bay,
W74-00913 2L

Free-Living Copepoda of the Chesapeake Bay,
W74-00914 2L

Decapod Crustaceans of the Chesapeake Bay,
W74-00915 2L

Fishes of the Chesapeake Bay,
W74-00916 2L

AQUATIC PLANTS
Viruses of Aquatic Plants of the Chesapeake Bay,
W74-00900 2L

AQUATIC VEGETATION
Aquatic Vegetation of Fishponds of the Western Regions of the Ukraine, (In Russian),
W74-01075 4A

AQUATIC WEEDS
Malezas Acuaticas, Aquatic Weeds, J. M. Bristow,
W74-00736 4A

AQUEOUS SOLUTIONS
Spinning Dropping Mercury Electrode-A Practical Analytical Tool,
W74-00634 2K

An Ammonium Ion-Specific Electrode,
W74-00636 2K

A Study of Liquid-Membrane Perchlorate-Selective Electrodes Made from an Organic Radical Ion Salt,
W74-00649 5A

AQUIFER CHARACTERISTICS
Ground Water Pollution and Conservation,
W74-00938 4B

Well Efficiency and Skin Effect,
W74-00945 8G

AQUIFERS
Maximizing Water Yield Through Well Development--Technical Memo No. 2,
W74-00943 8B

ARAGONITE
Concerning a New Graphic Method for Study of Natural Waters (In French),
W74-01008 2K

ARCTIC
Development of a Snowmelt-Runoff Model for the U.S. Tundra Biome, Progress Report,
W74-01094 2C

ARCTIC OCEAN
Are Ocean Polluters Subject to Universal Jurisdiction--Canada Breaks the Ice,
W74-00867 5G

ARDENNES REGION
New Points of View on the Phytogeographic Position of the High Ardennes, (In German),W. Van Cotthem.
W74-01025 2D

ARGENTINA (EL CHOCON RESERVOIR)
Algorithm for Solving a Class of Linear Programming Problems Related to Reservoir Management and Design,
W74-00667 4A

ARIZONA
Pressure Bomb Measures Changes in Moisture Stress of Birchleaf Mountainmahogany After Partial Crown Removal,
W74-00681 2I

ARIZONA

A Report Upon West Central Maricopa County, Arizona: Volume I, A Study of Physical Environmental Factors as a Basis for Land Use Planning.
W74-00746 3D

Present and Future Water Use and its Effect on Planning in Maricopa County, Arizona,
W74-00754 3D

Coronado Resource Conservation and Development Project, Program of Action.
W74-00755 4A

The Economics of the Cattle Feeding Industry in Arizona,
W74-00758 6C

ARKANSAS

A Eutrophication Model of the White River Basin Above Beaver Reservoir in Northwest Arkansas,
W74-00555 5C

Water Pollution--User of City Sewer System Creates Nuisance Against Lower Riparian,
W74-00870 5G

Arkansas Soil and Water Conservation Commission.
W74-00878 6E

Gillham Lake, Cossatot River Arkansas (Final Environmental Impact Statement).
W74-00881 4A

Gillham Lake, Cossatot River, Arkansas, Appendix II (Photographs), Appendix III (Environmental Elements), (Final Environmental Impact Statement).
W74-00882 4A

ARMY SURPLUS PESTICIDES

Problem Definition Study: Evaluation of Health and Hygiene Effects of the Disposal of Pesticides and Pesticide containers,
W74-00580 5G

ARTESIAN AQUIFER

Modified Solutions for Decreasing Discharge Wells,
W74-00932 8B

ARTIFICIAL AERATION

Optimal Allocation of Artificial Aeration Along a Polluted Stream Using Dynamic Programming,
W74-00883 5G

ASCOPHYLLUM NODOSUM

Pollution Effects on Littoral Algal Communities in the Inner Oslofjord, with Special Reference to Ascophyllum nodosum,
W74-00733 5C

ASH

On the Stellario-Alnetum Glutinosae (Mikyska 1944) Lohmeyer 1957 in the Czech Socialistic Republic (CSR),
W74-01078 2I

ATMOSPHERE

The Development and Preliminary Application of an Invariant Coupled Diffusion and Chemistry Model,
W74-01095 5A

ATMOSPHERIC PHYSICS

A Compilation of Studies from Atmospheric Variability Experiment (AVE),
W74-00851 2B

A Study of Winter Precipitation Areas in Relation to Several Indicators of Vertical Motion--Chapter I of a Compilation of Studies from Atmospheric Variability Experiment (AVE),
W74-00852 2B

Time Changes in Gradient and Observed Winds--Chapter II of a Compilation of Studies from Atmospheric variability Experiment (AVE),
W74-00853 2B

An Approach to the Determination of the Variability of Wind Through the Use of Quasi-Conservative Thickness Fields--Chapter IV of a Compilation of Studies from Atmospheric Variability Experiment (AVE),
W74-00855 2B

ATMOSPHERIC VARIABILITY

A Compilation of Studies from Atmospheric Variability Experiment (AVE),
W74-00851 2B

A Study of Winter Precipitation Areas in Relation to Several Indicators of Vertical Motion--Chapter I of a Compilation of Studies from Atmospheric Variability Experiment (AVE),
W74-00852 2B

Time Changes in Gradient and Observed Winds--Chapter II of a Compilation of Studies from Atmospheric variability Experiment (AVE),
W74-00853 2B

An Analysis of Internal Zones of Discontinuity--Chapter III of a Compilation of Studies from Atmospheric Variability Experiment (AVE),
W74-00854 2B

An Approach to the Determination of the Variability of Wind Through the Use of Quasi-Conservative Thickness Fields--Chapter IV of a Compilation of Studies from Atmospheric Variability Experiment (AVE),
W74-00855 2B

ATRAZINE

The Effect of Atrazine and Diuron on the Productivity of Cladocera. (Experimental Studies), (In Russian),
W74-01024 5C

ATTITUDES

Wild River Peception and Management: A Study of Users and Managers of the Middle Fork of the Salmon River,
W74-00551 6B

Social and Cultural Impact of a Proposed Reservoir on a Rural Kentucky School District,
W74-00557 6B

Impact of a Proposed Reservoir on Local Land Values, Anthroplogical Analysis of Social and Cultural Benefits and Costs from Stream Control Measures - Phase 3,
W74-00558 6B

AUSTRALIA

Detergent Phosphate and Eutrophication in Australia,
W74-00718 5C

Water Quality Assessment Practice in Australia,
W74-01089 2K

AUTOMATIC CONTROL

The Use of Mini Computers in the Water Industry,
W74-00666 7C

AVAILABLE WATER

Effective Available Water and Its Relation to Evapotranspiration Rate, Depth of Wetting, and Soil Texture,
W74-00608 2G

AVALANCHES

Avalanches in Our Western Mountains: What Are We Doing About Them,
W74-00680 2C

A Centrifugal Tensile Tester for Snow,
W74-00682 2C

Simulated Sonic Boom as an Avalanche Trigger,
W74-00683 2C

AVERAGE SAMPLE NUMBER

Skip-Lot Sampling Plans,
W74-00627 7C

AVERAGE VELOCITY

Travel Time of Georgia Streams,
W74-00556 4A

BACILLUS SUBTILIS

Biomagnification of p,p'-DDT and Methoxychlor by Bacteria,
W74-00615 5B

BACTERIA

Microbial Formation of Nitrosamines in Vitro,
W74-00654 5B

Bacteria, Yeasts, Viruses and Related Microorganisms of the Chesapeake Bay,
W74-00893 2L

Everything You Always Wanted to Know About Sulfate-Reducing Bacteria (But Were Afraid to Ask),
W74-00942 5B

BACTERIAL ENDOTOXINS

Bacterial Endotoxins in the Environment,
W74-00618 5B

BACTERIAL GROWTH

The Effect of Nutrients on the Growth of Bacterial Population in Water,
W74-01001 5C

Studies of Biological Energy Balance and Biological Productivity in the USSR Lakes (In Russian),
W74-01009 2H

BACTERICIDES

Everything You Always Wanted to Know About Sulfate-Reducing Bacteria (But Were Afraid to Ask),
W74-00942 5B

Corrosion and Incrustation - Guidelines for Water Wells,
W74-00948 8G

BACTERIOPHAGE

Recovery of Bacteriophage from Contaminated Chilled and Frozen Samples of Edible West Coast Crabs,
W74-00613 5A

BACTOPEPTONE

The Effect of Nutrients on the Growth of Bacterial Population in Water,
W74-01001 5C

BALTIMORE (MD)

Sewer System Cost Estimation Model.
W74-00745 5D

BARROW (ALASKA)
Development of a Snowmelt-Runoff Model for the U.S. Tundra Biome, Progress Report,
W74-01094 2C

BASE FLOW
Quantity and Chemical Quality of Low Flow in the Upper Colorado River Basin, Texas, April 8, 1968,
W74-01090 2E

BAYESIAN DECISION THEORY
Subjective Decision-Making for Urban Water Resources Development,
W74-00884 6B

BAYS
Hydrocarbon Incorporation Into the Salt Marsh Ecosystem from the West Falmouth Oil Spill,
W74-00824
Estuaries, Bays and Coastal Currents Around Puerto Rico,
W74-00832 7C

BDELLOVIBRIO
Effects of Calcium and Magnesium Ions and Host Viability on Growth of Bdellovibrios,
W74-00625 5C

BDELLOVIBRIO BACTERIOVORUS
Factors Which Influence the Enumeration of Bdellovibrio Bacteriovorus in Sewage and River Water,
W74-00624 5A

BEANS
Relationship of Transpiration to Atmospheric Vapor Pressure,
W74-00759 2D

BEAVER RESERVOIR (ARK)
A Eutrophication Model of the White River Basin Above Beaver Reservoir in Northwest Arkansas,
W74-00555 5C

BEETS
Comparative Data on the Yield and Chemical Composition of Beets Grown on Irrigated and Dry Farms, (In Russian),
W74-00980 3F

BELGIUM (BRUGES)
Ecological Study of the Cyanophytes and Chlorophytes in Some Ponds Around Bruges: Determination of the Degree of Trophism in Accordance with Schroever's PD Quotient, (In German),
W74-01012 5C

BELGIUM (OURTHE RIVER)
Age and Growth of the Chub Leuciscus cephalus (L.) in the Ourthe River and Berwine Creek, (In French),
W74-01097 2I

BENEFITS
Impact of a Proposed Reservoir on Local Land Values, Anthroplogical Analysis of Social and Cultural Benefits and Costs from Stream Control Measures - Phase 3,
W74-00558 6B

A Methodology for Assessment of Water Resources Development: A Competitive Evaluation Model for Water Resources Development Planning,
W74-00559 6B

BENTHIC FAUNA
Observations on Mortalities of Benthic Organisms After Contamination of the Bottom of Long Harbour, Placentia Bay, Newfoundland with Elemental Phosphorus,
W74-00710 5C

Preliminary Survey of Mercury and Other Metals Contained in Animals from the Fraser River Mudflats,
W74-00764 5C

BENTHIC MACROALGAE TAXONOMY
Benthic Macroalgae of the Maryland Portion of the Chesapeake Bay,
W74-00897 2L

BENTHOS
Benthic Macroalgae of the Maryland Portion of the Chesapeake Bay,
W74-00897 2L

BENTONITE
Waste Water Clarification and Solids Recovery with 'Waste Water Bentonite': Report on a Study Trip to Sweden (Abwasserklaerung und Stoffrueckgewinnung mit 'Abwasserbentonit': Bericht ueber eine Reise nach Schweden),
W74-00762 5D

BEVERAGES
Bacterial Endotoxins in the Environment,
W74-00618 5B

BIBLIOGRAPHIES
Algae Abstracts, A Guide to the Literature, Volume 1 to 1969; Volume 2, 1970-1972.
W74-00704 5C

The Effects of Strip Mining Upon Navigable Waters and Their Tributaries: Discussion and Selected Bibliography.
W74-00725 5C

Factors of Chemical Fertilization in Saline Water Irrigation: A Review,
W74-00757 3C

Bibliography of Reports on the Water Resources of Indiana Prepared by the U.S. Geological Survey, 1886-1972,
W74-00814 2E

BIDS
Market Problems in the Distribution of Emission Rights,

BLACK SEA

The Variation of Water Relations and Respiration Intensity in Male and Female Ephedra distachya Plants of the Black Sea Coast as a Function of Age,
W74-01076 2I

BLACK SPRUCE CANOPY

The Effect of Overstory Removal Upon Surface Wind in a Black Spruce Bog,
W74-00688 3B

BLEACHING WASTES

Kraft Pulpers and Pollution Problems and Prescriptions,
W74-00774 5D

Bleaching Effluent for Irrigation,
W74-00787 5D

BLIZZARDS

Weather Conditions that Determine Snow Transport Distances at a Site in Wyoming,
W74-00685 2C

BLOWING SNOW

Weather Conditions that Determine Snow Transport Distances at a Site in Wyoming,
W74-00685 2C

BODEGA HEAD (CALIF)

Bodega: A Case History of Intense Controversy,
W74-00738 6G

BODIES OF WATER

Effects of Thermal Effluents on Biocenoses of Water Bodies (O kharaktere vliyaniya termal'nykh sbrosnykh vod na biotsenozy vodoyemov),
W74-00842 5C

BOGS

Vegetation and Stratigraphy of Bogs of the Eastern Forest-Steppe, (In Russian),
W74-01096 4A

BOREHOLE GEOPHYSICS

What's New in Downhole Operating Technology,
W74-00950 8G

BOREHOLE STABILITY

New Muds Designed to Improve Drilling Rate, Hole Stability,
W74-00946 8G

BORRERIA-ARTICULARIS

Population Dynamics of Herbaceous Communities of Pilani (Rajasthan),
W74-00714 2I

BOSTON (MASSACHUSETTS)

Additional Sources for Water Supply for the Town of Wellesley.
W74-00807 6A

BOTTOM FAUNA

Bottom Fauna of Dead Vistula,
W74-01073 5C

BOTTOM SEDIMENTS

Observations on Mortalities of Benthic Organisms After Contamination of the Bottom of Long Harbour, Placentia Bay, Newfoundland with Elemental Phosphorus,
W74-00710 5C

Distribution of Trace Metals in the Pore Waters of Shallow Water Marine Sediments,
W74-00828 2K

Interaction of Nitrilotriacetic Acid with Suspended and Bottom Material.
W74-00926 5A

BOTTOM ZONES (LAKES)

Rotifers of the Near Bottom Zone of Lakes Mikolajskie and Taitowisko,
W74-00935 2H

BRACKISH WATER

Phytoplankton Populations in Brackish Water Ponds, A Revised Report--Part II of Studies on Brackish Water Phytoplankton,
W74-00591 5C

BRAZIL

Kinonchulus Sattleri N.G.N.Sp. (Enoplida, Tripyloidea), An Aberrant Freeliving Nematode from the Lower Amazonas,
W74-00974 2I

BREAKPOINT CHLORINATION

Removal of Ammonia Nitrogen by Breakpoint Chlorination Using an Activated Carbon Catalyst,
W74-00810 5D

BRYOPHYTES

Bryophytes and Lichens of the Chesapeake Bay,
W74-00899 2L

BUFFEL GRASS

Emergence of Buffel Grass (Cenchrus ciliaris) From Seed After Flooding,
W74-00768 3F

BUZZARDS BAY (MASS)

Hydrocarbon Incorporation Into the Salt Marsh Ecosystem from the West Falmouth Oil Spill,
W74-00824

BYSTRITSA RIVER (USSR)
Factors Responsible for Floodflow in Carpathian Rivers (as illustrated by the Stryy and Bystritsa Rivers) (Faktory pavodochnogo stoka karpatskikh rek (na primers Stryya i Bystritsy)),
W74-00599 2E

CADMIUM
Seasonal Variations of Cadmium, Copper, Manganese, Lead, and Zinc in Water and Phytoplankton in Monterey Bay, California,
W74-00829 2K

CALCITE
Concerning a New Graphic Method for Study of Natural Waters (In French),
W74-01008 2K

CALCIUM
Effects of Calcium and Magnesium Ions and Host Viability on Growth of Bdellovibrios,
W74-00625 5C

CALCIUM COMPOUNDS
Complementary Role of Iron (III), Sulfate and Calcium in Precipitation of Phosphate From Solution,
W74-01053 5D

CALIFORNIA
River Mile Index--NAPA, Salinas, and Eel River Basins, California.
W74-00585 2E

Summary Report: Pilot Plant Studies on Dewatering Primary Digested Sludge,
W74-00700 5D

Response of Aquatic Life to Salinity, Temperature, Dissolved Oxygen, and Water Flow,
W74-00721 5C

Bodega: A Case History of Intense Controversy,
W74-00738 6G

Project Report for Ventura County Planning Department and Casitas Municipal Water District on Watershed Development Impact on Lake Casitas.
W74-00752 5B

Seasonal Variations of Cadmium, Copper, Manganese, Lead, and Zinc in Water and Phytoplankton in Monterey Bay, California,
W74-00829 2K

Southern California's Deteriorating Marine Environment, An Evaluation of the Health of the Benthic Marine Biota of Ventura, Los Angeles and Orange Counties,
W74-00877 5C

A Summary Report Master Water and Sewerage Plan.
W74-01041 5D

Saline Water Conversion Research, 1972 Annual Report.
W74-01049 3A

Saline Water Research, Progress Summary, January 1, 1972 - December 31, 1972.
W74-01050 3A

CALLUS TISSUE CULTURES
Callus Tissue Culture From the Viewpoint of Water Relationships (In German),
W74-00995 2I

CALOTHRIX PARIETINA
Electron Microscope and Physical Chemical Characterization of C-Phycocyanin from Fresh Extracts of Two Blue-Green Algae,
W74-00652 5A

CANADA
Effects of Elemental Phosphorus on Marine Life.
W74-00705 5C

Coexistence of a Fishery and A Major Industry in Placentia Bay,
W74-00706 5C

Decomposition of Phosphorus in Water,
W74-00707 5C

An Assessment of the Assimilation of Elemental Phosphorus by Newfoundland Marine Organisms in the 1969 Pollution Problem and in 1970 Monitoring Operations,
W74-00709 5C

Observations on Mortalities of Benthic Organisms After Contamination of the Bottom of Long Harbour, Placentia Bay, Newfoundland with Elemental Phosphorus,
W74-00710 5C

Symptoms of 'Red' Herring in Relation to the Mass Mortalities in Placentia Bay, February--April 1969,
W74-00711 5C

Analysis of Elemental Phosphorus and Some of Its Compounds by Gas Chromatography,
W74-00712 5C

Preliminary Survey of Mercury and Other Metals Contained in Animals from the Fraser River Mudflats,
W74-00764 5C

Organochlorine Residues in Harp Seals (Pagophilus groenlandicus) Caught in Eastern Canadian Waters,
W74-00766 5C

Some Comparisons in the Thermal Structure of Lakes Wood, Kalamalka, Okanagan, Skaha, and Osoyoos, British Columbia,
W74-00769 2H

The Tidal Power Potential of Ungava Bay and Its Possible Exploitation in Conjunction with the Local Hydroelectric Resources,
W74-00838 4A

Are Ocean Polluters Subject to Universal Jurisdiction--Canada Breaks the Ice,
W74-00867 5G

List of the Gastropods of the St. Lawrence River in the Region of Gentilly, (In French),
W74-00973 2I

CANCER ANTENNARIUS
Recovery of Bacteriophage from Contaminated Chilled and Frozen Samples of Edible West Coast Crabs,
W74-00613 5A

CANCER MAGISTER
Recovery of Bacteriophage from Contaminated Chilled and Frozen Samples of Edible West Coast Crabs,
W74-00613 5A

CAPACITANCE MODEL
Dead End Pore Volume and Dispersion in Porous Media,
W74-00951 8B

CAPACITY EXPANSION
Pathology of a Dynamic Programing Sequencing Algorithm,
W74-00671 6A

CAPILLARY PRESSURE
The Use of Tensiometers as Indicators of Soil Moisture Availability for Plants, (In Russian),
W74-00989 3F

CAPITAL COSTS
Low-Cost Facilities for the Bacteriological Examination of Drinking Water Samples,
W74-00630 5G

CARBON-14 TECHNIQUE
Comparison of 2 Methods of Treating Water Samples ('Actual in Situ' and 'Simulated in Situ') for Study of Primary Production by the Carbon 14 Technique (In French),
W74-01004 7B

CARBON DIOXIDE
Corrosion Control in Water Wells,
W74-00952 5F

CARBONATES
Concerning a New Graphic Method for Study of Natural Waters (In French),
W74-01008 2K

CARDIIDAE (DISTRIBUTION)
Distribution of Monodacna Colorata (Eulamellibranchiata, Cardiidae) in the Samarsky Bay of the Zaporozhsky Water Reservoir (In Russian),
W74-00999 2H

CARICETUM SPECIES
Sedge Associations from the Ozunca Swamp, (In Rumanian),
W74-01016 2H

CARP
Experimental Studies of Polyculture in 1971,
W74-01021 8I

Experimental Studies on Feeding the Common Carp Cyprinus Carpio L. In Egypt,
W74-01100 8I

CARP BREEDING
Comparative Efficiency of the Area Unit Used for Fish Breeding and Other Agricultural Purposes, (In Russian),
W74-01084 8I

CARPATHIAN MOUNTAINS
Calculation of Spring Runoff Depth in Carpathian Rivers (Raschet sloya vesennego stoka rek Karpat),
W74-00597 4A

Flash Floods on Carpathian Rivers in June 1969 and May 1970 (Livnevyye pavodki na rekakh Karpat v iyune 1969, maye 1970 g.),
W74-00598 2E

CASCADES (WASH)
Avalanches in Our Western Mountains: What Are We Doing About Them,
W74-00680 2C

CASEIN PEPTONE STARCH MEDIUM
A Medium for Counting Aquatic Heterotrophic Bacteria in Polluted and Unpolluted Waters,
W74-00663 5B

CATTLE
The Economics of the Cattle Feeding Industry in Arizona,
W74-00758 6C

CEMENT BOND LOG
A Sonic Method for Analyzing the Quality of Cementation of Borehole Casings,
W74-00936 8F

CEMENT GROUTING
A Sonic Method for Analyzing the Quality of Cementation of Borehole Casings,
W74-00936 8F

CENSUS
Wild River Peception and Management: A Study of Users and Managers of the Middle Fork of the Salmon River,
W74-00551 6B

Suburban America: Population Dynamics as Related to Water Resources Planning,
W74-00553 6B

CENTRIFUGATION
Centrifuge Dewaters Sludge at Rate of 10 Tons Per Day,
W74-00788 5D

CESTOIDEA
Cestoidea of Fish in the River Hron (Czechslovakia), (In Czech),
W74-00689 2I

CHANNEL FLOW
Flow and Channel Characteristics of Two High Mountain Streams,
W74-00678 4A

CHANNEL IMPROVEMENT
A Bill to Amend the River and Harbor Act of 1973 Relating to The Chicago River, Illinois.
W74-00863 6E

CHANNEL MORPHOLOGY
Flow and Channel Characteristics of Two High Mountain Streams,
W74-00678 4A

CHANOS-CHANOS
Weight-Length Relationship and Growth of Chanos chanos (Fersskal) Grown in Freshwater Ponds,
W74-01080 8I

CHAPARRAL
Pressure Bomb Measures Changes in Moisture Stress of Birchleaf Mountainmahogany After Partial Crown Removal,
W74-00681 2I

CHARITON COUNTY
Levee Unit No. L-246, Missouri River Levee System (Final Environmental Statement).
W74-00879 4A

CHELATION
Changes in the Concentration of Soluble and Particulate Iron in Seawater Enclosed in Containers,
W74-00830 2K

CHEM CONTROL
Development of a Selective Algaecide to Control Nuisance Algal Growth,
W74-00702 5G

CHEMICAL ANALYSIS
Selected Water-Quality Records for Texas Surface Waters, 1971 Water Year,
W74-01086 7C

Water Quality Assessment Practice in Australia,
W74-01089 2K

CHEMICAL COMPOSITION
Fatty Acid Composition of L-Forms of Streptococcus Faecalis Cultured at Different Osmolalities,
W74-00622 5A

CHEMICAL PRECIPITATION
A Guide to Chemical and Clarifier Selection for Waste Water Treatment,
W74-00811 5D

Enhancing Trickling Filter Plant Performance by Chemical Precipitation,
W74-00835 5D

CHEMICAL TREATMENT
A Guide to Chemical and Clarifier Selection for Waste Water Treatment,
W74-00811 5D

CHEMICAL WASTES
Priminary System Development, Chemical Hazards Response Information System (CHRIS),
W74-01092 5B

CHEMOTAXIS
Negative Chemotaxis of Marine Bacteria to Toxic Chemicals,
W74-00658 5C

CHEMOTAXONOMY
Molecular Relationships Among the Salmonelleae,
W74-00623 5B

CHESAPEAKE BAY
Chesapeake Bay Existing Conditions Report, Appendix A--The People and the Economy.
W74-00887 2L

Chesapeake Bay Existing Conditions Report, Appendix B, The Land-Resources and Use, Volume I.
W74-00888 2L

Chesapeake Bay Existing Conditions Report, Appendix B, The Land-Resources and Use, Volume II.
W74-00889 2L

Chesapeake Bay Existing Conditions Report, Appendix C, The Bay--Processes and Resources, Volume I.
W74-00890 2L

Chesapeake Bay Existing Conditions Report, Appendix C, The Bay--Processes and Resources, Volume II.
W74-00891 2L

Bacteria, Yeasts, Viruses and Related Microorganisms of the Chesapeake Bay,
W74-00893 2L

Fungi of the Chesapeake Bay,
W74-00894 2L

Nannoplankton of the Chesapeake Bay,
W74-00895 2L

Phytoplankton of the Chesapeake Bay,
W74-00896 2L

Benthic Macroalgae of the Maryland Portion of the Chesapeake Bay,
W74-00897 2L

Macroalgae of the Chesapeake Bay,
W74-00898 2L

Bryophytes and Lichens of the Chesapeake Bay,
W74-00899 2L

Viruses of Aquatic Plants of the Chesapeake Bay,
W74-00900 2L

Submerged Vascular Plants of the Chesapeake Bay and Tributaries,
W74-00901 2L

Emergent Vascular Plants of Chesapeake Bay Wetlands,
W74-00902 2L

Vascular Plants of the Chesapeake Bay,
W74-00903 2L

Free-Living Protozoa of the Chesapeake Bay Exclusive of Foraminifera and the Flagellates,
W74-00904 2L

Foraminifera of the Chesapeake Bay,
W74-00905 2L

Ctenophores of the Chesapeake Bay,
W74-00906 2L

Cnidaria of the Chesapeake Bay,
W74-00907 2L

Priapulida of the Chesapeake Bay,
W74-00908 2L

Tardigrada of the Chesapeake Bay,
W74-00909 2L

Kinorhyncha of the Chesapeake Bay,
W74-00910 2L

Digenetic Trematodes of the Chesapeake Bay,
W74-00911 2L

Molluscs of the Chesapeake Bay,
W74-00912 2L

Polychaetes of the Chesapeake Bay,
W74-00913 2L

Free-Living Copepoda of the Chesapeake Bay,
W74-00914 2L

Decapod Crustaceans of the Chesapeake Bay,
W74-00915 2L

Fishes of the Chesapeake Bay,
W74-00916 2L

Amphibians of the Chesapeake Bay Region,
W74-00917 2L

Reptiles of the Chesapeake Bay Region,
W74-00918 2L

Waterfowl of the Chesapeake Bay,
W74-00919 2L

Current Status of the Knowledge of the Biological Effects of Suspended and Deposited Sediments in Chesapeake Bay,
W74-00920 2L

Current Status of Knowledge Concerning the Cause and Biological Effects of Eutrophication in Chesapeake Bay,
W74-00921 2L

Current Status of Knowledge of the Biological Effects of Heavy Metals in the Chesapeake Bay,
W74-00922 2L

Current Status of Research on the Biological Effects of Pesticides in Chesapeake Bay,
W74-00923 2L

Chesapeake Bay Existing Conditions Report, Appendix D--Map Folio.
W74-00924 2L

CHINCOTEAGUE BAY
Survival of Vibrio Parahaemolyticus in Oyster Shellstock at Two Different Storage Temperatures,
W74-00616 5C

CHLAMYDOMONAS
Let as a Determinant of Oxygen Enhancement Ratio and Shape of Survival Curve for Chlamydomonas,
W74-00732 5C

Biological Models of Freshwater Communities,
W74-00925 5C

CHLORINATED HYDROCARBON PESTICIDES
Mechanism of Organic Adsorption on Activated Carbon,
W74-00565 5D

Biomagnification of p,p'-DDT and Methoxychlor by Bacteria,
W74-00615 5B

Degradation of Chlorinated Hydrocarbons by Clostridium Sp. Isolated from Lindane-Amended, Flooded Soil,
W74-00664 5B

Organochlorine Residues in Harp Seals (Pagophilus groenlandicus) Caught in Eastern Canadian Waters,
W74-00766 5C

CHLORINATION
Removal of Ammonia Nitrogen by Breakpoint Chlorination Using an Activated Carbon Catalyst,
W74-00810 5D

CHLORO CHOLINE CHLORIDE
Effect of Retardant Chlorocholine Chloride on Content of Protein Components in Plant Leaves During Drought (In Russian),
W74-00996 3F

CHLOROPHTES
Ecological Study of the Cyanophytes and Chlorophytes in Some Ponds Around Bruges: Determination of the Degree of Trophism in Accordance with Schroever's PD Quotient, (In German),
W74-01012 5C

CHROMIUM
A New Era for Cooling Water Treatment,
W74-00777 5D

Power Plant Cooling System Still Using Sewage Effluent.
W74-00778 5D

CHUB
Age and Growth of the Chub Leuciscus cephalus (L.) in the Ourthe River and Berwine Creek, (In French),
W74-01097 2I

CIRCULATION (ESTUARINE)
Circulation in the Bay of Ampasindava (Madagascar) and Its Biochemical Implications (In French),
W74-01005 5B

CITIES
Bacterial Endotoxins in the Environment,
W74-00618 5B

CITY PLANNING
Suburban America: Population Dynamics as Related to Water Resources Planning,
W74-00553 6B

CLADOCERA
The Effect of Atrazine and Diuron on the Productivity of Cladocera. (Experimental Studies), (In Russian),
W74-01024 5C

CLARIFIERS
A Guide to Chemical and Clarifier Selection for Waste Water Treatment,
W74-00811 5D

CLASSIFICATION
Chesapeake Bay Existing Conditions Report, Appendix C, The Bay--Processes and Resources, Volume II.
W74-00891 2L

Bacteria, Yeasts, Viruses and Related Microorganisms of the Chesapeake Bay,
W74-00893 2L

Fungi of the Chesapeake Bay,
W74-00894 2L

Nannoplankton of the Chesapeake Bay,
W74-00895 2L

Phytoplankton of the Chesapeake Bay,
W74-00896 2L

Classification and Evaluation of Freshwater Wetlands as Wildlife Habitat in the Glaciated Northeast,
W74-01052 6B

CLAY LOAM
Effect of Detergent Application on the Growth of corn,
W74-01057 3C

CLEAR-CUTTING
Effect of Forest Cover Removal on Depth of Soil Freezing and Overland Flow,
W74-00610 2G

CLEARCUTTING
Soils and Water,
W74-00698 3B

CLEARWATER RIVER BASIN (IDAHO)
In Search of New Methods for River System Planning,
W74-01029 4A

CLIMATIC EFFECTS
Environmental Impact Study for Expansion on the Village Creek Sewage Treatment Plant,
W74-01035 5D

CLOSTRIDIUM
Degradation of Chlorinated Hydrocarbons by Clostridium Sp. Isolated from Lindane-Amended, Flooded Soil,
W74-00664 5B

CLOSTRIDIUM WELCHII
The Detection of Clostridium Welchii in the Differential Reinforced Clostridial Medium Technique,
W74-00661 5A

CNIDARIA TAXONOMY
Cnidaria of the Chesapeake Bay,
W74-00907 2L

COASTAL MARSHES
Louisiana Government and the Coastal Zone-1972.
W74-01028 6E

Wetlands '73: Toward Coastal Zone Management in Louisiana.
W74-01043 2L

COASTAL WATERS
Are Ocean Polluters Subject to Universal Jurisdiction--Canada Breaks the Ice,
W74-00867 5G

COASTAL ZONE MANAGEMENT
Ocean Waste Disposal in Selected Geographic Areas.
W74-00928 5E

Louisiana Government and the Coastal Zone-1972.
W74-01028 6E

Wetlands '73: Toward Coastal Zone Management in Louisiana.
W74-01043 2L

COLIFORMS
Low-Cost Facilities for the Bacteriological Examination of Drinking Water Samples,
W74-00630 5G

COLOMBIA (SOUTH AMERICA)
Malezas Acuaticas, Aquatic Weeds, J. M. Bristow,
W74-00736 4A

COLORADO
Sampling Requirements for Areal Water Equivalent Estimates in Forested Subalpine Watersheds,
W74-00675 3B

Snow Fences for Influencing Snow Accumulation,
W74-00684 2C

Simulating Effects of Harvest Cutting on Snowmelt in Colorado Subalpine Forest,
W74-00686 4C

Photogrammetric Determinations of Snow Cover Extent from Uncontrolled Aerial Photographs,
W74-00697 3B

Flood Management Plan--Warning, Damage, Coordination.
W74-00817 6F

Master Plan for Major Drainage: Henry's Lake Area, Subbasin 1-31-5501-01.
W74-01037 6B

A Program for Storm Drainage and Flood Control-1971-1990: Damage Prevention, Major Drainageways, Master Planning, Regional Management.
W74-01038 6F

COLORADO RIVER
Lone Peak Wilderness Area, Utah, and Designating a Segment of the Colorado River in Utah as Part of the Wild and Scenic Rivers System.
W74-00874 4C

COLORADO RIVER BASIN
Surface Water Supply of the United States, 1966-70: Part 9. Colorado River Basin--Volume 2. Colorado River Basin from Green River to Compact Point.
W74-00586 7C

COLORADO RIVER BASIN

Annual Streamflow Summaries from Four Subalpine Watersheds in Colorado,
W74-00676 3B

Chemical and Biological Patterns in the Lower Colorado River System,
W74-00760 5C

COLORADO RIVER BASIN (TEX.)
Quantity and Chemical Quality of Low Flow in the Upper Colorado River Basin, Texas, April 8, 1968,
W74-01090 2E

COLORADO RIVER BASIN (WYO TO N MEX)
Surface Water Supply of the United States, 1966-70: Part 9. Colorado River Basin--Volume 2. Colorado River Basin from Green River to Compact Point.
W74-00586 7C

COLUMBIA RIVER
Solid Waste Management Plan, Cowlitz and Wahkiakum Region.
W74-00747 5D

COMPARISON OF MEANS
Some Aspects of Nonorthogonal Data Analysis, Part II. Comparison of Means,
W74-00612 7C

COMPETITIVE EVALUATION
A Methodology for Assessment of Water Resources Development: A Competitive Evaluation Model for Water Resources Development Planning,
W74-00559 6B

COMPREHENSIVE PLANNING
An Evaluation of the Water-Related Economic Resource Development of Appalachia-In-Mississippi,
W74-00799 6A

Open Space and Recreation Plan.
W74-00801 6A

Comprehensive Water and Sewerage Plan for Ouachita Parish.
W74-00806 6A

Environmental Health Analysis.
W74-00808 5B

Findings of the National Water Commission,
W74-00812 6A

Phase I Comprehensive Water and Sewer Plan.
W74-00813 6A

Water-Related Facilities Study for the Comprehensive Regional Plan of Columbus and Franklin County (Ohio).
W74-01048 6B

COMPUTER MODELS
Sewer System Cost Estimation Model.
W74-00745 5D

HEC-1, Flood Hydrograph Package--Users Manual, Computer Program 723-X6-L2010.
W74-00821 7C

Dynamic Water Quality Forecasting and Management,
W74-00927 5C

Systems Engineering Approach,
W74-00940 6A

HEC-4, Monthly Streamflow Simulation, Computer Program 723-X6-L2340.
W74-01091 7C

COMPUTER PROGRAMS
HEC-1, Flood Hydrograph Package--Users Manual, Computer Program 723-X6-L2010.
W74-00821 7C

Computer Program 723-X6-L202A, HEC-2, Water Surface Profiles--Users Manual.
W74-00822 7C

Computer Program 723-X6-L202A, HEC-2, Water Surface Profiles--Programmers Manual.
W74-00823 7C

CONCRETE DAMS
Concrete Gravity Dams,
W74-01066 8A

CONGRESSIONAL HEARINGS
Restore Rural Water and Waste Disposal Grant Programs.
W74-00875 5G

CONIFEROUS TREAS
Plantations of Coniferous Tree Species, (In Russian),
W74-01023 2I

CONNECTICUT RIVER
Banks Study Basin Cleanup.
W74-00772 5D

CONSERVATION
Coronado Resource Conservation and Development Project, Program of Action.
W74-00755 4A

Are Ocean Polluters Subject to Universal Jurisdiction--Canada Breaks the Ice,
W74-00867 5G

Arkansas Soil and Water Conservation Commission.
W74-00878 6E

CONSOLIDATED FARM AND RURAL DEVELOPMENT ACT
Restore Rural Water and Waste Disposal Grant Programs.
W74-00875 5G

CONSTRUCTION COSTS
Systematic Errors in Cost Estimates for Public Investment Projects,
W74-00751 6C

CONSTRUCTION MATERIALS
Foundations and Construction Materials,
W74-01063 8A

CONTROL SYSTEMS
The Use of Mini Computers in the Water Industry,
W74-00666 7C

CONTROLLED DRAINAGE
Preliminary Results of Water Level Control on Small Plots in a Peat Bog,
W74-00694 4A

COOLING BASINS
Some Phytoplankton Characteristics in Cooler Basins, (In Russian),
W74-01017 5C

COOLING WATER
Economic Feasibility of an Integrated Cottonwood Plantation Utilizing a Nuclear Power Reactor,
W74-00771 3C

A New Era for Cooling Water Treatment,
W74-00777 5D

Power Plant Cooling System Still Using Sewage Effluent.
W74-00778 5D

COORDINATION
Water and Sewer Service Needs of Low and Moderate Income Households in Metropolitan Washington.
W74-01034 5D

COPEPODA TOXONOMY
Free-Living Copepoda of the Chesapeake Bay,
W74-00914 2L

COPEPODS
Free-Living Copepoda of the Chesapeake Bay,
W74-00914 2L

COPPER
Electrochemical Study of a Heterogeneous Copper (II)-Selective Electrode; Study of Selectivity and Potential Stability,
W74-00637 2K

Adsorptive Extraction for Analysis of Copper in Seawater,
W74-00827 2K

Seasonal Variations of Cadmium, Copper, Manganese, Lead, and Zinc in Water and Phytoplankton in Monterey Bay, California,
W74-00829 2K

Copper Content of Oysters (Crassostrea Angulata) Along the Huelva Coasts, (In Spanish),
W74-00978 5C

COREGONUS-PELED
Observations on the Development of Coregonus peled (Gmel.) Fry in Ponds,
W74-01081 8I

CORIXIDS
Evaluation of a Removal Method for Estimating the Numbers of Rock Pool Corixids (Hemiptera, Corixidae),
W74-01055 7B

CORN (FIELD)
Effect of Detergent Application on the Growth of corn,
W74-01057 3C

CORPS OF ENGINEERS
Increasing Protection for our Waters, Wetlands, and Shorelines: The Corps of Engineers.
W74-00858 6E

CORRELATION ANALYSIS
Estimating a Correlation Coefficient When One Variable is Not Directly Observed,
W74-00619 7C

CORRELATION COEFFICIENTS
Estimating a Correlation Coefficient When One Variable is Not Directly Observed,
W74-00619 7C

CORROSION
Corrosion Control in Large Volume Pumping Brine Wells,
W74-00937 8G

Everything You Always Wanted to Know About Sulfate-Reducing Bacteria (But Were Afraid to Ask),
W74-00942 5B

The Range of Validity of the Linear Polarization Method for Measurement of Corrosion Rates,
W74-00947 8G

CORROSION CONTROL
A New Era for Cooling Water Treatment,
W74-00777 5D

Power Plant Cooling System Still Using Sewage Effluent.
W74-00778 5D

Corrosion and Incrustation - Guidelines for Water Wells,
W74-00948 8G

Corrosion Control in Water Wells,

W74-00876 3A

Levee Unit No. L-246, Missouri River Levee System (Final Environmental Statement).
W74-00879 4A

Lost Creek Watershed, Newton County, Missouri (Final Environmental Statement).
W74-00880 4D

Gillham Lake, Cossatot River Arkansas (Final Environmental Impact Statement).
W74-00881 4A

Gillham Lake, Cossatot River, Arkansas, Appendix II (Photographs), Appendix III (Environmental Elements), (Final Environmental Impact Statement).
W74-00882 4A

Chesapeake Bay Existing Conditions Report, Appendix C, The Bay--Processes and Resources, Volume I.
W74-00890 2L

Louisiana Government and the Coastal Zone-1972.
W74-01028 6E

Wetlands '73: Toward Coastal Zone Management in Louisiana.
W74-01043 2L

Ecological and Environmental Considerations,
W74-01060 8A

ENVIRONMENTAL ENGINEERING
Master Plan for Major Drainage: Henry's Lake Area, Subbasin 1-31-5501-01.
W74-01037 6B

ENVIRONMENTAL IMPACT STATEMENT
Natural Resources Defense Council Inc. V. Grant (Action to Permanently Enjoin Construction of Watershed Project).
W74-00868 6E

ENVIRONMENTAL IMPACT STATEMENT; *NATIONAL ENVIRONMENTAL POLICY ACT; *GILLHAM LAKE AREA
Gillham Lake, Cossatot River, Arkansas, Appendix II (Photographs), Appendix III (Environmental Elements), (Final Environmental Impact Statement).
W74-00882 4A

ENVIRONMENTAL IMPACT STATEMENTS
Prickett Creek Watershed, West Virginia (Final Environmental Statement).
W74-00860 4A

Five Year Extension for Research and Development, Public Law 92-60 (Final Environmental Statement).
W74-00876 3A

Levee Unit No. L-246, Missouri River Levee System (Final Environmental Statement).
W74-00879 4A

Lost Creek Watershed, Newton County, Missouri (Final Environmental Statement).
W74-00880 4D

Gillham Lake, Cossatot River Arkansas (Final Environmental Impact Statement).
W74-00881 4A

ENVIRONMENTAL INVENTORY
A Report Upon West Central Maricopa County, Arizona: Volume I, A Study of Physical Environmental Factors as a Basis for Land Use Planning.
W74-00746 3D

ENVIRONMENTAL LAW TRENDS
Trends in Environmental Law Related to Water Resources Planning,
W74-00552 6E

ENVIRONMENTAL QUALITY
Least-Cost Allocation and Valuation Model for Water Resources,
W74-00670 5D

Nonlinear Effluent Charges,
W74-00886 5G

ENVIRONMENTAL SANITATION
Environmental Health Analysis.
W74-00808 5B

ENZYME ACTIVITY
Polymer Membrane Electrodes. Part I. A Choline Ester-Selective Electrode,
W74-00647 2K

ENZYMES
Glutamine Synthetase of the Nitrogen-Fixing Alga Anabaena cylindrica,
W74-00717 5C

Enzyme-Enhanced Turbidity Removal Through Primary Treatment,
W74-00783 5D

EPHEDRA-DISTACHYA
The Variation of Water Relations and Respiration Intensity in Male and Female Ephedra distachya Plants of the Black Sea Coast as a Function of Age,
W74-01076 2I

EPILIMNION
Some Comparisons in the Thermal Structure of Lakes Wood, Kalamalka, Okanagan, Skaha, and Osoyoos, British Columbia,
W74-00769 2H

EPIZOOTIAE
Natural Factors of Activation of Plague Epizootiae in Siberia, (In Russian),
W74-00990 2I

EPIZOOTIOLOGY
Cestoidea of Fish in the River Hron (Czechslovakia), (In Czech),
W74-00689 2I

EQUATIONS
Vertical Infiltration into a Layered Soil,
W74-00603 2G

EROSION CONTROL
Computation of Maximum Storm Runoff for Designing Erosion Control Structures in Southwestern European Russia (Rashet maksimal'nogo livnevogo stoka pri proyektirovanii protivoerozionnykh sooruzheniy v yugo-zapadnoy chasti YeTS),
W74-00600 2D

Effect of the Polymer K-4 on the Resistance of Light Chestnut Soil Cover to Erosion by Water, (In Russian),
W74-00988 4D

ERTS
Monitoring of Dumping by Means of Satellite Remote Sensing,
W74-00635 5B

ESTIMATED COSTS
Systematic Errors in Cost Estimates for Public Investment Projects,
W74-00751 6C

ESTIMATING
Consideration of the Character of Surface-Groundwater Relationships and Streamflow in Estimates of Yields From Infiltration Galleries (Uchet kharaktera svyazi podzemnykh vod s poverkhnostnymi i rezhima rechnogo stoka pri raschetakh inf il'tratsionnykh vodozaborov),
W74-00848 8A

ESTUARIES
Studies on Brackish Water Phytoplankton,
W74-00589 5C

The Phytoplankton of Gales Creek with Emphasis on the Taxonomy and Ecology of Estuarine Phytoflagellates--Part 1 of Studies on Brackish Water Phytoplankton,
W74-00590 5C

Capacity of an Estuary to Accept Pollutants,
W74-00708 5C

Estuaries, Bays and Coastal Currents Around Puerto Rico,
W74-00832 7C

Macroalgae of the Chesapeake Bay,
W74-00898 2L

Bryophytes and Lichens of the Chesapeake Bay,
W74-00899 2L

EUROPEAN USSR
Computation of Maximum Storm Runoff for Designing Erosion Control Structures in Southwestern European Russia (Rashet maksimal'nogo livnevogo stoka pri proyektirovanii protivoerozionnykh sooruzheniy v yugo-zapadnoy chasti YeTS),
W74-00600 2D

EUTROPHICATION
A Eutrophication Model of the White River Basin Above Beaver Reservoir in Northwest Arkansas,
W74-00555 5C

Algae Abstracts, A Guide to the Literature, Volume 1 to 1969; Volume 2, 1970-1972.
W74-00704 5C

Nutrient Loading From a Separate Storm Sewer in Madison, Wisconsin,
W74-00716 5C

Detergent Phosphate and Eutrophication in Australia,
W74-00718 5C

Algal Response to Getergent Phosphate Levels,
W74-00724 5C

Lake Washington,
W74-00739 5C

Project Report for Ventura County Planning Department and Casitas Municipal Water District on Watershed Development Impact on Lake Casitas.
W74-00752 5B

Chemical and Biological Patterns in the Lower Colorado River System,
W74-00760 5C

Current Status of Knowledge Concerning the Cause and Biological Effects of Eutrophication in Chesapeake Bay,
W74-00921 2L

Some Phytoplankton Characteristics in Cooler Basins, (In Russian),
W74-01017 5C

EVAPORATION
Reducing Evaporation Plant Pollution Plant Pollution and Its Treatment,
W74-00763 5D

Evaporation Rates of Liquid Hydrocarbon Spills on Land and Water,
W74-00775 5B

EVAPOTRANSPIRATION
Effective Available Water and Its Relation to Evapotranspiration Rate, Depth of Wetting, and Soil Texture,
W74-00608 2G

Preliminary Results of Water Level Control on Small Plots in a Peat Bog,
W74-00694 4A

Relationship of Transpiration to Atmospheric Vapor Pressure,
W74-00759 2D

Importance, Status, and Basic Problems of Studies in Physics of Soil Water (Znacheniye issledovaniy fiziki pochvennykh vod, ikh sovremennoye sostoyaniye i osnovnyye zadachi),
W74-00843 2G

New Points of View on the Phytogeographic Position of the High Ardennes, (In German),W. Van Cotthem.
W74-01025 2D

FALLOUT
The Development and Preliminary Application of an Invariant Coupled Diffusion and Chemistry Model,
W74-01095 5A

FARM WASTES
Establishing the Impact of Agricultural Practices on Groundwater Quality,
W74-00571 5B

The Economics of the Cattle Feeding Industry in Arizona,
W74-00758 6C

Fluctuations in Nitrate Concentrations Utilized as an Assessment of Agricultural Contamination to an Aquifer of a Semiarid Climatic Region,
W74-00850 5B

FAST FOURIER TRANSFORMATION
Alternating Current Polarography in the Harmonic Multiplex Mode. Observations on the Use of Digital Signal Conditioning with the Fast Fourier Transform Algorithm,
W74-00631 7C

FATE OF POLLUTANTS
Utilization of Iron Gallate and Other Organic Iron Complexes by Bacteria from Water Supplies,
W74-00660 5B

FATTY ACIDS
Fatty Acid Composition of L-Forms of Streptococcus Faecalis Cultured at Different Osmolalities,
W74-00622 5A

FAUNA
Rare and New Species of Rotifers in the Fauna of Poland,
W74-00970 2I

FEDERAL GOVERNMENT
Projects Proposed for Inclusion in Omnibus River and Harbor and Flood Control Legislation--1972.
W74-00872 6E

FEDERAL JURISDICTION
Natural Resources Defense Council Inc. V. Grant (Action to Permanently Enjoin Construction of Watershed Project).
W74-00868 6E

FEDERAL PROJECT POLICY
Water Supply and Waste Disposal Policy Review.
W74-00809 5D

FEDERAL-STATE COORDINATION
North Carolina Water Plan-Progress Report, Chapter 35-New River Basin.
W74-01033 6B

FEED LOTS
The Economics of the Cattle Feeding Industry in Arizona,
W74-00758 6C

FERTILIZERS
Establishing the Impact of Agricultural Practices on Groundwater Quality,
W74-00571 5B

Fluctuations in Nitrate Concentrations Utilized as an Assessment of Agricultural Contamination to an Aquifer of a Semiarid Climatic Region,
W74-00850 5B

Seepage Flows--Field Data Measurements for Evaluation of Potential Contribution of Fertilizers to Groundwater Pollution,
W74-01054 5B

FILTRATION
Recycling Fine-Paper Mill Effluent by Means of Pressure Filtration,
W74-00784 5D

Enhancing Trickling Filter Plant Performance by Chemical Precipitation,
W74-00835 5D

Alum Addition to Activated Sludge with Tertiary Solids Removal,
W74-00837 5D

System for Eliminating Environmental Pollution,
W74-00964 5D

Experimental Data on the Sorption Capacities of Water Bearing Strata and Survival of Escherichia coli During Bacterial Contamination of Ground Water (In Russian),
W74-01002 5B

FINANCIAL FEASIBILITY
Banks Study Basin Cleanup.
W74-00772 5D

FINANCING
Honolulu Board of Water Supply Annual Report for the Year Ended June 30, 1972.
W74-00749 6B

FINLAND
Finnish Directions in Solving Water Pollution Problems,
W74-00790 5D

FISH
Fishes of the Chesapeake Bay,
W74-00916 2L

FISH FOOD ORGANISMS
Response of Aquatic Life to Salinity, Temperature, Dissolved Oxygen, and Water Flow,
W74-00721 5C

FISH FOODS
Experimental Studies on Feeding the Common Carp Cyprinus Carpio L. In Egypt,
W74-01100 8I

FISH GROWTH
Efficiency of Mullet Growth in Fishponds,
W74-01022 8I

FISH MANAGEMENT
Saltwater Pond Research,
W74-00815 8I

FISH-PROCESSING INDUSTRY
Water Reuse in Industry, Part 2 -- Transport Water,
W74-00795 5D

FISH TAXONOMY
Fishes of the Chesapeake Bay,
W74-00916 2L

FISHERIES
Coexistence of a Fishery and A Major Industry in Placentia Bay,
W74-00706 5C

Saltwater Pond Research,
W74-00815 8I

FLAGELLATES
Four Metasaprobic Communities of Colorless Flagellates,
W74-01006 5B

FLASH FLOODS
Flash Floods on Carpathian Rivers in June 1969 and May 1970 (Livnevyye pavodki na rekakh Karpat v iyune 1969, maye 1970 g.),
W74-00598 2E

FLOCCULATION
Waste Water Clarification and Solids Recovery with 'Waste Water Bentonite': Report on a Study Trip to Sweden (Abwasserklaerung und Stoffrueckgewinnung mit 'Abwasserbentonit': Bericht ueber eine Reise nach Schweden),
W74-00762 5D

Enzyme-Enhanced Turbidity Removal Through Primary Treatment,
W74-00783 5D

FLOOD CONTROL
Optimization Model for The Operation of Flood Control Systems,
W74-00668 4A

Flood Management Plan--Warning, Damage, Coordination.
W74-00817 6F

Prickett Creek Watershed, West Virginia (Final Environmental Statement).
W74-00860 4A

Projects Proposed for Inclusion in Omnibus River and Harbor and Flood Control Legislation--1972.
W74-00872 6E

Water-Related Facilities Study for the Comprehensive Regional Plan of Columbus and Franklin County (Ohio).
W74-01048 6B

FLOOD DATA
Flood Management Plan--Warning, Damage, Coordination.
W74-00817 6F

FLOOD DISCHARGE
Procedures for Computing Movement of Spring Flow Along the Cascade of Reservoirs on the Dnieper River (Metodika rascheta dvizheniya vesennego stoka po kaskadu vodokhranilishch na Dnepre),
W74-00593 4A

Flash Floods on Carpathian Rivers in June 1969 and May 1970 (Livnevyye pavodki na rekakh Karpat v iyune 1969, maye 1970 g.),
W74-00598 2E

HEC-1, Flood Hydrograph Package--Users Manual, Computer Program 723-X6-L2010.
W74-00821 7C

FLOOD FLOW
Procedures for Computing Movement of Spring Flow Along the Cascade of Reservoirs on the Dnieper River (Metodika rascheta dvizheniya vesennego stoka po kaskadu vodokhranilishch na Dnepre),
W74-00593 4A

Experiment in Calculating Movement of the 1970 Flood Wave Along the Cascade of Dniper Reservoirs (Opyt rascheta dvizheniya volny polovod'ya 1970 g. po kaskadu dneprovskikh vodokhranilishch),
W74-00594 2E

Factors Responsible for Floodflow in Carpathian Rivers (as illustrated by the Stryy and Bystritsa Rivers) (Faktory pavodochnogo stoka karpatskikh rek (na primers Stryya i Bystritsy)),
W74-00599 2E

FLOOD FORECASTING
Flood Studies for Safety of TVA Nuclear Plants: Hydrologic and Embankment Breaching Analysis,
W74-00805 8A

Flood Management Plan--Warning, Damage, Coordination.
W74-00817 6F

Computer Program 723-X6-L202A, HEC-2, Water Surface Profiles--Users Manual.
W74-00822 7C

Computer Program 723-X6-L202A, HEC-2, Water Surface Profiles--Programmers Manual.
W74-00823 7C

FLOOD MANAGEMENT PLAN (COLO)
Flood Management Plan--Warning, Damage, Coordination.
W74-00817 6F

FLOOD PLAIN ZONING
A Program for Storm Drainage and Flood Control-1971-1990: Damage Prevention, Major Drainageways, Master Planning, Regional Management.
W74-01038 6F

FLOOD ROUTING
Procedures for Computing Movement of Spring Flow Along the Cascade of Reservoirs on the Dnieper River (Metodika rascheta dvizheniya vesennego stoka po kaskadu vodokhranilishch na Dnepre),
W74-00593 4A

Experiment in Calculating Movement of the 1970 Flood Wave Along the Cascade of Dniper Reservoirs (Opyt rascheta dvizheniya volny polovod'ya 1970 g. po kaskadu dneprovskikh vodokhranilishch),
W74-00594 2E

FLOOD STAGES
Flash Floods on Carpathian Rivers in June 1969 and May 1970 (Livnevyye pavodki na rekakh Karpat v iyune 1969, maye 1970 g.),
W74-00598 2E

FLOOD WAVES
Procedures for Computing Movement of Spring Flow Along the Cascade of Reservoirs on the Dnieper River (Metodika rascheta dvizheniya vesennego stoka po kaskadu vodokhranilishch na Dnepre),
W74-00593 4A

Experiment in Calculating Movement of the 1970 Flood Wave Along the Cascade of Dniper Reservoirs (Opyt rascheta dvizheniya volny polovod'ya 1970 g. po kaskadu dneprovskikh vodokhranilishch),
W74-00594 2E

FLOODED SOIL
Degradation of Chlorinated Hydrocarbons by Clostridium Sp. Isolated from Lindane-Amended, Flooded Soil,
W74-00664 5B

FLOODING
Storm Drainage Study, (Chatham County-Savannah, Georgia).
W74-01031 4A

FLOODING (PLANTS)
Emergence of Buffel Grass (Cenchrus ciliaris) From Seed After Flooding,
W74-00768 3F

Flooding Tolerance of Panicum Coloratum,
W74-00826 3F

FLOODS
Streamflow Formation, Computations, and Regulation (Formirovaniye, raschety i regulirovaniye rechnogo stoka).
W74-00592 4A

Factors Responsible for Floodflow in Carpathian Rivers (as illustrated by the Stryy and Bystritsa Rivers) (Faktory pavodochnogo stoka karpatskikh rek (na primers Stryya i Bystritsy)),
W74-00599 2E

Effect on Flood Introduced plants in the Desna River Flood Plain Near Ostra, (In Ukrainian),
W74-01013 4A

FLORIDA
A Bill to Authorize the Acquisition of the Big Cypress National Fresh Water Reserve.
W74-00865 6E

FLORIDA CONTINENTAL SHELF
On Advection in Phytoplankton Models,
W74-00737 5C

FLOW
Isua, Greenland: Calculations of Glacier Flow for an Open-Pit Mine,
W74-00818 2C

FLOW MEASUREMENT
Surface Water Supply of the United States, 1966-70: Part 9. Colorado River Basin--Volume 2. Colorado River Basin from Green River to Compact Point.
W74-00586 7C

Surface Water Supply of the United States, 1966-70: Part 5. Hudson Bay and Upper Mississippi River Basins--Vol 3. Upper Mississippi River Basin Below Keokuk, Iowa.
W74-00587 7C

Surface Water Supply of the United States, 1966-70: Part 3. Ohio River Basin--Volume 4. Ohio River Basin Below Wabash River.
W74-00588 7C

Water Resources Data for New York, 1972: Part 1. Surface Water Records.
W74-00825 7C

FLOW RATES
The Effect of Restricted Fluid Entry on Well Productivity,
W74-00953 8B

HEC-4, Monthly Streamflow Simulation, Computer Program 723-X6-L2340.
W74-01091 7C

FLUID MECHANICS
Isotope Effect and the Molecular Mechanism of the Second Viscosity Coefficient of Water,
W74-00770 1A

Numerical Simulation of Unsteady Flows in Rivers and Reservoirs,
W74-00816 8B

FLUORESCENT ANTIBODY TECHNIQUES
Identification of the Prototheca Species by Immunofluorescence,
W74-00659 5A

FLYGTOL PROCESS
Waste Water Clarification and Solids Recovery with 'Waste Water Bentonite': Report on a Study Trip to Sweden (Abwasserklaerung und Stoffrueckgewinnung mit 'Abwasserbentonit': Bericht ueber eine Reise nach Schweden),
W74-00762 5D

FOOD CHAINS
On Advection in Phytoplankton Models,
W74-00737 5C

Health Aspects of Fish Products from Polluted Water,
W74-00979 5C

FOOD PROCESSING INDUSTRY
Identification and Characterization of the Microflora and Spoilage Bacteria in Freshwater Crayfish Procambarus Clarkii (Girad),
W74-00620 5A

Microbiological Evaluation of Cold-Water Shrimp (Pandalus Borealis),
W74-00653 5A

Water Reuse in Industry, Part 2 -- Transport Water,
W74-00795 5D

FORAGE GRASSES
Vegetation Changes as a Result of Soil Ripping on the Rio Puerco in New Mexico,
W74-00696 4A

FORAMINIFERA TAXONOMY
Foraminifera of the Chesapeake Bay,
W74-00905 2L

FORECASTING
Present and Future Water Use and its Effect on Planning in Maricopa County, Arizona,
W74-00754 3D

Additional Sources for Water Supply for the Town of Wellesley.
W74-00807 6A

FOREST MANAGEMENT
Wild River Peception and Management: A Study of Users and Managers of the Middle Fork of the Salmon River,
W74-00551 6B

Simulating Effects of Harvest Cutting on Snowmelt in Colorado Subalpine Forest,
W74-00686 4C

Economic Feasibility of an Integrated Cottonwood Plantation Utilizing a Nuclear Power Reactor,
W74-00771 3C

FOREST SOILS
Bleaching Effluent for Irrigation,
W74-00787 5D

FOREST TYPES
Organic Matter Composition Under Different Forest Types in a Derno-Podzolic Zone, (In Russian),
W74-00984 2K

FOREST WATERSHEDS
Sampling Requirements for Areal Water Equivalent Estimates in Forested Subalpine Watersheds,
W74-00675 3B

FORMATION FACTOR
Detection and Estimation of Dead-End Pore Volume in Reservoir Rock by Conventional Laboratory Tests,
W74-00944 8G

FORMIC ACID
Polarographic Study of Calomel Electrode in Anhydrous Formic Acid,
W74-00633 2K

FOUNDATION INVESTIGATIONS
Foundations and Construction Materials,
W74-01063 8A

FOURIER ANALYSIS
Alternating Current Polarography in the Harmonic Multiplex Mode. Observations on the Use of Digital Signal Conditioning with the Fast Fourier Transform Algorithm,
W74-00631 7C

FRASER RIVER (BRITISH COLUMBIA)
Preliminary Survey of Mercury and Other Metals Contained in Animals from the Fraser River Mudflats,
W74-00764 5C

FREEZE DRYING
Water Reuse in Industry, Part 4 -- Metal Finishing,
W74-00797 5D

FREEZING
Water Reuse in Industry, Part 4 -- Metal Finishing,
W74-00797 5D

FRESHWATER
Groundwater Resources of the USSR (Resursy podzemnykh vod SSSR),
W74-00845 2F

FROST
Effect of Forest Cover Removal on Depth of Soil Freezing and Overland Flow,
W74-00610 2G

FRY
Observations on the Development of Coregonus peled (Gmel.) Fry in Ponds,
W74-01081 8I

FUNGI
Microbial Formation of Nitrosamines in Vitro,
W74-00654 5B

FUNGI TAXONOMY
Fungi of the Chesapeake Bay,
W74-00894 2L

FUTURE PLANNING
Banks Study Basin Cleanup.
W74-00772 5D

GAGING
Comparison of Field Methods for Measuring Stream Discharge,
W74-00735 2E

GALES CREEK (N.C.)
The Phytoplankton of Gales Creek with Emphasis on the Taxonomy and Ecology of Estuarine Phytoflagellates--Part 1 of Studies on Brackish Water Phytoplankton,
W74-00590 5C

GAME THEORY
A Methodology for Assessment of Water Resources Development: A Competitive Evaluation Model for Water Resources Development Planning,
W74-00559 6B

GAMETOGENESIS
Environmental Control of Gametogenesis in Laminaria saccharina. II. Correlation of Nitrate and Phosphate Concentrations with Gametogensis and Selected Metabolites,
W74-00726 5C

GAS CHROMATOGRAPHY
Analysis of Elemental Phosphorus and Some of Its Compounds by Gas Chromatography,
W74-00712 5C

Current Practice in GC-MS Analysis of Organics in Water,
W74-00834 5A

GASES
Inert Gas Stripping of Contaminated Water,
W74-00969 5D

GASTROPODS
List of the Gastropods of the St. Lawrence River in the Region of Gentilly, (In French),
W74-00973 2I

GENOME
Molecular Relationships Among the Salmonelleae,
W74-00623 5B

GENTAMICIN BLOOD AGAR
Gentamicin Blood Agar Used as a General-Purpose Selective Medium,
W74-00657 5A

GEOPHYSICS
Possibilities of Using Geophysical Methods in a Study of Freshwater Discharges in Littoral Zones of Seas (O vozmozhnostyakh geofizicheskikh metodov pri izuchenii razgruzok presnykh vod v pribrezhnykh zonakh morey),
W74-00847 2F

What's New in Downhole Operating Technology,
W74-00950 8G

Borehole Logging Investigations in the Chalk of the Lambourn and Winterbourne Valleys of Berkshire,
W74-00956 8G

GEORGIA
Travel Time of Georgia Streams,
W74-00556 4A

Storm Drainage Study, (Chatham County-Savannah, Georgia).
W74-01031 4A

Water and Sewer Plan Update, (Gray, Georgia).
W74-01036 5D

GEOTHERMAL STUDIES
Borehole Logging Investigations in the Chalk of the Lambourn and Winterbourne Valleys of Berkshire,
W74-00956 8G

GERMANY ELBE ESTUARY
Trophic Structure and Bioactivity of the Plankton Communities in Lower Reach of Elbe Estuary: Criteria for Saprobic Classification of a Tidal Water (In German),
W74-01003 5C

GERMINATION
Effects of Water and Heat on Seedling Emergence,
W74-00930 3F

GILLHAM LAKE
Gillham Lake, Cossatot River Arkansas (Final Environmental Impact Statement).
W74-00881 4A

GLACIERS
Isua, Greenland: Calculations of Glacier Flow for an Open-Pit Mine,
W74-00818 2C

GLEY
On the Stellario-Alnetum Glutinosae (Mikyska 1944) Lohmeyer 1957 in the Czech Socialistic Republic (CSR),
W74-01078 2I

GLUTAMINE SYNTHETASE
Glutamine Synthetase of the Nitrogen-Fixing Alga Anabaena cylindrica,
W74-00717 5C

GRAPHIC METHODS
Concerning a New Graphic Method for Study of Natural Waters (In French),
W74-01008 2K

GRAPHICAL METHODS
The Range of Validity of the Linear Polarization Method for Measurement of Corrosion Rates,
W74-00947 8G

GRAVITY DAMS
Concrete Gravity Dams,
W74-01066 8A

GRAY (GA.)
Water and Sewer Plan Update, (Gray, Georgia).
W74-01036 5D

GREAT SODUS BAY (N.Y.)
Analysis of Port Development Potentials at Great Sodus Bay.
W74-01039 6B

GREEFFIELLA-MOPPA
Greeffiella Moppa Sp. N. From the Skagerrak (Nematoda, Desmoscolecidae), (In German),
W74-00975 2I

GREENLAND
Isua, Greenland: Calculations of Glacier Flow for an Open-Pit Mine,
W74-00818 2C

GROUNDWATER
Ground Water, A Resource to be Protected,
W74-00566 5B

The National Quality of Ground Water in Minnesota,
W74-00567 2F

The Use of Groundwater in Minnesota,
W74-00568 4B

Ground Water Pollution Problems in Minnesota,
W74-00570 5B

Establishing the Impact of Agricultural Practices on Groundwater Quality,
W74-00571 5B

Water Well Records and Information System Needs,
W74-00574 7C

Utah's Ground Water Quality Information System,
W74-00577 7C

Well Construction Helps Determine Water Quality,
W74-00954 5B

GROUNDWATER AVAILABILITY
Groundwater Resources of the USSR (Resursy podzemnykh vod SSSR),
W74-00845 2F

GROUNDWATER CONTAMINATION
Experimental Data on the Sorption Capacities of Water Bearing Strata and Survival of Escherichia coli During Bacterial Contamination of Ground Water (In Russian),
W74-01002 5B

GROUNDWATER MANAGEMENT
Ground Water Pollution and Conservation,
W74-00938 4B

GROUNDWATER MOVEMENT
Hydrogeologic Framework for Deterioration in Groundwater Quality,
W74-00569 5B

Patterns of Long-Term Natural Fluctuations of Groundwater Levels (Zakonomernosti mnogoletnikh yestestvennykh kolebaniy urovney podzemnykh vod),
W74-00846 2F

Borehole Logging Investigations in the Chalk of the Lambourn and Winterbourne Valleys of Berkshire,
W74-00956 8G

GROUNDWATER POLLUTION
Ground Water Pollution and Conservation,
W74-00938 4B

GROUNDWATER RESOURCES
A Report of Progress and Conclusions, (Washington, D.C. Metropolitan Area Water Resources).
W74-00583 6D

Groundwater Survey of the Erbil Project Area,
W74-00761 4B

Groundwater Resources of the USSR (Resursy podzemnykh vod SSSR),
W74-00845 2F

GROUNDWATER VELOCITY
Methods of Collecting and Interpreting Ground-Water Data.
W74-00929 7C

GROWTH RATES
Effects of Calcium and Magnesium Ions and Host Viability on Growth of Bdellovibrios,
W74-00625 5C

The Influence of Environmental Factors on the Distribution of Freshwater Algae: An Experimental Study. II. The Role of pH and the Carbon Dioxide-Bicarbonate system,
W74-00639 5C

The Influence of Environmental Factors on the Distribution of Freshwater Algae: An Experimental Study. III. Effects of Temperature, Vitamin Requirements and Inorganic Nitrogen Compounds on Growth,
W74-00640 5C

GROWTH REGULATION
Effect of Growth Regulators on Water Metabolism in Plant: I, IAA, Tiba (2,3,5-Triiodobenzoic Acid), GA (Gibberellic Acid) and CCC (2-Chloroethylitrimethylammonium Chloride) on Hydration of Tomato Leaves at Various S oil Moisture Contents, (In Polish),
W74-01026 3F

HARBORS
Progress Report on the Proposed Yellow Creek Port Project Tishomingo County, Mississippi.
W74-00804 6A

Institutional Implications of Deepwater Ports.
W74-00820 8A

Analysis of Port Development Potentials at Great Sodus Bay.
W74-01039 6B

HARDWOOD FORESTS
Soil Water Depletion by a Hardwood Forest in Southwestern Wisconsin,
W74-00693 3B

HARVARD WATER PROGRAM
The Harvard Program: A Summing up,
W74-01030 6B

HAWAII
Honolulu Board of Water Supply Annual Report for the Year Ended June 30, 1972.
W74-00749 6B

HAZARDOUS SUBSTANCE
A Bill to be Known as the 'Safe Drinking Water Act of 1973'.
W74-00856 5F

HAZARDOUS SUBSTANCES (POLLUTION)
Water Pollution--User of City Sewer System Creates Nuisance Against Lower Riparian,
W74-00870 5G

HEAT RESISTANCE
Condition of Coliform Organisms Influencing Recovery of Subcultures on Selective Media,
W74-00621 5B

HEAT TRANSFER
Some Comparisons in the Thermal Structure of Lakes Wood, Kalamalka, Okanagan, Skaha, and Osoyoos, British Columbia,
W74-00769 2H

Evaporation Rates of Liquid Hydrocarbon Spills on Land and Water,
W74-00775 5B

HEATED WATER
Effects of Thermal Effluents on Biocenoses of Water Bodies (O kharaktere vliyaniya termal'nykh sbrosnykh vod na biotsenozy vodoyemov),
W74-00842 5C

Some Phytoplankton Characteristics in Cooler Basins, (In Russian),
W74-01017 5C

HEAVY METALS
Electrochemical Study of a Heterogeneous Copper (II)-Selective Electrode; Study of Selectivity and Potential Stability,
W74-00637 2K

On the Effect of Pollution on Surface Waters,
W74-00722 5C

Current Status of Knowledge of the Biological Effects of Heavy Metals in the Chesapeake Bay,
W74-00922 2L

HEAVY WATER
Isotope Effect and the Molecular Mechanism of the Second Viscosity Coefficient of Water,
W74-00770 1A

HEKTONE ENTERIC AGAR
Some observations on the Incorporation of Novobiocin Into Hektoen Enteric Agar for Improved Salmonella Isolation,
W74-00617 5A

HENRY'S LAKE (COLO.)
Master Plan for Major Drainage: Henry's Lake Area, Subbasin 1-31-5501-01.
W74-01037 6B

HERBACEOUS COMMUNITIES
Population Dynamics of Herbaceous Communities of Pilani (Rajasthan),
W74-00714 2I

HERBICIDE TOXICITY
The Effect of Atrazine and Diuron on the Productivity of Cladocera. (Experimental Studies), (In Russian),
W74-01024 5C

HERBICIDES
Some Aspects of Weed Control in Vineyards, (In Italian),
W74-00767 5G

HERRINGS
Symptoms of 'Red' Herring in Relation to the Mass Mortalities in Placentia Bay, February--April 1969,
W74-00711 5C

HETEROCYSTS
Nitrogen Fixation by Anabaena cylindrica. I. Localization of Nitrogen Fixation in the Heterocysts,
W74-00713 5C

HETEROTROPHIC BACTERIA
Negative Chemotaxis of Marine Bacteria to Toxic Chemicals,
W74-00658 5C

A Medium for Counting Aquatic Heterotrophic Bacteria in Polluted and Unpolluted Waters,
W74-00663 5B

HIRUDINEA
Nematoda, Acanthocephala and Hirudinea in Fishes from the River Hron (Czechoslovakia), (In Czech),
W74-00679 2I

HONOLULU (HAWAII)
Honolulu Board of Water Supply Annual Report for the Year Ended June 30, 1972.
W74-00749 6B

HOSTS
Effects of Calcium and Magnesium Ions and Host Viability on Growth of Bdellovibrios,
W74-00625 5C

HOUSING DEVELOPMENT
Differential Reproduction as a Criterion for Evaluating Development Decisions,
W74-01056 6B

HUMAN DISEASES
Significance of Docks in Dissemination of Diphyllobothriasis near Rivers and Large Transport Water Bodies (According to Data from the Volga Piers and the Volgograd Reservoir), (In Russian),
W74-00991 5C

HUMAN POPULATION
Chesapeake Bay Existing Conditions Report, Appendix A--The People and the Economy.
W74-00887 2L

HUMIDITY
Relationship of Transpiration to Atmospheric Vapor Pressure,
W74-00759 2D

HUMUS
Variation in Soil Factors and Crop Yield on a Sandy Soil Rich in Organic Matter, (In Norwegian),
W74-01051 3F

HYDRAULIC CONDUCTIVITY
Well Efficiency and Skin Effect,
W74-00945 8G

HYDRAULIC GEOMETRY
Flow and Channel Characteristics of Two High Mountain Streams,
W74-00678 4A

HYDROELECTRIC POWER
The Tidal Power Potential of Ungava Bay and Its Possible Exploitation in Conjunction with the Local Hydroelectric Resources,
W74-00838 4A

HYDROGEN SULFIDE
Water Reuse in Industry, Part 2 -- Transport Water,
W74-00795 5D

HYDROLOGIC BUDGET
The Water Budget and Waste Treatment at a Modern Dairy,
W74-00560 5D

HYDROLOGIC DATA
Needs and Uses for a Ground Water Quality Data System,
W74-00573 7A

Subsurface Geologic Information System in Minnesota: A Status Report,
W74-00575 7C

Ground Water Quality Information Systems - Experiences in Other States,
W74-00576 7C

Utah's Ground Water Quality Information System,
W74-00577 7C

Surface Water Supply of the United States, 1966-70: Part 9. Colorado River Basin--Volume 2. Colorado River Basin from Green River to Compact Point.
W74-00586 7C

Surface Water Supply of the United States, 1966-70: Part 5. Hudson Bay and Upper Mississippi River Basins--Vol 3. Upper Mississippi River Basin Below Keokuk, Iowa.
W74-00587 7C

Surface Water Supply of the United States, 1966-70: Part 3. Ohio River Basin--Volume 4. Ohio River Basin Below Wabash River.
W74-00588 7C

Groundwater Survey of the Erbil Project Area,
W74-00761 4B

Flood Management Plan--Warning, Damage, Coordination.
W74-00817 6F

HYDROLYSIS
Rate and Mechanism of Na-Montmorillonite Hydrolysis in Suspensions,
W74-00606 2K

HYPOLIMNION
Some Comparisons in the Thermal Structure of Lakes Wood, Kalamalka, Okanagan, Skaha, and Osoyoos, British Columbia,
W74-00769 2H

ICE
Icings Developed from Surface Water and Ground Water,
W74-00581 2C

ICINGS
Icings Developed from Surface Water and Ground Water,
W74-00581 2C

IDAHO
Wild River Peception and Management: A Study of Users and Managers of the Middle Fork of the Salmon River,
W74-00551 6B

In Search of New Methods for River System Planning,
W74-01029 4A

IDENTIFICATION MANUAL
Biota of Freshwater Ecosystems Identification Manual No. 10 Genera of Freshwater Nematodes (Nematoda) of Eastern North America,
W74-00563 2I

Biota of Freshwater Ecosystems Identification Manual No. 11 Freshwater Unionacean clams (Mollusca:Pelecypoda) of North America,
W74-00564 2A

ILLINOIS
A Bill to Amend the River and Harbor Act of 1973 Relating to The Chicago River, Illinois.
W74-00863 6E

IMBEDDED STATE SPACE APPROACH
Pathology of a Dynamic Programing Sequencing Algorithm,
W74-00671 6A

IMMUNOFLUORESCENCE
Identification of the Prototheca Species by Immunofluorescence,
W74-00659 5A

INCINERATION
System for Eliminating Environmental Pollution,
W74-00964 5D

INCOG ENVIRONMENTAL POLLUTION INVENTORY
Regional Pollution Study: Inventory and Analysis.
W74-00849 5B

INCRUSTATION
Corrosion Control in Large Volume Pumping Brine Wells,
W74-00937 8G

Corrosion and Incrustation - Guidelines for Water Wells,
W74-00948 8G

INDEMNIFICATION
A Bill to Provide for the Establishment of the Lowell Historic Canal District National Cultural Park.
W74-00862 6E

INDEXING
River Mile Index--NAPA, Salinas, and Eel River Basins, California.
W74-00585 2E

INDIA (RAJASTHAN)
Population Dynamics of Herbaceous Communities of Pilani (Rajasthan),
W74-00714 2I

INDIANA
Bibliography of Reports on the Water Resources of Indiana Prepared by the U.S. Geological Survey, 1886-1972,
W74-00814 2E

LANDFILLS
Solid Waste Management Plan, Cowlitz and Wahkiakum Region.
W74-00747 5D

Centrifuge Dewaters Sludge at Rate of 10 Tons Per Day,
W74-00788 5D

LANGMUIR CIRCULATION
Observations of Langmuir Circulations in Lake Ontario,
W74-00831 2H

LANSING (MICH)
Policy Plan for Development of Lansing's Waterfront.
W74-00742 3D

LAS VEGAS VALLEY DISTRICT (NEV)
Report to the Governor and the Legislative Commission: Pollution Abatement Project, Las Vegas Wash and Bay.
W74-00744 5D

LAS VEGAS VALLEY (NEV)
Reconnaissance Analysis of Effects of Waste-Water Discharge on the Shallow Ground-Water Flow System, Lower Las Vegas Valley, Nevada,
W74-00748 5B

LAW OF THE SEA
Are Ocean Polluters Subject to Universal Jurisdiction--Canada Breaks the Ice,
W74-00867 5G

LEACHING
Propagation of Sinusoidal Solute Density Oscillations in the Mobile and Stagnant Phases of a Soil,
W74-00604 2G

Salts in Irrigation Drainage Waters: I. Effects of Irrigation Water Composition, Leaching Fraction, and Time Year on the Salt Compositions of Irrigation Drainage Waters,
W74-00609 4C

Mechanism of Flow and Controlled Dissolution of Salt in Solution Mining,
W74-00934 8B

Seepage Flows--Field Data Measurements for Evaluation of Potential Contribution of Fertilizers to Groundwater Pollution,
W74-01054 5B

LEAD
Toxicity and Accumulation of Lead in the Common Mussel Mytilus Edulis in Laboratory Experiment, (In German),
W74-00972 5C

LEAK DETECTION
Gas Requirements to Pressurize Abandoned Deep Mines,
W74-00836 5G

LEGAL ASPECTS
Commonwealth V. Barnes and Tucker Company (Suit for Mandatory Injunction Requiring Defendant to Treat Acid Mine Drainage from Mine).
W74-00866 6E

LEGISLATION
Chemical Analysis of Water Effluents -- Lessons from the U.S. (Army Corps of Engineers) Permit Program,
W74-00791 5A

A Bill to Authorize Construction of the Little Cypress Lake and Reservoir, Texas.
W74-00861 6E

A Bill to Provide for the Establishment of the Lowell Historic Canal District National Cultural Park.
W74-00862 6E

A Bill to Amend the River and Harbor Act of 1973 Relating to The Chicago River, Illinois.
W74-00863 6E

A Bill to Provide for the Establishment of the Potomac Basin National Riverways.
W74-00864 6E

A Bill to Authorize the Acquisition of the Big Cypress National Fresh Water Reserve.
W74-00865 6E

Report of Proceedings at Public Hearing Relating to an Application Filed by Aroused Residents of Crowders Creek Inc. Requesting Reclassification of Crowders Creek, Catawba River Basin, Cleveland and Gaston Counties .
W74-00871 5G

Projects Proposed for Inclusion in Omnibus River and Harbor and Flood Control Legislation--1972.
W74-00872 6E

Designation of Wilderness Areas, Part II.
W74-00873 6E

Lone Peak Wilderness Area, Utah, and Designating a Segment of the Colorado River in Utah as Part of the Wild and Scenic Rivers System.
W74-00874 4C

Restore Rural Water and Waste Disposal Grant Programs.
W74-00875 5G

Arkansas Soil and Water Conservation Commission.
W74-00878 6E

LEHIGH-NORTHAMPTON COUNTIES (PENN.)
Water Supply and Sewage Facilities Plan Update-1970.
W74-01045 6B

LET
Let as a Determinant of Oxygen Enhancement Ratio and Shape of Survival Curve for Chlamydomonas,
W74-00732 5C

LEVEES
Levee Unit No. L-246, Missouri River Levee System (Final Environmental Statement).
W74-00879 4A

LICHENS
Bryophytes and Lichens of the Chesapeake Bay,
W74-00899 2L

LICHENS TAXONOMY
Bryophytes and Lichens of the Chesapeake Bay,
W74-00899 2L

LIMNOLOGY
Some Important Problems in Modern Limnology (O nekotorykh vazhnykh zadachakh sovremennogo ozerovedeniya),
W74-00839 2H

Hydrochemical Zonality of Ural Lakes (Gidrokhimicheskaya zonal'nost' ozer Urala),
W74-00840 2H

LINDANE
Degradation of Chlorinated Hydrocarbons by Clostridium Sp. Isolated from Lindane-Amended, Flooded Soil,
W74-00664 5B

LINEAR POLARIZATION
The Range of Validity of the Linear Polarization Method for Measurement of Corrosion Rates,
W74-00947 8G

LINEAR PROGRAMMING
Development of a Dynamic Water Management Policy for Texas,
W74-00562 6A

Algorithm for Solving a Class of Linear Programming Problems Related to Reservoir Management and Design,
W74-00667 4A

Optimization Model for The Operation of Flood Control Systems,
W74-00668 4A

Capacity Decisions in a Multipurpose Multireservoir System,
W74-00672 4A

Determination of the Discharge Policy for Existing Reservoir Networks Under Differing Objectives,
W74-00673 4A

Scientific Allocation of Water Resources, Water Resources Development and Utilization - A Rational Approach,
W74-00885 6A

LIQUID MEMBRANE ELECTRODES
A Study of Liquid-Membrane Perchlorate-Selective Electrodes Made from an Organic Radical Ion Salt,
W74-00649 5A

Anion Selectivity Studies on Liquid Membrane Electrodes,
W74-00650 5A

LIQUID WASTES
Sewage Disposal Effluent Purifier,
W74-00962 5D

LITTORAL ALGAE
Pollution Effects on Littoral Algal Communities in the Inner Oslofjord, with Special Reference to Ascophyllum nodosum,
W74-00733 5C

LOCATING SANITARY DEFECTS
Well Construction Helps Determine Water Quality,
W74-00954 5B

LOGGING
What's New in Downhole Operating Technology,
W74-00950 8G

LOGGING (RECORDING)
A Sonic Method for Analyzing the Quality of Cementation of Borehole Casings,
W74-00936 8F

LONE PEAK WILDERNESS AREA (UTAH)
Lone Peak Wilderness Area, Utah, and Designating a Segment of the Colorado River in Utah as Part of the Wild and Scenic Rivers System.
W74-00874 4C

LONG HARBOUR (NEWFOUNDLAND)
Observations on Mortalities of Benthic Organisms After Contamination of the Bottom of Long Harbour, Placentia Bay, Newfoundland with Elemental Phosphorus,
W74-00710 5C

LONG-TERM PLANNING
Suburban America: Population Dynamics as Related to Water Resources Planning,
W74-00553 6B

Development of a Dynamic Water Management Policy for Texas,
W74-00562 6A

LORAIN COUNTY (OHIO)
Stream and Lakefront Field Inventory, Volume I - Summary.
W74-01046 5B

LOS ANGELES
Summary Report: Pilot Plant Studies on Dewatering Primary Digested Sludge,
W74-00700 5D

LOUISIANA
Louisiana Government and the Coastal Zone-1972.
W74-01028 6E

Wetlands '73: Toward Coastal Zone Management in Louisiana.
W74-01043 2L

LOW FLOW
Quantity and Chemical Quality of Low Flow in the Upper Colorado River Basin, Texas, April 8, 1968,
W74-01090 2E

LOW SOLIDS
New Muds Designed to Improve Drilling Rate, Hole Stability,
W74-00946 8G

LUXURY UPTAKE
A Mathematical Model of the Nutrient Dynamics of Phytoplankton in a Nitrate-Limited Environment,
W74-00720 5C

MACROALGAE TAXONOMY
Macroalgae of the Chesapeake Bay,
W74-00898 2L

MACROPHYTES
Aquatic Vegetation of Fishponds of the Western Regions of the Ukraine, (In Russian),
W74-01075 4A

MADAGASCAR (AMPASINDAVA BAY)
Circulation in the Bay of Ampasindava (Madagascar) and Its Biochemical Implications (In French),
W74-01005 5B

MADAGASCAR (NOSY BE)
Comparison of 2 Methods of Treating Water Samples ('Actual in Situ' and 'Simulated in Situ') for Study of Primary Production by the Carbon 14 Technique (In French),
W74-01004 7B

MAGNESIUM
Effects of Calcium and Magnesium Ions and Host Viability on Growth of Bdellovibrios,
W74-00625 5C

MAINTENANCE
Maintenance and Operation,
W74-01070 8A

MAIZE
Adaptability of Maize to High Soil Water Conditions,
W74-00892 3F

MALAGASY REPUBLIC (MANGOKY)
Preliminary Results of the Project for Controlling and Preventing Schistosomiasis in the Lower Mangoky (Malagasy Republic),
W74-00992 5F

MANAGEMENT
Algorithm for Solving a Class of Linear Programming Problems Related to Reservoir Management and Design,
W74-00667 4A

MANGANESE
Seasonal Variations of Cadmium, Copper, Manganese, Lead, and Zinc in Water and Phytoplankton in Monterey Bay, California,
W74-00829 2K

MAPS
Chesapeake Bay Existing Conditions Report, Appendix D--Map Folio.
W74-00924 2L

MARGINAL COSTS
Market Problems in the Distribution of Emission Rights,
W74-00674 5G

MARICOPA COUNTY (ARIZ)
A Report Upon West Central Maricopa County, Arizona: Volume I, A Study of Physical Environmental Factors as a Basis for Land Use Planning.
W74-00746 3D

Present and Future Water Use and its Effect on Planning in Maricopa County, Arizona,
W74-00754 3D

MARINE ALGAE
Environmental Control of Gametogenesis in Laminaria saccharina. II. Correlation of Nitrate and Phosphate Concentrations with Gametogensis and Selected Metabolites,
W74-00726 5C

Nitrogen Fixation by Oscillatoria (Trichodesmium) thiebautii in the Southwestern Sargasso Sea,
W74-00729 5C

MARINE ANIMALS
Effects of Elemental Phosphorus on Marine Life.
W74-00705 5C

Organochlorine Residues in Harp Seals (Pagophilus groenlandicus) Caught in Eastern Canadian Waters,
W74-00766 5C

MARINE BACTERIA
Negative Chemotaxis of Marine Bacteria to Toxic Chemicals,
W74-00658 5C

MARINE BIOLOGY
Southern California's Deteriorating Marine Environment, An Evaluation of the Health of the Benthic Marine Biota of Ventura, Los Angeles and Orange Counties,
W74-00877 5C

MARINE FISH
Coexistence of a Fishery and A Major Industry in Placentia Bay,
W74-00706 5C

An Assessment of the Assimilation of Elemental Phosphorus by Newfoundland Marine Organisms in the 1969 Pollution Problem and in 1970 Monitoring Operations,
W74-00709 5C

Saltwater Pond Research,
W74-00815 8I

MARINE PLANTS
Effects of Elemental Phosphorus on Marine Life.
W74-00705 5C

MARINE POLLUTION
Health Aspects of Fish Products from Polluted Water,
W74-00979 5C

MARYLAND
Sewer System Cost Estimation Model.
W74-00745 5D

MASS SPECTROMETRY
Current Practice in GC-MS Analysis of Organics in Water,
W74-00834 5A

MASS TRANSFER
Isotope Effect and the Molecular Mechanism of the Second Viscosity Coefficient of Water,
W74-00770 1A

Evaporation Rates of Liquid Hydrocarbon Spills on Land and Water,
W74-00775 5B

MASSACHUSETTS
Hydrocarbon Incorporation Into the Salt Marsh Ecosystem from the West Falmouth Oil Spill,
W74-00824
A Bill to Provide for the Establishment of the Lowell Historic Canal District National Cultural Park.
W74-00862 6E

Classification and Evaluation of Freshwater Wetlands as Wildlife Habitat in the Glaciated Northeast,
W74-01052 6B

MATHEMATICAL MODELS
A Mathematical Model of the Nutrient Dynamics of Phytoplankton in a Nitrate-Limited Environment,
W74-00720 5C

On Advection in Phytoplankton Models,
W74-00737 5C

Dynamic Water Quality Forecasting and Management,
W74-00927 5C

Systems Engineering Approach,
W74-00940 6A

A Stochastic Model for Predicting Variations in Reservoir Rock Properties,
W74-00955 8E

MATHEMATICAL STUDIES
Isotope Effect and the Molecular Mechanism of the Second Viscosity Coefficient of Water,
W74-00770 1A

Evaporation Rates of Liquid Hydrocarbon Spills on Land and Water,
W74-00775 5B

In Search of New Methods for River System Planning,
W74-01029 4A

MAXIMIZING-NET BENEFITS
In Search of New Methods for River System Planning,
W74-01029 4A

MEASUREMENT
Capacity of an Estuary to Accept Pollutants,
W74-00708 5C

MELTING
Problem of Simplifying Snowmelt Computations (K voprosu ob uproshchennom raschete snegotayaniya),
W74-00596 2C

MEMBRANE ELECTRODES
Electrochemical Study of a Heterogeneous Copper (II)-Selective Electrode; Study of Selectivity and Potential Stability,
W74-00637 2K

MERCURY
Preliminary Survey of Mercury and Other Metals Contained in Animals from the Fraser River Mudflats,
W74-00764 5C

METABOLISM
The Dependence of Water Regimen of Palmette Type Apple Trees on the Watering Method, (In Russian),
W74-00981 3F

Effect of Growth Regulators on Water Metabolism in Plant: I, IAA, Tiba (2,3,5-Triiodobenzoic Acid), GA (Gibberellic Acid) and CCC (2-Chloroethylitrimethylammonium Chloride) on Hydration of Tomato Leaves at Various S oil Moisture Contents, (In Polish),
W74-01026 3F

Effect of Growth Regulators on Water Metabolism in Plant: II. IAA, TIBA (2,3,5-Triiodobenzoic Acid), GA (Gibberellic Acid) and CCC (2-Chloroethyltrimethylammonium Choride) on Transpiration Rate and Stomatal Aperatures o f Intact Tomato Plants, (In Polish),
W74-01027 3F

METAL FINISHING INDUSTRY
Water Reuse in Industry, Part 4 -- Metal Finishing,
W74-00797 5D

METASAPROBIC COMMUNITIES
Four Metasaprobic Communities of Colorless Flagellates,
W74-01006 5B

METEOROLOGICAL CONDITIONS
The Influence of Meteorological Elements on the Annual Rhythm of Height Growth in Pines, (In German),
W74-01077 2I

METEOROLOGY
The Effect of Overstory Removal Upon Surface Wind in a Black Spruce Bog,
W74-00688 3B

A Compilation of Studies from Atmospheric Variability Experiment (AVE),
W74-00851 2B

A Study of Winter Precipitation Areas in Relation to Several Indicators of Vertical Motion--Chapter I of a Compilation of Studies from Atmospheric Variability Experiment (AVE),
W74-00852 2B

Time Changes in Gradient and Observed Winds--Chapter II of a Compilation of Studies from Atmospheric variability Experiment (AVE),
W74-00853 2B

An Analysis of Internal Zones of Discontinuity--Chapter III of a Compilation of Studies from Atmospheric Variability Experiment (AVE),
W74-00854 2B

An Approach to the Determination of the Variability of Wind Through the Use of Quasi-Conservative Thickness Fields--Chapter IV of a Compilation of Studies from Atmospheric Variability Experiment (AVE),
W74-00855 2B

METHEMOGLOBINEMIA
Reduction of High Nitrate Content from Well Water in a Remote Eskimo Village,
W74-00949 5F

METHODOLOGY
How to Find Abandoned Oil and Gas Wells,
W74-00941 8G

In Search of New Methods for River System Planning,
W74-01029 4A

The Harvard Program: A Summing up,
W74-01030 6B

METHOXYCHLOR
Biomagnification of p,p'-DDT and Methoxychlor by Bacteria,
W74-00615 5B

MEXICO
Study of Algae Used as Foods in the Valley of Mexico, (In Spanish),
W74-00982 2H

MICHIGAN
The Influence of Environmental Factors on the Distribution of Freshwater Algae: An Experimental Study. IV. Growth of Test Species in Natural Lake Waters, and Conclusion,
W74-00641 5C

Michigan Water Resources Enforcement and Information System,
W74-00701 5G

Policy Plan for Development of Lansing's Waterfront.
W74-00742 3D

MICROBIAL DEGRADATION
Oxidation of Polychlorinated Biphenyls by Achromobacter pCB,
W74-00632 5B

Biodegradation of Nitrilotriacetate (NTA) By Bacteria-I. Isolation of Bacteria Able to Grow Anaerobically with NTA as a Sole Carbon Source,
W74-00644 5A

Biodegradation of Nitrilotriacetate (NTA) By Bacteria-II. Cultivation of an NTA-Degrading Bacterium in Anaerobic Medium,
W74-00645 5B

Utilization of Iron Gallate and Other Organic Iron Complexes by Bacteria from Water Supplies,
W74-00660 5B

Degradation of Chlorinated Hydrocarbons by Clostridium Sp. Isolated from Lindane-Amended, Flooded Soil,
W74-00664 5B

MICROCYSTIS
Development of a Selective Algaecide to Control Nuisance Algal Growth,
W74-00702 5G

MICROORGANISMS
Differential Counting in Mixed Cultures with Coulter Counters,
W74-00614 5A

Bleaching Effluent for Irrigation,
W74-00787 5D

MILKFISH
Weight-Length Relationship and Growth of Chanos chanos (Fersskal) Grown in Freshwater Ponds,
W74-01080 8I

MILLIVOLT INTEGRATOR
The Rocky Mountain Millivolt Integrator for use with Solar Radiation Sensors,
W74-00690 2D

MINE DRAINAGE
Gas Requirements to Pressurize Abandoned Deep Mines,
W74-00836 5G

MINE PRESSURIZATION
Gas Requirements to Pressurize Abandoned Deep Mines,
W74-00836 5G

MINE WATER
Water Reuse in Industry, Part 3 -- Mine Water,
W74-00796 5D

MINICOMPUTERS
The Use of Mini Computers in the Water Industry,
W74-00666 7C

MINING
Isua, Greenland: Calculations of Glacier Flow for an Open-Pit Mine,

Commonwealth V. Barnes and Tucker Company (Suit for Mandatory Injunction Requiring Defendant to Treat Acid Mine Drainage from Mine).
W74-00866 6E

Mechanism of Flow and Controlled Dissolution of Salt in Solution Mining,
W74-00934 8B

MINNESOTA
Ground Water, A Resource to be Protected,
W74-00566 5B

The National Quality of Ground Water in Minnesota,
W74-00567 2F

The Use of Groundwater in Minnesota,
W74-00568 4B

Ground Water Pollution Problems in Minnesota,
W74-00570 5B

Needs and Uses for a Ground Water Quality Data System,
W74-00573 7A

Water Well Records and Information System Needs,
W74-00574 7C

Subsurface Geologic Information System in Minnesota: A Status Report,
W74-00575 7C

Relation of Ground Water Quality Information System and Other Systems in Minnesota,
W74-00579 7C

The Effect of Overstory Removal Upon Surface Wind in a Black Spruce Bog,
W74-00688 3B

Preliminary Results of Water Level Control on Small Plots in a Peat Bog,
W74-00694 4A

MINNESOTA RIVER BASIN
Capacity Decisions in a Multipurpose Multireservoir System,
W74-00672 4A

MIRE VEGATATION
Ecological Data of Mire Vegetation, (In Russian),
W74-01014 2H

MISSING DATA
Some Aspects of Nonorthogonal Data Analysis, Part II. Comparison of Means,
W74-00612 7C

MISSISSIPPI
The Water Budget and Waste Treatment at a Modern Dairy,
W74-00560 5D

Accumulation of Sediment in Three Mississippi Reservoirs,
W74-00561 2J

MISSISSIPPI RIVER BASIN
Surface Water Supply of the United States, 1966-70: Part 5. Hudson Bay and Upper Mississippi River Basins--Vol 3. Upper Mississippi River Basin Below Keokuk, Iowa.
W74-00587 7C

MISSOURI
Water Pollution--User of City Sewer System Creates Nuisance Against Lower Riparian,
W74-00870 5G

Levee Unit No. L-246, Missouri River Levee System (Final Environmental Statement).
W74-00879 4A

Lost Creek Watershed, Newton County, Missouri (Final Environmental Statement).
W74-00880 4D

MISSOURI RIVER
Levee Unit No. L-246, Missouri River Levee System (Final Environmental Statement).
W74-00879 4A

MIXED CULTURES
Differential Counting in Mixed Cultures with Coulter Counters,
W74-00614 5A

MODEL STUDIES
Biological Models of Freshwater Communities,
W74-00925 5C

MOISTURE
Effects of Water and Heat on Seedling Emergence,
W74-00930 3F

Moisture Expenditure by Forest and Fields in the Protective Afforestation Regions, (In Russian),
W74-01099 3F

MOISTURE BALANCE
Moisture Balance in the Oak Forests on the Northern Donets Right Bank, (In Russian),
W74-00983 4A

MOISTURE STRESS
Pressure Bomb Measures Changes in Moisture Stress of Birchleaf Mountainmahogany After Partial Crown Removal,
W74-00681 2I

MOLDAVIA
Streamflow Formation, Computations, and Regulation (Formirovaniye, raschety i regulirovaniye rechnogo stoka).
W74-00592 4A

MOLLUSKS
Biota of Freshwater Ecosystems Identification Manual No. 11 Freshwater Unionacean clams (Mollusca:Pelecypoda) of North America,
W74-00564 2A

Molluscs of the Chesapeake Bay,
W74-00912 2L

MONITORING
Water Well Records and Information System Needs,
W74-00574 7C

Spinning Dropping Mercury Electrode-A Practical Analytical Tool,
W74-00634 2K

Monitoring of Dumping by Means of Satellite Remote Sensing,

MUNICIPAL WASTES
Preliminary Survey of Mercury and Other Metals Contained in Animals from the Fraser River Mudflats,
W74-00764 5C

The ABC Way to Better Wastewater Treatment,
W74-00776 5D

Analysis of Waste Waters and Interpretation of the Results,
W74-00779 5A

Method for Biochemical Treatment of Industrial Waste Water,
W74-00966 5D

MUNICIPAL WATER
Bacterial Endotoxins in the Environment,
W74-00618 5B

Subjective Decision-Making for Urban Water Resources Development,
W74-00884 6B

System for Eliminating Environmental Pollution,
W74-00964 5D

MUSSEL
Toxicity and Accumulation of Lead in the Common Mussel Mytilus Edulis in Laboratory Experiment, (In German),
W74-00972 5C

MUSSELS
Biota of Freshwater Ecosystems Identification Manual No. 11 Freshwater Unionacean clams (Mollusca:Pelecypoda) of North America,
W74-00564 2A

NACIMIENTO DAM (CALIF)
A Summary Report Master Water and Sewerage Plan.
W74-01041 5D

NALEDS
Icings Developed from Surface Water and Ground Water,
W74-00581 2C

NANNOPLANKTON
Nannoplankton of the Chesapeake Bay,
W74-00895 2L

NANNOPLANKTON TAXONOMY
Nannoplankton of the Chesapeake Bay,
W74-00895 2L

NATIONAL CULTURAL PARKS
A Bill to Provide for the Establishment of the Lowell Historic Canal District National Cultural Park.
W74-00862 6E

NATIONAL ENVIRONMENTAL POLICY ACT
Prickett Creek Watershed, West Virginia (Final Environmental Statement).
W74-00860 4A

Natural Resources Defense Council Inc. V. Grant (Action to Permanently Enjoin Construction of Watershed Project).
W74-00868 6E

Levee Unit No. L-246, Missouri River Levee System (Final Environmental Statement).
W74-00879 4A

Lost Creek Watershed, Newton County, Missouri (Final Environmental Statement).
W74-00880 4D

Gillham Lake, Cossatot River Arkansas (Final Environmental Impact Statement).
W74-00881 4A

NATIONAL FORESTS
Designation of Wilderness Areas, Part II.
W74-00873 6E

Lone Peak Wilderness Area, Utah, and Designating a Segment of the Colorado River in Utah as Part of the Wild and Scenic Rivers System.
W74-00874 4C

NATIONAL HISTORIC PARKS
A Bill to Provide for the Establishment of the Lowell Historic Canal District National Cultural Park.
W74-00862 6E

NATIONAL WATER COMMISSION
Findings of the National Water Commission,
W74-00812 6A

NATURAL RESOURCES
Phase I Comprehensive Water and Sewer Plan.
W74-00813 6A

NATURAL STREAMS
Travel Time of Georgia Streams,
W74-00556 4A

NAVIGABLE WATERS
The Effects of Strip Mining Upon Navigable Waters and Their Tributaries: Discussion and Selected Bibliography.
W74-00725 5C

Increasing Protection for our Waters, Wetlands, and Shorelines: The Corps of Engineers.

NEW RIVER BASIN (N.C.)
North Carolina Water Plan-Progress Report, Chapter 35-New River Basin.
W74-01033 6B

NEW YORK
Regional Water Supply/Sewage Disposal Plan and Short-Range Program, 1973-1978.
W74-00753 5D

Water Resources Data for New York, 1972: Part 1. Surface Water Records.
W74-00825 7C

Walsh V. Spadaccia (Proceeding to Set Aside Determination of Town Board Approving Construction Plans Which did not Consider Pollution of Lake).
W74-00857 6E

Analysis of Port Development Potentials at Great Sodus Bay.
W74-01039 6B

NEWTON CO.
Lost Creek Watershed, Newton County, Missouri (Final Environmental Statement).
W74-00880 4D

NICOTIANA-TABACUM
Callus Tissue Culture From the Viewpoint of Water Relationships (In German),
W74-00995 2I

NIRIDAZOLE
Preliminary Results of the Project for Controlling and Preventing Schistosomiasis in the Lower Mangoky (Malagasy Republic),
W74-00992 5F

NITRATES
Microbial Formation of Nitrosamines in Vitro,
W74-00654 5B

A Mathematical Model of the Nutrient Dynamics of Phytoplankton in a Nitrate-Limited Environment,
W74-00720 5C

Environmental Control of Gametogenesis in Laminaria saccharina. II. Correlation of Nitrate and Phosphate Concentrations with Gametogensis and Selected Metabolites,
W74-00726 5C

Fluctuations in Nitrate Concentrations Utilized as an Assessment of Agricultural Contamination to an Aquifer of a Semiarid Climatic Region,
W74-00850 5B

Reduction of High Nitrate Content from Well Water in a Remote Eskimo Village,
W74-00949 5F

NITRILES
Process for Treating Waste Water Containing Nitriles,
W74-00957 5D

Characteristics of the Toxic Effects and Safety Levels of Nitriles of Crotonic and Isocrotonic Acids in Water Bodies, (In Russian),
W74-01044 5C

NITRILOTRIACETIC ACID
Biodegradation of Nitrilotriacetate (NTA) By Bacteria-I. Isolation of Bacteria Able to Grow Anaerobically with NTA as a Sole Carbon Source,
W74-00644 5A

Interaction of Nitrilotriacetic Acid with Suspended and Bottom Material.
W74-00926 5A

NITRITES
Microbial Formation of Nitrosamines in Vitro,
W74-00654 5B

NITROGEN
A Eutrophication Model of the White River Basin Above Beaver Reservoir in Northwest Arkansas,
W74-00555 5C

Removal of Ammonia Nitrogen by Breakpoint Chlorination Using an Activated Carbon Catalyst,
W74-00810 5D

Introduction to Study 'In Situ' of Plankton Ecology in Lake Geneva, (In French),
W74-01079 2H

NITROGEN FIXATION
Nitrogen Fixation by Anabaena cylindrica. I. Localization of Nitrogen Fixation in the Heterocysts,
W74-00713 5C

Glutamine Synthetase of the Nitrogen-Fixing Alga Anabaena cylindrica,
W74-00717 5C

Nitrogen Fixation by Oscillatoria (Trichodesmium) thiebautii in the Southwestern Sargasso Sea,
W74-00729 5C

NITROSAMINES
Microbial Formation of Nitrosamines in Vitro,
W74-00654 5B

NONLINEAR PROGRAMMING
Capacity Decisions in a Multipurpose Multireservoir System,
W74-00672 4A

NONOPTIMALITY
Pathology of a Dynamic Programing Sequencing Algorithm,
W74-00671 6A

NONSTEADY FLOW CONDITIONS
Modified Solutions for Decreasing Discharge Wells,
W74-00932 8B

NORTH AMERICA
Biota of Freshwater Ecosystems Identification Manual No. 11 Freshwater Unionacean clams (Mollusca:Pelecypoda) of North America,
W74-00564 2A

NORTH CAROLINA
The Phytoplankton of Gales Creek with Emphasis on the Taxonomy and Ecology of Estuarine Phytoflagellates--Part 1 of Studies on Brackish Water Phytoplankton,
W74-00590 5C

Soils and Water,
W74-00698 3B

Natural Resources Defense Council Inc. V. Grant (Action to Permanently Enjoin Construction of Watershed Project).
W74-00868 6E

Report of Proceedings at Public Hearing Relating to an Application Filed by Aroused Residents of Crowders Creek Inc. Requesting Reclassification of Crowders Creek, Catawba River Basin, Cleveland and Gaston Counties .
W74-00871 5G

North Carolina Water Plan-Progress Report, Chapter 35-New River Basin.
W74-01033 6B

Public Water Supplies of North Carolina, Part I Northern Piedmont,
W74-01040 6D

NORTHAMERICA
Biota of Freshwater Ecosystems Identification Manual No. 10 Genera of Freshwater Nematodes (Nematoda) of Eastern North America,
W74-00563 2I

NORTHEAST U.S.
Classification and Evaluation of Freshwater Wetlands as Wildlife Habitat in the Glaciated Northeast,
W74-01052 6B

NORWAY (OSLOFJORD)
Pollution Effects on Littoral Algal Communities in the Inner Oslofjord, with Special Reference to Ascophyllum nodosum,
W74-00733 5C

NOVOBIOCIN
Some observations on the Incorporation of Novobiocin Into Hektoen Enteric Agar for Improved Salmonella Isolation,
W74-00617 5A

NUCLEAR POWER PLANTS
Flood Studies for Safety of TVA Nuclear Plants: Hydrologic and Embankment Breaching Analysis,
W74-00805 8A

NUCLEAR POWERPLANTS
Bodega: A Case History of Intense Controversy,
W74-00738 6G

NUCLEAR REACTORS
Economic Feasibility of an Integrated Cottonwood Plantation Utilizing a Nuclear Power Reactor,
W74-00771 3C

NUISANCE ALGAE
Development of a Selective Algaecide to Control Nuisance Algal Growth,
W74-00702 5G

NUISANCE (LEGAL ASPECTS)
Water Pollution--User of City Sewer System Creates Nuisance Against Lower Riparian,
W74-00870 5G

NUNIVAK ISLAND
Reduction of High Nitrate Content from Well Water in a Remote Eskimo Village,
W74-00949 5F

NUTRIENT REMOVAL
Complementary Role of Iron (III), Sulfate and Calcium in Precipitation of Phosphate From Solution,
W74-01053 5D

NUTRIENT REQUIREMENTS
The Influence of Environmental Factors on the Distribution of Freshwater Algae: An Experimental Study. III. Effects of Temperature, Vitamin Requirements and Inorganic Nitrogen Compounds on Growth,
W74-00640 5C

Biological Investigations of Lake Wingra,
W74-00833 5C

NUTRIENT SOURCES
Nutrient Loading From a Separate Storm Sewer in Madison, Wisconsin,
W74-00716 5C

NUTRIENTS
Chemical and Biological Patterns in the Lower Colorado River System,
W74-00760 5C

The Effect of Nutrients on the Growth of Bacterial Population in Water,
W74-01001 5C

OAK
Study of the Condition and Growth of Forest Plantations, (In Russian),
W74-01071 4A

Moisture Expenditure by Forest and Fields in the Protective Afforestation Regions, (In Russian),
W74-01099 3F

OAK FORESTS
Moisture Balance in the Oak Forests on the Northern Donets Right Bank, (In Russian),
W74-00983 4A

OAK ROOT SYSTEMS
Deepsoil Studies of Oak Root Systems in Old Age Plantations, (In Russian),
W74-01085 2I

OATS
The Use of Tensiometers as Indicators of Soil Moisture Availability for Plants, (In Russian),
W74-00989 3F

OCEAN CURRENTS
Estuaries, Bays and Coastal Currents Around Puerto Rico,
W74-00832 7C

OCEAN WASTE DISPOSAL
Ocean Waste Disposal in Selected Geographic Areas.
W74-00928 5E

OCEANS
Monitoring of Dumping by Means of Satellite Remote Sensing,
W74-00635 5B

ODESSA (USSR)
Possibilities of Using Geophysical Methods in a Study of Freshwater Discharges in Littoral Zones of Seas (O vozmozhnostyakh geofizicheskikh metodov pri izuchenii razgruzok presnykh vod v pribrezhnykh zonakh morey),
W74-00847 2F

ODOR
Environmental Impact Study for Expansion on the Village Creek Sewage Treatment Plant,
W74-01035 5D

OHIO
Stream and Lakefront Field Inventory, Volume I - Summary.
W74-01046 5B

Water-Related Facilities Study for the Comprehensive Regional Plan of Columbus and Franklin County (Ohio).
W74-01048 6B

OHIO RIVER
Surface Water Supply of the United States, 1966-70: Part 3. Ohio River Basin--Volume 4. Ohio River Basin Below Wabash River.
W74-00588 7C

OIL
The Draft United Nations Convention on the International Seabed Area--American Petroleum Institute Position,
W74-00859 5G

OIL BOOMS
Self-Righting Floating Booms,
W74-00965 5G

OIL POLLUTION
Remote Sampler for Determining Residual Oil Contents of Surface Waters,
W74-00584 5G

Remote Sensing of Oil Slicks,
W74-00638 5A

Water Disposal Caisson and Method of Using Same,
W74-00963 5G

OIL SCOOPS
Apparatus and Method for Collection of Oil From Surface of the Sea,
W74-00968 5G

OIL SPILL PROBABILITY
Cargo Spill Probability Analysis for the Deep Water Port Project,
W74-00819 5B

OIL SPILLS
Remote Sampler for Determining Residual Oil Contents of Surface Waters,
W74-00584 5G

Remote Sensing of Oil Slicks,
W74-00638 5A

Evaporation Rates of Liquid Hydrocarbon Spills on Land and Water,
W74-00775 5B

The Identification of Sources of Oil Spills,
W74-00780 5A

Cargo Spill Probability Analysis for the Deep Water Port Project,
W74-00819 5B

Hydrocarbon Incorporation Into the Salt Marsh Ecosystem from the West Falmouth Oil Spill,
W74-00824
Method and Means for Absorbing Crude Oil and the Like for Transportation and Recovery,
W74-00959 5G

Oil Skimmer Module,
W74-00961 5G

Self-Righting Floating Booms,
W74-00965 5G

Apparatus and Method for Collection of Oil From Surface of the Sea,
W74-00968 5G

OILY WATER
Remote Sampler for Determining Residual Oil Contents of Surface Waters,
W74-00584 5G

Evaporation Rates of Liquid Hydrocarbon Spills on Land and Water,
W74-00775 5B

OOMOLIDIC LIMESTONE
Detection and Estimation of Dead-End Pore Volume in Reservoir Rock by Conventional Laboratory Tests,
W74-00944 8G

OPEN CHANNEL FLOW
Numerical Simulation of Unsteady Flows in Rivers and Reservoirs,
W74-00816 8B

Errors in Piezometric Measurement,
W74-00931 8G

OPEN CHANNELS
Flow and Channel Characteristics of Two High Mountain Streams,
W74-00678 4A

OPERATING POLICY
Determination of the Discharge Policy for Existing Reservoir Networks Under Differing Objectives,
W74-00673 4A

OPERATION AND MAINTENANCE
Maintenance and Operation,
W74-01070 8A

OPOSSUM SHRIMP
Response of Aquatic Life to Salinity, Temperature, Dissolved Oxygen, and Water Flow,
W74-00721 5C

OPTIMIZATION
Optimization Model for The Operation of Flood Control Systems,
W74-00668 4A

Biological Investigations of Lake Wingra,
W74-00833 5C

Optimization of Surface-Water Quality: A Proposal for Solving a Future Problem (In German),
W74-00994 5B

OPTIMUM DEVELOPMENT PLANS
Wheat Response to Soil Moisture and the Optimal Irrigation Policy Under Conditions of Unstable Rainfall,
W74-00669 3F

OREGON
Sewerage Master Plan, Eugene-Springfield Urbanizing Area.
W74-01042 5D

Differential Reproduction as a Criterion for Evaluating Development Decisions,
W74-01056 6B

ORGANIC COMPOUNDS
Mechanism of Organic Adsorption on Activated Carbon,
W74-00565 5D

Negative Chemotaxis of Marine Bacteria to Toxic Chemicals,
W74-00658 5C

ORGANIC IRON COMPOUNDS
Utilization of Iron Gallate and Other Organic Iron Complexes by Bacteria from Water Supplies,
W74-00660 5B

ORGANIC MATTER
Organic Matter Composition Under Different Forest Types in a Derno-Podzolic Zone, (In Russian),
W74-00984 2K

Variation in Soil Factors and Crop Yield on a Sandy Soil Rich in Organic Matter, (In Norwegian),
W74-01051 3F

ORGANIC POLYMERS
New Muds Designed to Improve Drilling Rate, Hole Stability,
W74-00946 8G

ORGANIC SOILS
Preliminary Results of Water Level Control on Small Plots in a Peat Bog,
W74-00694 4A

ORTHOGONAL POLYNOMIALS
A Stochastic Model for Predicting Variations in Reservoir Rock Properties,
W74-00955 8E

OSCILLATORIA-CHALYBEA
Effect of Fish on the Bottom of Reservoirs,
W74-01020 2H

OSCILLATORIA THIEBAUTII
Nitrogen Fixation by Oscillatoria (Trichodesmium) thiebautii in the Southwestern Sargasso Sea,
W74-00729 5C

OSMOSIS
Anion Exclusion and Coupling Effects in Nonsteady Transport Through Unsaturated Soils: I. Theory,
W74-00611 2G

OSMOTIC PRESSURE
Fatty Acid Composition of L-Forms of Streptococcus Faecalis Cultured at Different Osmolalities,
W74-00622 5A

OSTRACODS
Some Ecological Data on Freshwater Ostracods of the Temporary and Permanent Waters in the Vicinity of Bucharest (In Rumanian),
W74-01000 2I

OUACHITA PARISH (LOUISIANA)
Comprehensive Water and Sewerage Plan for Ouachita Parish.
W74-00806 6A

OUTLET WORKS
Outlet Works,
W74-01068 8A

OVERLAND FLOW
Effect of Forest Cover Removal on Depth of Soil Freezing and Overland Flow,
W74-00610 2G

OXIDATION
Oxidation of Polychlorinated Biphenyls by Achromobacter pCB,
W74-00632 5B

Method for Biochemical Treatment of Industrial Waste Water,
W74-00966 5D

OXYGEN
The Effects of Water Temperature and Elevation Upon Aeration,
W74-00699 5D

Let as a Determinant of Oxygen Enhancement Ratio and Shape of Survival Curve for Chlamydomonas,
W74-00732 5C

Circulation in the Bay of Ampasindava (Madagascar) and Its Biochemical Implications (In French),
W74-01005 5B

Bottom Fauna of Dead Vistula,
W74-01073 5C

OXYGEN-ENHANCEMENT RATIO
Let as a Determinant of Oxygen Enhancement Ratio and Shape of Survival Curve for Chlamydomonas,
W74-00732 5C

OXYGEN TRANSFER
The Effects of Water Temperature and Elevation Upon Aeration,
W74-00699 5D

OYSTER SHELLSTOCK
Survival of Vibrio Parahaemolyticus in Oyster Shellstock at Two Different Storage Temperatures,
W74-00616 5C

OYSTERS
Copper Content of Oysters (Crassostrea Angulata) Along the Huelva Coasts, (In Spanish),
W74-00978 5C

PACENTIA BAY (NEWFOUNDLAND)
Effects of Elemental Phosphorus on Marine Life.
W74-00705 5C

PACIFIC SOUTHWEST
River Mile Index--NAPA, Salinas, and Eel River Basins, California.
W74-00585 2E

PALMELLOID STATE
The 'Palmelloid' State in a Blue-Green Alga, Anabaena sp. I. Preliminary Report,
W74-00723 5C

PANAGROBELUS-CORONATUS
Nematodes in Dams of Zemplinska Sirava, (In Czech.),
W74-00977 2I

PANDORINA MORUM
Inhibition of Oxygen Evolution in Volvox globator by Culture Filtrates from Pandorina morum,
W74-00728 5C

PANICUM-COLORATUM
Flooding Tolerance of Panicum Coloratum,
W74-00826 3F

PANICUM-MAXIMUM
Flooding Tolerance of Panicum Coloratum,
W74-00826 3F

PATENTS
Process for Treating Waste Water Containing Nitriles,
W74-00957 5D

Method of Purifying Sewage Effluent and Apparatus Therefor,
W74-00958 5D

Method and Means for Absorbing Crude Oil and the Like for Transportation and Recovery,
W74-00959 5G

Sewage Treatment Process,
W74-00960 5D

Oil Skimmer Module,
W74-00961 5G

Sewage Disposal Effluent Purifier,
W74-00962 5D

Water Disposal Caisson and Method of Using Same,
W74-00963 5G

System for Eliminating Environmental Pollution,
W74-00964 5D

Self-Righting Floating Booms,
W74-00965 5G

Method for Biochemical Treatment of Industrial Waste Water,
W74-00966 5D

Process for Treating Industrial Wastes,
W74-00967 5D

Apparatus and Method for Collection of Oil From Surface of the Sea,
W74-00968 5G

Inert Gas Stripping of Contaminated Water,
W74-00969 5D

PATH OF POLLUTANTS
Hydrogeologic Framework for Deterioration in Groundwater Quality,
W74-00569 5B

Ground Water Pollution Problems in Minnesota,
W74-00570 5B

Propagation of Sinusoidal Solute Density Oscillations in the Mobile and Stagnant Phases of a Soil,
W74-00604 2G

Intermedia Aspects of Air and Water Pollution Control,
W74-00703 5B

Environmental Impact Study for Expansion on the Village Creek Sewage Treatment Plant,
W74-01035 5D

Seepage Flows--Field Data Measurements for Evaluation of Potential Contribution of Fertilizers to Groundwater Pollution,
W74-01054 5B

PATHOGENIC BACTERIA
Survival of Vibrio Parahaemolyticus in Oyster Shellstock at Two Different Storage Temperatures,
W74-00616 5C

Effect of Temperature of Incubation on Performance of Media in the Detection of Enteric Pathogens,
W74-00646 5A

Potential Pathogens in the Environment: Klebsiella Pneumoniae, A Taxonomic and Ecological Enigma,
W74-00656 5A

Gentamicin Blood Agar Used as a General-Purpose Selective Medium,
W74-00657 5A

A Comparison of the Distribution of Intestinal Bacteria in British and East African Water Sources,
W74-00662 5B

PATHOGENIC FUNGI
Identification of the Prototheca Species by Immunofluorescence,
W74-00659 5A

PEAK DISCHARGE
Flash Floods on Carpathian Rivers in June 1969 and May 1970 (Livnevyye pavodki na rekakh Karpat v iyune 1969, maye 1970 g.),
W74-00598 2E

PEAT BOGS
Preliminary Results of Water Level Control on Small Plots in a Peat Bog,
W74-00694 4A

PELECYPODS
Biota of Freshwater Ecosystems Identification Manual No. 11 Freshwater Unionacean clams (Mollusca:Pelecypoda) of North America,
W74-00564 2A

PENETROMETER RESISTANCE
A Simple Method to Measure the Penetrometer-Resistance of the Soil and the Relationship between This Resistance, Soil Porosity and Soil Water Content,
W74-00987 2G

PENNSYLVANIA
Gas Requirements to Pressurize Abandoned Deep Mines,
W74-00836 5G

Commonwealth V. Barnes and Tucker Company (Suit for Mandatory Injunction Requiring Defendant to Treat Acid Mine Drainage from Mine).
W74-00866 6E

Water Supply and Sewage Facilities Plan Update-1970.
W74-01045 6B

PERCHLORATE ELECTRODES
A Study of Liquid-Membrane Perchlorate-Selective Electrodes Made from an Organic Radical Ion Salt,
W74-00649 5A

PERCHLORATES
A Study of Liquid-Membrane Perchlorate-Selective Electrodes Made from an Organic Radical Ion Salt,
W74-00649 5A

PERFORATED CASING
The Effect of Restricted Fluid Entry on Well Productivity,
W74-00953 8B

PERIPHYTON
Beta Radioactivity of Periphyton in Certain Dam Reservoirs,
W74-00993 5B

PERMEABILITY
Permeability Restoration in Underground Disposal Reservoirs,
W74-00554 5E

Polymer Membrane Electrodes. Part II. A Potassium Ion-Selective Membrane Electrode,
W74-00648 2K

Detection and Estimation of Dead-End Pore Volume in Reservoir Rock by Conventional Laboratory Tests,
W74-00944 8G

A Stochastic Model for Predicting Variations in Reservoir Rock Properties,
W74-00955 8E

PERMITS
Market Problems in the Distribution of Emission Rights,
W74-00674 5G

Chemical Analysis of Water Effluents -- Lessons from the U.S. (Army Corps of Engineers) Permit Program,
W74-00791 5A

PERMSELECTIVE MEMBRANES
An Ammonium Ion-Specific Electrode,
W74-00636 2K

Polymer Membrane Electrodes. Part I. A Choline Ester-Selective Electrode,
W74-00647 2K

PESTICIDE RESIDUES
Well Construction Helps Determine Water Quality,
W74-00954 5B

PESTICIDES
Problem Definition Study: Evaluation of Health and Hygiene Effects of the Disposal of Pesticides and Pesticide containers,
W74-00580 5G

Current Status of Research on the Biological Effects of Pesticides in Chesapeake Bay,
W74-00923 2L

PHAEOPHYTA
Pollution Effects on Littoral Algal Communities in the Inner Oslofjord, with Special Reference to Ascophyllum nodosum,
W74-00733 5C

PHENOPHASE
The Variation of Water Relations and Respiration Intensity in Male and Female Ephedra distachya Plants of the Black Sea Coast as a Function of Age,
W74-01076 2I

PHLEGER GRAVITY CORES
Accumulation of Sediment in Three Mississippi Reservoirs,
W74-00561 2J

PHOSPHATE
Complementary Role of Iron (III), Sulfate and Calcium in Precipitation of Phosphate From Solution,
W74-01053 5D

PHOSPHATES
Detergent Phosphate and Eutrophication in Australia,
W74-00718 5C

Algal Response to Getergent Phosphate Levels,
W74-00724 5C

Environmental Control of Gametogenesis in Laminaria saccharina. II. Correlation of Nitrate and Phosphate Concentrations with Gametogensis and Selected Metabolites,
W74-00726 5C

PHOSPHORUS
Effects of Elemental Phosphorus on Marine Life.
W74-00705 5C

Coexistence of a Fishery and A Major Industry in Placentia Bay,
W74-00706 5C

Decomposition of Phosphorus in Water,
W74-00707 5C

An Assessment of the Assimilation of Elemental Phosphorus by Newfoundland Marine Organisms in the 1969 Pollution Problem and in 1970 Monitoring Operations,
W74-00709 5C

Observations on Mortalities of Benthic Organisms After Contamination of the Bottom of Long Harbour, Placentia Bay, Newfoundland with Elemental Phosphorus,
W74-00710 5C

Symptoms of 'Red' Herring in Relation to the Mass Mortalities in Placentia Bay, February--April 1969,
W74-00711 5C

Analysis of Elemental Phosphorus and Some of Its Compounds by Gas Chromatography,
W74-00712 5C

Enhancing Trickling Filter Plant Performance by Chemical Precipitation,
W74-00835 5D

Effect of Detergent Application on the Growth of corn,
W74-01057 3C

Introduction to Study 'In Situ' of Plankton Ecology in Lake Geneva, (In French),
W74-01079 2H

PHOSPHORUS COMPOUNDS
Analysis of Elemental Phosphorus and Some of Its Compounds by Gas Chromatography,
W74-00712 5C

PHOTOGRAMMETRY
Photogrammetric Determinations of Snow Cover Extent from Uncontrolled Aerial Photographs,
W74-00697 3B

PHOTOSYNTHESIS
Responses of a Mixed Phytoplankton Population to Nutrient Enrichments of Ammonia and Phosphate, and Some Associated Ecological Implications,
W74-00665 5C

PHOTOSYNTHETIC PIGMENTS
Electron Microscope and Physical Chemical Characterization of C-Phycocyanin from Fresh Extracts of Two Blue-Green Algae,
W74-00652 5A

PHRAGMITES-COMMUNIS
Changes of Plant Communities in Overgrown Bodies of Water of the Amu-Darya Delta, (In Russian),
W74-01018 2L

PHYTO PLANKTON RELATIONSHIPS
Primary Production-Phytoplankton Relationship in the Crapina-Jijila Complex in the Flood Conditions of 1970, (In Rumanian),
W74-01015 2I

PHYTOCENOSIS FORMATION
Course of Phytocenosis Formation in Closed Shallows of Flood Band of the Kiev Hydroelectric Station Reservoir, (In Ukrainian),
W74-01011 4A

PHYTOFLAGELLATES
The Phytoplankton of Gales Creek with Emphasis on the Taxonomy and Ecology of Estuarine Phytoflagellates--Part 1 of Studies on Brackish Water Phytoplankton,
W74-00590 5C

PHYTOGEOGRAPHIC POSITION
New Points of View on the Phytogeographic Position of the High Ardennes, (In German),W. Van Cotthem.
W74-01025 2D

PHYTOPLANKTON
Studies on Brackish Water Phytoplankton,
W74-00589 5C

The Phytoplankton of Gales Creek with Emphasis on the Taxonomy and Ecology of Estuarine Phytoflagellates--Part 1 of Studies on Brackish Water Phytoplankton,
W74-00590 5C

The Standing Crop and Primary Productivity of the Phytoplankton of Abbot's Pond, North Somerset,
W74-00651 5C

Responses of a Mixed Phytoplankton Population to Nutrient Enrichments of Ammonia and Phosphate, and Some Associated Ecological Implications,
W74-00665 5C

A Mathematical Model of the Nutrient Dynamics of Phytoplankton in a Nitrate-Limited Environment,
W74-00720 5C

Contributions to the Knowledge of Biogenic Elements and Phtoplankton Associations Dynamics in Frasinet Pond During November 1969-November 1970, (In Rumanian),
W74-00727 5C

On Advection in Phytoplankton Models,
W74-00737 5C

Phytoplankton of the Chesapeake Bay,
W74-00896 2L

Time-Tables as a Method to Record Changes in Plankton Composition,
W74-01010 7B

Some Phytoplankton Characteristics in Cooler Basins, (In Russian),
W74-01017 5C

Introduction to Study 'In Situ' of Plankton Ecology in Lake Geneva, (In French),
W74-01079 2H

PHYTOPLANKTON TAXONOMY
Phytoplankton of the Chesapeake Bay,
W74-00896 2L

PIEDMONT (NC)
Public Water Supplies of North Carolina, Part I Northern Piedmont,
W74-01040 6D

PIEZOMETRIC MEASUREMENT
Errors in Piezometric Measurement,
W74-00931 8G

PIEZOMETRY
Errors in Piezometric Measurement,
W74-00931 8G

PILOT PLANS
Summary Report: Pilot Plant Studies on Dewatering Primary Digested Sludge,
W74-00700 5D

PINE
Effect of Depth of Soil Cultivation and of Fertilizers on the Survival and Growth of Pine on the Lower Dnieper Sands, (In Russian),
W74-01098 4A

PINES
The Influence of Meteorological Elements on the Annual Rhythm of Height Growth in Pines, (In German),
W74-01077 2I

PINUS-NIGRA
Plantations of Coniferous Tree Species, (In Russian),
W74-01023 2I

PLACENTIA BAY (NEWFOUNDLAND)
Coexistence of a Fishery and A Major Industry in Placentia Bay,
W74-00706 5C

Decomposition of Phosphorus in Water,
W74-00707 5C

An Assessment of the Assimilation of Elemental Phosphorus by Newfoundland Marine Organisms in the 1969 Pollution Problem and in 1970 Monitoring Operations,
W74-00709 5C

Observations on Mortalities of Benthic Organisms After Contamination of the Bottom of Long Harbour, Placentia Bay, Newfoundland with Elemental Phosphorus,
W74-00710 5C

Symptoms of 'Red' Herring in Relation to the Mass Mortalities in Placentia Bay, February--April 1969,
W74-00711 5C

Analysis of Elemental Phosphorus and Some of Its Compounds by Gas Chromatography,
W74-00712 5C

PLAGUE
Natural Factors of Activation of Plague Epizootiae in Siberia, (In Russian),
W74-00990 2I

PLANKTON COMMUNITIES
Trophic Structure and Bioactivity of the Plankton Communities in Lower Reach of Elbe Estuary: Criteria for Saprobic Classification of a Tidal Water (In German),
W74-01003 5C

PLANKTON SAMPLER
Some Simple Methods for Limnological Study in Shallow Water,
W74-00998 7B

PLANNING
Trends in Environmental Law Related to Water Resources Planning,
W74-00552 6E

Sampling for Waste Water Analyzers. Part I: Systematic Approach,
W74-00642 5A

Policy Plan for Development of Lansing's Waterfront.
W74-00742 3D

Protecting our Water Environment.
W74-00743 5G

Report to the Governor and the Legislative Commission: Pollution Abatement Project, Las Vegas Wash and Bay.
W74-00744 5D

Sewer System Cost Estimation Model.
W74-00745 5D

A Report Upon West Central Maricopa County, Arizona: Volume I, A Study of Physical Environmental Factors as a Basis for Land Use Planning.
W74-00746 3D

Project Report for Ventura County Planning Department and Casitas Municipal Water District on Watershed Development Impact on Lake Casitas.
W74-00752 5B

Regional Water Supply/Sewage Disposal Plan and Short-Range Program, 1973-1978.
W74-00753 5D

Present and Future Water Use and its Effect on Planning in Maricopa County, Arizona,
W74-00754 3D

PLANNING

Additional Sources for Water Supply for the Town of Wellesley.
W74-00807 6A

Louisiana Government and the Coastal Zone-1972.
W74-01028 6E

The Harvard Program: A Summing up,

Water and Sewer Service Needs of Low and Moderate Income Households in Metropolitan Washington.
W74-01034 5D

Master Plan for Major Drainage: Henry's Lake Area, Subbasin 1-31-5501-01.
W74-01037 6B

Analysis of Port Development Potentials at Great Sodus Bay.
W74-01039 6B

Sewerage Master Plan, Eugene-Springfield Urbanizing Area.
W74-01042 5D

Wetlands '73: Toward Coastal Zone Management in Louisiana.
W74-01043 2L

Areawide Water and Waste Water Planning Study for the St. Charles Mesa, Rye-Colorado City, and Beulah Sectors of Pueblo County.
W74-01047 5D

PLANNING TECHNIQUES

In Search of New Methods for River System Planning,
W74-01029 4A

PLANT MORPHOLOGY

Xylem Water Potentials and Stomatal Resistance in Bog Plants: Ecological Implications,
W74-00719 2I

The 'Palmelloid' State in a Blue-Green Alga, Anabaena sp. I. Preliminary Report,
W74-00723 5C

PLANT WATER POTENTIAL

Xylem Water Potentials and Stomatal Resistance in Bog Plants: Ecological Implications,
W74-00719 2I

PLANTING MANAGEMENT

Jojoba and its Uses, An International Conference, June 1972.
W74-00756 3F

PLASTICIZERS

Polymer Membrane Electrodes. Part II. A Potassium Ion-Selective Membrane Electrode,
W74-00648 2K

PLECTONEMA BORYANUM

Electron Microscope and Physical Chemical Characterization of C-Phycocyanin from Fresh Extracts of Two Blue-Green Algae,
W74-00652 5A

PLUMBING

Water and Sewer Service Needs of Low and Moderate Income Households in Metropolitan Washington.
W74-01034 5D

POLAND

Protection of Water Against Pollution,
W74-00731 5C

Rare and New Species of Rotifers in the Fauna of Poland,
W74-00970 2I

POLAND (DEAD VISTULA)

Bottom Fauna of Dead Vistula,
W74-01073 5C

POLAND (LAKES MIKOLAJSKIE-TAITOWSKO)

Rotifers of the Near Bottom Zone of Lakes Mikolajskie and Taitowisko,
W74-00935 2H

POLAND (PRZECZYCE)

Remarks on the Stocking of the Dam Reservoir at Przeczyce with Lake Trout Salmo trutta M Lacustris L,
W74-01072 8I

POLAND (VISTULA RIVER)

On the Effect of Pollution on Surface Waters,
W74-00722 5C

POLAROGRAPHIC ANALYSIS

Spinning Dropping Mercury Electrode-A Practical Analytical Tool,
W74-00634 2K

POLAROGRAPHY

Polarographic Study of Calomel Electrode in Anhydrous Formic Acid,
W74-00633 2K

POLICY PLAN

Policy Plan for Development of Lansing's Waterfront.
W74-00742 3D

POLITICAL ASPECTS

Lake Washington,
W74-00739 5C

POLLUTANT IDENTIFICATION

Remote Sampler for Determining Residual Oil Contents of Surface Waters,
W74-00584 5G

Some observations on the Incorporation of Novobiocin Into Hektoen Enteric Agar for Improved Salmonella Isolation,
W74-00617 5A

Fatty Acid Composition of L-Forms of Streptococcus Faecalis Cultured at Different Osmolalities,
W74-00622 5A

Molecular Relationships Among the Salmonelleae,
W74-00623 5B

Factors Which Influence the Enumeration of Bdellovibrio Bacteriovorus in Sewage and River Water,
W74-00624 5A

On the Isolation of Virus from Sewage Treatment Plant Sludges,
W74-00628 5A

The Effect of Pretreatments on the Virus Contents of Sewage Samples,
W74-00629 5A

Remote Sensing of Oil Slicks,
W74-00638 5A

Potential Pathogens in the Environment: Klebsiella Pneumoniae, A Taxonomic and Ecological Enigma,
W74-00656 5A

Identification of the Prototheca Species by Immunofluorescence,
W74-00659 5A

The Detection of Clostridium Welchii in the Differential Reinforced Clostridial Medium Technique,
W74-00661 5A

A Medium for Counting Aquatic Heterotrophic Bacteria in Polluted and Unpolluted Waters,
W74-00663 5B

Sampling and Analysis of Chemical Pollutants in River Water,
W74-00773 5A

Analysis of Waste Waters and Interpretation of the Results,
W74-00779 5A

The Identification of Sources of Oil Spills,
W74-00780 5A

Chemical Analysis of Water Effluents -- Lessons from the U.S. (Army Corps of Engineers) Permit Program,
W74-00791 5A

Current Practice in GC-MS Analysis of Organics in Water,
W74-00834 5A

Interaction of Nitrilotriacetic Acid with Suspended and Bottom Material.
W74-00926 5A

POLLUTANTS

Capacity of an Estuary to Accept Pollutants,
W74-00708 5C

Effects of Thermal Effluents on Biocenoses of Water Bodies (O kharaktere vliyaniya termal'nykh sbrosnykh vod na biotsenozy vodoyemov),
W74-00842 5C

POLLUTION ABATEMENT

Market Problems in the Distribution of Emission Rights,
W74-00674 5G

Banks Study Basin Cleanup.
W74-00772 5D

Finnish Directions in Solving Water Pollution Problems,
W74-00790 5D

Water Reuse in Industry, Part 5 -- The Water Pollution Control Act: Reaching Toward Zero Discharge,
W74-00798 5D

Are Ocean Polluters Subject to Universal Jurisdiction--Canada Breaks the Ice,
W74-00867 5G

Nonlinear Effluent Charges,
W74-00886 5G

Method and Means for Absorbing Crude Oil and the Like for Transportation and Recovery,
W74-00959 5G

Oil Skimmer Module,
W74-00961 5G

Self-Righting Floating Booms,
W74-00965 5G

Apparatus and Method for Collection of Oil From Surface of the Sea,
W74-00968 5G

POLLUTION TAXES (CHARGES)
Nonlinear Effluent Charges,
W74-00886 5G

POLYCELIS-FELINA
The Responses to Current Flow of Two Stream Dwelling Triclads, Crenobia Alpina (Dana) and Polycelis Felina (Dalyell),
W74-00971 2I

POLYCHAETE TAXONOMY
Polychaetes of the Chesapeake Bay,
W74-00913 2L

POLYCHLORINATED BIPHENYLS
Oxidation of Polychlorinated Biphenyls by Achromobacter pCB,
W74-00632 5B

Organochlorine Residues in Harp Seals (Pagophilus groenlandicus) Caught in Eastern Canadian Waters,
W74-00766 5C

Biological Models of Freshwater Communities,
W74-00925 5C

POLYMER K-4
Effect of the Polymer K-4 on the Resistance of Light Chestnut Soil Cover to Erosion by Water, (In Russian),
W74-00988 4D

POLYMER MEMBRANE ELECTRODES
Polymer Membrane Electrodes. Part I. A Choline Ester-Selective Electrode,
W74-00647 2K

Polymer Membrane Electrodes. Part II. A Potassium Ion-Selective Membrane Electrode,
W74-00648 2K

POLYSACCHARIDES (EXTRACELLULAR)
Study of the Extracellular Polysaccharides Produced by a Blue-Green Alga, A-37,
W74-00734 5G

POLYTOMETUM-UVELLAE
Four Metasaprobic Communities of Colorless Flagellates,
W74-01006 5B

PONDEROSA PINE FOREST
Water Yield Characteristics of Three Small Watersheds in the Northeastern Black Hills,
W74-00677 3B

PONDS
Studies on Brackish Water Phytoplankton,
W74-00589 5C

Phytoplankton Populations in Brackish Water Ponds, A Revised Report--Part II of Studies on Brackish Water Phytoplankton,
W74-00591 5C

Saltwater Pond Research,
W74-00815 8I

PORE WATER
Distribution of Trace Metals in the Pore Waters of Shallow Water Marine Sediments,
W74-00828 2K

POROSITY
Detection and Estimation of Dead-End Pore Volume in Reservoir Rock by Conventional Laboratory Tests,
W74-00944 8G

A Stochastic Model for Predicting Variations in Reservoir Rock Properties,
W74-00955 8E

POROUS MEDIA
Dead End Pore Volume and Dispersion in Porous Media,
W74-00951 8B

POSPHORUS
A Eutrophication Model of the White River Basin Above Beaver Reservoir in Northwest Arkansas,
W74-00555 5C

POTABLE WATER
Bacterial Endotoxins in the Environment,
W74-00618 5B

Low-Cost Facilities for the Bacteriological Examination of Drinking Water Samples,
W74-00630 5G

Trends in Development of Water Treatment for Populated Regions (Tendentsii razvitiya obrabotki vody dyla naselennykh mest),
W74-00841 5F

A Bill to be Known as the 'Safe Drinking Water Act of 1973'.
W74-00856 5F

Dynamics of Changes in Cortical Activity in Albino Rats with Chronic Silver Intoxication (In Ukrainian),
W74-00997 5C

POTASSIUM
An Ammonium Ion-Specific Electrode,
W74-00636 2K

POTASSIUM ELECTRODES
Polymer Membrane Electrodes. Part II. A Potassium Ion-Selective Membrane Electrode,
W74-00648 2K

POTASSIUM PERMANGANATE
Direct Measurement of Potassium Permanganate Demand and Residual Potassium Permanganate,
W74-00765 5A

POTENTIAL STABILITY
Electrochemical Study of a Heterogeneous Copper (II)-Selective Electrode; Study of Selectivity and Potential Stability,
W74-00637 2K

POTOMAC RIVER
(The Potomac 1972).
W74-01032 6B

POULTRY
The Detection of Clostridium Welchii in the Differential Reinforced Clostridial Medium Technique,
W74-00661 5A

POWERPLANTS
Bodega: A Case History of Intense Controversy,
W74-00738 6G

Power Plant Cooling System Still Using Sewage Effluent.
W74-00778 5D

Water Reuse in Industry, Part I -- Power Generation,
W74-00794 5D

PRE-INJECTION TREATMENT
Permeability Restoration in Underground Disposal Reservoirs,
W74-00554 5E

PRECIPITATION
Water Yield Characteristics of Three Small Watersheds in the Northeastern Black Hills,
W74-00677 3B

PRESSURE BOMB MEASUREMENT
Pressure Bomb Measures Changes in Moisture Stress of Birchleaf Mountainmahogany After Partial Crown Removal,
W74-00681 2I

PRESSURE MEASURING INSTRUMENTS
Pulse Testing: A New Method for Describing Reservoir Flow Properties Between Wells,
W74-00939 8G

PRETREATMENT
Factors Which Influence the Enumeration of Bdellovibrio Bacteriovorus in Sewage and River Water,
W74-00624 5A

PRIAPULIDA TAXONOMY
Priapulida of the Chesapeake Bay,
W74-00908 2L

PRIMARY DIGESTED SLUDGE
Summary Report: Pilot Plant Studies on Dewatering Primary Digested Sludge,
W74-00700 5D

PRIMARY PRODUCTION
Comparison of 2 Methods of Treating Water Samples ('Actual in Situ' and 'Simulated in Situ') for Study of Primary Production by the Carbon 14 Technique (In French),
W74-01004 7B

Primary Production-Phytoplankton Relationship in the Crapina-Jijila Complex in the Flood Conditions of 1970, (In Rumanian),
W74-01015 2I

PRIMARY PRODUCTIVITY
The Standing Crop and Primary Productivity of the Phytoplankton of Abbot's Pond, North Somerset,
W74-00651 5C

Studies of Biological Energy Balance and Biological Productivity in the USSR Lakes (In Russian),
W74-01009 2H

PRIORITY EVALUATION
Water Supply and Sewage Facilities Plan Update-1970.
W74-01045 6B

PRODUCTIVITY
The Effect of Restricted Fluid Entry on Well Productivity,
W74-00953 8B

PRODUCTIVITY (PLANKTON)
Some Simple Methods for Limnological Study in Shallow Water,
W74-00998 7B

PROJECT PLANNING
Coronado Resource Conservation and Development Project, Program of Action.
W74-00755 4A

PROJECT PLANNING

North Carolina Water Plan-Progress Report, Chapter 35-New River Basin.
W74-01033 6B

Design of Small Dams.
W74-01058 8A

Project Planning,
W74-01059 8A

Ecological and Environmental Considerations,
W74-01060 8A

PROJECTIONS
El Paso's Water Resources,
W74-00740 6D

Water Supply and Sewage Facilities Plan Update-1970.
W74-01045 6B

PROTEIN
Effect of Retardant Chlorocholine Chloride on Content of Protein Components in Plant Leaves During Drought (In Russian),
W74-00996 3F

PROTISTS TAXONOMY
Bacteria, Yeasts, Viruses and Related Microorganisms of the Chesapeake Bay,
W74-00893 2L

PROTOTHECA
Identification of the Prototheca Species by Immunofluorescence,
W74-00659 5A

PROTOTYPES
Sampling for Waste Water Analyzers. Part II: Effective Applications,
W74-00643 5A

PROTOZOA
Free-Living Protozoa of the Chesapeake Bay Exclusive of Foraminifera and the Flagellates,
W74-00904 2L

Foraminifera of the Chesapeake Bay,
W74-00905 2L

Biological Models of Freshwater Communities,
W74-00925 5C

PROTOZOA TAXONOMY
Free-Living Protozoa of the Chesapeake Bay Exclusive of Foraminifera and the Flagellates,
W74-00904 2L

PSEUDOMONADS
Negative Chemotaxis of Marine Bacteria to Toxic Chemicals,
W74-00658 5C

PSEUDOMONAS
Identification and Characterization of the Microflora and Spoilage Bacteria in Freshwater Crayfish Procambarus Clarkii (Girad),
W74-00620 5A

PUBLIC HEALTH
Trends in Development of Water Treatment for Populated Regions (Tendentsii razvitiya obrabotki vody dyla naselennykh mest),
W74-00841 5F

A Bill to be Known as the 'Safe Drinking Water Act of 1973'.
W74-00856 5F

Reduction of High Nitrate Content from Well Water in a Remote Eskimo Village,
W74-00949 5F

PUBLIC INVESTMENT PROJECTS
Systematic Errors in Cost Estimates for Public Investment Projects,
W74-00751 6C

PUERTO RICO
Estuaries, Bays and Coastal Currents Around Puerto Rico,
W74-00832 7C

PUGET SOUND (WASH)
Changes in the Concentration of Soluble and Particulate Iron in Seawater Enclosed in Containers,
W74-00830 2K

PULP AND PAPER INDUSTRY
Improving Water Economy of a Northern Kraft Bleach Plant,
W74-00792 3E

PULP WASTES
Waste Water Clarification and Solids Recovery with 'Waste Water Bentonite': Report on a Study Trip to Sweden (Abwasserklaerung und Stoffrueckgewinnung mit 'Abwasserbentonit': Bericht ueber eine Reise nach Schweden),
W74-00762 5D

Reducing Evaporation Plant Pollution Plant Pollution and Its Treatment,
W74-00763 5D

Kraft Pulpers and Pollution Problems and Prescriptions,
W74-00774 5D

Influence of Evaporation Condensate on Biological Purification of Pulp Wash Waters (Einfluss von Eindampfkondensat auf die biologische Reinigung von Zellstoffwaschwassern),
W74-00781 5D

Enzyme-Enhanced Turbidity Removal Through Primary Treatment,
W74-00783 5D

Recycling Fine-Paper Mill Effluent by Means of Pressure Filtration,
W74-00784 5D

Clarification of NSC Waste Liquor by Active Carbon, Etc., (In Japanese),
W74-00785 5D

Unique Water Treatment Plant Ensures Purity of Lake Baikal,
W74-00786 5D

Centrifuge Dewaters Sludge at Rate of 10 Tons Per Day,
W74-00788 5D

Switching from Calcium Bisulfite to Two-Stage Sodium-Calcium Bisulfite Pulping to Reduce Water Pollution (Znizenie znecistenia odpadnych vod prechodom z Ca-bisulfitoveho varenia na dvojstupnove Na-Ca-bisulfitove),
W74-00789 5D

Finnish Directions in Solving Water Pollution Problems,
W74-00790 5D

Chemical Analysis of Water Effluents -- Lessons from the U.S. (Army Corps of Engineers) Permit Program,
W74-00791 5A

Oxygen-Consuming Organic Matter (BOD) in Effluents Originating in Different Pulping Processes of the Woodworking Industry: Review of Literature During the Years 1960-1970,
W74-00793 5B

PULSE TESTING
Pulse Testing: A New Method for Describing Reservoir Flow Properties Between Wells,
W74-00939 8G

QUADRATIC PROGRAMMING
Least-Cost Allocation and Valuation Model for Water Resources,
W74-00670 5D

QUALITY CONTROL
Skip-Lot Sampling Plans,
W74-00627 7C

QUASI-CONSERVATIVE THICKNESS FIELDS
An Approach to the Determination of the Variability of Wind Through the Use of Quasi-Conservative Thickness Fields--Chapter IV of a Compilation of Studies from Atmospheric Variability Experiment (AVE),
W74-00855 2B

RADIATION
Let as a Determinant of Oxygen Enhancement Ratio and Shape of Survival Curve for Chlamydomonas,
W74-00732 5C

RADIOACTIVITY
Beta Radioactivity of Periphyton in Certain Dam Reservoirs,
W74-00993 5B

RAINBOW TROUT
History of Importing Rainbow Trout, Parasalmo gairdnerii (Richardson, 1836) into Bohemian Countries, (In Czech),
W74-01019 8I

RAINFALL
Wheat Response to Soil Moisture and the Optimal Irrigation Policy Under Conditions of Unstable Rainfall,
W74-00669 3F

A Study of Winter Precipitation Areas in Relation to Several Indicators of Vertical Motion--Chapter I of a Compilation of Studies from Atmospheric Variability Experiment (AVE),
W74-00852 2B

RAINFALL-RUNOFF RELATIONSHIPS
Surface-Groundwater Relationships on the Eastern Dniester Left Bank (O vzaimosvyazi poverkhnostnykh i podzemnykh vod na vostoke levoberezhnogo Podnestrov'ya),
W74-00601 2A

Variability of Annual Runoff and Precipitation Values (Ob izmenchivosti godovykh velichin stoka i osadkov),
W74-00844 4A

RANGES
Vegetation Changes as a Result of Soil Ripping on the Rio Puerco in New Mexico,
W74-00696 4A

RATS
Dynamics of Changes in Cortical Activity in Albino Rats with Chronic Silver Intoxication (In Ukrainian),
W74-00997 5C

RECHARGE
Water Recharge in a Soil with Shrinkage Cracks,
W74-00602 2G

RECREATION
Wild River Peception and Management: A Study of Users and Managers of the Middle Fork of the Salmon River,
W74-00551 6B

Bodega: A Case History of Intense Controversy,
W74-00738 6G

Lake Washington,
W74-00739 5C

A Bill to Provide for the Establishment of the Lowell Historic Canal District National Cultural Park.
W74-00862 6E

A Bill to Provide for the Establishment of the Potomac Basin National Riverways.
W74-00864 6E

Report of Proceedings at Public Hearing Relating to an Application Filed by Aroused Residents of Crowders Creek Inc. Requesting Reclassification of Crowders Creek, Catawba River Basin, Cleveland and Gaston Counties .
W74-00871 5G

RECREATION DEMAND
Recreation/Tourism Development Program for the Mississippi Appalachian Area.
W74-00800 6A

Open Space and Recreation Plan.
W74-00801 6A

RECREATION DEVELOPMENT
Analysis of Port Development Potentials at Great Sodus Bay.
W74-01039 6B

RECREATION FACILITIES
Open Space and Recreation Plan.
W74-00801 6A

RED CARPS
Weight-Length Relationship and Growth of Chanos chanos (Fersskal) Grown in Freshwater Ponds,
W74-01080 8I

'RED' HERRING SYMPTOMS
Symptoms of 'Red' Herring in Relation to the Mass Mortalities in Placentia Bay, February--April 1969,
W74-00711 5C

REGIONAL ANALYSIS
Sewer System Cost Estimation Model.
W74-00745 5D

Optimization of Surface-Water Quality: A Proposal for Solving a Future Problem (In German),
W74-00994 5B

Master Plan for Major Drainage: Henry's Lake Area, Subbasin 1-31-5501-01.
W74-01037 6B

A Program for Storm Drainage and Flood Control-1971-1990: Damage Prevention, Major Drainageways, Master Planning, Regional Management.
W74-01038 6F

REGIONAL DEVELOPMENT
Regional Water Supply/Sewage Disposal Plan and Short-Range Program, 1973-1978.
W74-00753 5D

An Evaluation of the Water-Related Economic Resource Development of Appalachia-In-Mississippi,
W74-00799 6A

Recreation/Tourism Development Program for the Mississippi Appalachian Area.
W74-00800 6A

Progress Report on the Proposed Yellow Creek Port Project Tishomingo County, Mississippi.
W74-00804 6A

Water Supply and Waste Disposal Policy Review.
W74-00809 5D

REGIONS
Least-Cost Allocation and Valuation Model for Water Resources,
W74-00670 5D

Nonlinear Effluent Charges,
W74-00886 5G

REGRESSION ANALYSIS
Impact of a Proposed Reservoir on Local Land Values, Anthroplogical Analysis of Social and Cultural Benefits and Costs from Stream Control Measures - Phase 3,
W74-00558 6B

Some Aspects of Nonorthogonal Data Analysis, Part II. Comparison of Means,
W74-00612 7C

RELOCATION
Impact of a Proposed Reservoir on Local Land Values, Anthroplogical Analysis of Social and Cultural Benefits and Costs from Stream Control Measures - Phase 3,
W74-00558 6B

REMOTE SENSING
Monitoring of Dumping by Means of Satellite Remote Sensing,
W74-00635 5B

Remote Sensing of Oil Slicks,
W74-00638 5A

Photogrammetric Determinations of Snow Cover Extent from Uncontrolled Aerial Photographs,
W74-00697 3B

REPRODUCTION
Environmental Control of Gametogenesis in Laminaria saccharina. II. Correlation of Nitrate and Phosphate Concentrations with Gametogensis and Selected Metabolites,
W74-00726 5C

REPTILE TAXONOMY
Reptiles of the Chesapeake Bay Region,
W74-00918 2L

REPTILES
Reptiles of the Chesapeake Bay Region,
W74-00918 2L

RESEARCH PRIORITIES
North Carolina Water Plan-Progress Report, Chapter 35-New River Basin.
W74-01033 6B

RESERVOIR CAPACITY
Capacity Decisions in a Multipurpose Multireservoir System,
W74-00672 4A

RESERVOIR CONSTRUCTION
A Bill to Authorize Construction of the Little Cypress Lake and Reservoir, Texas.
W74-00861 6E

RESERVOIR DESIGN
Design of Small Dams.
W74-01058 8A

Project Planning,
W74-01059 8A

Ecological and Environmental Considerations,
W74-01060 8A

Flood Studies,
W74-01061 8A

Selection of Type of Dam,
W74-01062 8A

RESERVOIR OPERATION
Optimization Model for The Operation of Flood Control Systems,
W74-00668 4A

Maintenance and Operation,
W74-01070 8A

RESERVOIR RELEASES
Determination of the Discharge Policy for Existing Reservoir Networks Under Differing Objectives,
W74-00673 4A

RESERVOIRS
Procedures for Computing Movement of Spring Flow Along the Cascade of Reservoirs on the Dnieper River (Metodika rascheta dvizheniya vesennego stoka po kaskadu vodokhranilishch na Dnepre),
W74-00593 4A

Experiment in Calculating Movement of the 1970 Flood Wave Along the Cascade of Dniper Reservoirs (Opyt rascheta dvizheniya volny polovod'ya 1970 g. po kaskadu dneprovskikh vodokhranilishch),
W74-00594 2E

Algorithm for Solving a Class of Linear Programming Problems Related to Reservoir Management and Design,
W74-00667 4A

Project Report for Ventura County Planning Department and Casitas Municipal Water District on Watershed Development Impact on Lake Casitas.
W74-00752 5B

A Bill to Authorize Construction of the Little Cypress Lake and Reservoir, Texas.
W74-00861 6E

Gillham Lake, Cossatot River Arkansas (Final Environmental Impact Statement).
W74-00881 4A

Gillham Lake, Cossatot River, Arkansas, Appendix II (Photographs), Appendix III (Environmental Elements), (Final Environmental Impact Statement).
W74-00882 4A

Beta Radioactivity of Periphyton in Certain Dam Reservoirs,
W74-00993 5B

RESERVOIRS

Effect of Fish on the Bottom of Reservoirs,
W74-01020 2H

RESISTIVITY
Borehole Logging Investigations in the Chalk of the Lambourn and Winterbourne Valleys of Berkshire,
W74-00956 8G

RESPIRATION
Responses of a Mixed Phytoplankton Population to Nutrient Enrichments of Ammonia and Phosphate, and Some Associated Ecological Implications,
W74-00665 5C

The Variation of Water Relations and Respiration Intensity in Male and Female Ephedra distachya Plants of the Black Sea Coast as a Function of Age,
W74-01076 2I

RETAMIX PROCESS
Waste Water Clarification and Solids Recovery with 'Waste Water Bentonite': Report on a Study Trip to Sweden (Abwasserklaerung und Stoffrueckgewinnung mit 'Abwasserbentonit': Bericht ueber eine Reise nach Schweden),
W74-00762 5D

RETURN FLOW
Salts in Irrigation Drainage Waters: I. Effects of Irrigation Water Composition, Leaching Fraction, and Time Year on the Salt Compositions of Irrigation Drainage Waters,
W74-00609 4C

REVIEWS
A Guide to Chemical and Clarifier Selection for Waste Water Treatment,
W74-00811 5D

RHEOLOGY
Isotope Effect and the Molecular Mechanism of the Second Viscosity Coefficient of Water,
W74-00770 1A

RICHARDSON (TEXAS)
Enhancing Trickling Filter Plant Performance by Chemical Precipitation,
W74-00835 5D

RIPARIAN RIGHTS
Water Pollution--User of City Sewer System Creates Nuisance Against Lower Riparian,
W74-00870 5G

RIPRAP
Riprap Slope Protection for Earth Dams: A Review of Practices and Procedures,
W74-01093 8D

RIVER BASIN DEVELOPMENT
A Bill to Provide for the Establishment of the Potomac Basin National Riverways.
W74-00864 6E

Gillham Lake, Cossatot River Arkansas (Final Environmental Impact Statement).
W74-00881 4A

In Search of New Methods for River System Planning,
W74-01029 4A

North Carolina Water Plan-Progress Report, Chapter 35-New River Basin.
W74-01033 6B

Master Plan for Major Drainage: Henry's Lake Area, Subbasin 1-31-5501-01.
W74-01037 6B

A Program for Storm Drainage and Flood Control-1971-1990: Damage Prevention, Major Drainageways, Master Planning, Regional Management.
W74-01038 6F

RIVER BASINS
Banks Study Basin Cleanup.
W74-00772 5D

RIVER FORECASTING
Short-Term Forecast of Daily Discharges of the Dnieper River at Kiev During the Period of the 1970 Flood (O kratkosrochnom prognoze yezhednevnykh raskhodov Dnepra u Kiyeva v period polovod'ya 1970 g.),
W74-00595 4A

RIVER MILE INDEX
River Mile Index--NAPA, Salinas, and Eel River Basins, California.
W74-00585 2E

RIVER SYSTEMS
River Mile Index--NAPA, Salinas, and Eel River Basins, California.
W74-00585 2E

RIVERS
Calculation of Spring Runoff Depth in Carpathian Rivers (Raschet sloya vesennego stoka rek Karpat),
W74-00597 4A

RIVERS AND HARBORS ACT
A Bill to Amend the River and Harbor Act of 1973 Relating to The Chicago River, Illinois.
W74-00863 6E

Projects Proposed for Inclusion in Omnibus River and Harbor and Flood Control Legislation--1972.
W74-00872 6E

RIVIERE DU NORD (QUEBEC-CANADA)
Determination of the Discharge Policy for Existing Reservoir Networks Under Differing Objectives,
W74-00673 4A

ROCK MECHANICS
New Muds Designed to Improve Drilling Rate, Hole Stability,
W74-00946 8G

ROCK POOLS
Evaluation of a Removal Method for Estimating the Numbers of Rock Pool Corixids (Hemiptera, Corixidae),
W74-01055 7B

ROCK PROPERTIES
A Stochastic Model for Predicting Variations in Reservoir Rock Properties,
W74-00955 8E

ROCKFILL DAMS
Rockfill Dams,
W74-01065 8A

ROCKY MOUNTAINS
Photogrammetric Determinations of Snow Cover Extent from Uncontrolled Aerial Photographs,
W74-00697 3B

ROMANIA (BUCHAREST)
Some Ecological Data on Freshwater Ostracods of the Temporary and Permanent Waters in the Vicinity of Bucharest (In Rumanian),
W74-01000 2I

ROMANIA (CRAPINA-JIJILA COMPLEX)
Primary Production-Phytoplankton Relationship in the Crapina-Jijila Complex in the Flood Conditions of 1970, (In Rumanian),
W74-01015 2I

ROMANIA (MOSTISTEA RIVER)
Contributions to the Knowledge of Biogenic Elements and Phtoplankton Associations Dynamics in Frasinet Pond During November 1969-November 1970, (In Rumanian),
W74-00727 5C

ROMANIA (OZUNCA SWAMP)
Sedge Associations from the Ozunca Swamp, (In Rumanian),
W74-01016 2H

ROOTS
Adaptability of Maize to High Soil Water Conditions,
W74-00892 3F

ROTIFERS
Rotifers of the Near Bottom Zone of Lakes Mikolajskie and Taitowisko,
W74-00935 2H

Rare and New Species of Rotifers in the Fauna of Poland,
W74-00970 2I

RUNOFF
Streamflow Formation, Computations, and Regulation (Formirovaniye, raschety i regulirovaniye rechnogo stoka).
W74-00592 4A

Problem of Simplifying Snowmelt Computations (K voprosu ob uproshchennom raschete snegotayaniya),
W74-00596 2C

Calculation of Spring Runoff Depth in Carpathian Rivers (Raschet sloya vesennego stoka rek Karpat),
W74-00597 4A

Annual Streamflow Summaries from Four Subalpine Watersheds in Colorado,
W74-00676 3B

Development of a Snowmelt-Runoff Model for the U.S. Tundra Biome, Progress Report,
W74-01094 2C

RURAL SOCIOLOGY
Social and Cultural Impact of a Proposed Reservoir on a Rural Kentucky School District,
W74-00557 6B

Impact of a Proposed Reservoir on Local Land Values, Anthroplogical Analysis of Social and Cultural Benefits and Costs from Stream Control Measures - Phase 3,
W74-00558 6B

SACRAMENTO-SAN JOAQUIN DELTA ESTUARY
Response of Aquatic Life to Salinity, Temperature, Dissolved Oxygen, and Water Flow,
W74-00721 5C

SAFE DRINKING WATER ACT OF 1973
A Bill to be Known as the 'Safe Drinking Water Act of 1973'.
W74-00856 5F

SAFETY
Flood Studies for Safety of TVA Nuclear Plants: Hydrologic and Embankment Breaching Analysis,
W74-00805 8A

SAGINAW COUNTY (MICHIGAN)
Environmental Health Analysis.
W74-00808 5B

SALINE WATER
Factors of Chemical Fertilization in Saline Water Irrigation: A Review,
W74-00757 3C

Saltwater Pond Research,
W74-00815 8I

Five Year Extension for Research and Development, Public Law 92-60 (Final Environmental Statement).
W74-00876 3A

SALINITY
On the Effect of Pollution on Surface Waters,
W74-00722 5C

Chemical and Biological Patterns in the Lower Colorado River System,
W74-00760 5C

Circulation in the Bay of Ampasindava (Madagascar) and Its Biochemical Implications (In French),
W74-01005 5B

Bottom Fauna of Dead Vistula,
W74-01073 5C

SALMON RIVER (IDAHO)
Wild River Peception and Management: A Study of Users and Managers of the Middle Fork of the Salmon River,
W74-00551 6B

SALMONELLA
Some observations on the Incorporation of Novobiocin Into Hektoen Enteric Agar for Improved Salmonella Isolation,
W74-00617 5A

Molecular Relationships Among the Salmonelleae,
W74-00623 5B

SALT-DILUTION METHODS
Comparison of Field Methods for Measuring Stream Discharge,
W74-00735 2E

SALTS
Movement of Salt and Water in Relatively Dry Soils,
W74-01088 2G

SALTWATER PONDS
Saltwater Pond Research,
W74-00815 8I

SAMPLE PREPARATION
The Effect of Pretreatments on the Virus Contents of Sewage Samples,
W74-00629 5A

SAMPLING
Chemical Analysis of Water Effluents -- Lessons from the U.S. (Army Corps of Engineers) Permit Program,
W74-00791 5A

Methods of Collecting and Interpreting Ground-Water Data.
W74-00929 7C

SAMPLING EQUIPMENT
Sampling for Waste Water Analyzers. Part I: Systematic Approach,
W74-00642 5A

Sampling for Waste Water Analyzers. Part II: Effective Applications,
W74-00643 5A

SAMPLING (SHALLOW-WATER)
Some Simple Methods for Limnological Study in Shallow Water,
W74-00998 7B

SAN ANGELO (TEXAS)
Subjective Decision-Making for Urban Water Resources Development,
W74-00884 6B

SAN LUIS OBISPO COUNTY (CALIF.)
A Summary Report Master Water and Sewerage Plan.
W74-01041 5D

SAN LUIS WATERSHED (N MEX)
Vegetation Changes as a Result of Soil Ripping on the Rio Puerco in New Mexico,
W74-00696 4A

SANDY LOAM
Effect of Detergent Application on the Growth of corn,
W74-01057 3C

SANDY SOIL
Variation in Soil Factors and Crop Yield on a Sandy Soil Rich in Organic Matter, (In Norwegian),
W74-01051 3F

SAPROBIC CLASSIFICATION
Trophic Structure and Bioactivity of the Plankton Communities in Lower Reach of Elbe Estuary: Criteria for Saprobic Classification of a Tidal Water (In German),
W74-01003 5C

SAPROBITY VECTOR
The Vector of Saprobity and the System of Water Quality,
W74-01074 5A

SARGASSO SEA
Nitrogen Fixation by Oscillatoria (Trichodesmium) thiebautii in the Southwestern Sargasso Sea,
W74-00729 5C

SATURATED CALOMEL ELECTRODES
Polarographic Study of Calomel Electrode in Anhydrous Formic Acid,
W74-00633 2K

SATURATED LIME WATER
Corrosion Control in Water Wells,
W74-00952 5F

SAVANNAH (GEO)
Storm Drainage Study, (Chatham County-Savannah, Georgia).
W74-01031 4A

SCHISTOSOMIASIS
Preliminary Results of the Project for Controlling and Preventing Schistosomiasis in the Lower Mangoky (Malagasy Republic),
W74-00992 5F

SCOTLAND (LOCK FYNE)
Distribution of Trace Metals in the Pore Waters of Shallow Water Marine Sediments,
W74-00828 2K

SEA WATER
Decomposition of Phosphorus in Water,
W74-00707 5C

Distribution of Trace Metals in the Pore Waters of Shallow Water Marine Sediments,
W74-00828 2K

Changes in the Concentration of Soluble and Particulate Iron in Seawater Enclosed in Containers,
W74-00830 2K

SEABEDS
The Draft United Nations Convention on the International Seabed Area--American Petroleum Institute Position,
W74-00859 5G

SEALS (ANIMALS)
Organochlorine Residues in Harp Seals (Pagophilus groenlandicus) Caught in Eastern Canadian Waters,
W74-00766 5C

SEARCH TECHNIQUES
How to Find Abandoned Oil and Gas Wells,
W74-00941 8G

SEASONAL
Some Comparisons in the Thermal Structure of Lakes Wood, Kalamalka, Okanagan, Skaha, and Osoyoos, British Columbia,
W74-00769 2H

SEATTLE (WASH)
Shoreline Management Inventory.
W74-00741 4A

SEDGE ASSOCIATIONS
Sedge Associations from the Ozunca Swamp, (In Rumanian),
W74-01016 2H

SEDIMENT TRANSPORT
Current Status of the Knowledge of the Biological Effects of Suspended and Deposited Sediments in Chesapeake Bay,
W74-00920 2L

SEDIMENTATION RATES
Accumulation of Sediment in Three Mississippi Reservoirs,
W74-00561 2J

SEDIMENTS
Current Status of the Knowledge of the Biological Effects of Suspended and Deposited Sediments in Chesapeake Bay,
W74-00920 2L

SEEDLING EMERGENCE
Effects of Water and Heat on Seedling Emergence,
W74-00930 3F

SEEPAGE
Reconnaissance Analysis of Effects of Waste-Water Discharge on the Shallow Ground-Water Flow System, Lower Las Vegas Valley, Nevada,
W74-00748 5B

Seepage Flows--Field Data Measurements for Evaluation of Potential Contribution of Fertilizers to Groundwater Pollution,
W74-01054 5B

SELECTIVE MEDIA
Condition of Coliform Organisms Influencing Recovery of Subcultures on Selective Media,
W74-00621 5B

Potential Pathogens in the Environment: Klebsiella Pneumoniae, A Taxonomic and Ecological Enigma,
W74-00656 5A

Gentamicin Blood Agar Used as a General-Purpose Selective Medium,
W74-00657 5A

SELECTIVITY
Electrochemical Study of a Heterogeneous Copper (II)-Selective Electrode; Study of Selectivity and Potential Stability,
W74-00637 2K

Anion Selectivity Studies on Liquid Membrane Electrodes,
W74-00650 5A

SELF-PURIFICATION
Capacity of an Estuary to Accept Pollutants,
W74-00708 5C

SENSITIVITY
Condition of Coliform Organisms Influencing Recovery of Subcultures on Selective Media,
W74-00621 5B

SEPARATED SEWERS
Engineering Report on Special Assessment Storm Sewer District for the Northeast Industrial District, City of Kansas City, Missouri.
W74-00802 8A

Preliminary Study for Central Industrial District Sewers, Department of Public Works, Kansas City, Missouri.
W74-00803 8A

SEPARATION TECHNIQUES
Remote Sampler for Determining Residual Oil Contents of Surface Waters,
W74-00584 5G

Identification and Characterization of the Microflora and Spoilage Bacteria in Freshwater Crayfish Procambarus Clarkii (Girad),
W74-00620 5A

Clinical Laboratory Experience with the Improved Enterotube,
W74-00655 5A

Apparatus and Method for Collection of Oil From Surface of the Sea,
W74-00968 5G

SEPTIC TANKS
Walsh V. Spadaccia (Proceeding to Set Aside Determination of Town Board Approving Construction Plans Which did not Consider Pollution of Lake).
W74-00857 6E

SEQUENCING
Pathology of a Dynamic Programing Sequencing Algorithm,
W74-00671 6A

SEROTYPES
Potential Pathogens in the Environment: Klebsiella Pneumoniae, A Taxonomic and Ecological Enigma,
W74-00656 5A

SETTLING TANKS
Algae of Secondary Settling Tanks, (In Russian),
W74-00730 5D

SEWAGE
Factors Which Influence the Enumeration of Bdellovibrio Bacteriovorus in Sewage and River Water,
W74-00624 5A

Preliminary Survey of Mercury and Other Metals Contained in Animals from the Fraser River Mudflats,
W74-00764 5C

SEWAGE DISPOSAL
Water Pollution--User of City Sewer System Creates Nuisance Against Lower Riparian,
W74-00870 5G

Optimization of Surface-Water Quality: A Proposal for Solving a Future Problem (In German),
W74-00994 5B

SEWAGE EFFLUENTS
Phytoplankton Populations in Brackish Water Ponds, A Revised Report--Part II of Studies on Brackish Water Phytoplankton,
W74-00591 5C

A Medium for Counting Aquatic Heterotrophic Bacteria in Polluted and Unpolluted Waters,
W74-00663 5B

Walsh V. Spadaccia (Proceeding to Set Aside Determination of Town Board Approving Construction Plans Which did not Consider Pollution of Lake).
W74-00857 6E

SEWAGE SLUDGE
On the Isolation of Virus from Sewage Treatment Plant Sludges,
W74-00628 5A

The Effect of Pretreatments on the Virus Contents of Sewage Samples,
W74-00629 5A

SEWAGE TREATMENT
On the Isolation of Virus from Sewage Treatment Plant Sludges,
W74-00628 5A

On the Effect of Pollution on Surface Waters,
W74-00722 5C

Lake Washington,
W74-00739 5C

A Guide to Chemical and Clarifier Selection for Waste Water Treatment,
W74-00811 5D

Restore Rural Water and Waste Disposal Grant Programs.
W74-00875 5G

Method of Purifying Sewage Effluent and Apparatus Therefor,
W74-00958 5D

Sewage Treatment Process,
W74-00960 5D

Sewage Disposal Effluent Purifier,
W74-00962 5D

SEWER SYSTEM EXPANSION
Water and Sewer Plan Update, (Gray, Georgia).
W74-01036 5D

SEWERAGE
Protecting our Water Environment.
W74-00743 5G

Sewer System Cost Estimation Model.
W74-00745 5D

Lamar County: Land Use Survey and Analysis, Land Use Plan, Housing, Water and Sewer, Open Space.
W74-00750 5D

Regional Water Supply/Sewage Disposal Plan and Short-Range Program, 1973-1978.
W74-00753 5D

Comprehensive Water and Sewerage Plan for Ouachita Parish.
W74-00806 6A

Water and Sewer Plan Update, (Gray, Georgia).
W74-01036 5D

A Summary Report Master Water and Sewerage Plan.
W74-01041 5D

Sewerage Master Plan, Eugene-Springfield Urbanizing Area.
W74-01042 5D

Water Supply and Sewage Facilities Plan Update-1970.
W74-01045 6B

Areawide Water and Waste Water Planning Study for the St. Charles Mesa, Rye-Colorado City, and Beulah Sectors of Pueblo County.
W74-01047 5D

SEWERAGE SYSTEM EXPANSION
Sewerage Master Plan, Eugene-Springfield Urbanizing Area.
W74-01042 5D

SEWERS
Engineering Report on Special Assessment Storm Sewer District for the Northeast Industrial District, City of Kansas City, Missouri.
W74-00802 8A

Preliminary Study for Central Industrial District Sewers, Department of Public Works, Kansas City, Missouri.
W74-00803 8A

SHELTERBELTS
Effect of Snow Fence Height on Wind Speed,
W74-00691 3B

SHIPS
Cargo Spill Probability Analysis for the Deep Water Port Project,
W74-00819 5B

Institutional Implications of Deepwater Ports.
W74-00820 8A

SHORELINE MANAGEMENT
Shoreline Management Inventory.
W74-00741 4A

SHORES
Bodega: A Case History of Intense Controversy,
W74-00738 6G

Shoreline Management Inventory.
W74-00741 4A

Increasing Protection for our Waters, Wetlands, and Shorelines: The Corps of Engineers.
W74-00858 6E

SHRIMP
Microbiological Evaluation of Cold-Water Shrimp (Pandalus Borealis),
W74-00653 5A

SHRINKAGE CRACKS
Water Recharge in a Soil with Shrinkage Cracks,
W74-00602 2G

SILICATES
Silicate in the Water of the Bay of Vigo (In Spanish),
W74-01007 2L

SILVER
Dynamics of Changes in Cortical Activity in Albino Rats with Chronic Silver Intoxication (In Ukrainian),
W74-00997 5C

SILVER CARP
Experimental Studies of Polyculture in 1971,
W74-01021 8I

SIMULATION ANALYSIS
Wheat Response to Soil Moisture and the Optimal Irrigation Policy Under Conditions of Unstable Rainfall,
W74-00669 3F

Scientific Allocation of Water Resources, Water Resources Development and Utilization - A Rational Approach,
W74-00885 6A

SITES
Capacity Decisions in a Multipurpose Multireservoir System,
W74-00672 4A

SKIMMING
Oil Skimmer Module,
W74-00961 5G

SKIP-LOT SAMPLING
Skip-Lot Sampling Plans,
W74-00627 7C

SLAB MECHANICS
Generalization of Haefeli's Creep-Angle Analysis,
W74-00687 2C

SLOPE PROTECTION
Riprap Slope Protection for Earth Dams: A Review of Practices and Procedures,
W74-01093 8D

SLOPE STABILITY
Flow and Channel Characteristics of Two High Mountain Streams,
W74-00678 4A

SLUDGE DISPOSAL
Summary Report: Pilot Plant Studies on Dewatering Primary Digested Sludge,
W74-00700 5D

SLUDGE TREATMENT
Summary Report: Pilot Plant Studies on Dewatering Primary Digested Sludge,
W74-00700 5D

Centrifuge Dewaters Sludge at Rate of 10 Tons Per Day,
W74-00788 5D

SMALL DAMS
Design of Small Dams.
W74-01058 8A

Project Planning,
W74-01059 8A

SNOW
Avalanches in Our Western Mountains: What Are We Doing About Them,
W74-00680 2C

SNOW AVALANCHES
A Centrifugal Tensile Tester for Snow,
W74-00682 2C

SNOW COVER
Simulated Sonic Boom as an Avalanche Trigger,
W74-00683 2C

Photogrammetric Determinations of Snow Cover Extent from Uncontrolled Aerial Photographs,
W74-00697 3B

SNOW FENCES
Snow Fences for Influencing Snow Accumulation,
W74-00684 2C

Effect of Snow Fence Height on Wind Speed,
W74-00691 3B

Design of a Watershed Snow Fence System, and First-Year Snow Accumulations,
W74-00695 3B

SNOW MANAGEMENT
A Centrifugal Tensile Tester for Snow,
W74-00682 2C

Snow Fences for Influencing Snow Accumulation,
W74-00684 2C

Design of a Watershed Snow Fence System, and First-Year Snow Accumulations,
W74-00695 3B

SNOW TRANSPORT
Weather Conditions that Determine Snow Transport Distances at a Site in Wyoming,
W74-00685 2C

SNOWDRIFTS
Weather Conditions that Determine Snow Transport Distances at a Site in Wyoming,
W74-00685 2C

Effect of Snow Fence Height on Wind Speed,
W74-00691 3B

Design of a Watershed Snow Fence System, and First-Year Snow Accumulations,
W74-00695 3B

SNOWMELT
Problem of Simplifying Snowmelt Computations (K voprosu ob uproshchennom raschete snegotayaniya),
W74-00596 2C

Simulating Effects of Harvest Cutting on Snowmelt in Colorado Subalpine Forest,
W74-00686 4C

Development of a Snowmelt-Runoff Model for the U.S. Tundra Biome, Progress Report,
W74-01094 2C

SNOWPACK SAMPLING
Sampling Requirements for Areal Water Equivalent Estimates in Forested Subalpine Watersheds,
W74-00675 3B

SNOWPACKS
Simulated Sonic Boom as an Avalanche Trigger,
W74-00683 2C

Snow Fences for Influencing Snow Accumulation,
W74-00684 2C

Design of a Watershed Snow Fence System, and First-Year Snow Accumulations,
W74-00695 3B

SOCIAL CHANGE
Social and Cultural Impact of a Proposed Reservoir on a Rural Kentucky School District,
W74-00557 6B

SOCIAL IMPACT
Social and Cultural Impact of a Proposed Reservoir on a Rural Kentucky School District,
W74-00557 6B

SOCIAL VALUES
Impact of a Proposed Reservoir on Local Land Values, Anthroplogical Analysis of Social and Cultural Benefits and Costs from Stream Control Measures - Phase 3,
W74-00558 6B

SODIC SOILS
Variation of Absorbed Base Composition in Sodic Soils of the Karabach Plain Under Water Flush with and Without the Electric Current, (In Russian),
W74-00985 2G

SODIUM
An Ammonium Ion-Specific Electrode,
W74-00636 2K

SODIUM CHLORIDE
Mechanism of Flow and Controlled Dissolution of Salt in Solution Mining,
W74-00934 8B

SOIL BACTERIA
Degradation of Chlorinated Hydrocarbons by Clostridium Sp. Isolated from Lindane-Amended, Flooded Soil,
W74-00664 5B

SOIL CHEMISTRY
Dissolved Aluminum in Acid Sulfate Soils and Acid Mine Waters,
W74-00607 5B

SOIL COVER
Effect of the Polymer K-4 on the Resistance of Light Chestnut Soil Cover to Erosion by Water, (In Russian),
W74-00988 4D

SOIL CULTIVATION
Effect of Depth of Soil Cultivation and of Fertilizers on the Survival and Growth of Pine on the Lower Dnieper Sands, (In Russian),
W74-01098 4A

SOIL DISPOSAL FIELDS
Bleaching Effluent for Irrigation,
W74-00787 5D

SOIL HORIZONS
Vertical Infiltration into a Layered Soil,
W74-00603 2G

SOIL MOISTURE
Effective Available Water and Its Relation to Evapotranspiration Rate, Depth of Wetting, and Soil Texture,
W74-00608 2G

Wheat Response to Soil Moisture and the Optimal Irrigation Policy Under Conditions of Unstable Rainfall,
W74-00669 3F

Vegetation Changes as a Result of Soil Ripping on the Rio Puerco in New Mexico,
W74-00696 4A

The Use of Tensiometers as Indicators of Soil Moisture Availability for Plants, (In Russian),
W74-00989 3F

SOIL PHYSICS
Importance, Status, and Basic Problems of Studies in Physics of Soil Water (Znacheniye issledovaniy fiziki pochvennykh vod, ikh sovremennoye sostoyaniye i osnovnyye zadachi),
W74-00843 2G

SOIL POROSITY
A Simple Method to Measure the Penetrometer-Resistance of the Soil and the Relationship between This Resistance, Soil Porosity and Soil Water Content,
W74-00987 2G

SOIL RIPPING
Vegetation Changes as a Result of Soil Ripping on the Rio Puerco in New Mexico,
W74-00696 4A

SOIL STRUCTURE
Propagation of Sinusoidal Solute Density Oscillations in the Mobile and Stagnant Phases of a Soil,
W74-00604 2G

SOIL TREATMENT
Vegetation Changes as a Result of Soil Ripping on the Rio Puerco in New Mexico,
W74-00696 4A

SOIL WATER
Importance, Status, and Basic Problems of Studies in Physics of Soil Water (Znacheniye issledovaniy fiziki pochvennykh vod, ikh sovremennoye sostoyaniye i osnovnyye zadachi),
W74-00843 2G

Adaptability of Maize to High Soil Water Conditions,
W74-00892 3F

A Simple Method to Measure the Penetrometer-Resistance of the Soil and the Relationship between This Resistance, Soil Porosity and Soil Water Content,
W74-00987 2G

SOIL WATER DEPLETION
Soil Water Depletion by a Hardwood Forest in Southwestern Wisconsin,
W74-00693 3B

SOIL WATER MOVEMENT
Water Recharge in a Soil with Shrinkage Cracks,
W74-00602 2G

Propagation of Sinusoidal Solute Density Oscillations in the Mobile and Stagnant Phases of a Soil,
W74-00604 2G

Unstable Wetting Fronts in Uniform and Nonuniform Soils,
W74-00605 2G

Anion Exclusion and Coupling Effects in Nonsteady Transport Through Unsaturated Soils: I. Theory,
W74-00611 2G

Importance, Status, and Basic Problems of Studies in Physics of Soil Water (Znacheniye issledovaniy fiziki pochvennykh vod, ikh sovremennoye sostoyaniye i osnovnyye zadachi),
W74-00843 2G

Movement of Salt and Water in Relatively Dry Soils,
W74-01088 2G

SOIL-WATER-PLANT RELATIONSHIPS
Importance, Status, and Basic Problems of Studies in Physics of Soil Water (Znacheniye issledovaniy fiziki pochvennykh vod, ikh sovremennoye sostoyaniye i osnovnyye zadachi),
W74-00843 2G

SOILS
Soil of North Dagestan, (In Russian),
W74-00986 2G

Deepsoil Studies of Oak Root Systems in Old Age Plantations, (In Russian),
W74-01085 2I

SOLAR RADIATION INTEGRATOR
The Rocky Mountain Millivolt Integrator for use with Solar Radiation Sensors,
W74-00690 2D

SOLID WASTES
Solid Waste Management Plan, Cowlitz and Wahkiakum Region.
W74-00747 5D

SOLUTES
Movement of Salt and Water in Relatively Dry Soils,
W74-01088 2G

SOLVENT EXTRACTIONS
Current Practice in GC-MS Analysis of Organics in Water,
W74-00834 5A

SONIC BOOM
Simulated Sonic Boom as an Avalanche Trigger,
W74-00683 2C

SONIC PULSE
A Sonic Method for Analyzing the Quality of Cementation of Borehole Casings,
W74-00936 8F

SORPTION CAPACITIES
Experimental Data on the Sorption Capacities of Water Bearing Strata and Survival of Escherichia coli During Bacterial Contamination of Ground Water (In Russian),
W74-01002 5B

SOUND WAVES
A Sonic Method for Analyzing the Quality of Cementation of Borehole Casings,
W74-00936 8F

SOUSLIKS
Natural Factors of Activation of Plague Epizootiae in Siberia, (In Russian),
W74-00990 2I

SOUTH AMERICA
Malezas Acuaticas, Aquatic Weeds, J. M. Bristow,
W74-00736 4A

SOUTHEAST U.S.
A Compilation of Studies from Atmospheric Variability Experiment (AVE),
W74-00851 2B

A Study of Winter Precipitation Areas in Relation to Several Indicators of Vertical Motion--Chapter I of a Compilation of Studies from Atmospheric Variability Experiment (AVE),
W74-00852 2B

Time Changes in Gradient and Observed Winds--Chapter II of a Compilation of Studies from Atmospheric variability Experiment (AVE),
W74-00853 2B

An Analysis of Internal Zones of Discontinuity--Chapter III of a Compilation of Studies from Atmospheric Variability Experiment (AVE),
W74-00854 2B

An Approach to the Determination of the Variability of Wind Through the Use of Quasi-Conservative Thickness Fields--Chapter IV of a Compilation of Studies from Atmospheric Variability Experiment (AVE),
W74-00855 2B

SOUTHERN CALIFORNIA
Southern California's Deteriorating Marine Environment, An Evaluation of the Health of the Benthic Marine Biota of Ventura, Los Angeles and Orange Counties,
W74-00877 5C

SPAIN (HUELVA COAST)
Copper Content of Oysters (Crassostrea Angulata) Along the Huelva Coasts, (In Spanish),
W74-00978 5C

SPAIN (VIGO BAY)
Silicate in the Water of the Bay of Vigo (In Spanish),
W74-01007 2L

SPATIAL DISTRIBUTION
On Advection in Phytoplankton Models,
W74-00737 5C

SPILLWAYS
Spillways,
W74-01067 8A

SPRAY IRRIGATION
Spray Disposal of Sewage Effluent,
W74-00572 5D

SPRAYING
Spray Disposal of Sewage Effluent,
W74-00572 5D

SPRING
Calculation of Spring Runoff Depth in Carpathian Rivers (Raschet sloya vesennego stoka rek Karpat),
W74-00597 4A

SPRINKLER IRRIGATION
Spray Disposal of Sewage Effluent,
W74-00572 5D

ST. LAWRENCE RIVER
List of the Gastropods of the St. Lawrence River in the Region of Gentilly, (In French),
W74-00973 2I

STANDARDS
Nonlinear Effluent Charges,
W74-00886 5G

STANDING CROPS
The Standing Crop and Primary Productivity of the Phytoplankton of Abbot's Pond, North Somerset,
W74-00651 5C

STAPHYLOCOCCUS
Microbiological Evaluation of Cold-Water Shrimp (Pandalus Borealis),
W74-00653 5A

STATISTICAL METHODS
Variability of Annual Runoff and Precipitation Values (Ob izmenchivosti godovykh velichin stoka i osadkov),
W74-00844 4A

STATISTICAL MODELS
A Systematic Approach to the Analysis of Means. Part I. Analysis of Treatment Effects,
W74-00626 7C

STOCHASTIC PROCESSES
Development of a Dynamic Water Management Policy for Texas,
W74-00562 6A

Wheat Response to Soil Moisture and the Optimal Irrigation Policy Under Conditions of Unstable Rainfall,
W74-00669 3F

Scientific Allocation of Water Resources, Water Resources Development and Utilization - A Rational Approach,
W74-00885 6A

A Stochastic Model for Predicting Variations in Reservoir Rock Properties,
W74-00955 8E

STOCKING
Remarks on the Stocking of the Dam Reservoir at Przeczyce with Lake Trout Salmo trutta M Lacustris L,
W74-01072 8I

Observations on the Development of Coregonus peled (Gmel.) Fry in Ponds,
W74-01081 8I

STOMATA
Xylem Water Potentials and Stomatal Resistance in Bog Plants: Ecological Implications,
W74-00719 2I

STOMATAL APERATURES
Effect of Growth Regulators on Water Metabolism in Plant: II. IAA, TIBA (2,3,5-Triiodobenzoic Acid), GA (Gibberellic Acid) and CCC (2-Chloroethyltrimethylammonium Choride) on Transpiration Rate and Stomatal Aperatures o f Intact Tomato Plants, (In Polish),
W74-01027 3F

STORAGE
Recovery of Bacteriophage from Contaminated Chilled and Frozen Samples of Edible West Coast Crabs,
W74-00613 5A

Survival of Vibrio Parahaemolyticus in Oyster Shellstock at Two Different Storage Temperatures,
W74-00616 5C

STORAGE CAPACITY
Development of a Dynamic Water Management Policy for Texas,
W74-00562 6A

STORAGE CAVITY
Mechanism of Flow and Controlled Dissolution of Salt in Solution Mining,
W74-00934 8B

STORM DRAINS
Nutrient Loading From a Separate Storm Sewer in Madison, Wisconsin,
W74-00716 5C

Engineering Report on Special Assessment Storm Sewer District for the Northeast Industrial District, City of Kansas City, Missouri.
W74-00802 8A

Preliminary Study for Central Industrial District Sewers, Department of Public Works, Kansas City, Missouri.
W74-00803 8A

STORM RUNOFF
Computation of Maximum Storm Runoff for Designing Erosion Control Structures in Southwestern European Russia (Rashet maksimal'nogo livnevogo stoka pri proyektirovanii protivoerozionnykh sooruzheniy v yugo-zapadnoy chasti YeTS),
W74-00600 2D

Storm Drainage Study, (Chatham County-Savannah, Georgia).
W74-01031 4A

A Program for Storm Drainage and Flood Control-1971-1990: Damage Prevention, Major Drainageways, Master Planning, Regional Management.
W74-01038 6F

STORMS
Avalanches in Our Western Mountains: What Are We Doing About Them,
W74-00680 2C

STRATIGRAPHY
Vegetation and Stratigraphy of Bogs of the Eastern Forest-Steppe, (In Russian),
W74-01096 4A

STREAM DISCHARGE
Comparison of Field Methods for Measuring Stream Discharge,
W74-00735 2E

STREAM IMPROVEMENT
Optimal Allocation of Artificial Aeration Along a Polluted Stream Using Dynamic Programming,
W74-00883 5G

STREAM SAMPLE CONDITIONER
Sampling for Waste Water Analyzers. Part II: Effective Applications,
W74-00643 5A

STREAMFLOW
Surface Water Supply of the United States, 1966-70: Part 9. Colorado River Basin--Volume 2. Colorado River Basin from Green River to Compact Point.
W74-00586 7C

Surface Water Supply of the United States, 1966-70: Part 5. Hudson Bay and Upper Mississippi River Basins--Vol 3. Upper Mississippi River Basin Below Keokuk, Iowa.
W74-00587 7C

Surface Water Supply of the United States, 1966-70: Part 3. Ohio River Basin--Volume 4. Ohio River Basin Below Wabash River.
W74-00588 7C

Streamflow Formation, Computations, and Regulation (Formirovaniye, raschety i regulirovaniye rechnogo stoka).
W74-00592 4A

Annual Streamflow Summaries from Four Subalpine Watersheds in Colorado,
W74-00676 3B

Water Resources Data for New York, 1972: Part 1. Surface Water Records.
W74-00825 7C

Consideration of the Character of Surface-Groundwater Relationships and Streamflow in Estimates of Yields From Infiltration Galleries (Uchet kharaktera svyazi podzemnykh vod s poverkhnostnymi i rezhima rechnogo stoka pri raschetakh inf il'tratsionnykh vodozaborov),
W74-00848 8A

STREAMFLOW FORECASTING
Short-Term Forecast of Daily Discharges of the Dnieper River at Kiev During the Period of the 1970 Flood (O kratkosrochnom prognoze yezhednevnykh raskhodov Dnepra u Kiyeva v period polovod'ya 1970 g.),
W74-00595 4A

Computer Program 723-X6-L202A, HEC-2, Water Surface Profiles--Users Manual.
W74-00822 7C

Computer Program 723-X6-L202A, HEC-2, Water Surface Profiles--Programmers Manual.
W74-00823 7C

HEC-4, Monthly Streamflow Simulation, Computer Program 723-X6-L2340.
W74-01091 7C

Development of a Snowmelt-Runoff Model for the U.S. Tundra Biome, Progress Report,
W74-01094 2C

STREAMS
Surface-Groundwater Relationships on the Eastern Dniester Left Bank (O vzaimosvyazi poverkhnostnykh i podzemnykh vod na vostoke levoberezhnogo Podnestrov'ya),
W74-00601 2A

STREPTOCOCCUS FAECALIS
Fatty Acid Composition of L-Forms of Streptococcus Faecalis Cultured at Different Osmolalities,
W74-00622 5A

STRESS
Condition of Coliform Organisms Influencing Recovery of Subcultures on Selective Media,
W74-00621 5B

STRESS ANALYSIS
Generalization of Haefeli's Creep-Angle Analysis,
W74-00687 2C

STRIP MINE WASTES
The Effects of Strip Mining Upon Navigable Waters and Their Tributaries: Discussion and Selected Bibliography.
W74-00725 5C

STRIPED BASS
Response of Aquatic Life to Salinity, Temperature, Dissolved Oxygen, and Water Flow,
W74-00721 5C

STRIPPING PROCESS
Inert Gas Stripping of Contaminated Water,
W74-00969 5D

STRYY RIVER (USSR)
Factors Responsible for Floodflow in Carpathian Rivers (as illustrated by the Stryy and Bystritsa Rivers) (Faktory pavodochnogo stoka karpatskikh rek (na primers Stryya i Bystritsy)),
W74-00599 2E

SUBALPINE WATERSHEDS
Sampling Requirements for Areal Water Equivalent Estimates in Forested Subalpine Watersheds,
W74-00675 3B

Annual Streamflow Summaries from Four Subalpine Watersheds in Colorado,
W74-00676 3B

SUBLIMATION
Weather Conditions that Determine Snow Transport Distances at a Site in Wyoming,
W74-00685 2C

SUBMARINE SPRINGS
Possibilities of Using Geophysical Methods in a Study of Freshwater Discharges in Littoral Zones of Seas (O vozmozhnostyakh geofizicheskikh metodov pri izuchenii razgruzok presnykh vod v pribrezhnykh zonakh morey),
W74-00847 2F

SUBMERGED PLANTS
Submerged Vascular Plants of the Chesapeake Bay and Tributaries,
W74-00901 2L

SUBMERGED VASCULAR PLANT TAXONOMY
Submerged Vascular Plants of the Chesapeake Bay and Tributaries,
W74-00901 2L

SUBSIDENCE
Preliminary Results of Water Level Control on Small Plots in a Peat Bog,
W74-00694 4A

SUBSTRATE UTILIZATION
Utilization of Iron Gallate and Other Organic Iron Complexes by Bacteria from Water Supplies,
W74-00660 5B

SUBURBAN DEVELOPMENT
Suburban America: Population Dynamics as Related to Water Resources Planning,
W74-00553 6B

SUCCESSION
Biological Investigations of Lake Wingra,
W74-00833 5C

SULFATE-REDUCING BACTERIA
Corrosion and Incrustation - Guidelines for Water Wells,
W74-00948 8G

SULFATES
Dissolved Aluminum in Acid Sulfate Soils and Acid Mine Waters,
W74-00607 5B

Complementary Role of Iron (III), Sulfate and Calcium in Precipitation of Phosphate From Solution,
W74-01053 5D

SULFITE LIQUORS
Influence of Evaporation Condensate on Biological Purification of Pulp Wash Waters (Einfluss von Eindampfkondensat auf die biologische Reinigung von Zellstoffwaschwassern),
W74-00781 5D

Clarification of NSC Waste Liquor by Active Carbon, Etc., (In Japanese),
W74-00785 5D

Switching from Calcium Bisulfite to Two-Stage Sodium-Calcium Bisulfite Pulping to Reduce Water Pollution (Znizenie znecistenia odpadnych vod prechodom z Ca-bisulfitoveho varenia na dvojstupnove Na-Ca-bisulfitove),
W74-00789 5D

SULPHURIC ACID
Process for Treating Industrial Wastes,
W74-00967 5D

SURFACE-GROUNDWATER RELATIONSHIPS
Surface-Groundwater Relationships on the Eastern Dniester Left Bank (O vzaimosvyazi poverkhnostnykh i podzemnykh vod na vostoke levoberezhnogo Podnestrov'ya),
W74-00601 2A

Consideration of the Character of Surface-Groundwater Relationships and Streamflow in Estimates of Yields From Infiltration Galleries (Uchet kharaktera svyazi podzemnykh vod s poverkhnostnymi i rezhima rechnogo stoka pri raschetakh inf il'tratsionnykh vodozaborov),
W74-00848 8A

SURFACE WATER RECORDS (NY)
Water Resources Data for New York, 1972: Part 1. Surface Water Records.
W74-00825 7C

SURFACE WATERS
A Report of Progress and Conclusions, (Washington, D.C. Metropolitan Area Water Resources).
W74-00583 6D

Surface Water Supply of the United States, 1966-70: Part 9. Colorado River Basin--Volume 2. Colorado River Basin from Green River to Compact Point.
W74-00586 7C

Surface Water Supply of the United States, 1966-70: Part 5. Hudson Bay and Upper Mississippi River Basins--Vol 3. Upper Mississippi River Basin Below Keokuk, Iowa.
W74-00587 7C

Surface Water Supply of the United States, 1966-70: Part 3. Ohio River Basin--Volume 4. Ohio River Basin Below Wabash River.
W74-00588 7C

Water Resources Data for New York, 1972: Part 1. Surface Water Records.
W74-00825 7C

Selected Water-Quality Records for Texas Surface Waters, 1971 Water Year,
W74-01086 7C

SURVEYS
Groundwater Survey of the Erbil Project Area,
W74-00761 4B

SUSPENDED SOLIDS
Enzyme-Enhanced Turbidity Removal Through Primary Treatment,
W74-00783 5D

SWAMPS
A Bill to Authorize the Acquisition of the Big Cypress National Fresh Water Reserve.
W74-00865 6E

Sedge Associations from the Ozunca Swamp, (In Rumanian),
W74-01016 2H

SWEDEN
Waste Water Clarification and Solids Recovery with 'Waste Water Bentonite': Report on a Study Trip to Sweden (Abwasserklaerung und Stoffrueckgewinnung mit 'Abwasserbentonit': Bericht ueber eine Reise nach Schweden),
W74-00762 5D

SWITZERLAND (LAKE GENEVA)
Introduction to Study 'In Situ' of Plankton Ecology in Lake Geneva, (In French),
W74-01079 2H

SYNTHETIC HYDROLOGY
HEC-1, Flood Hydrograph Package--Users Manual, Computer Program 723-X6-L2010.
W74-00821 7C

Computer Program 723-X6-L202A, HEC-2, Water Surface Profiles--Users Manual.
W74-00822 7C

Computer Program 723-X6-L202A, HEC-2, Water Surface Profiles--Programmers Manual.
W74-00823 7C

Systems Engineering Approach,
W74-00940 6A

HEC-4, Monthly Streamflow Simulation, Computer Program 723-X6-L2340.
W74-01091 7C

SYNTHETIC ORGANIC POLLUTION
Mechanism of Organic Adsorption on Activated Carbon,
W74-00565 5D

SYSTEMATICS
Studies on Brackish Water Phytoplankton,
W74-00589 5C

The Phytoplankton of Gales Creek with Emphasis on the Taxonomy and Ecology of Estuarine Phytoflagellates--Part 1 of Studies on Brackish Water Phytoplankton,
W74-00590 5C

Malezas Acuaticas, Aquatic Weeds, J. M. Bristow,
W74-00736 4A

SYSTEMS ANALYSIS
HEC-1, Flood Hydrograph Package--Users Manual, Computer Program 723-X6-L2010.
W74-00821 7C

Computer Program 723-X6-L202A, HEC-2, Water Surface Profiles--Users Manual.
W74-00822 7C

Computer Program 723-X6-L202A, HEC-2, Water Surface Profiles--Programmers Manual.
W74-00823 7C

HEC-4, Monthly Streamflow Simulation, Computer Program 723-X6-L2340.
W74-01091 7C

SYSTEMS ENGINEERING
Systems Engineering Approach,
W74-00940 6A

TAFEL SLOPES
The Range of Validity of the Linear Polarization Method for Measurement of Corrosion Rates,
W74-00947 8G

TARDIGRADA TAXONOMY
Tardigrada of the Chesapeake Bay,
W74-00909 2L

TAXES
Nonlinear Effluent Charges,
W74-00886 5G

TAXONOMY
Studies on Brackish Water Phytoplankton,
W74-00589 5C

The Phytoplankton of Gales Creek with Emphasis on the Taxonomy and Ecology of Estuarine Phytoflagellates--Part 1 of Studies on Brackish Water Phytoplankton,
W74-00590 5C

Phytoplankton Populations in Brackish Water Ponds, A Revised Report--Part II of Studies on Brackish Water Phytoplankton,
W74-00591 5C

TECUITLATL
Study of Algae Used as Foods in the Valley of Mexico, (In Spanish),
W74-00982 2H

TEMPERATURE
Recovery of Bacteriophage from Contaminated Chilled and Frozen Samples of Edible West Coast Crabs,
W74-00613 5A

Survival of Vibrio Parahaemolyticus in Oyster Shellstock at Two Different Storage Temperatures,
W74-00616 5C

Effect of Temperature of Incubation on Performance of Media in the Detection of Enteric Pathogens,
W74-00646 5A

Effects of Water and Heat on Seedling Emergence,
W74-00930 3F

TEMPERATURE FORECASTING
Prediction of Air Temperature at A Remote Site From Official Weather Station Records,
W74-00692 2A

TEMPERATURE INVERSION
Environmental Impact Study for Expansion on the Village Creek Sewage Treatment Plant,
W74-01035 5D

TENNESSEE - TOMBIGBEE WATERWAY
An Evaluation of the Water-Related Economic Resource Development of Appalachia-In-Mississippi,
W74-00799 6A

TENNESSEE VALLEY AUTHORITY
Systematic Errors in Cost Estimates for Public Investment Projects,
W74-00751 6C

Flood Studies for Safety of TVA Nuclear Plants: Hydrologic and Embankment Breaching Analysis,
W74-00805 8A

TENSILE STRENGTH
A Centrifugal Tensile Tester for Snow,
W74-00682 2C

TENSIOMETERS
The Use of Tensiometers as Indicators of Soil Moisture Availability for Plants, (In Russian),
W74-00989 3F

TERRITORIAL WATERS
Are Ocean Polluters Subject to Universal Jurisdiction--Canada Breaks the Ice,
W74-00867 5G

TERTIARY TREATMENT
Enhancing Trickling Filter Plant Performance by Chemical Precipitation,
W74-00835 5D

TESTING PROCEDURES
Proposal of a Simplified Manometric Method for Measuring Biochemical Oxygen Demand -- Results and Problems (Vorschlag einer vereinfachten manometrischen Methode zur Messung des biochemischen Sauerstoffbedarfs -- Ergebnisse und P robleme),
W74-00782 5A

What You Should Know About Pumping Tests. Technical Memo No. 1,
W74-00933 8G

TETRAHYMENA VORAX
Biological Models of Freshwater Communities,
W74-00925 5C

TEXAS
Development of a Dynamic Water Management Policy for Texas,
W74-00562 6A

El Paso's Water Resources,
W74-00740 6D

Saltwater Pond Research,
W74-00815 8I

Enhancing Trickling Filter Plant Performance by Chemical Precipitation,
W74-00835 5D

A Bill to Authorize Construction of the Little Cypress Lake and Reservoir, Texas.
W74-00861 6E

Environmental Impact Study for Expansion on the Village Creek Sewage Treatment Plant,
W74-01035 5D

Selected Water-Quality Records for Texas Surface Waters, 1971 Water Year,
W74-01086 7C

Quantity and Chemical Quality of Low Flow in the Upper Colorado River Basin, Texas, April 8, 1968,
W74-01090 2E

TEXTILES
The ABC Way to Better Wastewater Treatment,
W74-00776 5D

THEORETICAL ANALYSIS
Evaporation Rates of Liquid Hydrocarbon Spills on Land and Water,
W74-00775 5B

THERMAL CAPACITY
Some Comparisons in the Thermal Structure of Lakes Wood, Kalamalka, Okanagan, Skaha, and Osoyoos, British Columbia,
W74-00769 2H

THERMAL DEGRADATION
Problem Definition Study: Evaluation of Health and Hygiene Effects of the Disposal of Pesticides and Pesticide containers,
W74-00580 5G

THERMAL POLLUTION
On the Effect of Pollution on Surface Waters,

Bodega: A Case History of Intense Controversy,
W74-00738 6G

Water Reuse in Industry, Part I -- Power Generation,
W74-00794 5D

Effects of Thermal Effluents on Biocenoses of Water Bodies (O kharaktere vliyaniya termal'nykh sbrosnykh vod na biotsenozy vodoyemov),
W74-00842 5C

THERMOCLINE
Some Comparisons in the Thermal Structure of Lakes Wood, Kalamalka, Okanagan, Skaha, and Osoyoos, British Columbia,
W74-00769 2H

TIDAL WATERS
The Tidal Power Potential of Ungava Bay and Its Possible Exploitation in Conjunction with the Local Hydroelectric Resources,
W74-00838 4A

TILAPIA-AUREA
Effect of Fish on the Bottom of Reservoirs,
W74-01020 2H

Experimental Studies of Polyculture in 1971,
W74-01021 8I

TILAPIA-VULCANI
Experimental Studies of Polyculture in 1971,
W74-01021 8I

TIME
Travel Time of Georgia Streams,
W74-00556 4A

TIME TABLES
Time-Tables as a Method to Record Changes in Plankton Composition,
W74-01010 7B

TOBRILUS-INCOGNITUS
New Species of Free-Living Nematodes from Lake Baikal, (In Russian),
W74-00976 2H

TOMATO
Effect of Growth Regulators on Water Metabolism in Plant: II. IAA, TIBA (2,3,5-Triiodobenzoic Acid), GA (Gibberellic Acid) and CCC (2-Chloroethyltrimethylammonium Choride) on Transpiration Rate and Stomatal Aperatures o f Intact Tomato Plants, (In Polish),
W74-01027 3F

TOMATO LEAVES
Effect of Growth Regulators on Water Metabolism in Plant: I, IAA, Tiba (2,3,5-Triiodobenzoic Acid), GA (Gibberellic Acid) and CCC (2-Chloroethylitrimethylammonium Chloride) on Hydration of Tomato Leaves at Various S oil Moisture Contents, (In Polish),
W74-01026 3F

TORT LIABILITY
A Bill to Provide for the Establishment of the Lowell Historic Canal District National Cultural Park.
W74-00862 6E

TOXICICITY
Characteristics of the Toxic Effects and Safety Levels of Nitriles of Crotonic and Isocrotonic Acids in Water Bodies, (In Russian),
W74-01044 5C

TOXICITY
Symptoms of 'Red' Herring in Relation to the Mass Mortalities in Placentia Bay, February--April 1969,
W74-00711 5C

TOXICITY

A New Era for Cooling Water Treatment,
W74-00777 5D

Toxicity and Accumulation of Lead in the Common Mussel Mytilus Edulis in Laboratory Experiment, (In German),
W74-00972 5C

Copper Content of Oysters (Crassostrea Angulata) Along the Huelva Coasts, (In Spanish),
W74-00978 5C

TOXINS

Mechanism of Organic Adsorption on Activated Carbon,
W74-00565 5D

TRACE ELEMENTS

Distribution of Trace Metals in the Pore Waters of Shallow Water Marine Sediments,
W74-00828 2K

TRACERS

Travel Time of Georgia Streams,
W74-00556 4A

Fluctuations in Nitrate Concentrations Utilized as an Assessment of Agricultural Contamination to an Aquifer of a Semiarid Climatic Region,
W74-00850 5B

TRANSMISSIBILITY

Pulse Testing: A New Method for Describing Reservoir Flow Properties Between Wells,
W74-00939 8G

TRANSPIRATION

Xylem Water Potentials and Stomatal Resistance in Bog Plants: Ecological Implications,
W74-00719 2I

Relationship of Transpiration to Atmospheric Vapor Pressure,
W74-00759 2D

TRANSPIRATION RATE

Effect of Growth Regulators on Water Metabolism in Plant: II. IAA, TIBA (2,3,5-Triiodobenzoic Acid), GA (Gibberellic Acid) and CCC (2-Chloroethyltrimethylammonium Choride) on Transpiration Rate and Stomatal Aperatures o f Intact Tomato Plants, (In Polish),
W74-01027 3F

TRANSPORT WATER

Water Reuse in Industry, Part 2 -- Transport Water,
W74-00795 5D

TREATMENT FACILITIES

The ABC Way to Better Wastewater Treatment,
W74-00776 5D

Recycling Fine-Paper Mill Effluent by Means of Pressure Filtration,
W74-00784 5D

Unique Water Treatment Plant Ensures Purity of Lake Baikal,
W74-00786 5D

TREE SPECIES

Plantations of Coniferous Tree Species, (In Russian),
W74-01023 2I

TREMATODE TAXONOMY

Digenetic Trematodes of the Chesapeake Bay,
W74-00911 2L

TRIBUTARIES

Factors Responsible for Floodflow in Carpathian Rivers (as illustrated by the Stryy and Bystritsa Rivers) (Faktory pavodochnogo stoka karpatskikh rek (na primers Stryya i Bystritsy)),
W74-00599 2E

The Effects of Strip Mining Upon Navigable Waters and Their Tributaries: Discussion and Selected Bibliography.
W74-00725 5C

TRICKLING FILTERS

Enhancing Trickling Filter Plant Performance by Chemical Precipitation,
W74-00835 5D

TRICLADS

The Responses to Current Flow of Two Stream Dwelling Triclads, Crenobia Alpina (Dana) and Polycelis Felina (Dalyell),
W74-00971 2I

TROPHIC STAGES

Ecological Data of Mire Vegetation, (In Russian),
W74-01014 2H

TROPHIC STRUCTURE

Trophic Structure and Bioactivity of the Plankton Communities in Lower Reach of Elbe Estuary: Criteria for Saprobic Classification of a Tidal Water (In German),
W74-01003 5C

TROPHISM

Ecological Study of the Cyanophytes and Chlorophytes in Some Ponds Around Bruges: Determination of the Degree of Trophism in Accordance with Schroever's PD Quotient, (In German),
W74-01012 5C

TROUT

Remarks on the Stocking of the Dam Reservoir at Przeczyce with Lake Trout Salmo trutta M Lacustris L,
W74-01072 8I

TROUT REARING

History of Importing Rainbow Trout, Parasalmo gairdnerii (Richardson, 1836) into Bohemian Countries, (In Czech),
W74-01019 8I

UKRAINE

Streamflow Formation, Computations, and Regulation (Formirovaniye, raschety i regulirovaniye rechnogo stoka).
W74-00592 4A

Flash Floods on Carpathian Rivers in June 1969 and May 1970 (Livnevyye pavodki na rekakh Karpat v iyune 1969, maye 1970 g.),
W74-00598 2E

Factors Responsible for Floodflow in Carpathian Rivers (as illustrated by the Stryy and Bystritsa Rivers) (Faktory pavodochnogo stoka karpatskikh rek (na primers Stryya i Bystritsy)),
W74-00599 2E

UNDERGROUND STORAGE

Permeability Restoration in Underground Disposal Reservoirs,

CENTERS OF COMPETENCE AND THEIR SUBJECT COVERAGE

- Ground and surface water hydrology at the Water Resources Division of the U. S. Geological Survey, U. S. Department of the Interior.
- Metropolitan water resources planning and management at the Center for Urban and Regional Studies of University of North Carolina.
- Eastern United States water law at the College of Law of the University of Florida.
- Policy models of water resources systems at the Department of Water Resources Engineering of Cornell University.
- Water resources economics at the Water Resources Center of the University of Wisconsin.
- Eutrophication at the Water Resources Center of the University of Wisconsin.
- Water resources of arid lands at the Office of Arid Lands Studies of the University of Arizona.
- Water well construction technology at the National Water Well Association.
- Water-related aspects of nuclear radiation and safety at the Oak Ridge National Laboratory.
- Water resource aspects of the pulp and paper industry at the Institute of Paper Chemistry.

Supported by the Environmental Protection Agency in cooperation with WRSIC

- Thermal pollution at the Department of Sanitary and Water Resources Engineering of Vanderbilt University.
- Wastewater treatment and management at the Center for Research in Water Resources of the University of Texas.
- Methods for chemical and biological identification and measurement of pollutants at the Analytical Quality Control Laboratory of the Environmental Protection Agency.
- Coastal pollution at the Oceanic Research Institute.
- Water treatment plant waste pollution control at American Water Works Association.
- Effect on water quality of irrigation return flows at the Department of Agricultural Engineering of Colorado State University.
- Agricultural livestock waste at East Central State College, Oklahoma.

SELECTED WATER RESOURCES ABSTRACTS

VOLUME 7, NUMBER 3
FEBRUARY 1, 1974

W74-01101 – W74-01650

SELECTED WATER RESOURCES ABSTRACTS is published semimonthly for the Water Resources Scientific Information Center (WRSIC) by the National Technical Information Service (NTIS), U.S. Department of Commerce. NTIS was established September 2, 1970, as a new primary operating unit under the Assistant Secretary of Commerce for Science and Technology to improve public access to the many products and services of the Department. Information services for Federal scientific and technical report literature previously provided by the Clearinghouse for Federal Scientific and Technical Information are now provided by NTIS.

SELECTED WATER RESOURCES ABSTRACTS is available to Federal agencies, contractors, or grantees in water resources upon request to: Manager, Water Resources Scientific Information Center, Office of Water Resources Research, U.S. Department of the Interior, Washington, D. C. 20240.

SELECTED WATER RESOURCES ABSTRACTS is also available on subscription from the National Technical Information Service. Annual subscription is $45 (domestic), $56.25 (foreign). Certain documents abstracted in this journal can be purchased from the NTIS at prices indicated in the entry. Prepayment is required.

SELECTED
WATER RESOURCES ABSTRACTS

A Semimonthly Publication of the Water Resources Scientific Information Center,
Office of Water Resources Research, U.S. Department of the Interior

VOLUME 7, NUMBER 3
FEBRUARY 1, 1974

W74-01101 -- W74-01650

The Secretary of the U. S. Department of the Interior has determined that the publication of this periodical is necessary in the transaction of the public business required by law of this Department. Use of funds for printing this periodical has been approved by the Director of the Office of Management and Budget through August 31, 1978.

As the Nation's principal conservation agency, the Department of the Interior has basic responsibilities for water, fish, wildlife, mineral, land, park, and recreational resources. Indian and Territorial affairs are other major concerns of America's "Department of Natural Resources."

The Department works to assure the wisest choice in managing all our resources so each will make its full contribution to a better United States—now and in the future.

FOREWORD

Selected Water Resources Abstracts, a semimonthly journal, includes abstracts of current and earlier pertinent monographs, journal articles, reports, and other publication formats. The contents of these documents cover the water-related aspects of the life, physical, and social sciences as well as related engineering and legal aspects of the characteristics, conservation, control, use, or management of water. Each abstract includes a full bibliographical citation and a set of descriptors or identifiers which are listed in the **Water Resources Thesaurus.** Each abstract entry is classified into ten fields and sixty groups similar to the water resources research categories established by the Committee on Water Resources Research of the Federal Council for Science and Technology.

WRSIC IS NOT PRESENTLY IN A POSITION TO PROVIDE COPIES OF DOCUMENTS ABSTRACTED IN THIS JOURNAL. Sufficient bibliographic information is given to enable readers to order the desired documents from local libraries or other sources.

Selected Water Resources Abstracts is designed to serve the scientific and technical information needs of scientists, engineers, and managers as one of several planned services of the Water Resources Scientific Information Center (WRSIC). The Center was established by the Secretary of the Interior and has been designated by the Federal Council for Science and Technology to serve the water resources community by improving the communication of water-related research results. The Center is pursuing this objective by coordinating and supplementing the existing scientific and technical information activities associated with active research and investigation program in water resources.

To provide WRSIC with input, selected organizations with active water resources research programs are supported as "centers of competence" responsible for selecting, abstracting, and indexing from the current and earlier pertinent literature in specified subject areas.

Additional "centers of competence" have been established in cooperation with the Environmental Protection Agency. A directory of the Centers appears on inside back cover.

Supplementary documentation is being secured from established discipline-oriented abstracting and indexing services. Currently an arrangement is in effect whereby the BioScience Information Service of Biological Abstracts supplies WRSIC with relevant references from the several subject areas of interest to our users. In addition to Biological Abstracts, references are acquired from Bioresearch Index which are without abstracts and therefore also appear abstractless in SWRA. Similar arrangements with other producers of abstracts are contemplated as planned augmentation of the information base.

The input from these Centers, and from the 51 Water Resources Research Institutes administered under the Water Resources Research Act of 1964, as well as input from the grantees and contractors of the Office of Water Resources Research and other Federal water resources agencies with which the

Center has agreements becomes the information base from which this journal is, and other information services will be, derived; these services include bibliographies, specialized indexes, literature searches, and state-of-the-art reviews.

Comments and suggestions concerning the contents and arrangements of this bulletin are welcome.

CONTENTS

FOREWORD_____iii

SUBJECT FIELDS AND GROUPS

(Use Edge Index on back cover to Locate Subject Fields and Indexes in the journal.)

01 NATURE OF WATER
Includes the following Groups: Properties; Aqueous Solutions and Suspensions

02 WATER CYCLE
Includes the following Groups: General; Precipitation; Snow, Ice, and Frost; Evaporation and Transpiration; Streamflow and Runoff; Groundwater; Water in Soils; Lakes; Water in Plants; Erosion and Sedimentation; Chemical Processes; Estuaries.

03 WATER SUPPLY AUGMENTATION AND CONSERVATION
Includes the following Groups: Saline Water Conversion; Water Yield Improvement; Use of Water of Impaired Quality; Conservation in Domestic and Municipal Use; Conservation in Industry; Conservation in Agriculture.

04 WATER QUANTITY MANAGEMENT AND CONTROL
Includes the following Groups: Control of Water on the Surface; Groundwater Management; Effects on Water of Man's Non-Water Activities; Watershed Protection.

05 WATER QUALITY MANAGEMENT AND PROTECTION
Includes the following Groups: Identification of Pollutants; Sources of Pollution; Effects of Pollution; Waste Treatment Processes; Ultimate Disposal of Wastes; Water Treatment and Quality Alteration; Water Quality Control.

06 WATER RESOURCES PLANNING
Includes the following Groups: Techniques of Planning; Evaluation Process; Cost Allocation, Cost Sharing, Pricing/Repayment; Water Demand; Water Law and Institutions; Nonstructural Alternatives; Ecologic Impact of Water Development.

07 RESOURCES DATA
Includes the following Groups: Network Design; Data Acquisition; Evaluation, Processing and Publication.

08 ENGINEERING WORKS
Includes the following Groups: Structures; Hydraulics; Hydraulic Machinery; Soil Mechanics; Rock Mechanics and Geology; Concrete; Materials; Rapid Excavation; Fisheries Engineering.

09 MANPOWER, GRANTS, AND FACILITIES
Includes the following Groups: Education—Extramural; Education—In-House; Research Facilities; Grants, Contracts, and Research Act Allotments.

10 SCIENTIFIC AND TECHNICAL INFORMATION
Includes the following Groups: Acquisition and Processing; Reference and Retrieval; Secondary Publication and Distribution; Specialized Information Center Services; Translations; Preparation of Reviews.

02. WATER CYCLE

2A. General

A DETERMINISTIC PARAMETRIC WATER--BALANCE MODEL,
Norwegian Water Resources and Electricity Board, Oslo.
H. Grip.
Nordic Hydrology, Vol 4, No 3, p 191-205, 1973. 10 fig, 3 tab, 7 ref.

Descriptors: *Water balance, Mathematical models, Recession curves, Rainfall-runoff relationships, Hydrograph analysis, Water storage, Soil moisture, Hydrologic cycle.

A simple deterministic model, that needs little input-data is based on an analysis of the recession curve. Input data consist of time-series of precipitation, initial values of storage in upper and lower soil storages and in interception storage, and initial runoff. Output data are time series of evapotranspiration, interception, upper and lower soil storages and runoff, all given as 2-hour mean values. (Knapp-USGS)
W74-01126

NUMERICAL SIMULATION OF THE RAINFALL-RUNOFF PROCESS ON A DAILY BASIS,
Technical Univ. of Denmark, Copenhagen. Inst. of Hydrodynamics and Hydraulic Engineering.
S. A. Nielsen, and E. Hansen.
Nordic Hydrology, Vol 4, No 3, p 171-190, 1973. 9 fig, 3 tab, 8 ref.

Descriptors: *Simulation analysis, *Rainfall-runoff relationships, Streamflow forecasting, Water storage, Soil moisture, Snowmelt, Overland flow, Base flow, Subsurface runoff, Numerical analysis, Hydrographs.

A digital model was developed for the simulation of the rainfall-runoff process of rural watersheds. Input data are daily values of precipitation and temperature together with mean monthly potential evapotranspiration. The model produces daily values of streamflow as well as information on the time variation of the soil moisture content. The model operates by accounting continuously for the moisture content in four different and mutually interrelated storages representing physical elements in the watershed. Simulations demonstrate that the main shortcoming of the model are due to the lack of a procedure accounting for frozen ground during extended periods of frost. (Knapp-USGS)
W74-01127

DEVELOPMENT OF A CONCEPTUAL DETERMINISTIC RAINFALL-RUNOFF MODEL,
Swedish Meteorological and Hydrological Inst., Stockholm.
S. Bergstrom, and A. Forsman.
Nordic Hydrology, Vol 4, No 3, p 147-170, 1973. 19 fig, 3 tab, 5 ref.

Descriptors: *Rainfall-runoff relationships, Mathematical models, Infiltration, Percolation, Runoff forecasting, Streamflow forecasting, Hydrographs.

A simple conceptual rainfall-runoff model was developed at the Swedish Meteorological and Hydrological Institute. The HBV-2 Model is based on lumped-parameter approximations to the physical laws governing infiltration, percolation and runoff formation. The time interval is one day. The model structure includes soil moisture storage, upper zone storage, and lower zone storage. A procedure for evaluating the parameter values is given. Examples of applications to several test catchments in various hydrologic settings are included. (Knapp-USGS)

HYDRODYNAMIC MODELING OF TWO--DIMENSIONAL WATERSHED FLOW,
Illinois Univ., Urbana. Dept. of Civil Engineering.
V. T. Chow, and A. Ben-Zvi.
ASCE Proceedings, Journal of the Hydraulics Division, Vol 99, No HY11, Paper 10172, p 2023-2040, November 1973. 4 fig, 1 tab, 28 ref, append. NSF Grants GK-1155 and GK-11292.

Descriptors: *Mathematical models, *Simulation analysis, *Rainfall-runoff relationships, Floods, Runoff, Water yield, Finite element analysis.

Unsteady surface flow over watersheds was modeled hydrodynamically by a system of quasilinear partial differential equations for two velocity components and a flow depth at any point on the watershed. Computer solution is possible by a difference scheme based on the combination of the Lax-Wendroff scheme with Burstein-Lapidus modifications. A numerical example is given for the solution of watershed flow resulting from a uniform rainfall intensity and finite duration. Preliminary results indicate that the model is suitable for the study of watershed flow. (Knapp-USGS)

PHYSICAL SYSTEM MODELLING AS A TOOL IN WATER RESOURCE PLANNING,
Department of the Environment, Ottawa (Ontario).
H. M. Hill, and J. Bergsima.
Engineering Journal, Vol 56, No 9, p 26-30, September 1973. 1 fig, 6 ref.

Descriptors: Water resources, *Comprehensive planning, *Watersheds (Basins), *Institutional constraints, *Multiple-purpose projects, *Systems analysis, Hydrology, Water quality, Physical properties, Optimum development plans, Social aspects, Economics, Benefits, Mathematical models, Water supply, Waste treatment.
Identifiers: *Canada (Grand River watershed), *Environmental quality, Planning agencies.

The effectiveness of a water resources comprehensive plan is determined by to what extent all

relevant variables are considered, and to what extent institutional characteristics are understood so that the programs of all agencies concerned are directed towards fulfillment of the one, intrarelated, comprehensive plan. Such planning is multi-objective, multi-jurisdictional, and multi-discipline, and involves multiple agencies, water uses, and programs. The planning function is characterized by economic development, environmental quality, and social well-being. Comprehensive planning and modelling of water resources in Canada are discussed. Institutional constraints on planning are analyzed, and a generalized operational framework of a typical Canadian watershed, the Grand River watershed in Ontario, is used to reflect the multiple-purpose nature of water resources planning. Included are water quality, water supply, and waste treatment operations. The major function of planning boards in Ontario is discussed, and hydrologic and water quality modeling are discussed to examine how the natural system analysis, and thus the direction of the planning function, is influenced by the institutional characteristics. It is concluded that no one agency can undertake water resources modeling to optimize a total hydrologic system. (Bell-Cornell)

2B. Precipitation

PRECIPITATION VARIABILITY OVER NORTH CAROLINA,
North Carolina State Univ., Raleigh. Dept. of Geosciences.
W. J. Saucier, A. H. Weber, and C. K. Bayne.
Available from the National Technical Information Service as PB-225 123/9, $5.25 in paper copy, $1.45 in microfiche. Water Resources Research Inst., University of North Carolina. Report No. 84, August 1973. 185 p, 22 fig, 14 tab, 55 ref, 12 append. OWRR A-061-NC (3).

Descriptors: *Rainfall, Precipitation intensity, Droughts, *North Carolina, *Weather patterns.
Identifiers: *Precipitation variability, *Rainfall distribution patterns.

Variability of precipitation is analyzed in detail for records of 40 to 50 years or more. The probability of occurrence of wet or dry days is calculated for various thresholds of rainfall. Using the Freyerherm-Bark model, tables of initial and transitional probabilities and confidence limits are calculated. Tables of sequences of wet and dry days are also calculated. Computer programs and example problems are presented. Monthly total precipitation is calculated by station and tables and maps are given for the monthly means and of variance about the means. Long-term variations in precipitation were found in analyzing 40-year data series. Variations due to tropical storms are also analyzed. Conclusive evidence is presented that long-term variations do occur and affect nearby locations quite differently. (McJunkin-North Carolina)

COMPARISON OF GAGE AND RADAR METHODS OF CONVECTIVE PRECIPITATION MEASUREMENT,
National Oceanic and Atmospheric Administration, Coral Gables, Fla. Experimental Meteorology Lab.
A. Herndon, W. L. Woodley, A. H. Miller, A. Samet, and H. Senn.
National Oceanic and Atmospheric Administration Technical Memorandum ERL OD-18, March 1973. 67 p, 20 fig, 11 tab, 30 ref.

Descriptors: *Rainfall intensity, *Rain gages, *Radar, *Florida, Correlation analysis, Data collections, Remote sensing, Evaluation, Convection, Cloud seeding, Heat transfer, Rainfall.

During the summer of 1972 convective rainfall over south Florida was estimated by two collocated, calibrated 10-cm radars (UM/10-cm of the University of Miami and the WSR-57 of the National Hurricane Center) and compared with the rainfall as determined by rain gages in small cluster arrays. These comparisons were variable, but in the mean both radars tended to underestimate the rainfall, particularly the heavier showers. On a daily basis, the mean absolute percentage differences for the periods of radar operation ranged between 35% and 40%. The radars were within a factor of two of the cluster standard nearly 70% of the time. Comparison of this finding with that in the gaging section suggests that the radars approximated a gage network of 20-30 sq mi/gage. The performances of the radars were very similar. The correlations between gage and radar rainfalls were 0.87 and 0.84 for the UM/10-cm and WSR-57 radars, respectively. The correlation between radar rainfalls for 46 common showers was 0.94. In the context of Experimental Meteorology Laboratory's cloud seeding experiments, neither gage nor radar methods of convective precipitation evaluation is entirely adequate by itself unless the effect of seeding on precipitation is unexpectedly large (greater than a factor of two). 2C. Snow, Ice, and Frost

PROBLEMS IN HYDROLOGY OF GLACIERS AND GLACIERIZED AREAS (PROBLEMY GIDROLOGII LEDNIKOV I LEDNIKOVYKH RAYONOV),
Akademiya Nauk SSSR, Moscow. Institut Geografii.
G. A. Avsyuk, V. M. Kotlyakov, V. G. Khodakov, and G. N. Golubev.
Vodnyye Resursy, No 2, p 3-20, 1973. 7 fig, 1 tab, 27 ref.

Descriptors: *Glaciohydrology, *Glaciers, Mountains, Ice, Snow, Firn, Melt water, Snowmelt, Melting, Ablation, Regimen, Hydrologic cycle, Water balance, Precipitation (Atmospheric), Runoff, Heat balance, International Hydrological Decade, Maps, Equations.
Identifiers: *USSR, Glacier mass balance, Paleoglaciology.

According to latest estimates, glaciers in the USSR cover 81,900 sq km. The volume of water stored in the glaciers is 13,750 cu km or about three times the annual runoff volume of all USSR rivers. In mountainous regions, glaciers cover about 21,000 sq km. The volume of ice is more than 2,800 cu km, and the water equivalent of this volume is about 2,450 cu km. A glaciological method is presented for calculating average precipitation and average long-term meltwater discharge at the boundary of glacier nourishment, and a map shows these values for the USSR and adjoining lands. An equation is given for the water-ice balance of a glacier basin, and possibilities of measuring and calculating major items in this balance are considered. A scheme is developed for calculating glacier internal nourishment, and results are presented of research on water regimen of glaciers as a whole and of individual ice-formation zones on glaciers. Successes in artificial augmentation of melting by surface dusting of glaciers and in computations and forecasts of floods and other consequences of catastrophic movements of pulsating glaciers are described. Possibilities of applying results of glacier mass balance studies to paleoglaciological research are noted, and basic directions of glacier investigations following the International Hydrological Decade in 1974 are outlined. SINGLE-VELOCITY METHOD IN MEASURING DISCHARGE,
Department of the Environment, Ottawa (Ontario). Inland Waters Directorate.
P. W. Strilaeff, and W. Bilozor.
Technical Bulletin No 75, 1973. 21 p, 5 fig, 6 tab, 13 ref.

Descriptors: *Streamflow, *Flow measurement, *Flow rates, *Canada, *Cold regions, Ice cover, Gaging stations, Hydrologic data, Velocity, Methodology, Mathematical studies, Hydrographs, Discharge measurement.
Identifiers: *Manitoba (Canada), *Northwest Territories (Canada), Single-velocity method.

In 1968 an analysis was made of discharge measurement records for a number of gaging stations located in Manitoba, Canada, and Northwest Territories. The purpose of the analysis was to discover the relationship between discharge measurements made on the basis of single velocity observations in the cross section, and discharge measurements made using traditional techniques. The relationship appeared to be very promising and the results were documented. This summary report is based on a more intensive and exhaustive analysis of the relationship and suggests procedures to be followed when applying the single-velocity method in discharge measurement work. THE MASS BALANCE OF THE SEA ICE OF THE ARCTIC OCEAN,
Department of Energy, Mines and Resources, Ottawa (Ontario). Polar Continental Shelf Project.
R. M. Koerner.
Journal of Glaciology, Vol 12, No 65, p 173-185, 1973. 4 fig, 5 tab, 13 ref.

Descriptors: *Water balance, *Sea ice, *Arctic Ocean, Melting, Ablation, Regimen.
Identifiers: Mass balance.

From data taken on the British Trans-Arctic Expedition it was calculated that 9% of the Arctic Ocean surface between the North Pole and Spitsbergen was hummocked or ridged ice, 17% was unridged ice less than a year old, 73% was unridged old ice and 0.6% was ice-free. The mode of 250 thickness measurements taken through level areas of old floes along the entire traverse lies between 2.25 and 2.75 m. The mean end-of-winter thickness of the ice was calculated to be 4.6 m in the Pacific Gyral and 3.9 m in the Trans-Polar Drift Stream. From measurements of the percentage coverage and thickness of the various ice forms, it was calculated that the total annual ice accumulation in the Arctic Ocean is equivalent to a continuous layer of ice 1.1 m thick. 47% of this accumulation occurs in ice-free areas and under ice less than 1 year old; 20% of the total ice production is either directly or indirectly related to ridging or hummocking. An ice-ablation rate of 500 kg per sq m was measured on a level area of a multiyear floe. Greatest melting occurs on new hummocks and least on old smooth hummocks. The annual balance of ice older than 1 year but younger than multiyear ice was calculated from a knowledge of ice-drift patterns and the percentage coverage of first-year ice. The same calculations give a mean-maximum drift period of 5 years for ice in the Trans-Polar Drift Stream and 16 years in the Pacific Gyral. For the period February 1968 to May 1969 the annual ice export was 5,580 cu km. (Knapp-USGS)

ICEBERGS AS A FRESH-WATER SOURCE: AN APPRAISAL,
Cold Regions Research and Engineering Lab., Hanover, N. H.
W. F. Weeks, and W. J. Campbell.
Journal of Glaciology, Vol 12, No 65, p 207-233, 1973. 16 fig, 1 tab, 36 ref.

Descriptors: *Icebergs, *Water sources, Water conveyance, Water costs, Antarctic, Water yield improvement.

A history of the idea of transporting large icebergs to arid regions to provide a fresh-water source is presented. Only in the Antarctic are supplies of large tabular icebergs available. Data on the size distribution of these icebergs are reviewed and it is concluded that icebergs of almost any desired size can readily be located. Steady-state towing velocities of different sized icebergs are calculated based on estimates of the drag of the icebergs and the bollard pull of tugs. Because drag increases with velocity squared, large icebergs can only be towed at very slow velocities (<0.5 m/s). However, tugs that can be built within the capabilities of current technology are capable of towing extremely large icebergs. Although melting losses are significant and may be excessive for small icebergs, when large icebergs are towed, large amounts of ice are left when the iceberg arrives at its destination. Towing trajectories, travel times, and ice delivery rates are calculated for optimum routes between Amery Ice Shelf and Western Australia and the Ross Ice Shelf and the Atacama Desert. Forces included in these calculations are towing, air, water, gradient current and Coriolis. Transit times exceed 107 d and 145 d with over 50% of the initial ice delivered. After total towing charges are paid, it is possible to deliver ice to Western Australia for 1.3 mills/per cu m of water and to the Atacama Desert region for 1.9 mills/per cu m. The water delivered by the operation of one super tug alone would irrigate 16,000 sq km. Problems related to both iceberg transport and processing are reviewed and although substantial problems do exist, they appear to be within the capabilities of current technology. (Knapp-USGS)

ICE CALVING INTO THE PROGLACIAL GENERATOR LAKE, BAFFIN ISLAND, N.W.T., CANADA,
Deptment of the Environment, Ottawa (Ontario). Glaciology Div.
G. Holdsworth.
Journal of Glaciology, Vol 12, No 65, p 235-250, 1973. 10 fig, 14 ref, 3 append.

Descriptors: *Glaciers, *Icebergs, *Lake ice, Ablation, *Canada, Melting, Water balance, Water level fluctuations.
Identifiers: *Calving (Icebergs), Baffin Island.

The morphology of the margin of Barnes Ice Dap, Baffin Island, at the proglacial Generator Lake is described. Types of calving that take place into the lake are discussed, particularly an observed calving in July 1970 when an ice-ramp of about 0.4 million cu m volume broke off due to a rise in lake level. Bending analyses throw some light on the calving mechanism. At Generator Lake, the margin of Barnes Ice Cap has recently retreated about five times further than the retreat of the adjacent land-based margin. The present ice front is characterized by cliffs and ramps in the approximate ratio of 1:1. A cliff is associated with an immediately grounded ice margin and a ramp is defined as a tapered projecting tongue of ice detached from the bottom of the lake but not necessarily floating in equilibrium. Cliffs occur in water shallower than about 30 m, whereas ramps predominate in water deeper than about 30 m. Typically, water depth exceeds 50 m just off the ramps. (Knapp-USGS)
W74-01376

FLOW OF A VALLEY GLACIER WITH A SOLID FRICTION LAW,
Centre National de la Recherche Scientifique, Grenoble (France). Laboratoire de Glaciologie.
L. Reynaud.
Journal of Glaciology, Vol 12, No 65, p 251-258, 1973. 7 fig, 1 tab, 4 ref.

Descriptors: *Glaciers, *Rheology, *Friction, Melting, Velocity, Glaciology, Flow.
Identifiers: Canada (Athabasca Glacier).

Friction on the bed of a glacier is assumed to obey Coulomb's law of solid friction in the presence of interstitial pressure. According to this, the friction is a maximum at certain places in the bottom of the valley. Assuming Glen's nonlinear creep law, the steady-state flow of ice along a regular cylindrical channel of parabolic section was calculated. The results reproduce to high accuracy the distribution of velocity measured on the Athabasca Glacier. (Knapp-USGS)
W74-01377

SEISMIC EVIDENCE FOR GLACIER MOTION,
Alaska Univ., College. Geophysical Inst.
D. VanWormer, and E. Berg.
Journal of Glaciology, Vol 12, No 65, p 259-265, 1973. 6 fig, 1 tab, 2 ref.

Descriptors: *Glaciers, *Movement, *Seismic studies, *Alaska, Shear, Strain.
Identifiers: *College Fiord (Alas).

Unusual seismic signals with weak P phases and well-developed monochromatic shear-wave trains were recorded and their sources located near College Fiord, Alaska. Epicentral determinations show that they originate on or near glaciers. Some of the events have equivalent earthquake magnitudes of 2.0 to 2.5. These energy sources seem to be compatible with spasmodic glacier movement. Smaller events occur often--as many as 60 per day. (Knapp-USGS)
W74-01378

ON THE FORMATION OF SMALL MARGINAL LAKES ON THE JUNEAU ICEFIELD, SOUTH--EASTERN ALASKA, U.S.A.,
Turku Univ. (Finland). Institutum Geographicum.
M. Seppala.
Journal of Glaciology, Vol 12, No 65, p 267-273, 1973. 7 fig, 9 ref.

Descriptors: *Lakes, *Glaciers, *Wind erosion, *Blowouts, Glaciohydrology, Glaciology, *Alaska.
Identifiers: Proglacial lakes, *Juneau Icefield (Alas).

Small 'moat lakes', sometimes empty, sometimes filled with water, are encountered on the edges of glacial firn areas of the Juneau Icefield in southeastern Alaska. The lake basins are primarily blowouts formed as a result of wind erosion. On the Juneau Icefield strong winds blow from the southern sector, principally from the southeast, and cause drifting. The lake basin develops in such a way that meltwater from the surface of the glacier and the slopes of the nunatak collects in the depression originially made by the wind. (Knapp-USGS)
W74-01379

SHORT-TERM SNOW MELT AND ABLATION DERIVED FROM HEAT- AND MASS-BALANCE MEASUREMENTS,
Department of the Environment, Ottawa (Ontario). Waters Branch.
P. M. B. Fohn.
Journal of Glaciology, Vol 12, No 65, p 275-289, 1973. 6 fig, 3 tab, 20 ref.

Descriptors: *Snowmelt, *Heat balance, *Water balance, *Glaciers, Ablation, Melting, Meteorology, Meteorological data, Heat transfer.

Daily melt rates of glaciers can be determined with a maximum relative error of 20% by evaluating the ice matrix density (in contrast to the total snow density) of the immediate surface and subsurface layers and by evaluating the decrease in volume. Neglecting the ice-density changes in the subsurface layer would, on the average, reduce the daily melt rates by 22%. The heat-balance approach gives satisfactory results on a daily basis and a close agreement for longer periods. The distribution of the total absorbed energy between the different components for the whole period was as follows: all-wave net radiation 44%, sensible heat 48%, and the latent heat (condensation), 8%. This distribution corresponds to a pattern often encountered over snow surfaces at low elevations in midsummer, when the convective heat is equal to or even exceeds the radiative heat, whereas the condensation process is a rather minor heat source. The heat-balance approach represents a useful method for obtaining melt rates for periods of several days. Applying such an approach, the use of a lumped melt index like the degree-day factor can be avoided. (Knapp-USGS)
W74-01380

COMPARISON OF THE SNOW RESISTOGRAPH WITH THE RAM PENETROMETER,
Montana State Univ., Bozeman. Dept. of Earth Sciences.
W. St. Lawrence, and C. C. Bradley.
Journal of Glaciology, Vol 12, No 65, p 315-321, 1973. 4 fig, 5 ref.

Descriptors: *Snowpacks, *Avalanches, *Instrumentation, Data collections, Strength, Snow surveys, Calibrations.
Identifiers: *Snow resistograph, *Snow penetrometer.

Comparative tests of the snow resistograph with the ram penetrometer indicate that there is a high degree of correlation between the two instruments despite fundamental differences in operation. It is probable therefore that the two instruments are measuring essentially the same parameters and may be used interchangeably. The resistograph has a large advantage over the ram penetrometer, in terms of speed and ease of operation, and in its capacity to measure the strength of very weak snow. (Knapp-USGS)

GEOPHYSICAL MEASUREMENTS OF THE THICKNESS OF THE MALYY AZAU GLACIER (GEOFIZICHESKIYE OPREDELENIYA MOSHCHNOSTI LEDNIKA MALYY AZAU),
Moscow State Univ. (USSR). Problemnaya Laboratoriya Kompleksnogo Kartografirovaniya i Atlasov.
L. A. Ushakova, A. V. Bryukhanov, and A. P. Tishchenko.
Vestnik Moskovskogo Universiteta, Seriya V, Geografiya, No 5, p 99-101, September-October 1971. 1 fig.

Descriptors: *Glaciers, *Measurement, *Gravimetry, *Gravimetric analysis, Gravimeters, Density, Ice, Glacial drift.
Identifiers: *USSR (Malyy Azau Glacier), Glacier tongues.

The gravity method was used to measure the thickness of the Malyy Azau Glacier (area--8.49 sq km; length--7.58 km) on the southern slope of Mount Elbrus in the Caucasus. Average thickness of the glacier tongue, calculated from Bouguer effects, is 80-100 m, and the maximum thickness is 150 m. The gravity method is a promising method for measuring the thickness of mountain glaciers, but, because of errors involved, must be combined with seismic or radar sounding. (Josefson-USGS)
W74-01390

USE OF ISOTOPIC METHODS TO DETERMINE PRESENT RATES OF SNOW ACCUMULATION IN ANTARCTICA (ISPOL'ZOVANIYE IZOTOPNYKH METODOV DLYA OPREDELENIYA SOVREMENNOY SKORSTI NAKOPLENIYA SNEGA V ANTARKTIDE),

V. D. Vilenskiy, R. V. Teys, V. V. Yemel'yanov, and S. N. Kochetkova.
Geokhimiya, No 9, p 1071-1082, September 1972. 5 fig, 4 tab, 19 ref.

Descriptors: *Antarctic, *Snow, *Snow cover, *Isotope studies, *Analytical techniques, Stable isotopes, Deuterium, Oxygen isotopes, Lead radioisotopes, Radioactivity, Depth, Seasonal.
Identifiers: *USSR (Antartica).

Determination of present rate of snow accumulation at Molodezhnaya, Mirnyy, and Vostok Antarctic stations by means of isotopic methods is discussed. To determine rate of snow accumulation and to identify annual layers in modern glacial deposits of coastal and central regions of the Antarctic continent, seasonal variations in radioactivity and variations in stable isotope contents must be considered. The accurary of determining mean rate of snow accumulation from variations in Pb-210 concentration with depth (in Pb-210 determinations carried out on snow samples corresponding to an accumulation period of about 10 years) cannot be improved by using thinner cut samples because of large variations in the Pb-210 concentration. To estimate irregularity of present-day snow accumulation at different points in the same region, it is recommended that three zones having different radioactivities be identified in the snow cover deposited since 1955. Simultaneous application of several isotopic methods have made it possible to determine the present snow accumulation rate at Mirnyy to be about 30 g/sq cm/yr, at two points near Molodezhnaya to be about 15 and 22 g/sq cm/yr, and at Vostok to be about 3 g/sq cm/yr. (Josefson-USGS)

SPECTRAL ABSORPTION OF SOLAR RADIATION IN ALPINE SNOWFIELDS,
Oregon State Univ., Corvallis. Dept. of Oceanography.
H. Curl, Jr., J. T. Hardy, and R. Ellermeier.
Ecology. Vol 53, No 6, p 1189-1194. 1972. Illus.
Identifiers: Absorption, Algae, Alpine, Regression, Seasons, *Solar radiation, *Spectral absorption, *Snowfields.

Penetration of solar radiation into snow at various times of the year was measured with a spectral radiometer. Light absorption obeys a $y \pm axn$ law where n varies from 0.71 to 2.10. The absorption coefficient n decreases with increasing snow density. The 1% of surface value of total energy occurs at a snow depth of approximately 18 cm in winter, increasing to a maximum of 110 cm in late summer when snow density is near its maximum. Penetration of 0.1% of the surface radiation is shown to coincide with the approximate date and depth of snow pack for the first spring bloom of snow algae, implying that increasing light penetration may initiate germination of overwintering stages.--Copyright 1973, Biological Abstracts, Inc.

LEAF TEMPERATURES, DIFFUSION RESISTANCES, AND TRANSPIRATION,
Macquarie Univ., North Ryde (Australia). School of Earth Sciences.
E. T. Linacre.
Agric Meteorol. Vol 10, No 4/5, p 365-382. 1972, Illus.
Identifiers: *Diffusion resistance, Grape vine, *Leaf temperature, Resistances, Temperatures, *Transpiration.

A simple model of the energy flows about a leaf yields new expressions for the temperature, external diffusion resistance, internal diffusion resistance and the transpiration rate. The effects are considered of either coating the leaf to make its surface impermeable to water vapor, or wetting the leaf surface, or shading it. Four methods of deriving a leaf's external resistance and 4 for determining the transpiration rate were deduced, and compared using data from field measurements on intact grape vine leaves. The results obtained by the various methods are roughly similar.--Copyright 1973, Biological Abstracts,Inc.

DIURNAL CHANGES IN TRANSPIRATION AND DAILY PHOTOSYNTHETIC RATER OF SEVERAL CROP PLANTS,
Agricultural Research Service, Watkinsville, Ga.
J. E. Pallas, Jr.
Crop Sci. Vol 13, No 1, p 82-84. 1973.
Identifiers: *Crop yield, Daily, *Diurnal changes, Growth, *Photosynthesis, *Transpiration, Measurement, Cotton, Bell pepper, Peanuts, Soybeans, Bermudagrass.

Measurements of photosynthesis and transpiration of soil-grown, growth chamber-cultured cotton (Gossypium hirsutum L. cv. 'Empire'), bell pepper (Capsicum frutescens L. cv. 'California Wonder'), peanut (Arachis hypogaea L. cv. 'Florigiant'), soybean (Gossypium max Merr. cv. 'Lee') and bermudagrass (Cynodon dactylon L.) plants were made during 14-hr photoperiods: irradiance 1.17. (joules)cm2/min, day-night temperature 30 degrees C, and CO2 concentration 310 micro1/1. A diurnal trend in both photosynthesis and transiration was evidenced by the dicots but not the monocot. The sinusoidal nature of the curves suggest endogenous rhythm changes in diffusive resistance and/or biochemical activity. As much as 2-fold changes in cotton and peanut photosynthesis were recorded compared to approximately 30% change in bell pepper and soybean photosynthesis. These findings jeopardize the relevancy of short-time photosynthetic measurements used in some screening techniques.--Copyright 1973, Biological Abstracts, Inc.

WATER USE BY PERENNIAL EVERGREEN PLANT COMMUNITIES IN AUSTRALIA AND PAPUA NEW GUINEA,
Queensland Univ., Brisbane (Australia). Dept. of Botany.
R. L. Specht.
Australian Journal of Botany, Vol 20, No 3, p 272-299, December 1972. 13 fig, 4 tab, 46 ref, append.

Descriptors: *Water utilization, Water requirements, Ecology, Plant growth, Plant populations, *Drought tolerance, Arid lands, Environment, Climatic data, *Australia, *Water balance, Ecosystems, Model studies, Evapotranspiration.
Identifiers: *Papua New Guinea, *Evergreens (Perennial), Eucalyptus.

Availability of water is the major ecological factor determining the productivity of plant communities in many areas of the world. Comparison of the water use of plant communities growing in different habitats depends on establishing relationships between community evapotranspiration and parameters which express the evaporative power of the atmosphere and the availability of water in the soil to plant roots. The water balance model developed uses empirical relationships between monthly values of precipitation, evapotranspiration, pan evaporation, drainage (infiltration and percolation) and extractable soil water. There is no doubt that this model obscures many finer processes which operate continuously within the ecosystem, However, the purpose is to discuss the water balance of perennial evergreen plant communities (usually natural) in Australia and Papua New Guinea and eventually from this to model the growth of these ecosystems. At present, significant changes in biomass of these ecosystems can only be defined with difficulty. Refined aerodynamic techniques in which carbon dioxide fluxes above a plant community are used may eventually be appliacable to long-term continuous monitoring of deterogeneous, irregularly structured plan communities. (Black-Arizona)

2E. Streamflow and Runoff

A STOCHASTIC MODEL OF STREAMFLOW BASED ON THE THEORY OF FUNCTIONS OF MARKOV PROCESSES,
Arizona Univ., Tucson.
C. C. Kisiel, J. L. Denny, and S. J. Yakowitz.
Available from the National Technical Information Service as PB-225 146/0, $3.00 in paper copy, $1.45 in microfiche. Project Completion Report, August 1971. 8 p, 6 ref. OWRR A-023-ARIZ (1). 14-31-0001-3203.

Descriptors: *Streamflow forecasting, *Statistical models, *Markov processes, *Stochastic processes, Flow measurement, Correlation analysis, Hydrographs, Analytical techniques, Evaluation, *Arizona, Streams.

Two streams (Rilliot and Sabino Creeks) in southern Arizona were studied with particular reference to understanding their random behavior. Analysis gives unexpectedly strong evidence that certain streamflow measurements possess the statistical characteristics of a Markov chain of order no larger than six or seven. This permits statistical estimation and hypothesis testing of the parameters of the stream, leads to a simple but realistic nonlinear model of streamflow, and allows a simple method of predicting future streamflow using past streamflow measurements. In addition, statistical evidence appeared to support the contention that urbanization in the vicinity of the stream forces a trend toward dry readings at the stream's measuring station. W74-01123

DIVISION OF THE UNITED STATES INTO REGIONS ACCORDING TO COPHASAL FLUCTUATIONS OF ANNUAL RUNOFF (RAYONIROVANIYE TERRITORII SSHA PO SINFAZNOSTI KOLEBANIY GODOVOGO STOKA REK),
N. V. Lalykin.
Vodnyye Resursy, No 2, p 183-189, 1973. 3 fig, 2 tab, 3 ref.

Descriptors: *United States, *Runoff, *Annual, *Fluctuations, Variability, Correlation analysis, Cycles, Rivers, River basins, Maps.
Identifiers: *USSR.

Data used to divide the United States into 13 regions according to the character of cyclic fluctuations of annual runoff were derived from surface-water records collected by the U.S. Geological Survey between 1900 and 1959 (Water Supply Papers 1301-1318 and 1721-1738). Runoff cycles for each region are described, and a method is proposed for determining size of rivers from patterns of areal variability of the coefficients of correlation between runoff on individual rivers. Relations of coefficients of correlation of annual runoff on small lowland and mountain streams to distance centers of gravity of the basins are graphed, and areas of cophasal fluctuations of annual runoff in the United States are mapped. STABILITY AND REACH LENGTH IN WATER SURFACE PROFILE DETERMINATION,
Stanley Consultants, Inc., Muscatine, Iowa. Dept. of Engineering.
G. F. Tavener.
Water Resources Bulletin, Vol 9, No 5, p 950-962, October 1973. 5 fig, 3 tab, 2 ref, 1 append.

Descriptors: *Profiles, *Flow profiles, *Backwater, Flood plains, Floods, Hydraulics.

Basic step methods of backwater computation are extended to reaches of finite length. Accuracies of commonly accepted hydraulic loss equations under particular water surface profile conditions are compared. Simulation of energy lines within a reach by parabolic curves minimizes error provided orientation of the axis of the parabola is selected in accordance with prevailing hydraulic conditions. An index reach length beyond which single-step computation from end to end of the reach must be in error was developed. Reduction of this reach length by suitable factors tailored to hydraulic conditions yields a mathematically defined allowable reach length for backwater computation. When reach length does not exceed this allowable reach length, no significant error may be detected. Automatic insertion of synthetic cross sections interpolated between surveyed cross sections (when these are inadvertently spaced too far apart) enables computation to proceed. This device is error-free for prismatic channels but may introduce error for irregular natural channels. Results may be accepted provided the fall in the original reach does not exceed one to two feet. When this is exceeded, additional cross sections should be surveyed. (Knapp-USGS)

THE BREAKING OF WAVES ON A SLOPING BEACH,
Rolls-Royce Ltd., Derby (England). Advanced Research Group.
A. Jeffrey.
Zeitschrift fur Angewandte Mathematik und Physik, Vol 15, No 7, p 97-106, March 1964. 5 fig, 9 ref.

Descriptors: *Coasts, *Beaches, *Waves (Water), Equations.
Identifiers: Discontinuity equation.

Calculations were made of the non-linear one-dimensional propagation of a periodic wave train into water which is at rest above a uniformly sloping beach, and the condition for the breaking of the incident wave was determined. The method is also directly applicable to problems in which the beach has a nonuniform slope. The method involves a discussion of the behavior of the Lipschitz continuous solution in the vicinity of the wavefront and does not depend for its success on special properties of the equations involved. Numerical results are presented for a typical problem showing the variation of the critical time and distance as functions of wave amplitude, wave frequency and the slope of the beach. (Sinha-OEIS)

BEACH CHANGES ON THE OUTER BANKS OF NORTH CAROLINA,
Virginia Univ., Charlottesville.
R. Dolan.
Annals of Association of American Geographers, Vol 56, No 4, p 699-711, December 1966. 5 fig, 9 tab, 24 ref. ONR Nonr-1575 (03).

Descriptors: *North Carolina, *Beaches, Surf, *Waves (Water), Sediments, *Topography, Water levels.
Identifiers: *Bodie Island (NC), *Shoaling.

Relationships between surf-zone processes and subaerial beach changes are considered as they occur on Bodie Island, North Carolina. The processes include: wave height, wave period, wave direction, and still-water level. Measurements of beach change include: beach thickness, width, and slope, as well as the size and sorting of the beach-face sediment. Analysis reveals that changes in these beach characteristics are predictable using only two of the process factors considered: wave height and stillwater level. Large waves with high water levels cause rapid reductions in beach thickness, width, and slope. Small waves with low water levels are associated with thicker, wider, and steeper beaches. Sediment size and sorting show little association with the processes of beach configuration. (Sinha-OEIS)

LONGSHORE CURRENT VELOCITY: A REVIEW OF THEORY AND DATA,
Army Coastal Engineering Research Center, Washington, D.C.
C. J. Galvin, Jr.
Reviews of Geophysics, Vol 5, No 3, p 287-304, August 1967. 7 fig, 3 tab, 24 ref.

Descriptors: *Coasts, Momentum equation, *Velocity, *Currents (Water), Energy equation, *Forecasting.
Identifiers: *Longshore currents, *Conservation of mass.

A proven prediction of longshore current velocity is not available, and reliable data on longshore currents are lacking over a significant range of possible flows. Theoretical studies have been based on over-simplified models, and empirical predictions have been hampered by lack of data. The empirically modified, momentum-flux theory now accepted as the best prediction is based on an untenable assumption and supported by inappropriate data. Regardless of their validity, however, all six of the testable equations agree fairly well with at least one of six sets of published data, and two agree with both of the better sets of data. These two equations may be used as empirical guides for velocity prediction in the absence of a proven theory. The best prospect for a generally valid velocity prediction appears to be an empirical correlation based on reliable data. (Sinha-OEIS)

NOTE ON THE EQUATIONS OF LONG WAVES OVER AN UNEVEN BOTTOM,
National Engineering Science Co., Pasadena, Calif.
C. C. Mei, and B. Le Mehaute.
Journal of Geophysical Research, Vol 71, No 2, p 393-400, January 15, 1966. 10 ref. ONR Nonr 4177 (00).

Descriptors: *Shallow water, *Waves (Water), *Coasts, Continental shelf, Equations, *Topography.
Identifiers: *Shoaling, *Long waves.

Equations for long waves in shallow water are derived systematically for an uneven bottom. With the basic assumption that the depth is small in comparison with a horizontal length scale, three regimes of approximation are presented according to the magnitude of the wave amplitude. (a) When the amplitude is of the same order of magnitude as the depth, the Airy equations are rederived as the first approximation. (b) When the amplitude is comparable to the cube of the depth, both lengths being nondimensionalized with respect to a common horizontal scale, two high-order nonlinear equations are obtained which include the classical cnoidal wave as a special solution for a horizontal bottom. These equations may be transformed to a set of first-order quasi-linear hyperbolic equations with the characteristic curves in the x-t plane directly related to the bottom profile. To facilitate numerical computations they are then written as differential equations along the characteristics. In the third regime (c) of extremely small wave amplitudes the appropriate linearized equations are given. (Sinha-OEIS)

EFFECTS OF FRICTION AND SURFACE TIDE ANGLE OF INCIDENCE ON THE COASTAL GENERATION OF INTERNAL TIDES,
Washington Univ., Seattle. Dept. of Oceanography.
J. G. Weigand, H. G. Farmer, S. J. Prinsenberg, and M. Rattray, Jr.
Journal of Marine Research, Vol 27, No 2, p 241-259, May 15, 1969. 11 fig, 10 ref.

Descriptors: *Internal waves, *Boundary processes, *Friction, Mathematical models, *Waves (Water), Coasts, Tides.
Identifiers: Surface waves.

For the generation of internal waves by long surface waves, the normal-mode equations and solutions that satisfy the boundary conditions in a two-layer system are found analytically. Frictional effects decrease the amplitude of an internal wave over the shelf, changing it from a standing wave to a wave that progresses coastward and decreases the interference on the amplitude of the offshore progressive wave traveling seaward. Model studies, using a two-layer system of fresh water and saline water in a 9.9 m-long channel, gave favorable results relative to the theoretical results. (Sinha-OEIS)

A NOTE ON EDGE WAVES IN A STRATIFIED FLUID,
Massachusetts Inst. of Tech., Cambridge. Dept. of Mathematics.
H. P. Greenspan.
Studies in Applied Mathematics, Vol 49, No 4, p 381-388, December 1970. 2 fig, 6 ref. F44620-67-C-0007.

Descriptors: *Stratification, *Beaches, *Waves (Water), Equations, Density.
Identifiers: *Edge waves.

Ursell's solutions are generalized so that they apply to a stratified fluid in which the density increases exponentially with depth. Explicit solutions are given for edge waves on a sloping beach. The lowest mode, Stoke's edge wave, is found to be completely insensitive to the density field. Compared with the case of constant density, 'stratified' edge waves are found to exist in a much wider range of conditions. The higher modes show that previous restrictions on slope angle no longer apply. (Sinha-OEIS)

BEACH EQUILIBRIUM AND SECOND-ORDER WAVE THEORY,
Johns Hopkins Univ., Baltimore, Md. Dept. of Mechanics and Materials Science.
D. R. Wells.
Journal of Geophysical Research, Vol 72, No 2, p 497-504, January 15, 1967. 3 fig, 16 ref, 2 append.

Descriptors: *Beaches, Equilibrium, *Waves (Water), *Sedimentation, *Coasts, *Sediment transport, Gravity waves.

The skewness of the probability distribution of the horizontal water velocity of second-order gravity waves is derived in order to investigate the stability of sand beaches. If the distribution is skewed toward the beach, sand may accumulate; whereas if it is skewed away from the beach, sand may be swept seaward. A neutral line is defined where the skewness is zero, and computation show that it cannot occur shoreward of the point where the depth-to-wavelength ratio is approximately 0.090. These results explain in a precise manner some observed beach equilibrium phenomena. (Sinha-OEIS)

LONG SURF,
Brown Univ., Providence, R.I. Div. of Applied Mathematics.
D. V. Ho, R. E. Meyer, and M. C. Shen.
Technical Report No. 4, March 1963. 17 p, 3 fig, 3 plates, 10 ref. ONR Nonr 562 (07), 562 (34).

Descriptors: *Surf, Mathematics, Models, *Waves (Water), *Beaches, *Coasts.
Identifiers: Breakers, Swell, Long surf.

A digest of a mathematical investigation on surf due to long swell is offered to present the assumptions and conclusions in a form usable by the experimental physicist. The results so far obtained are mainly qualitative, but quite detailed in some respects, and radically different from the results of earlier analyses. Some new observational material is also presented. It appears that a simple, non-linear model is capable of describing the essence of the whole phenomenon -- breaker formation, breaker collapse, run-up and back-wash -- for a quite representative type of surf. (Sinha-OEIS)

THE TRANSVERSE CIRCULATION NEAR A COAST,
Florida State Univ., Tallahassee. Dept. of Mathematics; and Florida State Univ., Tallahassee. Geophysical Fluid Dynamics Inst.
S. L. Blumsack.
Journal of Physical Oceanography, Vol 2, No 1, p 34-40, January 1972. 3 fig, 7 ref. NO0014-68-A-0159, NSF-GA-27560.

Descriptors: *Coasts, *Water circulation, *Boundary processes, Stratified flow, Rotational flow.
Identifiers: Length scale relationships, Transverse circulation.

The structure of the steady transverse circulation of a rotating stratified fluid on an f plane is analyzed in two stages. First, a length scale analysis is performed, giving the relationships between the vertical and horizontal length scales. Then an idealized problem in which there is an offshore Ekman transport near a coast is solved, giving the detailed structure of the transverse circulation. Boundary layer structures which decay algebraically are found from the formal solution. (Sinha-OEIS)

EDGE WAVES OVER A SLOPING BEACH IN A ROTATING TWO-LAYERED SYSTEM,
Florida State Univ., Tallahassee. Oceanographic Inst.
H. Iida, and T. Ichiye.
Prepared for Office of Naval Research. Technical Report No. 4, April 1963. 34 p, 5 fig, 2 tab, 13 ref, 1 append. ONR Nonr-988 (11).

Descriptors: *Beaches, *Slopes, Models, *Waves (Water), Currents (Water), *Shallow water, Sea level, Equations.
Identifiers: Edge waves, Geostrophic currents.

A mathematical analysis of a model describing edge waves over a sloping beach in a rotating two-layered system is described. It is assumed that geostrophic currents in the upper and lower layers have uniform velocities owing to the surface elevation increasing linearly from the coast. Though such an infinite uprise of sea level seems unrealistic, the waves considered have amplitudes significant only near the coast and the simplified model is justified. Slopes of surface and the interface are assumed so small that the approximation of hydrostatic pressure is valid as shown by Eckhart (1951). (Sinha-OEIS)

EXPERIMENTAL STUDY OF WAVE REFLECTION BY A SLOPING BEACH,
Tokyo Univ. (Japan). Ocean Research Inst.
K. Taira, and Y. Nagata.
Journal of the Oceanographical Society of Japan, Vol 24, No 5, p 242-252, October 1968. 15 fig, 7 ref.

Descriptors: *Beaches, *Coasts, *Waves (Water), Gravity waves, Energy loss, Slopes.
Identifiers: *Wave reflection, Phase difference.

Wave reflection by a sloping beach was studied with small-scale gravity waves in a small wave-tank 4 m long. The breaking of small-scale waves is much different from that observed on natural ocean beaches or in experimental tanks using large-scale waves. In a small tank, the waves lose their energy by generating capillary waves several millimeters in length at wave fronts near the shoreline. However, the dependence of the reflection coefficient on beach slope and on wave steepness are similar to those for large-scale waves, and the critical beach slope for wave breaking at a given deep wave steepness can be predicted by Miche's theory. The difference occurs only in the slope range just larger than the critical beach slope where the small-scale waves lose a significant amount of their energy without breaking. The capillary waves which are generated near the shoreline and propagate offshore seem to have an important role in this energy loss. The phase difference between the incident and reflected waves at the toe of the beach was also examined. The phase difference does not depend on wave steepness but depends on the ratio of wave length to beach length. The experimental results show that the phase differnce is proportional to kL for a wide range of kL. For small values of kL, the experimental values agree with the calculated values based on a simple model. (Sinha-OEIS)

WAVE-INDUCED WATER PARTICLE MOTION MEASUREMENTS,
Naval Postgraduate School, Monterey, Calif.
R. F. Krapohl.
Available from NTIS, Springfield, Va., 22151, AD-756 577 Price $3.00 printed copy; $1.45 microfiche. M Sc Thesis, December 1972. 61 p, 6 fig, 4 tab, 19 ref.

Descriptors: *Waves (Water), *Ocean waves, *Model studies, *Movement, Flow rates, Depth, Velocity, Flow measurement, Current meters, Winds, Equations.
Identifiers: *Water particle motion, Wave-induced water, Wave spectra.

During June 8, 1972 records of orthogonal water particle velocity and instantaneous water elevation were measured at the Naval Undersea Research and Development Center (NUC) tower located approximately 1 mile off Mission Beach, California. Simultaneous measurements of wave height and two orthogonal water particle velocities were made at six elevations in 19 meters of water using a penetrating wave staff and an electromagnetic flowmeter. Moderate swell and low wind conditions prevailed during the experiment. The measured wave-induced velocities were 2%-4% greater than those predicted using linear wave theory. Coherence of the wave height and wave-induced velocities in the significant energy-density range was computed to be over 0.85, indicating that the motion was almost totally wave induced. At higher frequencies it was apparent that the motion was primarily turbulence. Phase spectra computed for the measured wave heights and orbital velocities compared very well with linear theory. Measured frequency distributions were compared to both Gaussian and Gram-Charlier distributions using the chi-squared goodness-of-fit test. Qualitatively, the Gram-Charlier distribution gave the better fit to the data. (Woodard-USGS)

Available from NTIS, Springfield, Va 22151 as AD-758 905 Price $3.00 printed copy; $1.45 microfiche. Report HEC-IHD-200, April 1972. 213 p, 11 fig, 6 tab, 12 ref.

Descriptors: *Water resources development, *Hydrologic data, *Data processing, *Computer programs, *Streamflow, Stochastic processes, Correlation analysis, Methodology, Runoff, International Hydrological Decade, Hydraulic engineering, Data storage and retrieval, Regional analysis.

This volume (vol 2) is part of a 12-volume report entitled, 'Hydrologic Engineering Methods for Water Resources Development,' prepared as part of the U.S. Army Corps of Engineers' participation in the International Hydrological Decade. Volume 2 describes methods and procedures for managing hydrologic data in a systematic manner, techniques for estimating missing portions of hydrologic records, and techniques for generating synthetic hydrologic data. A generalized computer program description, 'Monthly Streamflow Simulation,' is included. This program will analyze monthly hydrologic data at a number of interrelated stations, generate sequences of hypothetical hydrologic data, and reconstitute missing hydrologic data on the basis of concurrent data observed at other locations. LONGSHORE CURRENT GENERATION BY OBLIQUELY INCIDENT INTERNAL WAVES,
Massachusetts Inst. of Tech., Cambridge.
N. G. Hogg.
Geophysical Fluid Dynamics, Vol 2, No 4, p 361-376, September 1971. 2 fig, 5 ref. Nonr 1841 (74) and Nonr 3963 (31).

Descriptors: *Internal waves, Shores, *Beaches, *Waves (Water), *Coasts, *Shallow water.
Identifiers: *Breaker zone, Vertical eddy motions, Longshore currents, Viscous stresses, *Internal gravity waves.

A significant longshore current of maximum amplitude v ± (30,000/v)cm/sec-1 (for typical oceanic values) can be forced between the breaker zone and shore by internal gravity waves obliquely incident on a plane beach. In the mean longshore momentum balance Reynolds stress terms appear which can be calculated to O (alpha), alpha being a bottom slope parameter, using a WKB approach. With appropriate assumptions being made about the amplitude behavior of the motion after breaking, the divergence of these stresses does not vanish and forces a current whose magnitude is determined by a balance with viscous stresses derived from vertical eddy motions. Descriptors: *Permeability, Aquifer characteristics, *Aquifer testing, Wells, *South Dakota, Sandstones, Theis equation, Pumping.
Identifiers: Dakota Formation (SDak), Lakota Formation (SDak), *Cretaceous sandstones.

A pump test was conducted in the Dakota Sandstone at Wall, South Dakota, on October 7, 1972. Two observation wells responded to the pumping, and an average value of permeability was calculated to be 9.42 gpd/sq ft. No deviation from the Theis type curve was observed during the 44 hours of pumping at 120 gpm. A pump test was conducted on a new well at Box Elder, South Dakota, on July 6, 1972. The well was pumped at 110 gpm for 54 hours and the recovery was documented. The resulting calculation of permeability is 7.06 gpd/sq ft. (Wiersma-South Dakota)

DETERMINATION OF THE TOTAL STORAGE CAPACITY OF THE CRETACEOUS SANDSTONE AQUIFERS IN SOUTH DAKOTA,
South Dakota School of Mines and Technology, Rapid City. Dept. of Geology and Geological Engineering.
J. P. Gries, W. J. Sick, and R. K. Baker.
Available from the National Technical Information Service as PB-225 122/1, $2.75 in paper copy, $1.45 in microfiche. South Dakota State University, Brookings, Water Resources Institute Completion Report, June 1973. 13 p, 6 fig, 17 ref. OWRR A-031-SDAK (1). 14-31-0001-3842.

Descriptors: *Porosity, *Water storage, *Sandstones, Aquifer characteristics, *South Dakota, Wells, Stratigraphy.
Identifiers: Dakota Formation (SDak), Fall River Formation (SDak), Lakota Formation (SDak), Newcastle Formation (SDak).

Sandstones were divided into three stratigraphic units; where Skull Creek Shale separates the Lakota and Fall River Formations from the overlying Newcastle-Dakota Formations formed two units, the third is east of the Skull Creek Shale pinchout where the formations merge into the Dakota Formation. Thicknesses of effective sandstone within each unit were determined from resistivity and spontaneous potential logs. Data from about 380 wells were used. An isopach map of effective sandstone thickness was prepared for each unit. Porosities of the effective sand units west of the Skull Creek zero line were determined from sonic and bulk density logs. Isoporosity maps were prepared using data from about 150 wells. By superimposing effective sand and porosity maps, a total volume of porosity figure was calculated. A total of 1.3 billion acre-feet of water storage capacity was determined for the Fall River-Lakota interval, and 977,800 acre-feet for the Newcastle-Dakota sandstones. East of the Skull Creek zero line, no sonic or bulk density logs were available. A porosity value of 25 percent was applied to the total thickness of effective sandstones, giving an estimated storage capacity of 360 million acre-feet for the sandstones of the Dakota Formation. Descriptors: *Groundwater movement, *Unsteady flow, *Mathematical models, Numerical analysis, Hydrogeology, Aquifer characteristics, Surface-groundwater relationships.
Identifiers: *Iceland.

Unsteady groundwater flow in an aquifer of limited horizontal extent and arbitrary boundary shape is described by a differential equation, the solution of which includes the solution of an eigenvalue problem by a numerical method. Boundary conditions are provided by nature in the form of watertight rocks, rivers, lakes or any kind of constant water level in hydraulic contact with the aquifer. The runoff behaves as a sum of flows through infinitely many linear reservoirs, corresponding to the eigen functions. The resulting equations for groundwater level and runoff discharge are sums of convolution integrals of the infiltration, an easy process to handle in a digital computer. The mathematical model derived was used to analyze the inflow into a water reservoir in Iceland from a nearby lava field. (Knapp-USGS)

An interdepartmental All-Union conference devoted to regional dynamics of artesian water and hydrodynamics of deep zones of artesian basins was held in Leningrad November 28-December 1, 1972. Conference participants included more than 350 delegates from approximately 60 scientific institutes, industrial organizations, and educational establishments. Twenty of the 116 papers of the conference were presented at two plenary sessions and the remaining papers were presented at sectional meetings. Among the topics discussed were: regional dynamics of artesian basins in ancient and recent platforms and folded-mountain regions; relation between vertical and lateral movement of groundwater;role of tectonic factors; origin of anomalously high and low groundwater pressure heads; contribution of folded-mountain structures to the alimentation of deep artesian horizons; and new proposals for the classification of artesian basins. Descriptors: *Drawdown, *Groundwater movement, Withdrawal, Acquifers, Water yield, Water level fluctuations, Equations, Discharge (Water), Unsteady flow, Artesian aquifers, Artesian wells.

The exact solution for the drawdown in and around a well in a homogeneous, isotropic, and confined aquifer is presented for well discharge as a function of time. The effect of the storage capacity of the well is also taken into consideration. Two types of flow rate functions are studied, namely linear and exponential functions, and the results are plotted in graphs. A nonflowing well of finite diameter in a homogeneous, isotropic confined aquifer of uniform thickness is considered under the assumption that the well screen penetrates the entire artesian aquifer. A DISTRIBUTED HYDROLOGICAL MODEL BASED ON THE CONCEPT OF GROUNDWATER RECHARGE, TRANSMISSION, AND DISCHARGE,
Department of the Environment, Ottawa (Ontario). Inland Waters Branch.
D. W. Lawson.
J Hydrol (Dunedin). Vol 10, No 2, p 133-140. 1971. Illus.
Identifiers: Discharge, Equations, *Groundwater recharge, *Hydrological models, Model studies, Moisture zone, Recharge, Soils, Transmission, *Groundwater movement.

A conceptual model is proposed which is distributed on the basis of groundwater flow systems. The fundamental unit of the model is a vertical section in which 4 groundwater regions are distinguished: a recharge region, a transmission region, a discharge region and a bank storage region. Each region is subdivided into a groundwater zone and a soil moisture zone. The storage and transmission equations are formulated, and a procedure is outlined for routing precipitation through the model.--Copyright 1973, Biological Abstracts, Inc.

Identifiers: *Kent County (Tex), *Stonewall County (Tex), Electrical sounding, Salt springs, Seeps.

Fifteen electrical soundings were made near the Salt Fork of the Brazos River in Texas using the Schlumberger and equatorial electrode arrays to evaluate the usefulness of the direct-current resistivity method in determining the depth of a freshwater-saltwater interface in a geologic setting containing gypsum and anhydrite layers. The sounding data were interpreted by curve matching and computer modeling, and indicate that the resistivity method is useful where the interface lies above the gypsum series and also where the effective relative conductance of the brine-saturated layers below the gypsum layers is large. This type of successful application was obtained from soundings made near the town of Jayton and also in an area approximately 7 miles west of Aspermont. Near the town of Girard, the freshwater-saltwater interface was difficult to detect because of the presence of high-resistivity anhydrite beds that lie directly beneath the interface. In the immediate vicinity of Aspermont and north of Old Glory, preliminary interpretation of the sounding data indicates the presence of brackish- to freshwater-saturated sedimentary rocks. TRANSIENT MOVEMENT OF WATER AND SOLUTES IN UNSATURATED SOIL SYSTEMS,
Arizona Univ., Tucson. Dept. of Hydrology and Water Resources.
A. K. Tyagi, D. D. Evans, H. K. Qashu, and A. W. Warrick.
Available from the National Technical Information as PB-225 119/7, $3.00 in paper copy, $1.45 in microfiche. Project Completion Report, September 1973. 31 p, 15 fig, 2 tab, 3 ref. OWRR B-020-ARIZ (4). 14-31-0001-3555.

Descriptors: *Soil water movement, *Finite element analysis, *Solutes, *Salts, Dispersion, *Soil moisture, Simulation analysis, Infiltration, Drainage.
Identifiers: *Unsaturated soil.

The movement of moisture content and dispersion of salts in unsaturated groundwater systems were studied. The subject was studied as both a hydrologic phenomenon and as a dispersion phenomenon caused by the quantity and the rate of application of water, together with solutes. From theoretical considerations, equations were derived to predict the moisture contents and the concentrations as a function of time and space. Finite element solutions were obtained for a composite system of moisture content and water quality. The generalized programs are capable of simulating and predicting the transport and distribution of solutes in water, under a variety of boundary conditions in the field and laboratory. In order to verify the simulation process of the developed numerical models, laboratory experiments were conducted. Natural soils, coarse sand, and fine sand were used as porous media in the column experiments. In the column, ten stations at 10-centimeter depth intervals were fixed for observation of moisture content, suction head, and concentration of solute in the water. Ten experiments for the infiltration and drainage conditions were performed. The observed data on moisture content and concentration for one-dimensional cases are in agreement with the finite element solutions.

PHYSICAL PROPERTIES OF SOME VOLCANIC-ASH DERIVED SOILS OF THE HIGHLANDS OF PASTO, NARINO, COLOMBIA, (IN SPANISH),
Narino Univ., Pasto (Colombia). Facultad de Ciencias Agriculturas.
G. Escovar, R. Jurado, and Ricardo Guerreo R.
Turrialba. Vol 22, No 3, p 338-346. 1972. Illus. (English summary).
Identifiers: *Colombia (Pasto Highlands), Density, Highlands, Index, Plasticity, Porosity, Soils, Stability, Texture, *Volcanic ash, *Soil physical properties.

Determinations were made on texture, densities, porosity, plasticity, water stability of aggregates and humidity retention capacity (humidity critical points). The soils presented dominance of sand and silt over clay. Porosity and retention capacity of humidity were very low and apparent density very high in comparison with those obtained from volcanic soils of Latin America, USA and Japan. Their plasticity index was relatively low and their aggregation ratio very high. Apparently, the soils from the Altiplano of Pasto have not reached the development of the typical 'andosol.' Studies of statistical correlation indicated that organic matter markedly influences most of the physical properties studied. It increased porosity, aggregation and humidity retention capacity and it decreased plasticity.--Copyright 1973, Biological Abstracts, Inc.

EFFECT OF THE QUALITY OF WELL WATERS ON SOILS IN GURGAON DISTRICT,
Haryana Agricultural Univ., Hisser (India). Dept. of Soils.
H. R. Manchanda, and J. S. Kanwar.
Haryana Agric Univ J Res. Vol 1, No 2, p 1-10, 1971.
Identifiers: Adsorption, *Electrical conductivity, *India (Gurgaon district), Irrigation, Sodium, Soils, *Well water, Water quality, *Soil chemical properties.

Palwal and Bawal, Na percentage and Na/Ca + Mg ratio increased with soil depth in soils irrigated by the B-category (bad) waters, whereas, the reverse was true in soils receiving the A-category (good) waters. The electrical conductivity was maximum at 0-15 cm and minimum at 15-30 cm soil depth, irrespective of the quality of irrigation water. The A-category waters of Gurgaon and Nuh had about 2 times more electrical conductivity (EC) than the B-category waters, but their continuous use did not increase the salt content of the soil. The A-category waters of these soils were the best for irrigation purposes, because of high NO3 and K content particularly for the light textured soils. Significant correlations were obtained between the EC and Na adsorption ratio (SAR) of irrigation waters and the soils irrigated. SAR of water was also significantly associated with the exchangeable Na percentage (ESP), SUGGESTED THAT THE EC and SAR of irrigation water were good indices for predicting salt and Na accumulation in soil.--Copyright 1973, Biological Abstracts, Inc.

SOIL AERATION RESPONSE TO DRAINING INTENSITY IN BASIN PEAT,
Northern Forest Research Center, Edmonton (Alberta).
J. C. Lees.
Forestry (Oxf). Vol 45, No 2, p 135-143. 1972, Illus.

Identifiers: *Aeration, Draining, Forestation, *Oxygen diffusion, Peat, Pinus-Contorta-Var-Latifolia, Polarography, *Scotland (Flanders Moss), *Soil aeration.

Improvement in soil aeration was assessed following draining to a range of intensity on a peatland afforestation project at Flanders Moss in Central Scotland. A polarographic technique was used to measure O2 diffusion rates in the rooting zine of lodgepole pine (Pinus contorta Dougl. var. latifolia Engelm.) planted in 1965 on plowed furrows. There were soil aeration differences because of draining intensity. Below the planting turf O2 diffusion rates rapidly decreased and tree rooting was restricted to the surface layers. Aeration was found to be closely correlated with depth of water in boreholes which provide a simple and reliable index of response to draining. O2 diffusion rate was a more sensitive means of assessing soil aeration than oxidation-reduction potential at the low O2 concentrations encountered in the basin peat on the Moss.--Copyright 1973, Biological Abstracts, Inc.

PHYSICAL EDAPHOLOGY. THE PHYSICS OF IRRIGATED AND NONIRRIGATED SOILS,
S. A. Taylor.
W. H. Freeman and Co.: San Francisco, Calif., 1972. (Revised and edited by G. L. Ashcroft). 533 p, Illus. Pr. $17.50.
Identifiers: Atmosphere, *Edaphology, Energy, *Irrigated soils, *Nonirrigated soils, *Soil physical properties.

The interactions of soil physical processes and conditions with the atmospheric environment and the growing plant are discussed. Subjects include the foundations of irrigation science, climatic factors and evapotranspiration, the physical properties of water, the colloidal system, the soil solids, energy relations of soil water, water movement, measurement, retention and flow in field soil. Soil structure, aeration and temperature and irrigation are discussed. Appendixes containing dimensions and units for physical quantities, conversion factors and values for selected physical constants are included.--Copyright 1973, Biological Abstracts, Inc.
W74-01572

A RELIABLE AND INEXPENSIVE SOIL FROST GAGE,
Massachusetts Univ., Amherst. Dept. of Forestry and Wildlife Management.
B. O. Wilen, W. P. MacConnell, and L. F. Michelson.
Agron J, Vol 64, No 6, p 840-841, 1972.
Identifiers: Electrical resistance, *Frost, *Gages, Gypsum, Resistance, *Soil frost gages, Instrumentation.

The fabricated gypsum electrical resistance blocks proved their reliability as soil frost measuring devices. The difference in the electrical resistance between frozen and unfrozen soil is great enough to give a reliable indication of whether or not the soil is frozen. The blocks measure the physical state of the soil water inside them, independent of the temperature of the soil water in the blocks. The blocks will measure subsurface frost when the surface soil is unfrrozen. Since the blocks are small, they respond quickly to freezing and thawing of a relatively limited test area. The fabricated gypsum electrical resistance blocks should be of great value in frost measurement because the units are inexpensive, easy to construct, and last at least 2 yr in field use.--Copyright 1973, Biological Abstracts, Inc.
W74-01574

EFFECT OF PORTLAND CEMENT ON SOIL AGGREGATION AND HYDRAULIC PROPERTIES,
Purdue Univ., Lafayette, Ind. Agricultural Experiment Station.
L. R. Ahuja, and D. Swartzendruber.
Soil Sci, Vol 114, No 5, p 359-366, 1972, Illus.
Identifiers: *Cement (Portland), Diffusivity, *Hydraulic properties, *Soil aggregation, Water.

The effect of addition of small quantities of portland cement on the water-stable aggregates, the saturated hydraulic conductivity, the soil-water characteristic, and the unsaturated soil-water diffusivity of a silt loam soil are evaluated. Cement was intimately mixed with air-dry soil at a rate of 0.475%, 0.95% or 1.90% by weight, and the mixture was kept in moist condition for 32 hr, 7 days, 14 days or 28 days. The aggregate indicated a beneficial effect of cement application increasing with the rate and the duration of moist-curing. The amount of water-stable aggregates in the cement-treated soil increased as much as 3-fold, and the aggregation index increased as much as 8-fold, as compared with the moist-cured no-cement control. Most of the beneficial effect was achieved with 1% cement and 14 days duration of moist-curing. The saturated hydraulic conductivity of the treated samples was not much different from that of the control initially, but as the water flow continued for 12 hr the conductivity of the control decreased to 1/2 its initial value while the conductivities of the treated samples slightly increased. The water-retention curve measured for the soil treated with 1.90% cement showed a small decrease in the water retained between 50 cm and 200 cm suctions. The unsaturated soil-water diffusivity of the treated sample was practically the same as that of the control.--Copyright 1973, Biological Abstracts, Inc.
W74-01576

NITRATE REDUCTION IN SOILS: EFFECT OF SOIL MOISTURE TENSION,
Louisiana State Univ., Baton Rouge.
L. Pilot, and W. H. Patrick, Jr.
Soil Sci. Vol 114, No 4, p 312-316. 1972. Illus.
Identifiers: Moisture, *Nitrate reduction, Potential, Redox, Reduction, *Soil moisture tension, Soils, *Mississippi, *Soil aeration.

Nitrate reduction was very marked in the low moisture tension range for the 3 Mississippi River, alluvial soils studied, especially during the first 36-48 hrs of incubation. Critical moisture tension values specific to each soil were observed at which a small decrease in moisture tension caused a sharp increase in the rate of nitrate reduction. At tensions above these critical values (about 20 cm for the Crevasse soil and between 30 and 40 cm for both the Commerce and Mhoon soils) no nitrate loss occurred. The effect of moisture tension was in governing the air-filled porosity of the soil which in turn regulated the aeration of the soil. The critical values of air-filled porosity were 11% in the Crevasse soil, 12% in the Commerce soil and 14% in the Mhoon soil. Air-filled porosities this high and higher allowed oxygen to diffuse completely through the soil cores, kept the redox potential at high values and prevented nitrate loss. A very small amount of oxygen completely penetrating the soil core was sufficient to prevent dentrification. There was no evidence of nitrates being reduced under aerobic conditions.--Copyright 1973, Biological Abstracts, Inc.
W74-01583

DESORPTION AND DISSOLUTION OF SALTS FROM SOILS AS A FUNCTION OF SOIL WATER RATIO,
Goettingen Univ. (West Germany). Inst. of Soil Science and Food Nutrition.
B. Ulrich, and P. K. Khanna.
Soil Sci. Vol 114, No 4, p 250-253. 1972. Illus.
Identifiers: Desorption, Dissolution, *Salts, *Soil water ratio, Soils, *Cation concentration (Soil), Adsorption.

In 4 soils of low C content and different pH, the concentrations of the different cations in the soil solution were determined at solution volumes of 0.27-20 ml/g after equilibrating for 24 hr. Up to solution volumes of 0.6-0.8 ml/g soil, the cation concentration in the soil solution is determined by salt desorption; at higher solution volumes dissolution processes are governing. The salt adsorption in the 4 soils amounts to around 2 micro eq/g clay plus silt. The lower the intensity of the exchangeable binding of a cation, the greater is its fraction, which is present not in exchangeable but in adsorbed form. Due to the existence of adsorbed salt in soils, exchangeable cation determination bears a systematic error. Equilibrium soil solution should be taken only from samples with solution volumes less than 0.6-0.8 ml/g soil.--Copyright 1973, Biological Abstracts, Inc.

STUDY OF SOIL PLASTICITY OVER A WIDE RANGE OF SOIL MOISTURE CONTENTS,
Azove-Chernomorskii Selskokhozyaistvennyi Institut, Rostove-na-Donu (USSR).
M. B. Minkin, A. G. Kalmykov, and N. I. Buravchuk.
Soviet Soil Science, Vol 4, No 5, p 600-604, 1972. 1 fig, 1 tab, 11 ref. Translated from Pochvovedeniye, No 10, p 121-125, 1972.

Descriptors: *Soil mechanics, *Soil water, *Plasticity index, *Soil properties, *Soil moisture, Model studies, Plasticity, Moisture content.

Plasticity is usually understood to mean the capacity of a system to deform without rupture if the shear stress exceeds the ultimate shear stress and retains the new shape when the load is removed. The difference in water content between the upper and lower plastic limits (1.e. the plastic number) is extremely important for developing scientific methods of working the soil and for describing the mechanical properties of soils. The soil plasticity index developed by Volarovich was studied over a wide range of moisture contents. This index (ratio of ultimate shear stress to plastic viscosity) is a very objective method which can describe the plastic properties of a system, not only at separate boundary points, but over the entire range of soil moisture content variations. It

was discovered that the plastic number, which has a strictly physical basis, most accurately reflects the structural mechanical properties of soils at the plastic limits. Solonetz soils, typically halomorphic in character, and found in arid regions, are included in the sampling. (Black-Arizona)

COASTAL PROCESSES AND BEACH DYNAMICS AT SHEBOYGAN, WISCONSIN, JULY, 1972,
Williams Coll., Williamstown, Mass.
W. T. Fox, and R. A. Davis, Jr.
Available from NTIS, Springfield, Va., 22151 as AD-760 348 Price $3.00 printed copy; $1.45 microfiche. Technical Report No 10, April 3, (1973). 94 p, 35 fig, 23 ref, 3 append. ONR-GP Contract N00014-69-C-0151.

Descriptors: *Stroms, *Weather patterns, *Great Lakes, Data collections, Model studies, Winds, Waves (Water), Fog, Shores, Currents (Water), Upwelling, *Lake Michigan, Weather forecasting, Meteorological data, *Wisconsin.

During July 1972, a field study was conducted near Sheboygan, Wisconsin on the western shore of Lake Michigan to contrast coastal processes when storms move offshore with those encountered when storms move onshore on the eastern side of the lake. During the summer, the storms generally follow a path from west to east across the Great Lakes. Southwest winds build up the highest waves and strongest longshore currents on the east side of the lake. Winds from the south, blowing along the western shore, result in upwelling of cold water on the western side of the lake. The seabreeze effect is much stronger and fog more common along the western shore. The study area had a sinuous shoreline with a wavelength of 1000 feet and an amplitude of 30 feet. Crescent-shaped bars enclosing troughs approached the shore at the horns of the crescent. During high wave energy, the bars migrated within the study area, but the same general nearshore pattern was maintained. A computer simulation model was developed for the eastern shore of Lake Michigan which will be tested and modified for the western shore. (Woodard-USGS)

INTERNATIONAL FIELD YEAR FOR THE GREAT LAKES.
National Oceanic and Atmospheric Administration, Rockville, Md.

International Field Year for the Great Lakes Bulletin No 7, July 1973. 91 p, 13 fig, 8 tab.

Descriptors: *Hydrologic data, *Great Lakes, *International waters, *Canada, *United States, International Hydrological Decade, Surface waters, Erosion, Groundwater, Meteorological data, Climatology, Water temperature, Remote sensing, Aerial photography, Weather patterns, Winds, Humidity, Bathymetry, Aircraft, Ships, Data collections, Methodology, Instrumentation.

This bulletin summarizes data collected by Canada and the United States as part of the International Field Year For The Great Lakes (IFYGL) program. The data submitted by Canada are: groundwater erosion along part of the north shore of Lake Ontario (IFYGL Project 38 TW); analysis of energy fluxes by aerodynamic methods (IFYGL Project 44 BL); meteorological buoy measurements (IFYGL Project 97 BL); determination of temperature and current climatology relevant to cooling water intake locations for the proposed Ontario Hydrogenerating Stations (IFYGL Project 110 WM); A.R.T. surveys of Lake Ontario summary of flight operations (IFYGL Project 16 ME); bathymetric survey of Lake Ontario and positioning system evaluation (IFYGL Project 79 F); and wind temperature and humidity fluctuations (IFYGL Project 75 BL). The data submitted by the United States are: comments by the U.S. Director; U.S. scientific program--tawks, project areas; operations and data acquisition systems; data management--physical data collection system data, rawinsonde data; and IFYGL rawinsonde system operation. (Woodard-USGS)

PRODUCTION OF CRUSTACEAN ZOOPLANKTON IN MOTY BAY, LAKE JEZIORAK: II. ESTIMATION OF PRODUCTION OF THE PREDOMINATING SPECIES,
Nicolas Copernicus Univ. of Torun, Ilawa (Poland). Dept. of Hydrobiology.
W. Zawislak.
Pol Arch Hydrobiol. Vol 19, No 2, p 193-202. 1972. Illus.
Identifiers: *Crustacean zooplankton, Lakes, Methodology, Plankton, *Poland (Lake Jeziorak), *Production, Species, *Winberg formulas, Zooplankton.

Crustacean zooplankton production was estimated during 5 mo. (May 2-Nov. 7, 1969) in a shallow and slightly eutrophized Bay Moty, Lake Jeziorak, Poland. Production was computed by 2 methods: Winberg et al. (1965), and Winberg's method modified by Zawislak (1972). The modified method gave higher values of production of the investigated species. A PROFILE OF THE FOUR MOMENT MEASURES PERPENDICULAR TO A SHORE LINE, SOUTH HAVEN, MICHIGAN,
Williams Coll., Williamstown, Mass.
W. T. Fox, J. W. Ladd, and M. K. Martin.
Journal of Sedimentary Petrology, Vol 36, No 4, p 1126-1130, December 1966. 2 fig, 1 tab, 5 ref.

Descriptors: *Lake Michigan, *Sediment transport, Sand bars, *Energy, *Topography, *Statistics, Environments, *Beaches, *Waves (Water), *Coasts.
Identifiers: Nearshore processes.

A series of fourteen samples was taken along a profile crossing a beach, berm, foreshore slope, plunge point, nearshore, offshore bar, and offshore area to study the changes in the first four moments. The mean grain size and standard deviation reached a maximum in the plunge zone and were also high on the offshore bar. Skewness and kurtosis values were highest in the nearshore and offshore area. The beach represents a phi normal distribution of fine sand which is mixed with varying amounts of coarser material to form the sediments in the other environments. The four moments reflect the bottom topography and the dissipation of wave energy across the profile. The wave energy is first released on the sand bar where the waves break and move into the nearshore area. The bottom profile in the nearshore area is concave upward, representing equilibrium conditions for the waves encountered. In the nearshore area the waves form again but are smaller because of the energy spent in breaking on the offshore bar. The waves once again break at the plunge point, creating an area of maximum turbulence and release of energy. A traverse of closely spaced samples across a shore line is quite effective in interpreting the effects of both wave-energy dissipation and topographic profile on sand-size distribution. The four moments should be considered together in making the final interpretation of the energy profiles. (Sinha-OEIS)

NOTES ON THE DYNAMICS OF THE REPRODUCTIVE ACTIVITY OF ARCTODIAPTOMUS BACILLIFER IN HIGH ALTITUDE ALPINE LAKES,
Parma Univ. (Italy). Istituto di Zoologia e Anatomia Comparata.
I. Ferrari.
Boll Zool. Vol 38, No 3, p 221-225. 1971. Illus.
Identifiers: *Alpine lakes, Altitude, *Arctodiaptomus-bacillifer, *Italy (Bognanco Valley), Lakes, Reproduction, *Diaptomids, Zooplankton.

Zooplankton samples were periodically collected from 3 Alpine lakes in the Bognanco Valley (Piedment, Italy), i.e., Campo 2, 3 and 4 lakes, for 2 yr, 1968 and 1969, during the summer and autumn when the waters are ice free. The dynamics of the zooplankton populations, and principally of A. bacillifer, which is the ecologically dominant species in the zooplankton biocoenosis of all 3 lakes, was studies. In particular, the seasonal variations of mean clutch size of Diaptomids were considered.--Copyright 1973, Biological Abstracts, Inc.

CURRENTS AT TOLEDO HARBOR,
United States Lake Survey, Detroit, Mich.
G. S. Miller.
In: Proceedings 11th Conference Great Lakes Research, Milwaukee, Wisconsin, 1968. p 437-453, (1968), 17 fig, 8 ref.

Descriptors: *Ohio, *Currents (Water), *Wind tides, *Seiches, Surface waters, *Lake Erie.
Identifiers: *Toledo Harbor (Ohio), River discharge.

An investigation of currents at Toledo Harbor, Ohio, was conducted from May through November 1966 using Eulerian and Lagrangian

techniques. The driving forces producing currents in the harbor are wind tides, seiches, and river discharge. The current is a reversing type except during periods of high river outflow. Speed histograms indicate that about 10% of the time the current speed is greater than 15 cm/sec. Spectral analysis of current speed shows that the peaks correspond to the modes of the seiche. Drogue tracks indicate that the mid-channel current is up to 2.5 times greater than that recorded near the channel edge. Opposing currents are occasionally observed because of wind induced surface currents. (Sinha-OEIS)
W74-01214

SOME SOURCES OF ERROR IN THE 14C METHOD FOR ESTIMATING PRIMARY PRODUCTIVITY AND THEIR RELATIONSHIP TO LIGHT INTENSITY DURING INCUBATION,
Kyoto Univ., Otsu (Japan). Otsu Hydrobiological Station.
M. Nakanishi, and F. J. Ward.
Jap J Limnol. Vol 32, No 4, p 85-89. 1971. Illus.
Identifiers: *Carbon-14 method, *Error, Incubation, Intensity, *Japan (Lake Biwa), Light, Methodology, *Primary productivity, Lakes.

Losses in primary productivity estimates caused by desiccation of filters at Lake Biwa, Japan, ranged from 18-52% and were inversely related to the natural logarithms of light intensities during incubation. Losses caused by preservation were variable, depending on filter treatment and radioactivity counting method, but were high in scintillation determinations. Significant fractions of total differences between primary productivity estimates from liquid scintillation counts of immediately filtered wet filters and Geiger-Muller counts of immediately filtered dry filters were associated with over-estimating the relative activity of the C-14 stock solution (from 15-24%). In view of these and other causes for underestimating primary productivity, the 14C method requires further examination.--Copyright 1973, Biological Abstracts, Inc.

Identifiers: Bogs, *Cladoceran, *Copepod, Lakes, Plankton, *USSR (Kolyma basin), *Zoo plankton.

Seasonal dynamics of species composition, biomass and population density of zooplankton were investigated. In June and Oct. copepods dominated in zooplankton, biomass was low (1.70-0.67 g/m3) and population density was average (37.63-35.25 thousands of individuals per 1 m3). In July, Aug. and Sept. cladocerans dominated in zooplankton, biomass was high (10.40-12.99 g/m3). Population density varied considerably (14.38-62.54 thousands of individuals per 1 m3) and was connected with the dynamics of species and size composition of the dominant patterns of zooplankton.--Copyright 1973, Biological Abstracts, Inc.

ZOOPLANKTON IN KOLYMA-INDIGIRKA LAKES (IN RUSSIAN),
G. G. Kirillova, and V. A. Sokolova.
Gidrobiol Zh., Vol 8, No 4, p 82-85. 1972.
Identifiers: Biomass, Lakes, Plankton, Taiga lakes, Tundra lakes, *USSR (Kolyma-Indigirka Lakes), *Zooplankton, *Rotifers, *Copepoda.

The zooplankton population in 14 lakes from the tundra, USSR and taiga zones were analyzed. In the summer 30 species were identified in tundra lakes. According to population, rotifers predominated followed closely by Copepoda. Cladocera were present in smaller quantities. In taiga lakes 101 species were identified. Usually more than 1/2 of the total biomass was comprised of either Cladocera or Copepoda. The biomass was higher in taiga lakes due to different degrees of overgrowing and different temperature conditions.--Copyright 1973, Biological Abstracts, Inc.

THE PLANKTONIC ASSOCIATION (CLADOCERA AND COPEPODA) OF A DIMICTIC LAKE OF THE LAURENTIDES PARK, QUEBEC, (IN FRENCH),
Laval Univ., Quebec.
J. G. Bernard, and R. Lagueux.
Nat Can (Que). Vol 99, No 4, p 381-409. Illus. 1972. (English summary).
Identifiers: Bosmina-Longirostris, *Canada (Lake Bedard), *Cladocera, *Copepoda, Cyclops-Scutifer, Daphnia-Catawba, Diaptomus-Minutus, *Dimictic lake, Distribution, Holopedium-Gibberum, Lakes, Parks, Plankton.

A qualitative and quantitative analysis of the crustacean association of Lake Bedard, Foret Montmorency, Quebec, Canada, was made from samples collected during summers of 1967 and 1968. The Crustacea found in Lake Bedard include 6 spp. of Copepoda and 12 spp. of Cladocera. The most important taxa are the Cladocera Holopedium gibberum, Daphnia catawba, Bosmina longirostris and the Copepoda Diaptomus minutus and Cyclops scutifer. In its vertical distribution, C. scutifer remains isolated from the rest of the association, and is located at 4 and 6 m where it is vertually alone. The other species cohabit in the epilimnion and upper part of the mesolimnion.--Copyright 1973, Biological Abstracts, Inc.

PREDICTION OF THE VARIATION IN THE CHEMISTRY OF A LAKE RESULTING FROM AN INCREASE IN SOLUBLE DEPOSITS: APPLICATION: THE SODIUM IN LAKE NEUCHATEL,
Neuchatel Univ. (Switzerland). Centrahydrogeologie.
L. Kiraly, and B. Kubler.
Bull Soc Neuchatel Sci Nat. 95. p 165-172, 1972, Illus.
Identifiers: Chemistry, Lakes, Minerals, Pollution, Prediction, *Sodium ions, Soluble deposits, *Switzerland (Lake Neuchatel), *Ions.

The increase in salt consumption has increased the quantity of Na ions carried into lakes. Following some hypotheses on the variations in the quantity of salt carried in, results of application of a simplified calculation method for determining the increase in the average Na+ level to Lake Neuchatel (Switzerland) were given. Results showed that the average concentration of Na+ in the lake will stabilize about 20 yr after stabilization of the annual salt influx. The method used is valid for the increase of any inert water-soluble pollutants in a reservoir (inert in the sense of any elements not entering directly into a biocycle such as Cl-, Na+, SO4-2 or in a precipitation cycle such as Fe+3, Al+3, etc.). However the method does not take factors such as ionic diffusion or thermal convections into account.--Copyright 1973, Biological Abstracts, Inc.

FURTHER STUDIES OF FISH PREDATION ON SALMON STOCKED IN MAINE LAKES,
Maine Dept. of Inland Fisheries and Game, Bangor.
K. Warner.
Prog Fish-Cult. Vol 34, No 4, p 217-221. 1972. Illus.
Identifiers: Esox-Niger, *Fish predation, Lakes, Lota-Lota, *Maine, Micropterus-Dolomieui, Micropterus-Salmoides, Perca-Flavescens, Salmo-Salar, Salmo-Trutta, *Salmon stocking, Salvelinus-Namaycush, Stocked.

The role of 13 fish species as predators on newly stocked salmon (Salmo salar) was evaluated for 69 plantings in 36 Maine lakes from 1965-70. Four of the eight warmwater fishes studied preyed on salmon to some degree. Chain pickerel (Esox niger) were the most serious predators on stocked salmon, but pickerel predation was significantly reduced by scatter planting salmon over deep water. Smallmouth bass (Micropterus dolomieui) and largemouth bass (Micropterus salmoides) were also significant predators in some instances. Yellow perch (Perca flavescens) preyed on stocked salmon to a limited extent. Four of the five coldwater species studied preyed on newly stocked salmon. Burbot (Lota lota) appeared to be the most serious potential coldwater predator. Brown trout (Salmo trutta), lake trout (Salvelinus namaycush), and other salmon preyed on newly stocked salmon, but the degree of predation by salmonids is probably not of serious magnitude in most instances.--Copyright 1973, Biological Abstracts, Inc.

DISTRIBUTION AND MORPHOLOGICAL VARIATION OF LAMPSILIS RADIATA (PELECYPODA, UNIONIDAE) IN SOME CENTRAL CANADIAN LAKES: A MULTIVARIATE STATISTICAL APPROACH,
Manitoba Univ., Winnipeg. Dept. of Zoology.
R. H. Green.
J Fish Res Board Can. Vol 29, No 11, p 1565-1570. 1972.
Identifiers: *Anodonta-Grandis, *Canada, Distribution, Lakes, *Lampsilis-Radiata, *Morphological variation, Pelecypoda, Statistical methods, Unionidae.

Discriminant analysis performed on 62 samples containing Anodonta grandis and 52 samples containing L. radiata collected from 19 lakes in central Canada indicated separation in terms of an environmental factor which was interpreted as suitability of water chemistry for construction of shell. A canonical correlation analysis on morphological and environmental variables for 70 specimens of L. radiata yielded 2 highly significant canonical variates which related components of environmental variation to components of morphological variation. One was interpreted as variation in water turbulence, which primarily affected overall size. The other was similar to the factor which separated A. grandis from L. radiata and was interpreted similarly. Shell weight, or thickness, rather than overall size, was affected. Environments were successfully predicted for shells from 2 locations not included in the original analysis.--Copyright 1973, Biological Abstracts, Inc.

NUMBER AND SIZE OF DRIFTING NYMPHS OF EPHEMEROPTERA, CHIRONOMIDAE, AND SIMULIDAE BY DAY AND NIGHT IN THE RIVER STRANDA, WESTERN NORWAY,
Bergen Univ. (Norway). Zoological Museum.
I. Steine.
Nor Entomol Tidsskr. Vol 19, No 2, p 127-131. 1972. Illus.
Identifiers: *Chironomidae, Drifting fauna, *Ephemeroptera, *Norway (River Stranda), *Nymphs, Rivers, *Simuliidae, Size, Western.

Observations on the drift fauna in River Stranda (Voss, western Norway) were carried out in Aug. 1969. Quantitative samples were taken at hourly intervals throughout a 24-hr period at 2 different localities in the River Stranda. The nymphs of Ephemeroptera, Chironomidae, and Simuliidae were most abundant. The body size of drifting nymphs of the Ephemeroptera varied according to the time of day, with small individuals making up the population during day-time and larger animals at night. No such diurnal change was observed in the case of the Chironomidae and Simuliidae.--Copyright 1973, Biological Abstracts, Inc.

THE EFFECT OF SAND DEPOSITION UPON THE MACRO-INVERTEBRATE FAUNA OF THE RIVER CAMEL, CORNWALL,
Cornwall River Authority, Launceston (England).
P. M. Nuttall.
Freshwater Biol. Vol 2, No 3, p 181-186. 1972, Illus.
Identifiers: Baetis-Rhodani, Deposition, *England (River Camel), *Fauna (Invertebrates), Rhitrogena-Semicolorata, Rivers, *Sand deposits, Erosion, Tubificidae.

Erosion from a tributary of the River Camel (England) deposited an estimated 10,000 m3 of sand in the main river over a period of 2 yr. The poor incidence of plants and macro-invertebrates from the river was associated with the unstable shifting nature of the sand deposits, rather than turbidity or abrasion caused by particles in suspension. Sand deposition accounted for the low diversity of

invertebrate species below the tributary, and resulted in the elimination of several species which were frequent upstream. Baetis rhodani, Rhithrogena semicolorata, and Tubificidae were abundant where sand deposition had occurred.--Copyright 1973, Biological Abstracts, Inc.

BIOLOGY OF THE ALABAMA SHAD IN NORTHWEST FLORIDA,
Florida Dept. of Natural Resources, St. Petersburg, Marine Research Lab.
J. G. Mills, Jr.
Fla Dep Nat Resour Mar Res Lab Tech Ser. 68 p 1-24. 1972, Illus.
Identifiers: Alabama, Biology, *Florida (Apalachicola River), Georgia, *Shad (Alabama).

Biology of Alabama shad, Alosa alabamae, in the Apalachicola River, was studied from June 1968-April 1971. Adults enter the river in Feb. and spawn in April. Spawning occurs at 19-22C in moderate currents over bottom of coarse sand and gravel. Fecundity ranges from 61,238-257,655. Gonads of shad entering the river were in ripe condition with stage IV oocytes averaging 1159 micro in diameter. The 1969 collection contained 38.3% repeat spawners while the 1970 collection contained 6.3%. Mean fecundity increased 25.8%, although repeat spawners decreased 32%. Adult males enter the river in larger numbers than females at water temperatures below 72C. Adult shad do not feed during the spawning run. One, two and three yr old shad make the spawning run. Female mean length and weight were 394 mm (TL/total length)) and 737 g while male mean length and weight were 349 mm (TL) and 474 g. Length frequency analysis of juveniles indicate progeny of 3 spawning groups, their origins being the Chipola River, the Cattahoochee-Flint River, and the Jim Woodruff Dam. Most juvenile shad grew 30 mm/mo. Juveniles emigrate from the river at 125 mm (FL/fork length) or in Dec. Sport fishing potential is good since catch frequency is estimated as one shad/rod every 19.72 min.--Copyright 1973, Biological Abstracts, Inc.

AUTECOLOGY OF ATRIPLEX POLYCARPA FROM CALIFORNIA,
Aleppo Univ. (Syria). Faculty of Agriculture.
M. N. Sankary, and M. G. Barbour.
Ecology. Vol 53, No 6, p 1155-1162. 1972.
Identifiers: Atripleto-Brometum, *Atriplex-Polycarpa, *Autoecology, California (San Joaquin valley), Ecology, Germination, Growth, Haloxylon-Articulatum, Light, Moisture, Salinity, Salsola-Vermiculata-Var-Villosa, Temperature, Wilting.

Atriplex polycarpa (Torr.) Wats. was a dominant, palatable shrub of the xeric Atripleto-Brometum disclimax in the San Joaquin valley of California. Overgrazing and agriculture during the past 100 yr have restricted its present distribution to saline or fenced areas. Optimal germination temperatures (9-15C) are close to those that prevail in nature in Nov., the month of utricle dispersal. Germination is rapid and can occur over a wide range of temperatures (3-33C); it is reduced by light and NaCl greater than 1%, but indifferent to temperature alternation and soil CaCO3 content. It is unlikely that the bracteoles contain inhibitors. In a field plot in the Temblor Range of California, during a growing season with 115 mm precipitation the seeds sown produced an established seedling, possibly because of competition by introduced annuals. Optimal growth conditions were 18-hr photoperiod, 24 plus or minus 4C. Growth at 12C was quite slow. If conditions are favorable A. polycarpa can produce a large biomass, but it possesses a long juvenile stage of greater than 2 yr prior to flowering. The base value of shoot water potential at no moisture stress is -18 bars, but this can be modified downward by pre-exposure to minor cycles of drought. This species can endure soil moisture below that which causes ultimate wilting of sunflower plants and can recover from a shoot water potential as low as minus 69 bars. Plants in nature, in Aug., exhibited a shoot water potential as low as minus 58 bars. This species is compared in a number of ways to Syrian ecological equivalents Haloxylon articulatum and Salsola vermiculata var. villosa.--Copyright 1973, Biological Abstracts, Inc.

Littoral emergent macrophytes develop a complicated system of underground perennial organs, which propagate by tillers, bulbs or rhizomes forming extensive colonies. In natural habitats, it is sometimes not possible to estimate the annual production of these organs. The distribution of the biomass into above ground and underground organs was followed during the initial stage of polycormone development in winter hydroponic cultures. The plants were cultivated from lateral winter buds, rhizome cuttings and seedlings on a solid substrate, flooded with a nutrient solution. Two temperature regimes (15 degrees and 20 degrees) and 3 different dates of autumn and winter planting were chosen. Data on temperature, relative humidity, and density of incident solar

radiation were recorded. The growth rhythm of shoots, leaves and underground organs was followed and the increase of the leaf area, biomass dry weight and the ratio of the underground to the above ground biomass R/S from successive samples were estimated. In all species planted in Nov. the leaf area development, growth, final standing crop and the root/shoot (R/S) ratio were smaller than in the winter plantings, which was caused by an incomplete period of dormancy. The winter plantings showed a larger biomass of plants and leaf area increase, which in Feb. and March, was even more stimulated by the higher densities of irradiation. In all species, the R/S ratio shifted with the growth and the biomass increase in favor of the underground organs. Four phases of growth and the distribution pattern of both the above ground and underground organs during the inititial phase of polycormone development were distinguished. The R/S ratio may be a relatively constant quantitative species characteristic, but only for a given growth phase.--Copyright 1973, Biological Abstracts, Inc.

NEW RECORDS OF SARGASSUM HAWAIIENSIS DOTY AND NEWHOUSE (SARGASSACEAE, PHAEOPHYTA), A DEEP WATER SPECIES,
Hawaii Univ., Honolulu. Dept. of Botany.
R. E. De Wreede, and E. C. Jones.
Phycologia, Vol 12, Nos 1/2, p 59-62, June 1973. 2 fig, 11 ref.

Descriptors: *Phaeophyta, *Deep-water habitats, *Systematics, *Marine algae, Kelps, Speciation, Plant morphology, Plant groupings, *Hawaii.
Identifiers: *Sargassum hawaiiensis.

Sargassum hawaiiensis Doty and Newhouse was described in 1966 from a fragmentation specimen dredged from a depth of 50 m off Oahu, Hawaii. Until recently, no further collections have been available for study. In 1968 and 1971 new material was collected from Penguin Banks off Molokai, Hawaii, during shrimp trawling operations by the National Marine Fisheries Service vessel 'Townsend Cromwell'. The specimens were obtained from depths of 183 and 200 meters. A complete description of the species is given, which differentiates it from the three other species of Sargassum recognized from Hawaii. Sargassum hawaiiensis is distinguished by a combination of characteristics, these being: simple spines on some branches, terete vesicle petioles, muticous and spherical vesicles and bifurcate receptacles with narrow sterile bridges. (Holoman-Battelle)

EFFECT OF THE DESNA RIVER FLOOD ON DEVELOPMENT OF VEGETATION AND FLORA OF THE OSTER OUTSKIRTS (UKRANIAN)
M. I. Kotov.
Ukr Bot Zh., Vol 29, No 4, p 514-517, 1972. (English summary).
Identifiers: Achillea-Borysthenica, Acorellus-Pannonica, Artemisia-Dniproica, Callitriche-Palustris-F-Minima, Chenopodium-Acerifolium, Dichostylis-Mitchelliana, *Floods, *Flora, Galium-Salicifolium, Reproduction, River, Rumex-Ucrainicus, Senecio-Tataricus, *USSR (Desna River), Valeriana-Nitida, *Vegetation, Willow, Xanthium-Californicum.

For 8 yr (at summer time) development of vegetation in an area of 6 x 3 km sq on the left bank of the Desna river within the outskirts of Oster, the Chernigov region (USSR) was observed. The site was on sandy hills, in the flood plain willow forest of white willow and on the riparian alluvial sands. It was established that periods of development in different species vary in different years. The Desna river was particularly large in 1970. Water took the aquatic and riparian plants to high areas where they germinated. Bloom and fruiting under such conditions in Callitriche palustris L. f. minima (L.) Rchb. was recorded. Gigantism was observed in Valeriana nitida Kreyer., Senecio tataricus Less. and other plants growing near the border of a willow forest. Many endemic plants grow in the flood plain of the Desna river, such as: Rumex ucrainicus Fisch., Dichostylis michelliana (R. et Sch.) Nees., Chenopodium acerifolium Andrz., Acorellus pannonicus (Jacq.) Palla, Galium salicifolium Klok., Achillea borysthenica Klok., Artemisia dniproica Klok. Many adventitious plants --Copyright 1973, Biological Abstracts, Inc.

PHYTOPLANKTON OF THE CZECHOSLOVAK SECTOR OF THE DANUBE AND OF THE ESTUARIES OF THE PRINCIPAL TRIBUTARIES ON CZECHOSLOVAK TERRITORY, (IN CZECT.),
Slovenske Narodne Muzeum, Bratislava (Czechoslovakia).
S. Juris.
Zh Slov Nar Muz Prir Vedy. Vol 18, No 1, p 19-27, 1972. Illus.
Identifiers: Asterionella-Formosa, *Czechoslovakia (Danube River), Density, Estuaries, Melosira-Distans-Alpigena, *Phytoplankton, Stephanodiscus-Hantzschii, Temperature, Transparency, Tributaries, Velocity, *Sampling.

Water samples taken from 5 different localities of the Danube contained an average of 5150 cells/ml. Altogether 63 taxa of algae were identified. The dominant phytoplankton species were Stephanodiscus hantzschii, Melosira distans var. alpigena and Asterionella formosa which are autochthonous species of the river. The tributaries have a lower phytoplankton density than the Danube. Phytoplankton multiples in the Danube with blind arms of the river and various ponds in the inundation area are the principle supply sources. The Danube was found to have a lower transparency of water, lower flow velocity and higher water temperature. The Danube and tributaries contained 86 different taxa.--Copyright (c) 1973, Biological Abstracts, Inc.

PROFILE OF THE VEGETATION OF THE ELBURS MOUNTAIN RANGE (NORTHERN IRAN), (IN GERMAN),
Paedogogische Hochschule, Loerrach (West Germany).
W. Probst.
Bot Jahrb Syst Pflanzengesch Pflanzengeogr. Vol 91, No 4, p 496-520. 1972, Illus, (English summary).
Identifiers: *Aridity, Beech, Carpinus, Cypress, Elburs, *Iran (Elburs Mt. Range), Juniperus-Macropoda, Moss, Mountain ranges, Parrotia-Persica, Quercus-Macranthera, Thuja-Orientalis, *Vegetation, Winds, *Forest zones.

Four vegetation transects through the Elburs mountain range are described: Transect A (Rasht, Sefidrud) is determined by the piercing of the Sefidrud River through the main chain of the Elburs. In this valley, cypress groups border on elements of a half-moist deciduous forest as well as on the dry Juniperus forest of the south. In the valley of the Rud-e-Molla Ali, moss pads on the rocks as far as 40 km south of the main chain indicate the influence of the moist Caspian winds. Transect B (Chalus-Karadj) and C (Babolsar-Semnan) represent the vegetational distribution of the Central Elburs: the low mesozoic northern bordering chain which catches the first orographic rains is composed of a dense moist forest, the Hyrcanian Lowland Forest, with its characteristic tree Parrotia persica. In the valley of the Chalus River, a dry basin landscape with cypress trees meets immediately the Lowland Forest Zone. In the Talar valley, this dry intermediate region lies 400 m higher, between the upper and lower borders of the mountain forest. Whereas beech dominates the Caspian Mountain Forest up to 1600 m, oaks and Carpinus prevail in higher levels. The upper forest limit, at present about 2000-2600 m, is an aridity border. Subalpine coniferous forests as well as alpine dwarf bush formation are lacking: Quercus macranthera bush is bordering immediately on thorncushion and tall-herb vegetation. In lower altitudes of the southside there are remnants of the formerly widespread J. macropoda dry forest. Transect D (Shahpasand-Khordabad) is not far from the eastern arid border of the Hyrcanian Forest area. Judas trees, adapted to the dryer climate, thrive beside oaks. In a dry intermediate zone Thuja orientalis takes the place of the cypresses of the Chalus and Sefidrud valleys. Two factors are especially important for the horizontal arrangement of the vegetation: the minimum temperature of the winter and the water supply.--Copyright 1973, Biological Abstracts, Inc.

PERSISTENCE OF HEADWATER CHECK DAMS IN A TROUT STREAM,
California Univ., Berkeley. School of Forestry and Conservation.
R. Gard.
J Wildl Manage, Vol 36, No 4, p 1363-1367, 1972.
Identifiers: *California (Sagehen Creek), Dams, Salvelinus-fontinalis, Streams, *Brook trout.

The condition of a series of small dams constructed in 1957 in the headwaters of Sagehen Creek, California, was determined in 1969. Changes in a population of brook trout (Salvelinus fontinalis) introduced into the new ponds were also assessed. After a 12-yr period, about half of the dams were in good to excellent condition. Average depth of the ponds decreased from 16 to 10 in, but holes 9-13 in deep were created below the dams. The standing crop of trout of catchable sizes (> or equal to 100 mm in length) was estimated to be 93 trout weighing 9.6 lbs (equivalent to 394 trout/acre weighing 41 lbs). This is comparable to the standing crop in 6 miles of stream below the headwaters of Sagehen Creek. The cost of constructing the dams and introducing the trout was $154, or $12.80/yr over the 12-yr period.--Copyright 1973, Biological Abstracts, Inc.

A NEW TYPE OF CLIMATIZED GAS EXCHANGE CHAMBER FOR NET PHOTOSYNTHESIS AND TRANSPIRATION MEASUREMENTS IN THE FIELD,
Wuerzburgh Univ. (West Germany). Boranisches Institut II.
E. D. Schulze.
Oecologia (Berl), Vol 10, No 3, p 243-251, 1972, Illus.
Identifiers: *Carbon dioxide, Climatized control, *Gas exchange chamber, Measurements, Mesophyll, *Photosynthesis, Temperature, *Transpiration.

A temperature- and humidity-controlled plant chamber for CO2 and water exchange measurements in the field is described in which the heat exchanger assembly and humidity controlling water vapor trap are separated from the plant cuvette. The shape and construction material of the plant cuvette can vary according to the demands of the experimental conditions and the size and growth form of the plant. The natural illumination field is only slightly altered in this plant cuvette. In the chamber, the temperature and humidity conditions can either be held constant throughout a wide range of conditions or can be programmed to track ambient conditions. In this manner, not only temperature and absolute humidity are replicated, but it is also possible to reproduce the natural conditions of water vapor gradient between the evaporating surfaces in the mesophyll and the atmosphere, the relative humidity of the air, and the temperature difference between the leaf and the ambient air. Thus, the chamber appears to be an appropriate instrument to investigate with sufficient accuracy the reactions of individual plants in cultivation or in natural communities under field conditions.--Copyright 1973, Biological Abstracts, Inc.

EXPERIMENTAL ESTABLISHMENT OF FOREST PLANTATIONS ON SANDS, IN ACCORDANCE WITH THE IDEA OF G. N. VYSOTSKII (IN RUSSIAN),
I. M. Krivokobyl'skii.
Lesovod Agrolesomelior Resp Mezhved Temat Nauchn Sb. 20. p 91-95, 1970.
Identifiers: Acer-negundo, Apricot, Black locust, Caragana-arborescens, *Fertilizers, *Forests, Honey locust, Mahaleb cherry, Peat, Plantations, *Sands, *USSR (Lower Dnieper Sands).

Analysis is made of the 1937 trial planting of tree and shrub species inside the Aleshkovskaya Arena (plot) in the Saga area (Lower Dnieper Sands) on highly elevated deep monophase sands with ground waters at a depth of 3 m. Plantings were made according to the idea of G. N. Vysotskii, the essence of which consisted of the introduction under the forest plantation of a water-absorbing nutritive interlayer of pure peat (P), of P with mineral fertilizers (F) (ammonium nitrate and superphosphate with 90 kg/ha each of active component) (P + F), of pure loess-like loam (LLL), LLL with mineral fertilizers (LLL + F), and of mineral fertilizers only. P and LLL were placed in ditches 1 m wide, with a distance between the ditches of 8 m, in interlayers 10 cm thick to a depth of 30-40 and 40-50 cm, whereas mineral fertilizers were placed at a depth of 20-30 cm. At the end of the first year after planting, good height growth, in comparison with the control was observed in the interlayer of pure P in Caragana arborescens (50-fold increase of increment). Also mahaleb cherry and honey locust responded well (36-48-fold increase of increment). Some species in the variant P + F grew even better, in honey locust the increment increased 100-fold, in black locust-29-fold, in apricot and in Acer negundo--20-fold and 23-fold, respectively. A good increment was also observed in the variant LLL + F (the increment of honey locust increased 111-fold). In all the broad-leaved tree species the growth began to slow and afterward stopped altogether.--Copyright 1973, Biological Abstracts, Inc.

DESERT DOGMA REEXAMINED: ROOT/SHOOT PRODUCTIVITY AND PLANT SPACING,
California Univ., Davis. Dept. of Botany.
M. G. Barbour.
Am Midland Nat. Vol 89, No 1, p 41-57. 1972.
Identifiers: Allelopathy, Desert vegetation, Moisture, *Plant spacing, *Root/shoot productivity.

The factual basis for 3 generally accepted concepts about desert vegetation is reviewed, and found wanting. The concepts must, at least , be strictly qualified. The concepts are: net primary productivity is low; desert perennial plants possess a fast-growing root system which produces a high root/shoot ratio, and perennials tend to be distributed in a regular pattern, due to competition for moisture or allelopathic interactions. Areas for further research and documentation are indicated.--Copyright 1973, Biological Abstracts, Inc.

FACTORS AFFECTING THE DISTRIBUTION OF SOME PHRYGANEAEID (TRICHOPTERA) IN MALHAM TARN, YORKSHIRE,
Nature Conservancy, Aberystwyth (Wales).
R. P. Bary.
Freshwater Biol. Vol 1, No 2, p 149-158. 1971, Illus.
Identifiers: *Agrypnetes-Crassicornis, Chara, Dispersal, Distribution, Habitat, *Phryganea-Obsoleta, Phryganeaeid, Potamogeton, *Trichoptera, *United Kingdom (Malham Tarn-Yorkshire).

A distribution problem involving Agrypnetes crassicornis and Phryganea obsoleta (Trich-optera:Phryganeidae) in Malham Tarn, Yorkshire (United Kingdom) is described. The only suitable habitat for their larvae is offshore vegetation, chiefly Chara delicatula, but owing to the specialized egglaying behavior of this family and the absence of other sites, the eggs of A. crassicornis are laid on the exposed rocky shoreline. The situation with P. obsoleta differs in that the emergence of Potamogeton spp. provides new oviposition sites away from the shore. Investigations on both species, however, have provided further support for an hypothesis which postulates the importance of wind-induced water movements in rapidly dispersing newly hatched insect larvae to the favorable habitats in deep water.--Copyright 1973, Biological Abstracts, Inc.

SEASONAL WATER POTENTIAL PATTERNS IN THE MOUNTAIN BRUSH ZONE, UTAH,
Saint Louis, Univ., Mo. Dept. of Biology.
S. J. Dina, L. G. Klikoff, and M. B. Keddington.
Am Midland Nat. Vol 89, No 1, p 234-239. 1973.
Identifiers: Acer-Spp., Artemisia-Tridentata, Berberis-Repens, Betula-Occidentalis, Cercocarpus-Ledifolius, Elevation, Paxistima-Myrsinites, Purshia-Tridentata, Quercus-Gambelii, Regression analysis, Seasonal, Seasons, Temperature, *Utah, *Mesic habitat, *Mountain brush zone.

Species in a mesic habitat (Acer negundo, A. grandidentatum, Berberis repens, Betula occidentalis) have higher seasonal water potentials than those in a xeric habitat (Artemisia tridentata, Purshia tridentata, Quercus gambelli), but interspecific water potential patterns vary considerably within as well as between habitats. Of 5 spp. studied along an altitudinal gradient, water potential of Q.gambelii, A. gradidentatum and Pachistima (Paxistima) myrsinites increased with elevation, while B. repens and Cercocarpus ledifolius did not. All species except C. ledifolius exhibited some seasonal decrease in water potential. Seasonal water potential patterns of evergreen species did not differ from those of deciduous species. Linerar multiple regression analyses of several environmental variables indicated that temperature is most often significantly correlated with variation in water potential. Only in C. ledifolius was some temperature measurement not significant.--Copyright 1973, Biological Abstracts, Inc.

UNUSUAL OCCURRENCE OF THE BROOK STICKLEBACK (CULAEA INCONSTANS) IN THE MACKENZIE RIVER, NORTHWEST TERRITORIES,
Department of the Environment, Winnipeg (Manitoba). Fisheries Service.
M. R. Falk.
J Fish Res Board Can. Vol 29, No 11, p 1655-1656. 1972.
Identifiers: *Brook stickleback, *Canada (Mackenzie River-N.W.T.), Culaea-Inconstans, Rivers.

Two specimens of the brook stickleback (C.inconstans) were taken in the mouths of Pierre and Tsital Trien creeks near Arctic Red River on the Mackenzie River, Canada, during 1971. Previous

most northerly published records were from the south shore of Great Slave Lake. The specimens may have been carried downstream by spring floods and may not represent a resident population.--Copyright 1973, Biological Abstracts, Inc.
W74-01589

CARBON DIOXIDE EXCHANGE BY SEVERAL STREAM-SIDE AND SCRUB OAK COMMUNITY SPECIES OF RED BUTTE CANYON, UTAH,
Saint Louis Univ., Mo. Dept. of Biology.
S. J. Dina, and L. G. Klikoff.
Am Midland Nat. Vol 89, No 1, p 70-89. 1973, Illus.
Identifiers: Acer-Grandidentatum, Acer-Negundo, Artemisia-Tridentata, Berberis-Repens, Canyons, *Carbon dioxide, Community, Exchange, Moisture, *Oak, Purshia-Tridentata, Quercus-Gambelii, Scrub oak, Species, *Utah (Red Butte Canyon).

Species of a xeric scrub oak community (scrub oak, Quercus gambelii; sagebrush, Artemisia tridentata; bitterbrush, Purshia tridentata) have lower seasonal water potentials than species of a mesic streamside habitat (BOX ELDER, Acer negundo; bigtooth maple, A. grandidentatum; creeping barberry, Berberis repens). The restriction of box elder to mesic sites is, in part, a function of its physiolocical responses to moisture stress. Positive net photosynthesis of box elder ceases at water potentials 10 to 15 bars higher than net photosynthesis of the other species, and dark respiratory rates of box elder decline more rapidly. The relative photosynthetic and dark respiratory responses to water stress of scrub oak, sagebrush, Bitterbrush, bigtooth maple and creeping barberry are apparently not significant factors influencing the distribution of these species.--Copyright 1973, Biological Abstracts, Inc.
W74-01590

GERMINATION RESPONSES OF A TEXAS POPULATION OF OCOTILLO (FOUQUIERIA SPLENDENS ENGELM.) TO CONSTANT TEMPERATURE, WATER STRESS, PH AND SALINITY,
Texas Univ., El Paso. Dept. of Biological Sciences.
C. E. Freeman.
Am Midland Nat. Vol 89, No 1, p 252-256. 1973, Illus.
Identifiers: Fouquieria-Splendens, *Germination, *Ocotillo, Population, Salinity, Temperature, *Texas, Water stress, Hydrogen ion concentration.

Ocotillo had no dormany requirements, and germinated equally well in light or darkness. Optimum constant temperature was 20-25 degree C, the limits being approximately 10 degrees and 40 degrees C. Ocotillo seeds germinated well to a water stress of -5.0 atm, but germination declined rapidly to -10.0 atm. Germination was best at pH 7.5, declined at 8.0, and was quite low at pH's 8.5 and 9.0 over the range tested. Ocotillo germinated well under saline conditions, the decline in germination with increasing salinity being attributable to the effects of water stress to 7080 ppm NaCl.--Copyright 1973, Biological Abstracts, Inc.
W74-01591

LONGITUDINAL DISTRIBUTION AND HABITAT OF THE FISHES OF MASON CREEK, AN UPPER ROANOKE RIVER DRAINAGE TRIBUTARY, VIRGINIA,
Roanoke Coll., Salem, Va. Dept. of Biology.
R. E. Jenkins, and C. A. Freeman.
Va J Sci. Vol 23, No 4, p 194-202. 1972, Illus.
Identifiers: Drainage, *Fish habitats, *Longitudinal distribution, Rivers, *Virginia (Roanoke River tributary).

Mason Creek is an Order 4 tributary of 15.0 miles in length within the upper Roanoke drainage, Virginia. Based on a total of 16 collections from 7 localities and on personal communications, its present ichthyofauna includes 40 spp. distributed among 7 families. The fauna is typical of that of the upper Roanoke drainage. Faunal diversity (number of species) increased regularly from the headwaters to the mouth, from 6 species at the uppermost station to 31 at the lowermost. The dominant trend was addition of species, rather than replacement, in the downstream direction. Most species showed a pattern of longitudinal zonation, disappearing in the upstream direction after apparently being continuously distributed, or they appeared only in the headwaters. Few species were collected at all stations. Thirty-two species were recorded in pools and 12 in riffles. Generally, only the larger individuals of typically pool-inhabiting forms were found in swifter waters, and the young of species whose adults are riffle fishes frequented quieter waters.--Copyright 1973, Biological Abstracts, Inc.

POPULATION BIOMASS, NUMBER OF INDIVIDUALS, AVERAGE INDIVIDUAL WEIGHT, AND THE LINEAR SURPLUS PRODUCTION MODEL,
Environmental Protection Agency, Gulf Breeze, Fla. Gulf Breeze Lab.
A. L. Jensen.
J Fish Res Board Can. Vol 29, No 11, p 1651-1655. 1972, Illus.
Identifiers: *Biomass, *Linear surplus-production, *Model studies, Population, Weight, *Bluegill.

The identity Bt±NtWt, where Bt is the population biomass, Nt is the population size and Wt is the average individual weight for all ages, is applied to develop simultaneous equations for change in biomass, number of individuals, and average individual weight for the linear surplus-production equation. It is shown that equations for all 3 variables cannot be simultaneously logistic. The relation between logeNt and logeWt predicted by the linear surplus-production model is compared with observation of bluegill population densities and average weights estimated from 10 yr of cove roteonone sampling in 5 large TVA reservoirs. The fit of the model to the data is fairly good, but it accounts for only a small amount of the total variation observed.--Copyright 1973, Biological Abstracts, Inc.

ASSESSMENT OF TWO MESH SIZES FOR INTERPRETING LIFE CYCLES, STANDING CROP, AND PERCENTAGE COMPOSITION OF STREAM INSECTS,
Alberta Dept. of Lands and Forests, Edmonton. Fisheries Section.
A. Zelt, and H. F. Clifford.
Freshwater Biol. Vol 2, No 3, p 259-269. 1972. Illus.
Identifiers: Assessment, *Ephemeroptera, Life cyclers, *Mesh sizes, *Plecoptera, Sampling, Streams, *Aquatic insects, Standing crops.

Using Surber-type samplers and dip-net samplers, the efficiency of nets having pore sizes of 720 micrometer and 320 micrometer for determining standing crop and percentage composition of the stream fauna, and for collecting representative size-class specimens of Ephemeroptera and Plecoptera to be used in life-cycle studies was assessed. Except for one species, samples collected with either the 720-micrometer or 320-micrometer dip-net led to the same general inferences about the species' life cycle. Of 50 possible sample comparisons, there were 12 samples where the size-class frequencies of particular species collected in the 720-micrometer dip-net were significantly different from the size-class frequencies of the 320-micrometer dip-net; for 5 of these samples a deficit of large nymphs (> 5.0 mn) in the 320-micrometer net mainly contributed to the significant x2 values. On one date, double-bag samplers with both the 720-micrometer and 320-micrometer nets attached to either the Surber or dip-net sampler were used. Approximately 50% of the insects by numbers passed through the 720-micrometer mesh of each sampler, but only 5% by volume-biomass. Shape of the insect as well as body length was important in assessing mesh-size efficiencies. The 720-micrometer mesh of the double-bag dip-net sampler retained most of the Nemoura cinctipes (having stout appendages) and Epeorus longimanus (flattened) nymphs 2.0 mn in body length and larger; whereas most Baetis (streamlined) nymphs smaller than 3.0 mm and all Paraleuctra (needle-like shape) nymphs passed through the 720-micrometer mesh.--Copyright 1973, Biological Abstracts, Inc.

THE RELATIONSHIP BETWEEN MAPLE CANKER INCIDENCE AND PRECIPITATION,
Ohio Agricultural Research and Development Center, Wooster. Lab. of Environmental Studies.
T. C. Weidensaul, and F. A. Wood.
Plant Dis Rep. Vol 56, No 11, p 942-943. 1972.
Identifiers: Acer-Saccharum, Canker, *Fusarium-Spp, *Maple canker, Precipitation, *Pennsylvania.

The study was designed to determine whether, within the natural range of sugar maple (Acer saccharum) in Pennsylvania, levels of precipitation were correlated with canker (caused by Fusarium spp.) frequency. The difference in average yearly precipitation in Pike (106 cm) and Bedford (91 cm) counties was significant at the 0.01 level. An analysis of variance indicated a significant difference in canker frequency between the 2 counties based on a total of 2494 cankers observed. More cankers were observed in Pike County. There was variation in the number of cankers/tree within each county. A correlation analysis was made between the 2 counties with respect to precipitation vs. canker frequency. Although there were significant differences in precipitation and canker frequency, a coefficient of determination (r2) of less than 1% indicated that canker numbers and countywide precipitation were not associated when data from both counties were combined. The coefficients of determination in the 2 counties considered independently were both less than 1%, which also indicates that precipitation alone was not associated with canker frequency. Precipitation alone apparently does not have a significant influence on the frequency of cankers. When coupled with a satisfactory wounding agent and other unfavorable environmental conditions, however, precipitation may have an effect.--Copyright 1973, Biological Abstracts, Inc.

SOME INFLUENCES OF AQUATIC VEGETATION ON THE SPECIES AND NUMBER OF CULICIDAE (DIPTERA) IN SMALL POOLS OF WATER,
Auburn Univ., Ala. Dept. of Zoology-Entomology.
B. M. Furlow, and K. L. Hays.
Mosq News. Vol 32, No 4, p 595-599. 1972.
Identifiers: Aquatic plants, *Culicidae, *Diptera, *Spirodela-Oligorrhiza, *Mosquito population.

Physical configuration of the aquatic vegetation in 10 ft diameter plastic pools in the southeastern United States appeared to influence qualitative parameters of mosquito populations. There were definite trends reflecting the association of particular Culicidae spp. with a particular type of aquatic plant: submerged, floating, emergent or none. Even though apparent quantitative differences were observed in culicid populations among the various types of vegetation, vegetation had no significant effect on population sizes. The floating plant, Spirodela oligorrhize (duck weed), had a detrimental effect on mosquito survival when it completely covered the surface of the water.--Copyright 1973, Biological Abstracts, Inc.

DISTRIBUTION PATTERNS AND POPULATION DYANMICS OF THE MICRO--ARTHROPODS OF A DESERT SOIL IN SOUTHERN CALIFORNIA,
Westfield Coll., London (England). Dept of Zoology.
J. A. Wallwork.
Journal of Animal Ecology, Vol 41, No 2, p 291-310, June 1972. 11 fig, 10 tab, 15 ref.

Descriptors: *Thermophilic animals, *Deserts, Arid lands, Population, Ecology, Soil environment, Microenvironment, *Distribution patterns, On-site investigations, Mites, Litter, Density, *California, *Sierozems.
Identifiers: Joshua Tree National Monument, Mojave Desert, *Arthropods.

Very little information is availabe about the ecology of desert micro-arthropids, or about the way in which the various species populations are integrated into a community system. This study was designed not only to identify the principal faunal components of a desert soil community, but also to investigate distribution patterns and population dynamics in relation to certain well-defined factors, such as temperature, moisture, shade and food supply. An account is given of the distribution patterns and population dynamics of the micro- arthropod fauna of juniper litter and underlying mineral soil in the Joshua Tree National Monument, Mojave Desert, California, based on samples taken regularly over a 90month period from October 1966 to June 1967. The bulk of the fauna consisted of mites mainly belonging to the Orders Cryptostigmata, Astigmata and Prostigmata. The influence of shade on microdistribution patterns was examined but no significant effect could be detected. Peak densities for the entire fauna occurred in December and in April. The center of mite population densities shifts upwards from the mineral soil to litter as a new generation of individuals is produced. The relationship between this upward extension of the population range and the density peaks occurring in the litter is discussed. (Black-Arizona)

STRATIGRAPHY AND ECONOMIC GEOLOGY OF THE COASTAL PLAIN OF THE CENTRAL SAVANNAH RIVER AREA, GEORGIA,
Georgia Univ., Athens. Dept. of Geology.
J. Sandy, R. E. Carver, and T. J. Crawford.
Available from the National Technical Information Service as PB-225 151/0, $4.00 in paper copy, $1.45 in microfiche. Geological Society of America, Inc., Southeastern Section Guidebook for Field Trip No 3, April 16, 1966, 11 fig, 1 tab, 15 ref. OWRR A-006-GA (5).

Descriptors: *Stratigraphy, *Geology, *Economics, *Georgia, River basins, Geologic formations, Geologic time, Sedimentation, Sedimentology, Soil profiles, Exploration, Clay minerals, Sands, Gravels, Limestones, Marl, *Coastal plains.
Identifiers: *Savannah River (Geo).

The general stratigraphy and geologic setting of associated commercial clay deposits are illustrated for the coastal plain of the Central Savannah River area in central-east Georgia. Sites are distributed to show the stratigraphic position and mode of occurrence of kaolin, flint kaolin, fuller's earth, and speculities, as well as fossiliferous units of the Jackson Group of Eocene Age. The oldest formation is the Tuscaloosa Formation, of early Upper Cretaceous age. It rests directly on the seawater-dipping, eroded surface of the igneous and metamorphic rocks of the Piedmont Province. The best exposures of both the Barnwell and Tuscaloosa Formations are in the deeper road cuts and open pit mines. Lenses of kaolin of commercial grade and size are found throughout the Tuscaloosa Formation, but appear to be larger and more numerous along a line from central Richmond County to the point where McDuffie, Glascock, Warren, and Jefferson Counties join; extensive deposits of kaolin have been discovered in this area recently, and are being actively explored. (Woodard-USGS)
W74-01122

COHESIONLESS, FINE GRADED, FLAKED SEDIMENT TRANSPORT BY WATER,
Imperial Coll. of Science and Technology, London (England). Dept. of Civil Engineering.
P. A. Mantz.
Nature Physical Science, Vol 246, No 149, p 14-16, November 5, 1973. 3 fig, 1 tab, 13 ref.

Descriptors: *Sediment transport, *Particle shape, Scour, Erosion, Suspension, Suspended load, Sedimentation.

Transport of sediments composed of fine graded flakes was studied using six fine, well-sorted grades of muscovite and biotite mica flakes (specific gravity 2.74). The cohesionless nature of the flakes was established by measuring the angle of repose of part of a bed, after it had been laid down in a laboratory flume. This angle was fairly constant for all but the finest graded material. Each sediment bed composed of mica flakes was exposed to a very slowly increasing magnitude of applied fluid stress. A single mode of transport was observed throughout, giving a bed form known as parting lineations (that is, long ridges, parallel to the flow direction, of grouped particles). During this transport, no suspended load was present. At a critical bed stress for each grade, the lineations began to oscillate in three dimensions. A difference in behavior was found between flakes and grains of the same fall diameter (this diameter is that of a sphere which has a specific gravity of 2.65, and the same fall velocity in still water as the particle). They have differing friction velocities for incipient motion. This gives one quantitative explanation for the geological concept of sediment bypassing (the selective transport of particles). The ratio of incipient suspension friction velocity to incipient motion friction veloicty is fairly constant at about 2.2. This contradicts the general supposition that fine graded sediment becomes suspended at a stress magnitude close to that of incipient motion. (Knapp-USGS)
W74-01125

EXPERIMENTAL INVESTIGATION OF THE EFFECT OF SALTATING SEDIMENTS ON KINEMATICS OF FLOW (EKSPERIMENTAL'-NOYE ISSLEDOVANIYE VLIYANIYA SAL'-TIRUYUSHCHIKH NANOSOV NA KINE-MATIKU POTOKA),
Akademiya Nauk SSSR, Moscow. Institut Vodnykh Problem.
S. K. Olevinskaya, A. A. Pivovarov, and K. I. Rossinskiy.
Vodnyye Resursy, No 2, p 111-117, 1973. 7 fig, 9 ref.

Descriptors: *Sediment transport, *Saltation, *Flow, Turbulence, Turbulent flow, Movement, Sediment discharge, Flumes, Roughness (Hydraulic), Froude number.
Identifiers: USSR, *Kinematics (Sediment transport).

Effects of movement of saltating particles on kinematics of turbulent flow on a hydraulically rough bed were investigated in flume experiments at the Hydrophysics Laboratory of the Department of Physics, Moscow State University. Gravels with particles ranging from 3 mm to 7 mm in diameter and with settling velocities between 26 and 30 cm/sec were used to investigate sediment movement. Interaction of sediment concentration and movement, and effect of sediment concentration on depth distribution of average flow velocities and pulsation intensity are examined, and relations of pulsation intensity to Froude number, sediment concentration in flow, and dynamic roughness are graphed. (Josefson-USGS)

BEACH CUSPS,
Louisiana State Univ., Baton Rouge. Coastal Studies Inst.
R. J. Russell, and W. G. McIntire.
Geological Society of America Bulletin, Vol 76, p 307-320, March 1965. 5 fig, 7 plates, 6 ref, 2 append.

Descriptors: *Beaches, Berms, *Sedimentation, *Coasts, *Waves (Water).
Identifiers: *Beach cusps, Sea states, Swash zone.

Beach cusps develop along seaward faces of growing berms. They appear early in the transitional period of decreasing wave energy from winter- to summer-beach conditions. Growth stages are described and related to currents within the swash zone. Cusp spacing depends on coastal exposure and state of the sea. Conditions under which cusps disappear are described. Although most steps in the depositional development and erosional removal of cusps are understood, the theory of their origin will remain incomplete until the reasons for their spacing are known in quatitative terms. (Sinha-OEIS)

EFFECTS OF REEFS AND BOTTOM SLOPES ON WIND SET-UP IN SHALLOW WATER,
California Univ., Berkeley. Inst. of Engineering Research.
E. G. Tickner.
Corps of Engineers, Beach Erosion Board, Technical Memorandum No. 122, November 1960. 20 p, 12 fig, 1 tab, 5 ref.

Descriptors: *Coasts, *Reefs, *Slopes, Shallow water, *Wind tides, Waves (Water).

Wind tides in shallow water were studied in a laboratory channel with a reef, with various widths of openings, located near the center of the channel and with various slopes of the channel bottom other than horizontal. The reef increased the set-up over a smooth bottom condition by a factor of two for a solid reef and somewhat less than this if the reef had an opening in it. The cross-sectional integration procedure adequately describes the surface profile for the sloping bottom, while the estimated set-up assuming a constant depth equal to the deepest part underestimates the actual set-up by as much as 2.75. SHIFTING OFFSHORE BARS AND HARBOR SHOALING,
United States Lake Survey, Detroit, Mich.
L. Bajorunas, and D. B. Duane.
Journal of Geophysical Research, Vol 72, No 24, p 6195-6205, December 15, 1967. 13 fig, 6 ref.

Descriptors: *Lake Superior, *Coasts, *Littoral drift, Erosion, Lakes, Harbors, Shoals, *Currents (Water), Shallow water, Sand bars.
Identifiers: Ice foot, *Offshore bars.

Movement of offshore bars in Lake Superior produces alternating accretion and erosion of the nearshore area and causes pulsation in littoral drift. Extensive formation of ice foots contribute to significant erosion in front of them. Harbor structures extending into the lake shift offshore bars, modify coastal currents, and cause shoaling in the lee. The pattern of harbor shoaling was established, and its relationship with the shifting of offshore bars and existing currents was analyzed. The bar in shallow water was feeding material to the shoal and the currents determined the pattern of deposition. (Sinha-OEIS)

Descriptors: *Sediment transport, *Beaches, Sands, Littoral, *Sedimentation, *Coasts, Shallow water.
Identifiers: *Tidal cycle.

A depth integrated fluorescent tracer procedure was developed in order to study the movement of individual sand grains along the beach profile. The following pattern of littoral zone tidal-cycle sedimentation was derived from the collected data: During flood tide a small portion of the sediment eroded in the lower backwash scour zone is deposited just seaward of the upper swash limit. It consists mainly of the finer grain sizes of the beach sand. Most of the eroded sediment, including a large part of the coarse grains, is deposited in the building of the step under the breaker zone. There is a slight diffusion of fine grains seaward of the step to the shoaling wave zone. Sediment moved landward with the advance of the breaker zone is concentrated at the step. Ebb tide sedimentation is similar, but two slight differences can be discerned. The fine sediment eroded as the lower backwash scour zone is translated seaward is deposited seaward of the upper swash limit; however, as it is being deposited in a former scour zone it serves to restore the beach profile to its original form. Then too, there is little net diffusion of fine sediment to the shoaling wavezone when the breaker zone has returned to its original low-tide position. In upper swash deposition and step deposition there is a reversal of the sediment relative to the vertical position it held in the scour zone. (Sinha-OEIS)

THE EQUILIBRIUM BEACH,
Florida State Univ., Tallahassee. Dept. of Geology.
W. F. Tanner.
Transactions, American Geophysical Union, Vol 39, No 5, p 889-891, October 1958. 6 ref.

Descriptors: *Beaches, Littoral drift, Sands, *Equilibrium, *Sedimentation, *Shore protection.

The equilibrium beach has curvature and sand-prism characteristics adjusted to each other so delicately that the potential littoral motion provides precisely the energy needed to transport the detritus supplied at the up-current end. The time element in this balance is long-term rather than instantaneous. A beach which performs in any other way is not in equilibrium. The maintenance of certain beaches in equilibrium form is of great economic or political importance. The most pressing case of inequilibrium is that of the rapidly retrograding beach. In many instances the beach can be restored to an equilibrium condition by decreasing the actual littoral drift or increasing the available supply of sand. (Sinha-OEIS)

LITTORAL PROCESSES AND THE DEVELOPMENT OF SHORELINES,
Scripps Institution of Oceanography, La Jolla, Calif.
D. L. Inman, and J. D. Frautschy.
In: Coastal Engineering Santa Barbara Specialty Conference, October 1965, American Society of Civil Engineers. p 511-536 (1966). 9 fig, 26 ref.

Descriptors: *Beaches, *Sediment transport, Littoral zone, Energy, *Circulation, *California, Inlets (Waterways).

Basic principles bearing on the nature of beaches and processes that act to modify them are considered in the light of present coastal development demands. A working hypothesis is developed that applies the principle of the conservation of mass to the mechanics of granular-fluid media. This hypothesis appears to have general application to sand transport processes in the littoral zone. Consideration is given to methods of providing sand sources and methods of decreasing the longshore transport rates of sand as well as to the creation of new beaches and shorelines. Additional research must be done to provide basic information in some critical areas before application can be made with assurance. (Sinha-OEIS)

SAND MOVEMENT ALONG EQUILIBRIUM BEACHES NORTH OF SAN FRANCISCO,
California Univ., Berkeley. Hydraulic Engineering Lab.
J. A. Cherry.
Journal of Sedimentary Petrology, Vol 36, No 2, p 341-357, June 1966. 11 fig, 1 tab, 37 ref. NSF G-18123.

Descriptors: *Sediment transport, *Coasts, *Beaches, *California, Currents (Water), Waves (Water), Equilibrium, Refraction (Water waves), Sands.
Identifiers: Swell, Heavy metals.

Many sandy shorelines along open coasts have relatively permanent configurations which often are the result of an equilibrium adjustment between the predominant swell waves, the predominant conditions of littoral sand movement and the rate of sand supply. The sand movement along several stretches of equilibrium shoreline near Point Reyes was studied using two methods: (1) common techniques of tracing heavy minerals and (2) theoretical predictions based on swell data and diagrams of wave travel in shallow water. Patterns of heavy mineral distribution in the beach

and offshore sands established that negligible net movement of sand occurs along the beaches and that no significant supply of sand is being added to the beaches at present. Analysis of the predominant littoral and offshore waves showed that the sand transportation which was anticipated on the basis of predicted currents generated by the predominant swell coincides with that indicated by the heavy mineral patterns. EROSION OF TIDAL FLATS NEAR GEORGETOWN, BRITISH GUIANA,
Geological Survey Dept., Georgetown (Guyana).
D. D. Hawkes.
Nature, Vol 196, No 4850, p 128-130, October 13, 1962. 3 fig, 5 ref.

Descriptors: Mud flats, *Erosion, Deposition, *Intertidal areas, *Tidal effects, *Coasts, South America.
Identifiers: *British Guiana (Georgetown), *Tidal flats.

The British Guiana Coast is mainly an accretional coast which has been built up in recent times by the accumulation of mud flats. This deposition of mud is interrupted locally and temporarily by erosional periods. An erosion mechanism is described which is most effective in calm weather but in its cumulative effect is probably more important than storm weather erosion. An upper tidal and flat, which is covered by about a foot of water at high tide, is bounded by a low cliff step, below this a wide mud flat extends to the low water level. Blocks of dried-up clay fell from the step on to the soft mud below. Water swirling around these blocks removes loose mud from the edges and they sink deeper into the soft mud. Then turbulence in the water tends to rotate the blocks so that they cut out a pot hole in the mud which tends to grow larger and larger while the original mud block becomes smaller and more spherical. Loose mud drilled out is carried away by the tidal motion of the water. The effect of this pothole drilling, which is most effective within 50 ft of the cliff step causes appreciable changes in the topography of the floor, even in a twelve hour intertidal period. THE OXYGEN STATUS OF LAKE SEDIMENTS,
R. H. Howeier.
J Environ Qual, Vol 1, No 4, p 366-371, 1972, Illus.
Identifiers: Lakes, Mathematical models, Minerals, *Oxygen, Sediments, *Lake sediments, Diffusion models.

The presence of O2 in the surface layer of sediments greatly affects the abundance and availability of Fe, Mn, nitrates, phosphates, and sulfates. The concentration of O2 in the oxidized layer depends on the balance between the rate of O2 diffusion into the sediment and the rate of consumption by the sediment. Several mathematical diffusion models were developed to describe this relationship between diffusion and consumption. With these models the flux of O2 across the water-mud interface and the thickness of the oxidized zone can be calculated. Experimental testing of the models showed that the steady state O2 consumption rates were proportional to the square root of the O2 concentration at the mud surface. The relative contribution of biological and chemical O2 consumption depended mainly on the organic matter content of the sediment, the biological consumption being highest in high-organic matter soils. Determination of the Fe distribution near the sediment surface showed that Fe diffused upward from the reduced soil and accumulated in the oxidized zone. This freshly precipitated Fe could function as a phosphate sink, absorbing phosphates from the water and storing it in the sediment.--Copyright 1973, Biological Abstracts, Inc.

A ROLE OF SEDIMENT TRANSPORT IN ALLUVIAL CHANNELS,
Geological Survey, Washington, D.C.
T. Maddock, Jr.
ASCE Proceedings, Journal of the Hydraulics Division, Vol 99, No HY11, Paper 10130, p 1915-1931, November 1973. 12 fig, 18 ref, append.

Descriptors: *Sediment transport, *Bed load, Alluvial channels, Scour, Sedimentation, Erosion, Suspended load, Velocity.

Once a critical amount of sediment is being moved in an alluvial channel, velocity can be expressed as a function of slope and of size and composition of the moving sediment load. Depth is a redundant parameter. At sediment transport rates below critical, depth is an effective parameter. Methods of determining the size and composition of the moving sediment load are analyzed as is the problem of determining when depth becomes redundant. The phenomena of fill and scour at alluvial channel sections is also considered. (Knapp-USGS)

ANALYSIS OF SEDIMENT SORTING IN ALLUVIAL CHANNELS,
Colorado State Univ., Fort Collins. Dept. of Civil Engineering.
S. A. Rana, D. B. Simons, and K. Mahmood.
ASCE Proceedings, Journal of the Hydraulics Division, Vol 99, No HY11, Paper 10168, p 1967-1980, November 1973. 8 fig, 2 tab, 12 ref, append.

Descriptors: *Sediment sorting, *Alluvial channels, *Abrasion, *Sediment transport, Bed load, Mathematical models.

Bed material size in alluvial channels is reduced with distance downstream. This size reduction is caused by the physical size attrition of particles (abrasion) and by differential transport of sizes (sorting). A mathematical model is presented to simulate the bed material sorting in alluvial channels. Application of this model to hypothetical channels shows that the sorting coefficient depends on the channel slope, regime of flow, and total bed material transport. Also, it is shown that in channels formed by aggradation of material transported from upstream, strict equilibrium is not possible in the absence of abrasion. (Knapp-USGS)

SEDIMENT TRANSPORT: NEW APPROACH AND ANALYSIS,
Hydraulics Research Station, Wallingford (England).
P. Ackers, and W. R. White.
ASCE Proceedings, Journal of the Hydraulics Division, Vol 99, No HY11, Paper 10167, p 2041-2060, November 1973. 4 fig, 2 tab, 22 ref, append.

Descriptors: *Sediment transport, *Bed load, Alluvial channels, Sedimentation, Suspended load, Particle size, Model studies.

The relationship of sediment transport to fluid flow was studied; physical reasoning leads to dimensionless groupings of the variables, which are different for coarse sediment and for fine sediment because of dissimilar modes of transport. This concept provides a basis for a new analysis of data from flume experiments, and a method for dealing with transitional sizes of sediment is suggested. Analysis of experimental data supports the theory. Predictive equations relate total sediment flux to measurable properties of flow. A preliminary comparison was made with observations from other sources, including natural rivers. (Knapp-USGS)

Identifiers: USSR.

A quantitative estimate is made of the exchange of substances between bottom sediments and water to define the role of bottom sediments in the balance of biogenic elements in bodies of water. Research to determine the quantity of dissolved material released into water from bottom sediments is based on field observations of the distribution of an element on one or both sides of the sediment-water interface and on mathematical simulation. A study of the distribution of components on both sides of the sediment-water interface is, in all probability, the most correct approach to the study of the mechanism of exchange between water and bottom sediments. MOHAWK LAKE STUDY, BRANTFORD, ONTARIO.

Prepared for Grand River Conservation Authority, Cambridge, Ontario. August, 1972. 15p, 4 photos, 3 append. 6939-01.

Descriptors: *Lakes, *Silting, *Reservoir silting, Sedimentation, Canada, Dredging, Excavation, Costs, Runoff, Spillways, Oxygen demand, Ammonia, Iron, Hydrogen sulfide, Methane.
Identifiers: *Sediment removal, *Canada Mohawk Lake (Ont), Brantford (Ont), Grand River (Ont).

Mohawk Lake is a 35-acre lake in Brantford, Ontario. It is fed by the East Ward Creek, supplemented by a by-pass waterline from the Grand River. Because of an extremely low gradient, the river has silted, with deposits of 220,000 cu. yds. ranging from an average of 3 or 4 to 8 feet deep. Water depth is 8 to 10 feet on top of the sediments. The area surrounding the lake is proposed as a major recreation area, upon completion of an adjacent landfill. In order to establish and maintain recreational activities in the lake, primarily boating, the bottom sediments must be completely removed. This would lower oxygen demands, ammonia, iron, hydrogen sulfide, and methane concentrations. Unless the catch-basin at the head of the lake is extremely effective, the lake will soon silt again. Five alternative schemes for removal of sediment were initially considered and 3 are presented herein. One calls for silt removal by suction dredging. Advantages are least disruption to existing systems, but a liability is that this method does not result in a "clean" lake bottom. Two methods of open excavation are explained. One calls for pumping the lake dry, while another would use gravity to drain the lake into a retention pond and its outlets to the Grand River. Costs are estimated for each method. The gravity drainage and excavation alternative is recommended. Since peak runoff from the watershed is expected to increase 40%, contruction of a second emergency spillway to the Grand River is recommended to prevent flooding. Appendix contains maps and cost estimates. (Stein-North Carolina)

CHEMICAL RELATIONSHIPS BETWEEN SURFACE WATER AND THE GROUND IN SOUTH FLORIDA,
Miami Univ., Coral Gables, Fla.
L. J. Greenfield, and C. R. Hare.
Water Resources Bulletin, Vol 9, No 5, p 923-931, October 1973. 4 fig, 4 tab, 7 ref.

Descriptors: *Water chemistry, *Limestones, *Swamps, *Surface-groundwater relationships, Algae, *Florida, *Wetlands, Ion exchange, Acidity, Alkalinity, Hydrogen ion concentration, Peat, Mineralogy, Chemical precipitation, *Cyanophyta.

Analyses of soil and water were made in a stretch of shallow ground north of a cypress head in South Florida. The area is covered with water for part of the year, and it flows slowly southward. The soil is primarily peat formed from the local graminid vegetation during its decay. The top layer consists of a blue-green algal mat whose decay products contribute to the peat. Ion exchange capacity is high enough in all soil layers to account for the ion content within the soil and surrounding waters. It is a very important buffer system that retards limestone erosion. Cation exchange capacity (CEC) values ranged from 20 to 190 meg/100 gm dry soil from bedrock to surface. A large difference between the undersoils and the algal mat is based upon the fact that the synthetic processes are so great in the mat that at peak growth and on sunny days, pH may rise to 8.5.CaCO3, is often precipitated and contributes to the molluscan limestone deposits in this zone. Around tree islands, shading may occlude mat growth, and acidic decay products running off produce 'moats' in the rock. Subsequent filling of the area with peats and decaying mat fragments from upstream produce a layer with a high CEC that retards further erosion. (Knapp-USGS)

Journal of Physical Chemistry, Vol 76, No 13, p 1909-1912, 1972. 6 tab, 19 ref. OWRR B-049-GA (5). 14-31-0001-3269.

Descriptors: *Thermodynamics, *Acid-Base equilibrium, Enthalpy, Entropy, *Ionization, *Fluorine, Water chemistry, Aqueous solutions, Chemical reactions, *Bonding.
Identifiers: Calorimetric, *Hydroxybenzotrifluoride.

The free energy, enthalpy, and entropy of ionization of p- and m-hydroxybenzotrifluoride in water at 25C have been determined from pKa measurements as a function of temperature. The enthalpy of ionization was also determined by high-precision solution calorimetry. The thermodynamic data for the para and meta isomers are pKa 8.675, 8.950; delta H degree 4.99, 5.24 kcal/mol; and delta S degree -23.0, -23.3 cal/ (deg mole), respectively. The results suggest that double bond-no bond resonance is unimportant in the ionization of p-hydroxybenzotrifluoride.

QUALITY OF SURFACE WATERS OF THE UNITED STATES, 1968: PARTS 4 AND 5. ST LAWRENCE RIVER BASIN AND HUDSON BAY AND UPPER MISSISSIPPI RIVER BASINS.
Geological Survey, Washington, D.C.

Available from GPO, Washington, DC 20402 - Price $2.10 domestic postpaid or $1.75 GPO Bookstore. Water-Supply Paper 2094, 1973. 293 p, 1 fig, 39 ref.

Descriptors: *Water quality, *Surface waters, *St. Lawrence River, *Mississippi River basin, *Chemical analysis, Tributaries, Sediment transport, Water temperature, Streamflow, Gaging stations, Flow rates, Basic data collections, Water analysis, Illinois, Indiana, Michigan, Minnesota, Missouri, New York, Ohio, South Dakota, Wisconsin.
Identifiers: *Upper Mississippi River basin, *Hudson Bay basin.

The records of chemical analysis, water temperature, and suspended sediment of surface waters are tabulated for the St. Lawrence River Basin, and Hudson Bay and Upper Mississippi River Basins for the 1968 water year (Oct. 1967 to Nov. 1968). The Geological Survey maintained 139 stations on 93 streams for the study of chemical and physical characteristics of surface water. Samples were collected daily and monthly at 81 of these locations for chemical-quality studies. Samples also were collected less frequently at many other points. Water temperatures were measured continuously at 59 and daily at 24 stations. Specific conductance was determined and reported for almost all daily samples. Quantities of suspended sediment are reported for 24 stations. Sediment samples were collected one or more times daily at most stations, depending on the rate of flow and changes in stage of the stream. Particle-size distributions of sediments were determined only at miscellaneous sites. Descriptive statements are given for each sampling station. These statements include location of the station, drainage area, periods of records available, extremes of dissolved solids, hardness, specific conductance, temperature, sediment loads, and other pertinent data. Records of discharge of the streams at or near the sampling station are included in most tables of analyses. (Woodard-USGS)

APPLICATION OF INFRARED FOURIER TRANSFORM SPECTROSCOPY TO ANALYSIS OF MICRO SAMPLES,
Dow Chemical Co., Midland, Mich. Analytical Labs.
S. S. King.
Journal of Agricultural and Food Chemistry, Vol 21, No 4, p 526-530, July/August 1973. 4 fig, 3 ref.

Descriptors: *Chemical analysis, *Pollutant identification, Organic compounds, *Sampling, Methodology.
Identifiers: *Microanalysis, *Infrared spectroscopy, Micro sampling techniques, Trace levels, Infrared spectra.

A Fourier transform mid-infrared spectrometer equipped with 6X bean condenser has been used to record infrared spectra of samples in submicrogram quantities. Emphasis was placed on a study of micro sampling techniques. Several techniques were tried to transfer micro quantities of samples from dilute solution to KBR substrate. The most efficient method found was to transfer a few microliters of the solution onto 0.1-0.4 mg of KBr powder by using a 10-microliter microsyringe. The solvent was evaporated slowly on the KBr powder, which was attached to the end of the syringe needle. The KBr powder was then pressed into a 0.5-mm diameter disk. Ir spectra of solutions were obtained by placing the samples in a special 1-mm path microcavity cell. All spectra recorded in this study were obtained at a resolution of 4/cm. By improving the sample handling techniques and by utilizing the advantages of the ft-ir spectrometer, it was found that the analysis of submicrogram quantities of samples by this method is practical. This setup is ideal for the identification of small particles which can be as small as 0.05 mm in diameter. If the sample is in dilute solution, it is possible to obtain a usable infrared spectrum of 0.05-microgram samples. (Holoman-Battelle)

NOVEL METHOD OF RAMAN DATA ACQUISITION,
Campinas Univ. (Brazil). Gleb Wataghin Inst. of Physics.
J. E. Moore, and L. M. Fraas.
Analytical Chemistry, Vol 45, No 12, p 2009-2014, October 1973. 6 fig, 14 ref.

Descriptors: *Methodology, *Organic compounds, Molecular structure, Data collections.
Identifiers: *Raman spectroscopy, *Data acquisition, Enhancement, Selective phonon population, Data interpretation, Fluorescence discrimination, Resonant Raman enhancement.

Signal-to-noise information is presented that supports the feasibility of a novel approach to the acquisition of Raman data. In this approach, the fluorescence background interference common in many Raman experiments, is minimized through selective phonon population enhancement. The disadvantages of the proposed experimental technique are: a system must be constructed to comply with the experimental requirements and problems lying in the area of interpretation of acquired data. Although with simple organic molecules, a well known application of Raman data is in the use of vibrational analysis as a tool to accomplish structure elucidation, it may be impossible to assign spectra of large molecules, because of their complexity, to fundamental modes. It will be possible in many cases with good spectra to identify functional groups. Resonant enhancement could be a means of compensating for the weaker scattering cross sections of resonance for biochemical samples. With modified experimental techniques, the acquisition of Raman data of large molecules is quite possible. (Holoman-Battelle)

Identifiers: *Scanning spectrophotometer, Nitrobenzene, Dimethyl sulfoxide, Sensitivity, Absorbance, Spectroelectrochemistry.

An instrument which uses a computer to control and collect data from a rapid scanning visible spectrophotometer, and which simultaneously operates a potentiostat to control generation of electrochemical intermediates is described. The 370-700 nm spectral range may be swept in as little as 5 msec, and by using real time control to zero the spectral background repetitive spectra may be signal averaged to give an ultimate sensitivity of 0.00001 absorbance unit. For peak monitoring at fixed wavelength, data may be taken as soon as 20 microseconds after the application of the reaction initiating potential step. The performance of the system is illustrated with results from millimolar solutions of nitrobenzene in dry dimethyl sulfoxide after stepping the potential into the limiting current region. ANION RESPONSES AND POTENTIAL FUNCTIONS FOR NEUTRAL CARRIER MEMBRANE ELECTRODES,
North Carolina Univ., Chapel Hill. William R. Kenan, Jr. Lab. of Chemistry.
J. H. Boles, and R. P. Buck.
Analytical Chemistry, Vol 45, No 12, p 2057-2062, October 1973. 8 fig, 2 tab, 24 ref.

Descriptors: *Anions, *Electrochemistry, *Zeta potential, Physical properties, Aqueous solutions, *Electrolytes, Electrical properties, *Electrodes, Solubility, Oil, Equipment.
Identifiers: Potassium electrodes, Neutral carrier membrane electrodes, Response time, Ion selective electrodes, Picrates, Thiocyanates, Propionates, Cyclohexane butyrate, Benzene sulfonate, Benzoates, Potassium salts, Membrane electrodes, Ion pairing, Valinomycin electrodes.

Responses of Orion valinomycin-based, neutral carrier, potassium-selective electrodes have been measured for aqueous electrolytes containing oil-soluble anions. The results suggest a generalization of the Ciani-Eisenman-Szabo equation to include anion solubility, mobility, and ion pairing. This equation, which reduces to the CES form, encompasses Nernstian response to cations or anions in extreme cases. A counter proposal using the Teorell-Myers-Sievers model is also developed. Both are consistent with limited potentiometric observations, although only the former predicts that a given membrane may be anion or cation responsive depending upon intrinsic anion or cation membrane solubilities. Preferential solubilization can be enforced by addition of solubilizing agents such as valinomycin to aid selective response. Conditions for reduced slopes and maxima in potentiometric response curves are discussed. In addition, a response function is derived following the fixed-site hypotheses of Kedem, Perry, and Bloch. Distinctions between the theories are not possible solely from potentiometric cation response measurements. (Holoman-Battelle)

VERSATILE COMPUTER GENERATED VARIABLE ACCELERATING VOLTAGE CIRCUIT FOR MAGNETICALLY SCANNED MASS SPECTROMETERS. USE FOR ASSAYS IN THE PICOGRAM RANGE AND FOR ASSAYS OF STABLE ISOTOPE TRACERS,
Washington Univ., St. Louis, Mo. Biomedical Computer Lab.
W. F. Holmes, W. H. Holland, B. L. Shore, D. M. Bier, and W. R. Sherman.
Analytical Chemistry, Vol 45, No 12, p 2063-2071, October 1973. 8 fig, 16 ref.

Descriptors: *Assay, *Organic compounds, *Chemical analysis, *Stable isotopes, Computers, Computer programs, Electronic equipment, Tracers, *Mass spectrometry, Spectrometers, Amino acids, Carbohydrates, Electrical equipment.
Identifiers: *Trace levels, Magnetically scanned mass spectrometers, Accelerating voltage circuits, Precision, Sensitivity, Computer-D/A converter interface, Digital to analog converters, Myo-inositol, Alanine, Glucose, Accuracy, Circuits.

A circuit has been designed for magnetically scanned mass spectrometers that allows computer generation of any desired accelerating voltage change use to 2000 volts, using a 15-bit D/A converter, a high voltage amplifier, plus floating the standard accelerating voltage power supply. A 15-bit D/A converter interface for use with PDP-81 and PDP-12 computers has been built from two logic modules. The circuit appears to have considerable application for upgrading existing magnetically scanned mass spectrometers where there is a need for increased sensitivity for measuring selected fragment ions or increased accuracy for isotope ratio measurements. Using this circuit, a program has been written for the PDP-12 computer that measures the intensities of eight fragment ions. Exact masses are typed into the computer and the appropriate accelerating voltages generated. Results are presented showing a linear assay for picogram levels of myo-inositol, and the precision of assays for deuterated alanine and glucose. (Holoman-Battelle)

Descriptors: *Water analysis, *Aqueous solutions, *Chromium, *Metals, Laboratory equipment.
Identifiers: *Atomic absorption spectrophotometry, *Atomic fluorescence spectroscopy, Electrodeless discharge lamps, Neon lamps, Detection limits, Calibration curves.

Neon electrodeless discharge lamps (EDL) were prepared to study their usefulness in analyzing aqueous solutions of chromium by atomic fluorescence and atomic absorption. Power and emission intensity relationships showed that best results were obtained with lamps pressurized at 5 Torr and operated at 25-30 W incident power. Atomic fluorescence at 359 nm gave a detection limit of 2.5 ppm Cr using a monochromator slit-width which corresponded to a spectral band-pass of 6 nm. The analytical curve was linear up to about 50 ppm. Atomic absorption at 359.3 nm gave a detection limit of 0.8 ppm. The analytical curve in the range of 1 to 250 ppm was slightly curved toward the concentration axis and passed through the origin. It is concluded that neon EDL's, because of the linearity of analytical curves produced, should be useful for fluorescence and atomic absorption of chromium even though detection limits are poorer than those obtained with chromium sources. INDIRECT COULOMETRIC TITRATION OF BIOLOGICAL ELECTRON TRANSPORT COMPONENTS,
Ohio State Univ., Columbus. Dept. of Chemistry.
F. M. Hawkridge, and T. Kuwana.
Analytical Chemistry, Vol 45, No 7, p 1021-1027, June 1973. 7 fig, 2 tab, 29 ref.

Descriptors: *Electrochemistry, *Energy transfer, *Cytological studies, Oxidation-reduction potential, *Volumetric analysis, Oxidation, Methodology, Chemical reactions.
Identifiers: *Electron transport, Coulometric titration, Stoichiometry, Heme proteins, Bioenergetics, Enzyme kinetics, Potassium ferrocyanide, Methyl viologen, Myoglobin, 1 1'-Dimethyl-4 4'-bipyridyl dichloride, 1 1'-Ethylene-2 2'-bipyridyl dichloride, Optically transparent electrodes, Cytochrome c, Cytochromes.

The approach of utilizing an electrochemically generated titrant to transfer charge to an electron carrier enzyme has been demonstrated in the mediator/spinach ferredoxin-NADP-reductase/NADPH system. Present work describes further developments aimed toward the general application of spectroelectrochemical methods using optically transparent electrodes (OTE's) to evaluate the stoichiometry, energetics, and kinetics of enzymatic electron transfer sequences. Electrochemical and spectral data indicate that reagents such as potassium ferrocyanide, 1,1'-dimethyl-4,4'-bipyridyl dichloride (methyl viologen), and 1,1'-ethylene-2,2'bipyridyl dichloride can also act as electron mediators and that their essential properties are unaffected by the presence of a protein. These reagents undergo electron transfer at the electrode and in turn transfer charge to the enzyme. Anaerobic redox titrations (O2 less than or equal to 0.5 microM) of horse heart cytochrome c, modified horse heart cytochrome c, and sperm whale myoglobin are reported. Results indicate that the n values of these heme proteins can be evaluated within plus or minus 3 percent of the expected values. Concurrent potentiometric data have also been obtained for certain titrations. Experimental details of cell design, oxygen removal by vacuum degassing, procedures in charge injection, and the rapid acquisition of spectral information are discussed. (Holoman-Battelle)

Analytical Chemistry, Vol 45, No 9, p 1586-1594, August 1973. 10 fig, 6 tab, 28 ref.

Descriptors: *Chemical analysis, *Solutes, *Metals, Aluminum, Molybdenum, Cobalt, Calcium, Titanium, Potassium, Sodium, *Spectrophotometry.
Identifiers: Lateral diffusion interference, *Flame absorption, *Flame emission, Concomitants, Vanadium, Atomic absorption spectrophotometry, Flame emission spectroscopy, Reproducibility, Silver, Tungsten, Chemical interference, Sulfuric acid, Analytes.

Reported are results of detailed studies on the effect of concomitants on Al, Mo, and V absorption and emissions signals in nitrous oxide-acetylene flames supported on linear slot burners. Extensive unequivocal experimental evidence is presented to show that the horizontal distribution of the analyte free atoms across a linear slot burner flame may be markedly affected by the presence of concomitants. The effect of these concomitants, classified as a lateral diffusion interference, is to increase the concentration of analyte free atoms along the linear center of the flame and to decrease their concentration at the edges. This study of Al, Mo, and V confirms the existence of such enhancements and attributes them predominantly to changes in the horizontal distribution of analyte free atoms or molecules across the flame profile. This redistribution was first observed by Koirtyohann and Pickett in 1968. Because the elements studies form stable monoxides, oxide formation at the edges of the flame due to entrained air obscures edge depressions accompanying the enhancements in the cent of unshielded flames. The interferences were therefore observed in an argon-shielded flame and confirmed in an unshielded flame with metals forming less stable oxides. The following mechanism is proposed to explain this type of interference: The concomitant delays in atomization of spray droplets or solid particles, thus shortening the time available for lateral diffusion in the flame by analyte atoms or

molecules before they reach the optical path. The analyte free atoms or molecules are therefore concentrated in the center of the flame and depleted at the edges. (Holoman-Battelle)

Research Triangle Inst., Durham, N.C.
R. A. Zweidinger, L. Barnett, and C. G. Pitt.
Analytical Chemistry, Vol 45, No 8, p 1563-1564, July 1973. 3 tab, 14 ref.

Descriptors: *Fluorometry, Separation techniques, Heavy metals.
Identifiers: *Biological samples, *Sample preparation, *Tissue, *Gallium, *Ion exchange chromatography, Recovery, Detection limits, Chemical interference, Acid digestion, Elution.

Samples of biological material were analyzed for gallium by anion exchange chromatography. Ascorbic acid reduction of Fe (III) was used after the chromatography, and the fluorometric reagent was Lumogallion. Samples were digested by boiling in sulfuric and nitric acid, treated with C104, diluted with water and HC1, the resulting solution applied to Dowex 1-X8 resin, and the Ga eluted with HC1. The eluted Ga was treated with ascorbic acid, Na2S203, and Na2CO3, Lumogallion added, the resulting complex extracted with isoamyl alcohol, and the fluorescence read at 570 nm with 490-nm excitation. The detection limit with mouse tissue was 15 ng/g with average recovery of 100 percent. Fe (II), Al, and Cu either did not interfere or their interference was eliminated by the procedure. DETERMINATION OF LOW CONCENTRATIONS OF COBALT IN PLANT MATERIAL BY ATOMIC ABSORPTION SPECTROPHOTOMETRY,
Western Australia Univ., Nedlands. Inst. of Agriculture.
W. J. Simmons.
Analytical Chemistry, Vol 45, No 11, p 1947-1949, September 1973. 3 tab, 11 ref.

Descriptors: *Cobalt, *Plant tissues, *Pollutant identification, *Chemical analysis, *Methodology, Heavy metals, Potassium, Phosphorus, Calcium, Magnesium, Iron, Manganese, Zinc, Copper, Chemical degradation, Wheat, Clovers.
Identifiers: *Atomic absorption spectrophotometry, Chemical interference, Chemical recovery, Precision, Accuracy, Sample size, Organic solvents, 2-Nitroso-1-naphthol, Methyl isobutyle ketone, Sample preparation, Yellow lupin, Lucerne, Biological samples, Environmental samples.

An atomic absorption procedure is described which is an alternative to the AA method of Jago et al. (1971) for determining low concentrations of Co in plant material. This method has the same sensitivity but utilizes a different complexing agent (2-nitroso-1-naphthol), pH (6.0-6.4), and final solvent (MIBK) for the extraction and concentration of Co. When Co-57 was added to four 5-g samples of lucerne prior to digestion, recoveries of activity in the MIBK solution were quite satisfactory. The mean recovery was 98.8 percent with a standard deviation of 0.8 percent. The Effect of relatively high concentrations of eight of the most common of these elements on the determination of added Co was examined. None of the salts added interfered seriously with the recovery of added Co. Sample weight had no effect on the Co concentration of any of the plant materials analyzed indicating that the method is free of constant bias. The problem of nebulizer blockage encountered with another procedure was prevented by the removal of excess 2-nitroso-1-naphthol with NsOH. Over 1000 samples have been analyzed using the proposed procedure and not once has the nebulizer blocked. The method is superior to the colorimetric procedure because small sample weights can be used. For Co concentrations as low as 0.08 microgram/g, sample weights of as little as 2 have satisfactory precision and accuracy. At even lower Co concentrations, 5-g samples give adequate precision and accuracy. (Holoman-Battelle)

Descriptors: *Evaluation, *Computers, *Volumetric analysis, Sea water, Alkalinity, Carbonates, Mathematical studies, Water chemistry, Water quality, Equations.
Identifiers: *Gran plots, *Data interpretation, Accuracy, Potentiometric titration, Stability constants, Errors.

The use of computer calculations is deomonstrated for the determination of the systematic errors associated with Gran plots. The results of such calculations are used to derive 'modified' Gran plots capable of locating the equivalence point both more accurately and more precisely. The general principles are exemplified by application to the determination of the total alkalinity and carbonate content in seawater by means of potentiometric titration. (Holoman-Battelle)

Identifiers: USSR, Oozes, Upwelling (Currents).

Concentrations of Fe, Mn, and Cu in waters of the Atlantic Ocean are lower than those in river waters. Surface waters of the sea contain 3 to 24 micrograms of reactive Fe per liter. Maximum concentrations occurred in waters along coasts, near river mouths and volcanic islands and in areas of deep upwelling. Minimum concentrations occurred along coasts of North America (Gulf Stream, Sargasso Sea). The content of organic (colloidal) Fe is 2-10 times that of the reactive form. The content of dissolved Mn in the upper layer of Atlantic waters varies between 0.5 and 32.0 micrograms/liter and in deep waters (25-5,000 m) is 0.5 to 12.0 microgram/liter. Maximum amounts occurred in shelf waters at the mouth of the Congo River, and minimum amounts were found in the 25-150 m active layer of the Angola

Depression. The content of Mn in pore waters varies between 27.5 and 1,500 micrograms/liter. Highest concentrations occurred in reduced muds of the Baltic Sea and off the Congo coast, and minimum concentrations were found in oxidized foraminiferal oozes on the mid-Atlantic Ridge. The content of Cu in surface waters of the sea varies between 0.5 and 10.3 micrograms/liter and in deep waters (50-5,000 m) is 1.5 to 7.0 micrograms/liter. Highest Cu concentrations (5 to 10.3 micrograms/liter) occurred in areas of upwelling. The Cu concentration in pore waters is quite high (12.0 to 110.0 micrograms/liter.0. concentrations of reactive Fe, Mn, and Cu vary slightly with depth, while the content of organic Fe increases at depths of 200-1,500 m or more. (Josefson-USGS)

Descriptors: *Geochemistry, Surface waters, Chemical reactions, *Analytical techniques, Spectrophotometry, Electrophoresis, Solubility, Fulvic acids, Hydrogen ion concentration, Stable isotopes, Radioisotopes, Radioactivity.
Identifiers: *USSR (Moscow River), *Rare earth elements, *Cerium, *Yttrium, *Ytterbium.

Reaction of Ce, Y, Yb, and Ce-144 with fulvic acids separated from highly colored water of the Moscow River was investigated by solubility, spectrophotometric, and electrophoresis techniques. Reaction of rare earth elements with fulvic acids is accompanied by formation of slightly soluble compounds containing a fulvic-acid fraction of high molecular weight and of soluble cationic and anionic complexes containing fulvic-acid fractions of a lower molecular weight. Formation of complex compounds of rare earth elements with fulvic acids and their difference in solubility and stability are examined as possible factors affecting modes of migration, differentiation, and accumulation of rare earth elements in natural processes. Descriptors: *Aqueous solutions, *Nitrates, *Nitrites, Chemical analysis, Methodology.
Identifiers: *Qunatitative analysis, *Infrared spectrometry, *Mixtures, Infrared spectra, Chemical concentration, Detection limits, Ammonium nitrite, Ammonium nitrate, Sodium nitrate, Sodium nitrite.

Infrared spectra of aqueous NO2 (-) and NO3 (-) solutions, and of binary mixtures, were recorded using internal reflection techniques and a Fourier transform spectrometer. NO2 (-) could be detected at a concentration of 0.02 M, and NO3 (-) at 0.001 M. However, NO3 (-) also became adsorbed on the Ge prism. After making corrections for NO3 (-) adsorption and for overlapping of NO2 (-) and NO3 (-) bands, it was possible to analyze binary mixtures with concentrations as low as (NO3 (-)) equals 0.03 M and (NO2 (-)) equals 0.05 M. By adjusting the optics so that the usually totally absorbing water stretching band had a transmittance of about 50 percent, it was possible to observe N-H and C-H stretching bands of solutes. Dissolved materials cause the water structure and consequently the water absorption to change, causing distortions of the background of ratioed spectra of aqueous solutions. These distortions may influence qualitative and quantitative observations. (Holoman-Battelle)

SIMPLIFIED SPECTROPHOTOMETRIC ANALYSIS OF PLANTS FOR SELENIUM,
South Dakota State Univ., Brookings. Dept. of Biochemistry.
O. E. Olson.
Journal of the Association of Official Analytical Chemists, Vol 56, No 5, p 1073-1077, September 1973. 2 fig, 3 tab, 7 ref.

Descriptors: *Spectrophotometry, *Plant tissues, Feeds, Hay, Grains (Crops).
Identifiers: *Biological samples, *Selenium, *Sample preparation, Detection limits, Recovery, Hair, Reproducibility.

Plant samples can be analyzed for selenium by a simplified spectrophotometric method based on light absorption at 378 nm of the piazselenol formed by the reaction of 2,3-diaminonaphthalene with selenite. Samples of wheat, corn, wheat bran, alfalfa hay, soybean oil meal, linseed oil meal, barley, Astragulus recemosus seeds, and A. bisulcatus leaves and stems were analyzed after digestion. Comparison of results with those obtained by fluorometric analysis, and reproducibility and recovery studies showed the method to be suitable for plant samples containing more than 2 ppm Se. It is also useful for analyzing feed premixes and in diagnosis of selenium poisoning in cattle by hair analysis. (Little-Battelle)

P. H. Daum.
Analytical Chemistry, Vol 45, No 13, p 2276-2278, November 1973. 2 fig, 1 tab, 20 ref.

Descriptors: *Chemical reactions, *Methodology, Electrochemistry, Resistance, Voltage regulations, Chemical analysis.
Identifiers: *Double pulse coulostatics, *Coulostatic analysis.

A two-step method avoids most problems due to double layer charging and solution resistance and thus allows the study of much faster chemical processes. The method involves the perturbation of the potential of the test electrode from a potential where no electrochemical reaction occurs to the diffusion limiting region with the application of a short duration coulombic pulse. The system is allowed to relax for a predetermined time tau and is then perturbed with a coulombic pulse of opposite sign, to the diffusion limiting region in the other direction. The ratio of the relaxation potential at time 2 tau, to that at time tau is determined, and from this and the value of tau, the rate of a coupled chemical reaction can be determined. The method can be recognized as the addition of a second pulse to the familiar method of coulostatic analysis and is similar to the methods developed by Sluyters et al. for the study of heterogeneous electrochemical processes. Descriptors: *Fabrication, *Zeta potential, *Electrical properties, *Electrodes, Instrumentation, Equipment, Construction, Physical properties, Durability, Costs.
Identifiers: Glass-metal composite electrodes, *Sensors, Platinum electrodes, Silver billet electrodes, Potentiometry, Cyclic voltammetry, Potentiometric titration.

Some preliminary data are presented on an electrode system which utilizes a metal/glass composite carried as a film on a rigid inert glass carrier. Such electrodes have the advantages of durability, inertness to poisoners, and low cost. The conventional electrodes used were Beckman 39273 platinum inlay electrodes and Beckman 39261 silver billet electrodes. The new type of sensors was prepared from a chemically pure, low alkali glass cut to sections 1/8-inch thick, 1 inch wide, and 4 inches long. Onto this substrate was screened a formulation composed of a noble metal powder and pure glass binder of low alkali content and of a fine particle size mixed in a fugitive binder. Examples of potentiometric titrations and cyclic voltammetric measurements show the possible usefulness of the new sensors as substitutes for the more costly billet, foil, or wire electrodes now commonly used in potentiometric measurements. A CHEMICAL SURVEY OF THE MALACCA RIVER,
Kempas Devon Estate, Malacca (Malaysia).
Y. T. Tan, and G. A. Prowse.
Malays Agric J. Vol 48, No 3, p 185-221. 1972, Illus.
Identifiers: Chemical survey, *Malaysia (Malacca River), Minerals, Plankton, Rivers, Saline water, Sewage, Nitrates, Phosphates, Calcium, Sulfates.

A year long chemical survey was carried out over the length of the Malacca river, Malaysia. The tidal gate prevents both saline water and town sewage from passing upstream. Acid gelam swamps lower both the pH and the O2 of the water. Heavy rain washes nutrients downstream, but also lowers the O2 levels. Washing downstream tends to obscure changes in the various ions, although there are indications of the precipitation of Ca as sulphate. During drought nitrite appears to be oxidized to nitrate, while total phosphate levels are higher, probably due to the development of plankton.--Copyright 1973, Biological Abstracts, Inc.

Descriptors: *Estuaries, *Bacteria, Sedimentation, *Tides, *Salinity, *Sediment transport, Suspension, Path of pollutants.
Identifiers: *Elbe estuary (Germany).

The hydrographic conditions in the zone of maximal suspended matter of the Elbe Estuary are described by continous records of transparency, currents, salinity, temperature, and by measurements of the content of particulate C and seston. Investigations on mineralogical composition of suspended matter show no qualitative differences. But there are quantitative differences, obviously influenced by tidal transport sorting effects. With tidal variations of sedimentation and salinity, the distribution and composition of the bacterial flora are changing. (Sinha-OEIS)

SEDIMENTATION IN A MEANDERING ESTUARY,
Lehigh Univ., Bethlehem, Pa. Marine Science Center.
L. S. Land, and J. H. Hoyt.
Sedimentology, Vol 6, No 3, p 191-207, May 1966. 9 fig, 33 ref. NSF-G16426.

Descriptors: *Estuaries, *Sedimentation, Environments, *Coasts, *Georgia, Sand bars, Currents (Water), Sediments.
Identifiers: Bioclastics, Grain size, Point bar deposits.

Sand is being deposited in a meandering estuary separating Sapelo and Blackbeard Islands, Georgia, in the channel of the estuary and on two point bars associated with meanders. Sand is being eroded by the meandering channel from slightly lithified Pleistocene and unconsolidated Holocene strandline deposits, and is being redeposited by the ebb tidal currents. The estuary-channel deposits are coarse grained and their grain-size decreases down ebb current from the source outcrops. The point bars are elongated in the direction of the ebb current, and increase in grain-size from their crests downward as they grade into the channel deposits. Festoon cross-bedding and ripple marks on the point bars record the ebb direction, while elongate plant fragments are preferentially oriented normal to the bar elongation (current). Horizontally stratified muds and muddy sands are being deposited behind the bars, and contain a rich fauna (primarily annelids, arthropods, and molluscs). However, the fauna is represented in the deposits more by burrows and disturbed stratification than by preserved organisms. The sands of the bars and channel are biologically less productive, but the bioclastic content of the sediment is high. (Sinha-OEIS)

ON STRUCTURE, ENTRAINMENT, AND TRANSPORT IN ESTUARINE EMBAYMENTS,
Fisheries Research Board of Canada, Nanaimo (British Columbia). Pacific Oceanographic Group.
J. P. Tully.
Journal of Marine Research, Vol 17, p 523-535, 1958. 4 fig, 14 ref.

Descriptors: *Estuaries, *Salinity, Mixing, *Tides, *Coasts, Entrainment, *Canada.
Identifiers: *Halocine.

When fresh water enters the surface of an embayment it moves persistently seaward. Enroute it entrains seawater from below to form a halocline, in which the salinity increases with depth and to seaward. Wind mixing creates a nearly homogeneous zone in the upper part of the halocline. Below the halocline there is a nearly homogeneous lower zone in which sea water intrudes at a rate sufficient to supply the demand for entrainment. This fresh water transport system is superimposed on the tides which ebb and flood at all depths. There is a surface of no net motion in the halocline above which the net transport is seaward and below which it is inwards. Entrainment is the preferential upward transfer of water from the lower to upper zone. The downward mixing of fresh water is defined by the lower limit of the halocline, which is a surface of unidirectional upward transfer. The zone structure is accurately defined by plotting salinity as a function of the logarithm of depth. The seaward volume transport through the upper zone and halocline, the inward transport through the lower zone, and the upward transfer through the interzone boundary may be computed in terms of the continuity of fresh water, where the rate of input is known. Where it is not known, the equations are solved by introducing the difference of dynamic height across the embayment. The features of structure and transport may be defined by application of normal oceanographic date. Sinha-OEIS)

THE UNION OF THE COLUMBIA RIVER AND THE PACIFIC OCEAN -- GENERAL FEATURES,
Washington Univ., Seattle. Dept. of Oceanography.
A. C. Duxbury.
In: Ocean Science and Ocean Engineering, Transactions 1st Conference Marine Technology Society, Washington, DC, June 1965, Vol 2, p 914-922, 1965. 6 fig. AEC AT (45-1)-1725, ONR Nonr-477 (10), 477 (37).

Descriptors: *Columbia River, *Precipitation (Atmospheric), Freshwater, *Seasonal, Effluent streams, *Winds, Upwelling, *Estuaries, Rivers, Watersheds (Basins), Environments, *Pacific Ocean.

The Columbia River is seasonal in its discharge, having both a winter and a summer peak. The winter peak is generally erratic and a function of the coastal precipitation, while the summer peak, produced by snow melt in the interior, is uniform. The effluent enters the Northeastern Pacific through a belt of near uniform surface coastal water. In this region the Columbia is the largest single contributor of freshwater. During the summer peak discharge period the freshwater added by this one river represents approximately 95% of the area's coastal drainage. However, its influence on the dilution of the oceanic environment is reduced during the winter when other coastal rivers are also at peak flow. In addition to the seasonal variation in river flow, there is a seasonal trend in the transport of the effluent once it has united with the sea. During the winter the prevailing winds hold the effluent close to the shore on the northern side of the river, producing a narrow band of relatively fresh water that is composed of effluent from several coastal sources. The summer brings persistent northerly winds which transport the river's discharge seaward to the southwest and on either side of the river. Since at this time of the year the freshwater in the oceanic environment adjacent to the river is nearly all Columbia River water, any modification of the distributions can be related to the Columbia River and the local transport processes. SEDIMENT TRANSPORT IN A COASTAL PLAIN ESTUARY,
Virginia Inst. of Marine Science, Gloucester Point.
M. Nichols, and G. Poor.
Journal of the Waterways and Harbors Division, American Society of Civil Engineers, Vol 93, No WW4, Proceedings Paper 5571, p 83-95, November 1967. 9 fig, 19 ref.

Descriptors: *Sediment transport, *Estuaries, Density currents, *Tidal effects, *Shoals, Salinity, Diffusion, *Virginia, Turbulence.
Identifiers: *Rappahannock Estuary (Va), Flushing.

Observations of net flow and suspended sediment were made in the Rappahannock Estuary, Virginia, to delineate patterns of transport that lead to partial entrapment of sediment in the middle estuary. The estuary is characteristic of the partly mixed type; its main channel is bordered by extensive submerged shoals. River-borne sediments are flushed downstream through the upper estuary mainly over the shoals. In the middle estuary, sediment is partly entrapped on the north shoals or deposited on the basin floor. Another part is redistributed headward in the channel along with estuarine produced organic constituents. Upstream transport by density currents is augmented by alternating tidal flow that favors differential settling and selective transport of coarse-grained particles. Near the head, rapid advective mixing and moderate tidal turbulence act to deter deposition and recirculate sediment downstream over the shoals. Engineering measures in similar systems should be planned to take advantage of natural self-flushing features. (Sinha-OEIS)

TIDAL PERIOD OSCILLATIONS OF AN ISOHALINE SURFACE OFF THE MOUTH OF THE COLUMBIA RIVER,
Washington Univ., Seattle. Dept. of Oceanography.
A. C. Duxbury, and N. B. McGary.
International Journal of Oceanology and Limnology, Vol 1, No 2, p 71-84, April 1967. 6 fig, 1 infold, 5 ref. ONR Nonr 477 (37), AEC AT- (45-1)1725.

Descriptors: *Columbia River, *Salinity, *Tides, Effluent streams, *Coasts, Hydraulics, Currents (Water), Winds, *Estuaries, Water properties.
Identifiers: Tidal periods, *Isohaline surfaces.

Near the mouth of the Columbia River the river effluent forms a surface pool of low salinity water having distinct boundaries. The periodic motion of this pool and the magnitude of the accompanying changes in water characteristics have made it difficult to obtain directly quasi-synoptic measurements. To interpret these changes in both time and space, a repetitive series of observations was made, and depth-time profiles were interpolated for various parameters at selected points within this area of dilution. Vertical oscillations of equiscalar surfaces were found to be correlated with tidal periodicity. The variation in slope of the equiscalar surfaces with time along a three-station line was used in determining the motion of the periphery of the pool of low salinity surface water past the three stations. SHORELINE PROCESSES NEAR BARROW, ALASKA: A COMPARISON OF THE NORMAL AND THE CATASTROPHIC,
Tufts Univ., Medford, Mass. Dept. of Geology.
J. D. Hume, and M. Schalk.
Arctic, Vol 20, No 2, p 86-103, June 1967. 9 fig, 25 ref.

Descriptors: *Alaska, *Coasts, *Sediment transport, *Storms, Floods, Climates, Waves (Water), Beaches.
Identifiers: *Point Barrow (Alaska).

Studies of sediment movement between 1948 and 1962 along the Alaska coast west of Point Barrow indicate a normal average yearly net transport to the northeast of 10,000 cubic yards. Net transport east of Point Barrow, based on surveys begun in 1958, indicate a normal annual southeastward movement there of 9,500 cubic yards. On 3 October 1963, a storm with gusts of up to 75 miles per hour blew over an ice-free ocean and attacked the coast. Wave heights, estimated at 10 feet, combined with a storm surge of 11 to 12 feet caused coastal flooding and over $3 million damage. The 1963 storm, probably a 'two-hundred year storm,' moved over 200,000 cubic yards of sediments, which is equivalent to 20 years' normal transport. If the climate is becoming warmer, such storms can be expected more frequently. Construction adjoining the shore should be planned accordingly. (Sinha-OEIS)

Identifiers: *Sacramento-San Joaquin River (Calif).

The Sacramento-San Joaquin River Delta of California comprises approximately 700 mi of interconnected tidal channels that receive drainage

from the 64,000 sq-mi central valley basin. Waters flowing from the Delta paas through the San Francisco Bay system on their way to the Pacific Ocean. The development of a mathematical model that characterizes the dynamic tidal hydraulic conditions in the Delta network and its application to the prediction of water quality is described. The basic hydraulic conditions of surface water inflow, Delta consumptive uses, export demands, outflow, and tidal action are used as inputs to the model. A high speed digital computer program is described that will treat up to 1000 channel reaches interconnected at up to 750 junctions. Output gives values for input conditions, total head, velocity, surface width, and flow at selected points in both space and time. Other programs make possible salt routing on the basis of net flows and complete mixing. Limitations of this procedure are recognized and plans for the development of a dynamic water quality program are considered. (Sinha-OEIS)

TIDAL CYCLE OF CHANGES IN AN EQUILIBRIUM BEACH, SANDY HOOK, NEW JERSEY,
Columbia Univ., New York.
A. N. Strahler.
Journal of Geology, Vol 74, No 3, p 247-268, May 1966. 14 fig. ONR Nonr 266 68.

Descriptors: *New Jersey, *Beaches, *Coasts, *Sedimentation, Profiles.
Identifiers: *Tidal cycles, Sandy Hook (NJ).

The purpose of the field study described was to determine the characteristic summer equilibrium profile form and composition of the Atlantic Ocean beach of Sandy Hook, New Jersey, and to determine in detail the minor cyclic fluctuations in profile and sediment compositon imposed by the semidiurnal tidal cycle. Reference grids were laid out on the beach at two field stations to provide horizontal and vertical control for profile lines surveyed transverse to the shoreline in the foreshore zone. Surveys carried out during the summers of 1959, 1960, and 1961 provided data on the characteristic form and evolution of the beach during the summer regime of low waves and persistent obliquity of wave approach from the southeast. A series of half-hourly profile surveys permitted documentation of the small changes of beach form accompanying the rise and fall of tide and led to the formulation of a schematic model for the sequences of erosion and deposition in a semidiurnal tidal cycle. EXPERIMENTS AND HYDROGRAPHIC SURVEYS OFF SANDY HOOK, NEW JERSEY (1963),
Lamont-Doherty Geological Observatory, Palisades, N.Y.
T. Ichiye.
Technical Report No. CU-266 (48)-11 and Technical Report No. CU-2663-18, July 1965. 29 p, 9 fig, 15 ref, 1 append. ONR Nonr 266 (48), AEC AT (30-1) 2663.

Descriptors: *New Jersey, *Dye concentrations, *Diffusion, Weather, Bays, Advection, *Hydrography, *Coasts, Turbulence, Energy.
Identifiers: *Sandy Hook (NJ).

Dye diffusion experiments carried out off Sandy Hook, New Jersey on August 7 and October 15 through 18 in 1963 are described. Aerial photographs from a low flying airplane in October experiments showed fine structures of dye patches, such as striations, owing to calm weather. A shipborne fluorometer indicated that dye was thinly spread vertically only above seven meters in October although thermocline was located at about 25 meters. Hydrographic data off Sandy Hook Bay were collected at three different tidal stages on August 6 to 7. These data indicate that advection of water in the bay by tidal currents occurred independently at each level without much vertical mixing. Relationships between spectrum of mean square deviations of concentration and that of turbulent energy are discussed in relation to the dye diffusion process. (Sinha-OEIS)

HARBOR ANALOG SYSTEM, PART I - WAVES,
Navy Hydrographic Office, Washington, D.C. Oceanographic Analysis Div.
A. L. Grabham.
Technical Report TR-117, August 1961. 33 p, 14 fig, 1 tab, 29 ref, 1 append.

Descriptors: *Harbors, *Waves (Water), Winds, Fetch, Seasonal, *Shallow water, *Estuaries.

An initial attempt is presented to classify harbors and nearshore areas into analogous groups with respect to the frequency distribution of wave heights and wave periods. The harbors and nearshore areas of the world are classified according to the wind regime, the maximum fetch length, and the prevailing wind direction in the primary fetch area with respect to the shoreline. Additional breakdowns provide for seasonal variations and varying degrees of sheltering. Wave height and period cumulative frequency distribution graphs have been compiled for each possible combination under the classification system. The graphs have been assembled from data averaged from studies of the U.S. Navy Hydrographic Office, and U.S. Beach Erosion Board, and from compilations of wave data tabulated from oceanographic decks of the National Weather Records Center of the U.S. Weather Bureau. Examples of the use of the graphs are provided as well as a brief description of other factors which affect waves in shallow water. (Sinha - OEIS)

THE INFLUENCE OF TOPOGRAPHY AND PRESSURE GRADIENTS ON SHOALING IN A TIDAL ESTUARY,
Leeds Univ. (England). Dept. of Mechanical Engineering.
R. C. McGregor.
Geophysical Journal of the Royal Astronomical Society, Vol 25, No 5, p 469-480, December 1971. 4 fig, 1 tab, 11 ref.

Descriptors: *Estuaries, Tides, Equations, *River flow, Density currents, Topography, *Sedimentation, *Coasts.
Identifiers: *Shoaling, *Pressure gradients.

The non-periodic equations governing tidal motion in estuaries are developed. These equations, which determine the density driven currents within the estuary are then demonstrated to be easily soluble for estuaries of arbitrary topography, river flow and density distribution. The solution relates all the principal parameters associated with estuarial flow to the location of the deposition zone and can also be used to demonstrate the importance of different agencies in particular estuaries. The evaluation of the solution is very economical on computing time and requires only readily available data. Results are discussed with respect to data appropriate to the River Thames and the River Humber and agreement with observation is very good. (Sinha-OEIS)
W74-01204

ON THE VERTICAL STRUCTURE OF TIDAL FLOW IN RIVER ESTUARIES,
Reading Univ. (England). Dept. of Mathematics.
B. Johns, and N. Odd.
Geophysical Journal of the Royal Astronomical Society, Vol 12, No 5, p 103-110, November 1966. 1 fig, 1 tab, 6 ref, 1 append.

Descriptors: *Estuaries, *Tidal effects, *Rivers, *Currents (Water), Turbulence, Shear stress, Coasts.
Identifiers: Humber River (U.K.), Shoaling, Eddy viscosity.

A technique is developed for calculating the distribution with depth of current and shearing stress in tidal estuaries. The effect of turbulence is introduced by a coefficient of eddy viscosity which is a prescribed function of the depth coordinate, and the predictions are compared with observation and existing theory. Using parameters representative of the Humber estuary, the resultant current profiles are found to be in reasonable agreement with recent measurements. The friction coefficient k (used in the Lorentz linearization of the quadratic friction law) has a value consistent with that determined by the other methods. (Sinha-OEIS)

THE GENERATION OF LONGSHORE CURRENTS ON A PLANE BEACH,
Liverpool Observatory and Tidal Inst., Birkenhead (England).
A. J. Bowen.
Journal of Marine Research, Vol 27, No 2, p 206-215, May 1969. 2 fig, 10 ref. NO0014-69-A-0200-6006.

Descriptors: *Beaches, Momentum transfer, Surf, *Model studies, Shallow water, *Currents (Water), *Waves (Water).
Identifiers: *Longshore currents, Velocity field, Radiation stress.

The generation of longshore currents on a beach is investigated theoretically, using the concept of radiation stress to describe the flux of momentum associated with the incoming waves. Outside the surf zone, the longshore gradient of the radiation stress is always zero, and the flow is therefore driven only inside the surf zone. The exact form of the longshore current is dependent on assumptions about both the behavior of the waves in the surf zone and the form of the viscous forces. However, with reasonable assumptions, the theory leads to a complete description of the velocity field as a function of the distance from the shore. The model is intended to provide a mathematical framework in which the various possible assumptions can be tested by comparing them with reliable experimental data. One of the laboratory experiments of Galvin and Eagleson (1965) is used to show the relevance of this approach. (Sinha-OEIS)

THE CIRCULATION OF SURFACE WATERS IN RALEIGH BAY, NORTH CAROLINA,
Duke Univ., Durham, N.C. Dept. of Zoology; and Duke Univ., Beaufort, N.C. Marine Lab.
I. E. Gray, and M. J. Cerame-Vivas.

Limnology and Oceanography, Vol 8, No 3, p 330-337, July 1963. 5 fig, 2 tab, 13 ref. NSF G-13,952 and G-25,128.

Descriptors: *North Carolina, *Surface waters, *Coasts, *Bays, Winds, Currents (Water), Water circulation, Topography, Drift bottles.
Identifiers: *Raleigh Bay (N.C.).

Returns from helicopter-released drift bottles over Diamond Shoals, in April and August 1962, revealed a definite southwesterly coastal flow from Cape Hatteras, North Carolina. Influenced by northeast winds the flow was more pronounced in late summer than in late spring, some of the bottles rounding Cape Lookout. Recovery of drift bottles from Onslow Bay and Bogue Sound strongly supports the theory that the temporary winter populations of distinctly northern species in the Beaufort, North Carolina, area become established from planktonic larvae that originated north of Cape Hatteras and were transported around the capes. A postulated circulation, involving the influences of Diamond and Lookout shoals, runoff, northeasterly and southwesterly winds, and back eddies from the Florida Current and from wind-induced currents, is presented for Raleigh Bay. (Sinha-OEIS)

TIDEWATER SHORELINES IN BROWARD AND PALM BEACH COUNTIES, FLORIDA: AN ANALYSIS OF CHARACTERISTICS AND CHANGES INTERPRETED FROM COLOR, COLOR INFRARED AND THERMAL AERIAL IMAGERY,
Florida Atlantic Univ., Boca Raton. Remote Sensing and Interpretation Lab.
L. A. Eyre.
Available from NTIS as AD-727 630, Paper copy $3.00, Microfiche $1.45. Technical Report No 11, June 1971. 28 p, 17 fig, 1 tab. NO00-14-67-A-0320-0003.

Descriptors: Coasts, *Shores, *Tidal waters, Color, *Aerial photography, *Remote sensing, *Florida.
Identifiers: Broward County (Fla), Palm Beach County (Fla), Infrared, Thermal aerial imagery, Imagery pattern analysis.

In South Florida, pressures to extend and modify tidewater shorelines are very strong. These modifications include canal excavations, dredging and filling, bulkheading, erection of sea walls, and dock construction. Access to tidewater is much coveted and competition for such access is keen. Using color infrared aerial photography flown at 5000 ft., eight types of tidal shorelines are distinguished in a portion of NASA Test Site 164. Comparisons are made with other imagery, including high-altitude (60,000 ft.) photography and that from the Reconafax and Bendix Thermal Infrared sensor systems; and the degree to which these shoreline types are observable is noted. Some changes over time are also indicated, in particular the extent of additional modifications during a period of approximately one year. (Sinha-OEIS)

ESTUARINE CIRCULATION INDUCED BY DIFFUSION,
National Oceanic and Atmospheric Administration, Miami, Fla. Atlantic Oceanographic and Meteorological Labs.
D. V. Hansen, and M. Rattray, Jr.
Journal of Marine Research, Vol 30, No 3, p 281-294, September 15, 1972. 6 fig, 1 tab, 11 ref.

Descriptors: *Estuaries, *Stratification, *Diffusion, Salinity, *Chesapeake Bay, *Water circulation, Momentum transfer, *Maryland.
Identifiers: *Baltimore Harbor (Md), Flushing, Bottom friction, Turbulent exchange.

Similarity solutions of the equations for estuarine circulation and salt balance are presented for a circulation generated by diffusive modification of stratification maintained at the entrance to an inlet by external dynamics rather than by fresh water discharged directly into the inlet. The explicit x dependence may be factored from the governing equations if the inlet geometry and longitudinal variation in turbulent exchange coefficients are expressible as power or exponential functions of distance along the inlet, and the ordinary differential equations so obtained are solved approximately by perturbation in a function of the Rayleigh number. Salinity in the model decreases inward along the bottom but increases inward along the surface of the inlet, and the flow is three-layered - inward at the top and bottom, outward at the mid-depth - as have been shown and inferred for Baltimore Harbor. Inclusion of bottom friction increases the salinity gradient along the bottom and decreases it along the surface, giving the salinity distribution some resemblance to that expected in conventional estuaries. The induced circulation in all cases is a strong function of total depth and a weaker function of length and turbulent exchange coefficients for salt and momentum. The model can serve as an aid to interpretation of observations in this type of estuary, and it provides a simple means of evaluating the circulation and mixing rates from salinity measurements to whatever precision the eddy vicosity can be estimated, or current measurement can be obtained to scale the flow. ZOOBENTHOS OF THE AZOV SEA AFTER THE CONTROL OF THE DON RIVER, (IN RUSSIAN),
Azovskii Nauchno-Issledovatelskii Institut Rybnogo Khozyaistva, Rostov-na-Donu (USSR).
M. Ya. Nekrasova.
Zool Zh. Vol 51, No 6, p 789-797. 1972, Illus, (English summary).
Identifiers: *Benthos biomass, Biocenosis, Don River (USSR), Fauna, Food, Marine fauna, Nitrogen, Phosphorus, River control, *USSR (Azov Sea), *Zoo benthos.

After control of the Don River (USSR) flow, the amount of zoobenthic biocenoses in the Taganrog Bay diminished from 10 to 5. The benthos biomass in the western and central regions increased 2-3 times at the expense of introduction of marine fauna in the bay. In the eastern region, the biomass decreased by 40% at the expense of relict fauna. Two periods can be distinguished in the development of benthos in the Azov Sea after the control of flow. The first period (1952-1955) was characterized by ground compaction and the complete absence of suffocations, development of epifauna and depression of infauna on the background of unstable river regime. The Benthos biomass amounted to 210 g/m2 with 57% of food benthos. During the second period (1956-1970) the hydrological river regime stabilized and the concentration of N and P compounds markedly increased. The total benthos biomass amounted to 273 g/m2 with 70% of food benthos. The production of food zoobenthos in the Taganrog Bay varied in different yr from 243-644 thousand tons and in the Azov Sea from 19-196 million tons.--Copyright 1973, Biological Abstracts, Inc.

OCEAN UTILIZATION AND COASTAL ZONE DEVELOPMENT.
Massachusetts Inst. of Tech., Cambridge.

Available from NTIS, Springfield, Va., 22151 as COM73-10417, Price $3.00 printed copy; $1.45 microfiche. Sea Grant Report No 73-3, 1973. 27 p. Sea Grant GH-88.

Descriptors: *Oceanography, *Estuaries, *Harbors, *Grants, *Water resources, Research Act, Colleges, Training, Projects, Navigation, Oil spills, Water pollution sources, Marine biology, Marine bacteria, Environmental control.

The Massachusetts Institute of Technology established its Institute-wide Sea Grant Program in July 1970 to execute the Coherent Area Project (CAP), 'Ocean Utilization and Coastal Zone Development,' using Grant Number GH-88 from the Office of Sea Grant, National Oceanic and Atmospheric Administration. OSG extended this grant for one year to June 30, 1972, at no additional cost to the grant. This extension means that additional studies and data are included in this report and complete, rather than interim, reports are provided on three of the first-year projects: research projects, education and training projects, and advisory services projects. The major emphasis for the 1970-71 program year was to organize an effective operation and to direct a viable program that emphasized the education and training and the research categories. These, with the advisory services, are explicit requirements of mature Sea Grant programs. Advisory service efforts included establishing a Marine Resources Reference Center, publishing and distributing reports, and organizing and implementing symposia and seminar meetings. (Woodard-USGS)

OBSERVATIONS OF NET SHORELINE POSITIONS AND APPROXIMATIONS OF BARRIER ISLAND SEDIMENT BUDGETS,
Skidaway Inst. of Oceanography, Savannah, Ga.
G. F. Oertel.

Available from NTIS, Springfield, Va 22151, COM-73m10692 Price $3.00 printed copy; $1.45 microfiche. Georgia Marine Science Center Technical Report Series No 73-2, February 1973. 23 p, 6 fig, 3 ref.

Descriptors: *Sediment transport, *Barrier islands, *Coasts, *Georgia, Investigations, Aerial photography, Beaches, Littoral drift, Data collections, Evaluation, Beach erosion, Shore protection, Erosion control, Ocean currents, Tidal effects, Waves (Water).
Identifiers: Shoreline changes (Georgia).

A short term history (30 years) of the barrier-island shoreline positions in Georgia was studied using aerial photographs. Distances of shoreline erosion and accretion were measured from transects established on sets of aerial photographs of barrier-island shorelines. Four sets of aerial photos were used in this part of the study. A 1933 set of aerial photos obtained from the Department of Commerce was used to establish transects on St. Catherines and Sapelo Island. The other barrier islands were not in this set. Complete sets for 1942, 1952 and 1965 were obtained from the Corps of Engineers, the Department of Agriculture, and the U.S. Coast Geodetic Survey. Although vertical photos for the 1970's were not available, oblique photos were taken from a small plane in March of 1972, and some geomorphic changes between the 1960's and 1970's were noted. The most obvious conclusion was that over a given interval of time there were no general trends that applied to the sediment budgets (net shoreline positions) of all barrier islands. Barriers and portions of barriers appeared to be undergoing sequential sedimentary and morphologic changes. (Woodard-USGS)

VIRGINIA NATURAL RESOURCES LAW AND THE NEW VIRGINIA WETLANDS ACT,
D. J. Brion.
Washington and Lee Law Review, Vol 30, No 1, p 19-71, Spring 1973. 202 ref.

Descriptors: *Legislation, *Virginia, *Wetlands, Legal aspects, Coastal marshes, Local governments, Tidal marshes, Swamps, Constitutional law, Aquatic habitats, Bodies of water, Land reclamation, Governmental interrelations, Water resources development.

When the Virginia General Assembly enacted a wetlands protection statue at its 1972 Session, Virginia became one of the last east coast states to enact laws protecting its valuable wetlands resources. Unlike other states, Virginia chose to place the primary authority and initiative for wetlands protection not in a state-level agency created for that purpose, but in its cities, counties, and towns. The act enables each Virginia locality containing defined wetlands to set up a local wetlands zoning board whose duty is to pass on all uses, with limited exceptions, of local wetlands. Although local board decisions are reviewable by a central state marine resources agency and by the courts, the thrust of the act is to place the initiative for wetlands protection on the Virginia localities. The practical success of this act is yet to be demonstrated, but by its innovative structure it should be more successful than some of th

SOME CONSEQUENCES OF AN INERTIA OF TURBULENCE IN A TIDAL ESTUARY,
Reading Univ. (England). Dept. of Geophysics.
B. Johns.
Geophysical Journal of the Royal Astronomical Society, Vol 18, No 1, p 65-72, September 1969. 3 fig, 6 ref.

Descriptors: *Estuaries, *Turbulence, Circulation, Energy dissipation, Tides, *Tidal effects.
Identifiers: *Reynolds stress, Vertical gradient, Phase difference, Estuarine processes.

The changes that occur in an idealized estuary are considered in: the vertical structure of the tidal flow; the total mean rate of energy dissipation; and the tidal elevation at the head of the estuary. Having isolated the effect of a phase difference in a simple idealized estuary, the same conclusions may be expected to apply in a more general estuarial topography. A parametric representation of the turbulence in a tidal estuary is considered in which there is a specified phase difference between the Reynolds stress and vertical gradient of the tidal current. The model is used to estimate the dependence of the vertical and horizontal tidal structure on this phase difference. Calculations are also performed to determine changes in the mean rate of energy dissipation in the estuary. (Sinha-OEIS)

OSCILLATIONS OF TIDE AND SURGE IN AN ESTUARY OF FINITE LENGTH,
J. Proudman.
Journal of Fluid Mechanics, Vol 2, No 4, p 371-382, June 1957. 3 ref.

Descriptors: *Estuaries, *Tides, *Surges, Meteorology, *Tidal effects, Mathematics, *Coasts.
Identifiers: Surface elevation.

This paper is concerned with a narrow basin of uniform cross-section open to the sea at one end and closed at the other. An incident long wave of prescribed general form is supposed to enter from the sea and to represent the combination of tide and surge as generated in the sea. The solution of the linear terms of the equations of continuity and motion gives the reflection of this wave at the head of the estuary. The next approximation is given when the non-linear terms are retained, the second-order motion being made determinate by the condition that, at the mouth, it reduces to a progression towards the sea. The chief results relate to the surface elevation at the head of the estuary. When the first order elevation there increases steadily to a maximum, the effect of the 'shallow water terms' is to make high water higher and earlier, while the effect of the 'frictional term' is to make high water lower and later. For a short estuary, the interaction of the tide on a surge, due to a given sequence of meteorological conditions over the sea, is to make it higher when its maximum occurs at the time of tidal high water than when its maximum occurs at the time of tidal low water. This is directly opposite to the corresponding result when the estuary is of infinite length. (Sinha - OEIS)

Descriptors: *Transpiration control, *Evapotranspiration control, Chemcontrol, Stomata, Water conservation, *Antitranspirants, Water supply, *Photosynthesis, *Phreatophytes, Fruit crops.

Effects of film-forming antitranspirants on rates of transpiration and photosynthesis were evaluated by leaf chamber studies using dew-point hygrometer and infrared gas analyzer to monitor water vapor and carbon dioxide content of the air stream. Promising antitranspirant materials were evaluated as to foliar coverage with the aid of a scanning electron microscope, evaluated as to techniques of application, influence of stomatal conditions, plant-water potential and transmission of photosynthetically active wave lengths of light. Various antitranspirants were also field tested for possible use in highway landscaping, extension of life of cut flowers, aid in survival of transplants and cuttings, and improvement in fruit quality. Possible use of antitranspirants in reducing water loss by phreatophytes without destroying vegetation and ecological balance were also considered. (Snyder-California)

DEVELOPMENT OF A TIME-SPACE PREDICTION TECHNIQUE TO EVALUATE SNOWPACKS IN AND ADJACENT TO FOREST OPENINGS,
Arizona Univ., Tucson. Dept. of Watershed Management.
P. F. Ffolliott.
Project Completion Report, October 1973. 3 p. OWRR A-037-ARIZ (1). 14-31-0001-3803.

Descriptors: *Snowmelt, Runoff, Water supply, Forests, *Snow packs, *Arizona, Water sources, Water yield improvement.
Identifiers: New water supply, *Forest management guidelines, *Forest openings, Time-space prediction techniques.

In Arizona, snowpack water yield provides a major source of water for the reservoir systems, and it also contributes to the recharge of ground water aquifers. Much of the water realized is derived from the forest zone, which suggests the use of forest management practices (i.e., creating openings of different sizes, shapes, and orientations in forest overstories) in water yield improvement programs. Source information was obtained to develop a time-space prediction technique for evaluating and quantifying snowpack conditions in and adjacent to forest openings in terms of whether an increase in water equivalent occurred. And, if an increase was observed, the physical trade-off between the increased water equivalent and the decreased forest overstory was defined. This information is prerequisite to the synthesis and evaluation of water yield improvement programs based on forest management practices.

SIMULATION MODELS FOR WATER--RESOURCE SYSTEMS: THEIR UTILITY IN MEASURING PHYSICAL AND ECONOMIC EFFECTS OF WEATHER FORECASTING AND WEATHER MODIFICATION: SUMMARY REPORT,
North Carolina Univ., Chapel Hill.
M. M. Hufschmidt, M. B. Fiering, and J. K. Sherwani.
In: Human Dimensions of the Atmosphere, Pt. 3, NSF 68-18, GPO, Washington, D.C., p 121-135, February, 1968.

Descriptors: *Water resources, Methodology, *Simulation analysis, *Weather modification, *Weather forecasting, Model studies.
Identifiers: Harvard Water Resources Program, Physical effects, Economic effects.

The feasibility of adapting water-resource system simulation techniques as a means for testing the physical and economic effects of weather management and forecasting on controlled water-resource systems is examined. Simulating behavior proceeds by: (1) assigning initial trial values to the decision variables; (2) operating the selected system over a selected period of time using the exogenous variables; and (3) observing the physical and economic response of the selected system. In order to adapt such a program to handle weather modification and forecasting situations changes would be needed with respect to: (1) exogenous data: essentially the historic precipitation and climatologic records; (2) synthetic precipitation generator, using historic precipitation records as inputs; (3) new exogenous data: information on the nature of modifications of precipitation; (4) precipitation-runoff model, translating precipitation data into runoff data; (5) streamflow-forecast model; (6) revised operating policy model, adapted to handle streamflow; (7) revised-economic evaluation sub-model, adapted to handle deficits under conditions of natural and modified precipitation, and conditions of streamflow forecasting and absence of forecasting. The necery subroutines are discussed, and it is concluded that it appears feasible to adapt water-resources system simulation programs of the Lehigh-Delaware type for use in testing the effectiveness of weather modification and streamflow forecasting measures. Additional research recommendations are suggested. (Edwards-North Carolina)

In: Cento Seminar on Agricultural Aspects of Arid and Semi-arid Zones, September 19-23, 1971, Tehran, Iran, Central Treaty Organization, p 278-295. 7 tab.

Descriptors: Hydrologic data, Water levels, *Salts, Consumptive use, Water quality, Water resources, Groundwater basins, Seepage, Percolation, Saline water-freshwater interfaces, Arid lands, Irrigation effects, Soil water movement, *Salinity, *Irrigation water, Saline water, *Saline soils.
Identifiers: *West Pakistan (Indus Basin).

West Pakistan covers a land area of about 311,000 sq. mi. Summer temperatures are high, exceeding 120 F in the upper Sind. This region is divided into three distict hydrological units: the Indus Basin, the basin of the Kaharan Desert, and the Markran coastal streams discharging directly into the Arabian Sea. The river waters used for irrigation in the Indus Plains are of high quality with a salt content of only 200-300 ppm. The quality of groundwater is variable, having three separate zones: the fresh water zone--less than 1,000 ppm total disolved salts (TDS); the marginal zone--1,000 to 2,000 ppm TDS; and the unusable saline zone--2,00 ppm TDS and over. Waterin the marginal zone can be used by mixing it with canal water. Seepage from the existing irrigation systems has built up a huge groundwater reservoir in the Indus Plains, and over the past 100 years the water table has been stedily rising. An appreciable upward movement of subsoil water by capillary action has resulted in considerable salt deposition through evaporation of soil water at the surface. Supplemental irrigation water is now required to depress the accumulated salts in addition to the consumptive use requrements of crops. Also, it is now necessary to raise the intensity of croppping in order to reduce evaporation from the soil surface and resultant salt build up. (Black-Arizona)

WATER MASTER PLAN. EUGENE-SPRINGFIELD URBANIZING AREA.
Edmundson, Kochendoerfer, and Kennedy, Portland, Oreg.; and Daniel, Mann, Johnson, and Mendenhall, Portland, Oreg.

Prepared for Lane Council of Governments, Eugene, Oregon. December, 1970. 114 p, 60 fig, 38 tab, 23 ref, 3 append. ORE. P-116.

Descriptors: *Water supply development, *Planning, *Regional development, Costs, Project planning, *Oregon, Treatment facilities.
Identifiers: *Water system expansion, *Eugene-Springfield (Ore).

Population projections and commercial and industrial land use forecasts were used in conjunction with water use demands and related demand variations to determine future system requirements for both short-range (1975) needs and the long-range (1990) program. Projections were applied separately to the two elements within the study area: the central study area, including Eugene and Springfield; and the outlying communities. Because slow growth projections indicated that local demands of the outlying communities could be met (until 1990) by expansion of present systems, system development plans were concentrated on the central study area. Three alternative plans were evaluated for the central study area: (1) expansion of each of the present 9 utilities, (2) consolidation of utilities in the Springfield area, resulting in 2 area-wide utilities, and (3) the combination of all utilities into a single regional system. The third alternative was recommended. It offered the least capital cost, least cost in terms of construction programming (based on present worth analyses), and the least operation and maintenance expense. Besides interconnecting the existing system, the plan included the expansion of major water supply sources, particularly the Delta Treatment Plant, the installation of additional storage and pumping plants by the Airport and Willakenzie Reservoirs, and the construction of transmission and primary distribution mains. A LINEAR PROGRAMMING APPROACH TO FLOODPLAIN LAND USE PLANNING IN URBAN AREAS,
Arizona Univ., Tucson. Dept. of Agricultural Economics.
J. C. Day.
American Journal of Agricultural Economics, Vol 55, No 2, p 165-174, May 1973. 1 fig, 3 tab, 22 ref, append.

Descriptors: *Flood plains, *Land use, *Planning, *Management, *Linear programming, Optimization, Economics, Floodproofing, Buildings, Constraints, Systems analysis, Mathematical models.
Identifiers: *Urban areas, Cost minimization, Sensitivity analysis, Land fill, Site elevation.

Floodplain land use management is an approach to flood loss prevention which will complement engineering works and lead to more efficient use and development of urban floodplain areas. A floodplain management plan combining land use through public administration and floodwater control through engineering works is subject to legal, political, administrative and technical difficulties. Needed is a methodology for deriving operating rules for the utilization of water and land resources. Land use management is structured as an optimization problem, using a recursive linear programming assignment model. The objective of the model is to identify the most economically efficient combination of spatial-temporal distribution of land use activities and employment of site elevation and floodproofing given a community's expected growth, land use goals, resource endowment, and existing flood risk. Sensitivity analysis is required because of possible nonlinearities. (Bell-Cornell)

Descriptors: *Water resources, *Water utilization, Industrial plants, Water loss, Runoff, Water supply, Water types.
Identifiers: *USSR (Ural industrial area).

The Ural Industrial Area, which comprises the Sverdlovsk, Chelyabinsk, Perm', Kurgan, and Orenburg Oblasts, and the Bashkir and Udmurt Autonomous Soviet Socialist Republics, covers 824,000 sq km. Over 80% of the total water used in the area is obtained from rivers and lakes. Average annual streamflow is 127 cu km; in a low-water year of 95% probability, it is 71.1 cu km. The per capita input of water to the Ural Area is about 6,650 cu m/yr, decreasing to 3,520 cu m/yr in the Orenburg Oblast, to 1,900 cu m/yr in the Chelyabinsk Oblast, and to 920 cu m/yr in the Kurgan Oblast. Total water use is currently estimated at 11.6 cu km/yr (about 630 cu m per capita per yr), of which about 80% is industrial use, 17% is domestic use, and about 3% is agricultural use. Total water diversion is estimated at 9.4 cu km/yr. The present system of water use in the area does not ensure its protection from quantiative of qualitative depletion. (Josefson-USGS)

Descriptors: *Mapping, *Surveys, *Satellites (Artificial), *Remote sensing, Land use, Soil surveys, Grasslands, Forests, Forestry, Crops, Data collections.
Identifiers: *ERTS.

Results of remote sensing by ERTS approached or exceeded the 90% accuracy level for crop identification of major crops (corn and soybeans in South Dakota, Illinois, and Michigan; field corn and popcorn in Nebraska; winter wheat in Kansas; rice, safflower, asparagus, corn, and cotton in the San Joaquin Valley of California). Detection of field condition (growing crops, wet planted fields, plowed fields, harvested fields) was possible on fields as small as 4 hectares in the Imperial Valley on enlarged (1:62,500) color composites. Softwood, mixedwood, hardwood, agricultural land, and water were successfully mapped using MSS Bands 5 and 7 and a dot grid to measure areas. ERTS-1 is well suited for broad to relatively specific vegetation classification and distribution and for monitoring changes in distribution and condition. Soil associations were delineated through the reflective characteristics of a fairly uniform cover of vegetation using computer analysis of output from a scanning microdensitormeter of MSS Band 7 imagery. S-Kh Biol. Vol 7, No 2, p 250-255. 1972. Illus. (English summary).
Identifiers: *Phosphorus fertilizers, *Sunflower, Water regime, Fertilization.

Sunflower yield greatly depends on the increased quantity of soil retained water at the stages of budding, flowering and grain formation. The activation of growth processes conditioned by the high content of mobile water results in a change in the ratio of reproductive and vegetative organs. The regulation of the water regime towards its optimization is achieved with increased rates of P fertilizers. When moisture is low, P fertilizers increase the water-holding capacity of cells, which, in turn, results in the maintenance of the water availability at a higher level than in unfertilized plants.--Copyright 1973, Biological Abstracts, Inc.

EFFECTS OF SHADING AND OF SEASONAL DIFFERENCES IN WEATHERING ON THE GROWTH, SUGAR CONTENT AND SUGAR YIELD OF SUGAR BEET CROPS,
Rothamsted Experimental Station, Harpenden (England).
D. J. Watson, T. Motomatsu, K. Loach, and G. F. J. Milford.
Ann App Biol. Vol 71, No 2, p 159-185. 1972. Illus.
Identifiers: Crop yield, Growth, Irrigation, Nitrogen, Seasonal, *Shading, *Sugar beet crops, *Weather conditions.

The weather in 1967 was sunny and dry and that in 1968 dull and wet, but the yields of dry matter, and particularly of sugar, of the unshaded crop in 2 yr were similar because although net assimilation rate (E) was greater in 1967 than 1968, mean leaf area index (L) in 1968 was almost double that in the 1967 crop. Shading decreased the incoming radiation by 56%; it decreased E proportionally in 1967, increasing L slightly, but it decreased both E (by 44%) and L in 1968. The weights of dry matter and sugar in the roots of the shaded crop were consistently smaller at the end of shading and at final harvest in Oct. in both years. Root weights at final harvest in all shading treatments were proportional to the amount of radiation between June and Sept. Although shading greatly decreased the supply of photosynthate to the roots, it did not change the sugar content percentage of dry matter, except in the early stages of growth when the sugar content rapidly increased. Sugar content percentage of fresh weight of the roots was consistently decreased by shading. The sugar yield of shaded plants was low because the dry weights of the roots were also low. In 1967, extra N applied at the start of shading increased L and the dry weight of the tops in all periods, but had no effect on the dry weight of the roots. Because 1968 was a wet year the irrigation treatment had no effect on E or L except for a slight increase in L during the first period; it had no effect on plant dry weight. Both irrigation and additional N decreased the sugar content percentage of fresh weight of the roots only by altering their water content; sugar percentage of dry matter was unaffected.--Copyright 1973, Biological Abstracts, Inc.

SOIL SALINIZATION UNDER IRRIGATED CULTIVATION,
Haryana Agricultural Univ., Hissar (India). Dept. of Agricultural Engineering.

Indian J Agric Sci. Vol 41, No 12, p 1073-1078. 1971. Illus.
Identifiers: Cultivation, Depletion, *Evapotranspiration, Irrigated crops, Moisture, *Soil salinization, Transpiration, Salinity, *Root zone.

The accumulation of salts in the root zone depth under water cycles (irrigation and evapotranspiration) was analyzed. Assumptions such as linear depletion of moisture through root zone during evapotranspiration and positive displacement of soil water without mixing during leaching were made to simplify the problem for analysis. The resulting equations helped to predict the accumulation and distribution of salts in the root zone depth. The salt build up in the root zone during the growth season, where several irrigation-evapotranspiration cycles were involved, was ascertained.--Copyright 1973, Biological Abstracts, Inc.
W74-01238

THE EFFECT OF SUBSTRATE HUMIDITY ON THE SUPPLY OF MACROELEMENTS TO PLANTS, (IN LATVIAN),
Akademiya Nauk Latviiskoi SSR, Riga. Inst. of Biology.
G. Rinkis.
Latv Psr Zinat Akad Vestis. 7 p 27-32. 1972, Illus, (English summary).
Identifiers: *Elements, *Humidity, *Lettuce, *Spinach, Nitrogen, Potassium, Phosphorus, Calcium, Magnesium.

Regularities of the influence of substrate humidity conditions on the assimilation of N, P, K, Ca, Mg, by lettuce and spinach plants were studied in 2 experiments. In the first experiment lettuce plants were cultivated at 5 gradations of the substrate constant humidity: 20%, 35%, 50%, 65%, 80% of the total humidity (TH). In the second experiment spinach plants at first were cultivated according to the same scheme, but on the 16th day the substrate humidity in variants was raised or lowered. In most cases a higher macroelement content was characteristic for lettuce and spinach plants, cultivated at the optimum substrate humidity (under the conditions of the experiment, from 50% to 60% TH). In variants with a high (80% TH) or slightly lowered humidity (35% TH) a lowering of macroelement content was observed. In variants with a low substrate humidity (20% TH) an increase in the macroelement content was observed.--Copyright 1973, Biological Abstracts, Inc.

EFFECT OF FLOODING ON THE TWOSPOTTED SPIDER MITE AND ITS PREDATORS ON STRAWBERRY IN SOUTHERN CALIFORNIA,
California Univ., Riverside. Citrus Research Center and Agricultural Experiment Station.
V. Voth.
Environ Entomol. Vol 1, No 6, p 717-720. 1972, Illus.
Identifiers: *California, *Biocontrol, Flooding, Phytoseiulus-Persimilis, Predators, Scolothrips-Sexmaculatus, *Spider mites, *Strawberry, *Tetranychus-Urticae.

Biological control of Tetranychus urticae Koch on strawberry was investigated in southern California during 1968-69. Mass releases of Phytoseiulus persimilis Athias-Henriot were made at the equivalent rate of 86,250 total per acre at weekly intervals for 4 wk, starting Jan. 7. Populations of prey and predators were followed at weekly intervals from Dec.-June. A flash flood, resulting from a cloudburst on Feb. 24, destroyed all but 2 replicates (1 check and 1 release) and covered all plants with water for several hours. T. urticae reached a peak population, averaging 508.1 and 484.2 mites/leaflet in the remaining check and release plots, respectively, on April 22. By May 13, T. urticae averaged only 5.0/leaflet in the release plot compared with 178.6/leaflet in the check. P. persimilis reached a peak population, averaging 22.1 mites/leaflet, in the release plot on May 6, compared with 3.0/leaflet in the check. Native predators (primarily Scolothrips sexmaculatus (Pergande)) were adversely affected by the flooding, remaining at low numbers through March 25 and reaching a peak of 0.5 predators/leaflet on May 27.--Copyright 1973, Biological Abstracts, Inc.
W74-01243

NITRATES IN SOIL AND GROUND WATER BENEATH IRRIGATED AND FERTILIZED CROPS,
Agricultural Research Service, Fresno, Calif. Soil and Water Conservation Research Div.
H. I. Nightingale.
Soil Sci. Vol 114, No 4, p 300-311. 1972, Illus.
Identifiers: *Fertilized crops, Grapes, *Irrigated crops, *Nitrates, Orchards, Pollution, *Soil water, Truck crops, Weeds.

A field-scale approach and data reduction methods to evaluate associations between crop N fertilization rates, soil NO3--N concentrations, and ground water NO3--N within a meaningful size area are presented. The cumulative percentage frequency for soil NO3--N concentrations is presented for given soil depth intervals to 6.10 m under 4 crop classifications: no crops (weeds), grapes, row and truck crops. Geometric mean soil NO3--N concentrations depend upon the crop and soil depth, which suggests also a dependence upon soil N fertility management. Soil water content was dependent on soil texture, but was generally independent of the crop. Concentration of NO3--N at some sites in free, perched soil water was apparently related to N-fertilization. Orchards and row and truck crops were the major contributors to the higher concentrations of soil NO3--N. N-Fertilization rates of the various crops were related to the observed levels of soil NO3--N, although relationship became less obvious with increasing depth. Soil NO3--N concentrations and variability are associated with types of crops and their N management practices. A positive correlation exists between N-fertilizer and NO3--N concentrations in the soil solution, but the projected concentration of NO3--N in the ground water is relatively low. Obviously, NO3--N will be lost below the root zone when applied far in excess of crop needs. Increasing N-fertilizer use efficiency to prevent excessive losses to the ground water is a worthwhile goal.--Copyright 1973, Biological Abstracts, Inc.
W74-01245

EFFECT OF PUDDLING ON PHYSICAL PROPERTIES OF RICE SOIL,
Fertilizer Corp. of India, Sindri. Planning and Development Div.
J. D. Naphade, and B. P. Ghildyal.
Indian J Agric Sci. Vol 41, No 12, p 1065-1067. 1972, Illus.
Identifiers: Aggregates, Hydraulic conductivity, *Puddling, *Rice soil, Size distribution, Specific volume, *Soil physical properties.

The physical properties of soil, such as the aggregate size distribution, apparent specific volume and hydraulic conductivity under different degrees of puddling, using a laboratory puddler, were studied to define the physical state of puddled soil. With the increased level of puddling, the dsitribution of finer particles increased owing to the breakdown of natural aggregates. Field puddle and puddling in laboratory due to 0.45 watt hr energy input broke down about 40% of soil aggreagates into fractions smaller than 0.055 mm in size. Puddling with an increased energy input of 0-2.700 watt hr decreased the apparent specific volume and hydraulic conductivity of the soil from 0.714-0.591 cm3/g and 0.192 cm/hr, respectively, and a significant correlation between these 2 properties was observed. The decrease in apparent specific volume and hydraulic conductivity of soil with an increased energy input by puddling was attributed to the reduction in non-capillary pore spaces and the closer packing of soil particles.--Copyright 1973, Biological Abstracts, Inc.

SENSITIVITY OF CELL DIVISION AND CELL ELONGATION TO LOW WATER POTENTIALS IN SOYBEAN HYPOCOTYLS,
Illinois Univ., Urbana. Dept. of Botany.
R. F. Meyer, and J. S. Boyer.
Planta (Berl). Vol 108, No 1 p 77-87. 1972, Illus.
Identifiers: *Cell elongation, Growth, Hypocotyls, Pressure, Sensitivity, Soils, Solute, *Soybean hypocotyls, Transport, Turgor, Water potentials, *Cell division, Osmosis.

The response of cell division and cell elongation to low cell water potentials was studied in etiolated, intact soybean hypocotyls desiccated either by withholding water from seedlings or by subjecting hypocotyls to pressure. Measurements of hypocotyl water potential and osmotic potential indicated that desiccation by withholding water resulted in osmotic adjustment of the hypocotyls so that turgor remained almost constant. The adjustment appeared to involve transport of solutes from the cotyledons to the hypocotyl and permitted growth of the seedlings at water potentials which would have been strongly inhibitory had adjustment not occurred. Growth was ultimately inhibited in hypocotyls due to inhibition of cell division and cell elongation to a similar degree. The inhibition of cell elongation appeared to result from a change in the minimum turgor necessary for growth. On the other hand, when intact hypocotyls were exposed to pressure for 3 hr osmotic adjustment did not occur, turgor decreased, and the sensitivity of growth to low cell water potentials increased, presumably due to inhibition of cell elongation. Thus, although cell division was sensitive to low cell water potentials in soybean hypocotyls, cell elongation had either the same sensitivity or was more sensitive, depending on whether the tissue adjusted osmotically. Osmotic adjustment of hypocotyls may represent a mechanism for preserving growth in seedlings germinating in desiccated soil.--Copyright 1973, Biological Abstracts, Inc.

CONSOLIDATION OF IRRIGATION SYSTEMS: PHASE 1, ENGINEERING, LEGAL, AND SOCIOLOGICAL CONSTRAINTS AND/OR FACILITATORS,
Colorado State Univ., Fort Collins. Dept. of Agricultural Engineering.
V. Skogerboe, E. Radosevich, and C. Vlachos.
Available from the National Information Service as PB-225 289/8, $8.75 in paper copy, $1.45 in microfiche. Completion Report Series No. 52, Colorado Environmental Resources Center, Fort Collins, June 1973. 428 p, 45 fig, 76 tab, 496 ref, 3 append. OWRR-B-043-COLO.

Descriptors: *Irrigation systems, Prior appropriation, Agriculture, Arizona, Colorado, *Institutional constraints, *Irrigation districts, Irrigation water, *Legal aspects, Nevada, *Social aspects, Utah, Water management (Applied), Water policy, Wyoming.

The results from Phase I have indicated that consolidation of irrigation systems is a necessary part of an integrated policy of water development for improved water management, and of a coordinated effort towards an efficient and effective maximization of limited natural resources. National trends of growth, limited water supplies, the increasing population, and the multiplicity of uses call for new integrated forms of the interaction between policy determining institutions, local participants, and water users at large.

ECONOMICS OF RESOURCE USE ON SAMPLE FARMS OF CENTRAL GUJARAT,
Indian Inst. of Management, Ahmedabad.
B. M. Desai.
Indian Journal of Agricultural Economics, Vol 28, No 1, p 71-85, Jan.-Mar. 1973. 4 tab, 9 ref, append.

Descriptors: Water resources, *Irrigation, *Economic efficiency, *Return (Monetary), Agriculture, Crops, Returns to scale, Rainfall, Fertilizers, Labor. Irrigation water, Acreage, Mathematical models, Systems analysis.
Identifiers: *Production functions, *Resource use, *India (Gujarat), Regression coefficients, Least squares method.

The production functions on sample farms in two regions of the Baroda district in India are found to be different, due primarily to the variances in irrigation resource. Considered, in a more developed region (MDR) and in a less developed region (LDR), is whether or not the returns on resource use are maximized and if not, why not. The economic and statistical implications of the selection of functional forms and of variables for estimating production functions for a cross-section of farms are analyzed. Important properties of the three functional forms selected--transcendental, log-log inverse, and Cobb-Douglas--are discussed. Variables are chosen in terms of their relevancy, degree of multicollinearity, and the degree of aggregation. Variables selected include: ratio of acreage under high value crops to total crops acreage; net sown area; and expenditures on fertilizers and organic manures, irrigation water, and hired labor. The gross value of all crops grown on a farm is the dependent variable. Findings reveal an uneconomic use of labor and sub-optimum use of fertilizers in LDR. In MDR, where there is more and more evenly-distributed rainfall and a more reliable artificial irrigation source, sample farmers maximized the net returns over all inputs (that are measured in money units). (Bell-Cornell)

THE INFLUENCE OF SOME CLIMATIC FACTORS ON THE PRODUCTIVITY OF RED CLOVER SEED, (IN SERBO-CROATIAN),
Zegreb Univ. (Yugoslovia). Faculty of Agriculture.
M. Gikic.
Agron Glas. Vol 33, No 9/10, p 537-544. 1971.
Identifiers: *Climatic conditions, *Clover seed (Red), Germination, Light, Photoperiod, Productivity, Relative humidity, Seed, Sun, *Yugoslavia.

The effects of relative humidity, amount of sunlight, photoperiod and soil moisture on red clover seed were studied in Zagreb, Osiijek and Djakovo, Yugoslavia. The relative humidity in Osijek was most favorable for seed germination. The amount of sunlight during flowering was found satisfactory in all 3 test sites: it intensified the work of pollinators, resulting in faster seed germination. The tested areas showed favorable daylight conditions for growing the early, medium early and medium late varieties of red clover.--Copyright 1973, Biological Abstracts, Inc.

PRODUCTIVITY OF CEREAL CROPS ON ERODED CHERNOZEMS AGAINST BOTH NON-FERTILIZED AND FERTILIZED BACKGROUNDS, (IN RUSSIAN),
A. S. Skorodumov, and L. I. Palyanitsyna.
Agrokhimiya. 12 p, 46-55. 1971. Illus.
Identifiers: *Cereal crops, *Chernozems, Corn, Crop yield, *Eroded soil, Fertilized areas, Millet, Nonfertilized areas, Oats, Productivity, Wheat.

Moisture reserves and the content of basic nutrients in chernozems of northern forest-steppes

decreased depending on erodibility, and increased on alluvial soils. On non-fertilized eroded chernozems the cultures in order of increasing reaction to erodibility are: winter wheat, millet, oats, and corn. On alluvial soils yields of corn, then of millet, oats, and winter wheat increased. Fertilizers increased the yields more on eroded soils than on non-eroded and alluvial soils.--Copyright 1973, Biological Abstracts, Inc.

THE CARBOHYDRATE AND WATER BALANCE OF BEANS (VICIA FABA) ATTACKED BY BROOMRAPE (OROBANCHE CRENATA),
Royal Univ. of Malta, Valletta. Dept. of Biology.
P. J. Whitney.
Ann Appl Biol, Vol 70, No 1, p 59-66, 1972, Illus.
Identifiers: *Beans, *Broomrape, *Carbohydrates, Concentration, Desiccation, Orobanche-crenata, Sugar, Vicia-faba, *Water balance.

O. crenata parasitizing beans maintained a slightly higher osmotic pressure than the bean roots, largely because of the higher concentration of sugars in the broomrape tissues. The sugar was withdrawn from the bean mainly as sucrose, which was hydrolyzed to glucose and fructose by the Orobanche. These sugars were then rapidly translocated to the developing flower spike. As well as maintaining a high osmotic pressure this hydrolysis insured sucrose concentration gradient between host and parasite. In the field, bean plants showed wilt symptoms at about the time that the Orobanche flower spikes emerged. The higher the level of infection the lower was the water content of the host. This fall in water content was due to increased water loss by the bean shoots and it seemed unlikely that it was due to water removal by the parasite. The death of the bean was due to desiccation brought about largely by the reduced ability of the carbohydrate-starved roots to extract water from the soil.--Copyright 1973, Biological Abstracts, Inc.

WATER REQUIREMENTS OF WHEAT AND COTTON ON A HIGH WATER TABLE SOIL UNDER ARID CONDITIONS,
West Pakistan Agricultural Univ., Lyallpur. Dept. of Agronomy.
R. A. Khan, S. Ahmad, and M. S. Sharar.
Exp Agric. Vol 9, No 1, p 41-45. 1973.
Identifiers: Arid lands, *Cotton, Irrigation, *Pakistan, *Soils, *Wheat, Water table.

The effects of irrigation on the yields of wheat and cotton were studied on a sandy clay loam soil, with a water table at 7 ft below ground, under the arid conditions of Lyallpur (Pakistan). The conventional practice of providing 19-acre in. of water to Mexican wheat and 25-acre in. to American cotton proved to be a wasteful and unproductive practice on such soils. High yields of both these crops could be obtained without any subsequent watering after an initial 4-in. irrigation applied for seedbed preparation and sowing, while 13-in. irrigation after sowing was needed to obtain maximum yields.--Copyright 1973, Biological Abstracts, Inc.

EFFECT OF MOISTURE STRESS ON SOYBEAN (GLYCINE MAX (L.) MERR.),
Indian Council of Agricultural Research, New Delhi.
N. C. Tripathi.
Indian J Agric Sci. Vol 42, No 7, p 583-585. 1972.
Identifiers: Glycine-Max, *Moisture stress, *Soybeans, *Crop yield, Irrigation reduction.

The effect of withdrawal of irrigation at various physiological stages of G. max on the consumptive use of water and yield and yield components was studied. The consumptive use varied 12.9-33.6 cm. Maximum yield of Feb.-planted soybean could be obtained when irrigation was given at intervals of 10 days up to the bean-filled stage. When the plants were subjected to moisture stress at flowering, considerable reduction in number of pods, leaf area and length of internode occurred. Moisture stress at pod-development stage was slightly less deterimental to yield than that at flowering stage.--Copyright 1973, Biological Abstracts, Inc.

STOMATAL-DIFFUSION RESISTANCE AND WATER POTENTIAL OF SOYBEAN AND SORGHUM LEAVES,
Kansas Agricultural Experiment Station, Manhattan. Evapotranspiration Lab.
I. D. Teare, and E. T. Kanemasu.
New Phytol. Vol 71, No 5, p 805-810. 1972. Illus.
Identifiers: Leaves, Porometer, Psychrometer, Resistance, *Sorghum leaves, *Soybean leaves, *Stomatal diffusion resistance, Thermocouple, *Transpiration, Water potential.

Hourly trends in stomatal resistance and water potential of the upper leaves of sorghum and of soybean (measured with diffusion porometer and thermocouple psychrometer) tended to parallel each other. Vertical profiles (both canopies) indicated that the stomatal resistance of the lower leaves usually was greater than that of the upper leaves. The position of minimum resistance varied with time of day. The profiles of temperature and water-vapor pressure were consistent with the profile of canopy transpiration resistance. The upper sorghum leaves had a lower water potential than the lower leaves. In the morning a strong gradient of water potential existed from lower to upper leaves in plants in both canopies; in the afternoon the gradients continued in sorghum but disappeared in soybean plants.--Copyright 1973, Biological Abstracts, Inc.

SYSTEM OF TREATING IRRIGATED SOIL WHICH IS SOWN WITH SUGAR BEETS, (IN RUSSIAN),
A. M. Pishnamazov.
Dokl Akad Nauk Az SSR. Vol 27, No 11/12, p 72-75. 1971.
Identifiers: *Irrigated soils, *Sugar beets growth, *Soil treatment, Crop yield, *USSR (Azerbaidzhan).

The effect of soil preparation on growth and yield of sugar beets grown on the heavy soil at the Mingechaurskii Scientific Station in the Azerbaidzhan SSR was investigated. The moisture content was high in fields prepared by scuffling of the stubble field soil done twice and pre-plowing irrigation. Production was higher when harrowing was added to this process. On the Kovlarskii Scientific Station a single scuffling was most productive. On the weedy soils of E Shervan, preliminary scuffling with subsequent fall plowing was effective. In general, pre-scuffling watering, double scuffling and treatment of the soil to a depth of 27 cm in Oct. supplied the highest yield.--Copyright 1973, Biological Abstracts, Inc.

SOIL AND WATER CONSERVATION ON ARABLE LANDS,
Soils Inst., Tehran (Iran). Soil and Water Conservation Div.
A. Ganjini, and B. Azimi.
In: Cento Seminar on Agricultural Aspects of Arid and Semi-arid Zones, September 19-23, 1972, Thran, Iran, Central Treaty Organization, p 164-171, 1972. 4 tabs.

Descriptors: *Climatology, *Arid climates, Semiarid climates, *Soil conservation, *Water conservation, Precipitation (Atmospheric), Temperature, Rainfall, Evaporation, Water loss, *Agronomy.
Identifiers: *Iran, Middle East.

Classification of arid and semiarid areas for agriculture development programs must be determined by considering more than on climatological factor such as precipitation rate, rain distribution, changes in temperature, air currents, evaporation and light intensity. To determine the degree of aridity, two approaches are used: first, determination is made on the basis of temperature and rainfall, and second, determination is based on consideration of evaporation and rainfall. Data analyzed for Iran shows that more than nine-tenths of the total area of the country is arid/semiarid. Also discussed are the causes of water loss and soil erosion in arid and semiarid areas placing emphasis on the increasing soil erosion and water loss in Iran that limits agricultural development. Vodnyye Resursy, No 2, p 33-57, 1973. 14 tab, 22 ref.

Descriptors: Water resources, *Surface waters, *Surface water availability, *Human population, *Variability, Fluctuations, Rivers, Lakes, Reservoirs, Glaciers, Hydrologic cycle, Runoff, Water utilization, Water supply, Forecasting, Seasonal.
Identifiers: *USSR.

The average volume of surface water in the USSR, including the volume of water stored in glaciers and large freshwater lakes, is about 42,000 cu km, of which 4,714 cu km is average annual streamflow. Areal distribution of water resources in the USSR is extremely uneven. The total amount of river water varies slightly from year to year. In individual years, large areas may experience a water shortage or have an excess water supply. Factors affecting hydrologic regimen and streamflow are reservoir construction and operation, irrigation and flooding of lands, industrial and municipal water consumption, afforestation in river basins, drainage of bogs and saturated soils, and urbanization. As of 1970, the total decrease in runoff on 17 major USSR rivers as a result of man's activities was about 55 cu km/year or 1.2% of the country's total river-water resources. Runoff on individual rivers decreased by 10%-20%. Diminished streamflow is expected to reach 120 cu km/year (2.5%) by 1981-85 and 180 cu km/year (3.8%) by 1990-2000. (Josefson-USGS)

NEAR REAL TIME WATER RESOURCES DATA FOR RIVER BASIN MANAGEMENT,
Geological Survey, Harrisburg, Pa.
R. W. Paulson.
Available from NTIS, Springfield, Va. 22151 as E73-10451 Price $3.00 printed copy; $1.45 microfiche. Type II Progress Report to NASA for period July 1, 1972 to December 31, 1972-January 1973. 28 p.

Descriptors: *Remote sensing, *Hydrologic data, *Delaware River, *Data collections, Streamflow, Gaging stations, Water wells, Water quality, Telemetry, Satellites (Artificial), Data processing, Computer programs, Water resources.
Identifiers: *Real time data.

Twenty Data Collection Platforms (DCP) are being field installed on USGS water resources stations in the Delaware River basin. DCP's are operating on five stream gaging stations, three observation wells, and one water-quality monitor in the basin. DCP's have been installed at nine additional water-quality monitors. ERTS-relayed water resources data from platforms are being provided in near real time, by the Goddard Space Flight Center, to the Pennsylvania district, Water Resources Division, U.S. Geological Survey. On a daily basis, the data are computer processed by the Survey and provided to the Delaware River Basin Commission. Each daily summary contains data that were relayed during 4 or 5 of the 15 orbits made by ERTS during the previous day. Water-resources parameters relayed by the platforms include dissolved oxygen concentration, temperature, pH, specific conductance, well level and stream-gage height, which is used to compute streamflow for the daily summary. Identifiers: *ERTS.

ERTS imagery can be used for cartographic photobase products at scales 1:500,000 and smaller. In addition, the ERTS imagery can be used for photographic products to complement existing line maps at scales at least as large as 1:250,000, and to support the revision of existing line maps at many scales. Geometric accuracy is adequate for the interpretation of land use. Objects as small as 100 m in diameter and linear features as narrow as 15 m have been identified. Repetitive coverage increases accuracy and number of categories considerably. A larger number of land-use categories could be determined by the use of all four channels of ERTS data in conjunction with automatic pattern recognition programs than could be determined from image interpretation. In urban areas, generally three to four categories could be mapped. (See also W74-01163) (Knapp-USGS)

DIE-BACK IN THE MIXED HARDWOOD FORESTS OF EASTERN VICTORIA: A PRELIMINARY REPORT,
Forests Commission of Victoria, Melbourne (Australia).
G. C. Marks, F. Y. Kassaby, and S. T. Reynolds.
Aust J Bot. Vol 20, No. 2 p 141-154. 1972, Illus.
Identifiers: *Australia (Victoria), *Dieback (Forests), Distribution, *Eucalyptus, Forests, *Hardwood forests, Identification methods, Phytophthora-Cinnamomi.

The distribution and symptons of die-back in the mixed-species eucalypt hardwood forests of eastern Victora, Australia, are described. The disease was recognized in 1952 in small patches of forest situated in the flat, badly drained sandy coastal soils and has spread rapidly. This spread was associated with above-average rainfall during spring, summer and autumn. Disease symptoms were similar to that caused by drought, and were observed best during dry periods following summer rain. The lupin bait of Chee and Newhook was used to isolate Phytophthora cinnamomi from the diseased areas, and the field symptoms seen on susceptible eucalypts of the subgenus Renantherae were similar to those observed on young saplings inoculated with P. cinnamoni in the greenhouse. Species of the subgenus Macrantheae observed in the forests and tested in the greenhouse are tolerant to the disease. Estimates of population density indices of the fungus gave highest values in areas where the disease was most active. The fungus was not isolated from adjacent healthy forests. Improvements in the baiting and identification of P. cinnamomi with use of excised lupin radicles floated over a small sample of soil in a petri dish are described. Several variants of the fungus with differing growth rates were isolated.--Copyright 1973, Biological Abstracts, Inc.

ARIZONA'S COMING DILEMMA: WATER SUPPLY AND POPULATION GROWTH,
L. L. McBride.
Ecology Law Quarterly, Vol 2, p 357-384, Spring 1972. 149 ref.

Descriptors: *Arizona, *Water resources development, *Community development, Legal aspects, Water law, Water consumption, Public health, Water policy, Water management, Human population.

A comprehensive analysis is presented of the water supply problems facing the state of Arizona. It explores the supply and demand of water resources in order to determine whether water supply will set an upper limit on the population growth. The current law governing water rights is

discussed in relation to its effect on water consumption and on growth patterns. Prospects are evaluated for maintaining consumption and the present growth rates by increasing the water supply, or, in the alternative, by altering the current water rights system to prevent the exhaustion of water resources. The Colorado River is the major source of surface water for Arizona and the adjoining areas of the Lower Colorado Basin, which also includes the Las Vegas area of Nevada, and the Imperial and Coachella Valleys of southeastern California. However, as accompanying tables indicate, Arizona has completely insufficient supplies of surface water to meet the total demand. Possible future sources include desalinization and inter-regional water diversion. (Mockler-Florida)

STORM DRAINAGE AND FLOOD CONTROL FOR METROPOLITAN DENVER.
Denver Regional Council of Governments, Colo.

Project reuse summary report. May, 1973. 18 p, 1 fig, 4 tab, photos.

Descriptors: *River basin development, *Regional planning, *Flood control, *Colorado, Flood Plain Zoning, Storm runoff, Criteria, Standards, Coordination, Urban drainage, Flood plain insurance, Financing.
Identifiers: *Preventive master planning, Project REUSE, Design master planning, Flood warning systems, *Denver (Colo).

The proposed 20-year storm drainage and flood control program under Project REUSE (Renewing the Environment through Systems Engineering) encompasses three types of major drainage activities: (1) preventive master planning, for areas where flood plain regulation, land use controls, and other preventive action can be utilized; (2) design master planning, for areas where problems already exist and facility construction is known to be required; and, (3) construction, for developed areas where preventive measures are not feasible and where channels, culverts, sewers, and other structures are needed to provide protection. The system will provide for: delineation of flood plains on major drainage channels; regulation of all unoccupied 100-year flood plains; 100-year protection on occupied flood plains; National Flood Insurance Program coverage on occupied flood plains where protection is not cost effective; the provision, by ordinance, for limitation of runoff from new real estate development; flood storage capacity and spillway protection on dams in the region; integration of major drainage measures with the regional water resource management system; and, an early flood warning system. Cost estimates and an implementation schedule by basin are included. (Hoffman-North Carolina)
W74-01475

REPORT ON LAUREL CREEK CHANNEL IMPROVEMENTS, WATERLOO AND BRIDGEPORT, ONTARIO.
Kilbom Engineering Ltd., Toronto (Ontario).

Prepared for Grand River Conservation Authority, Cambridge, Ontario. December 1972. 53 p, 7 fig, 2 tab, 4 plates, 4 append.

Descriptors: *Flood protection, *Channel improvement, *Aeration, Flood control, Erosion control, Culverts, Water quality control, Oxygen demand, *Canada, Farm wastes.
Identifiers: *Cascades, Fountains, Bubbler systems, Aerators.

Laurel Creek, which flows through Waterloo and Bridgeport, Ontario, has caused flooding and erosion problems. During low flow periods, water quality has been adversely affected by pollutants entering the stream. Design flows for the Creek were based on calculations of the 100-year floods, assuming a certain degree of future urbanization and certain runoff proportions. To accomodate the 100-year flood, sections of box culvert, concrete-lined, grass-lined, and rip-rap-lined channels are recommended at various locations, depending on land costs. A dam above Waterloo is an alternative solution, but only one site is feasible. The dam was recommended in 1965, but is not recommended now. The culverts could be built in three identified stages, thereby spreading costs over time. Water quality of Laurel Creek is compared to Ontario Water Resources Commission standards. Water quality is generally good, but could be improved by aeration. Farm wastes in the spring is a problem to the Creek, adding carbon, nitrogen, and phosphorus, and contributing to biological oxygen demand. Techniques of aerating water, i.e. cascades, fountains, bubbler systems, and mechanical aerators are described and illustrated. Cascades along the channel in Waterloo and Bridgeport are suggested as the best aeration method for Laurel Creek. (Stein-North Carolina)
W74-01482

FLOODLAND AND SHORELAND DEVELOPMENT GUIDE.
Southeastern Wisconsin Regional Planning Commission, Waukesha.

Planning Guide No. 5, November 1968. 199 p, 47 fig, 9 maps, 56 ref, 17 append.

Descriptors: *Flood protection, *Pollution abatement, *Urbanization, Water quality control, Flood control, Land management, Regulation, *Wisconsin, Comprehensive planning.
Identifiers: *Shoreland management, *Floodplain management, *Land use planning, Environmental corridors.

The nature of floodland and shoreland problems and proposed comprehensive programs to deal with these problems are presented. This guideline report is intended to be used by cities and counties in Southeastern Wisconsin to help local governments solve their water resource problems and to coordinate them into a regional management framework. Many of the problems discussed relate to urbanization in critical water management areas where natural processes are adversely affected or to water quality problems created by poorly planned urban development. Thus, the need for comprehensive land use and water use planning is stressed and various program elements are outlined: protection of existing development, e.g. flood warning and floodproofing; removal of existing development; discouragement of new development, e.g. tax and finance policies; regulation of new development, e.g. zoning and sanitary ordinances; abatement of pollution, e.g. diversion of wastewater and low flow augmentation. A section on legal authority and administration of ordinances and regulations is included. (Elfers-North Carolina)

TALLAHALA CREEK LAKE, PASCAGOULA RIVER BASIN, MISSISSIPPI (FINAL ENVIRONMENTAL IMPACT STATEMENT).
Army Engineer District. Mobile, Ala.

Available from National Technical Information Service, as EIS-MS-72-5336-F, $8.00 paper copy, $1.45 microfiche. 1972. 106 p, 4 plate.

Descriptors: *Mississippi, *Environmental effects, *Flood control, Water quality control, Watershed management, Recreation, Dams, Water supply, Wildlife habitat, Forests, Agriculture.
Identifiers: *Environmental impact statements.

The project would serve to initiate land acquisition and construction of a dam 7,880 feet long for the purpose of impounding waters of Tallahala Creek to provide flood control, water supply, water quality control and recreation, including fish and wildlife enhancement. Adverse environmental effects include loss of 4,435 acres of agricultural and forest land and its associated wildlife habitat and loss of free-flowing stream fisheries. Desirable effects include providing a dependable water supply and high quality recreation. Alternatives considered included alternative sites and single purpose projects; however, these are considered less efficacious or economically infeasible. Also, no development at all was considered as an alternative. The project is authorized by the Flood Control Act of 1968 and is currently in the preconstruction planning stage. (Mockler-Florida)

HYDROGRAPH SIMULATION MODELS OF THE HILLSBOROUGH AND ALAFIA RIVERS, FLORIDA: A PRELIMINARY REPORT,
Geological Survey.
J. F. Turner, Jr.
Open File Report, No 72025, 1972. 107 p, 4 tab, 28 illus.

Descriptors: *Florida, *Hydrograph analysis, *Flood forecasting, River forecasting, River basins, Comprehensive planning, Flood control, Flood prevention, River basin development, Streamflow.

Serious water-management problems are being caused by flood-plain development in the Hillsborough and Alafia River Basins. Encroachment by urban development of the flood-prone areas has greatly increased in recent years. The U.S. Corps of Engineers have proposed the construction of numerous flood-retention reservoirs on many headwater tributaries, as well as other flood control measures including a bypass canal for the Hillsborough River. The by-pass canal would divert a significant part of flood water from the Hillsborough River to Tampa Bay, thereby preventing flooding of the Tampa-Temple Terrace

area except under the most extreme conditions. Additional drainage improvements are also proposed for the upper reaches of the basin. The objective of the investigation is to develop mathematical models that simulate segments of the streamflow hydrograph. Simulated streamflow discharges will be used in evaluating and implementing flood control and abatement programs within these basins. (Mockler-Florida)

BRUSH ERADICATING, BASIN PITTING, AND SEEDING MACHINE FOR ARID TO SEMIARID RANGELAND,
New Mexico State Univ., University Park. Dept. of Agriculture Engineering.
G. H. Abernathy, and C. H. Herbel.
Journal of Range Management, Vol 26, No 3, p 189-192, May 1973. 5 fig, 2 tab, 5 ref.

Descriptors: *Range management, *Arid climates, *Semiarid climates, Shrubs, Desert plants, *New Mexico, Southwest U.S., Planting management, Seeds, Viability, Land reclamation, Mechanical control, *Revegetation.
Identifiers: *Creosotebush, *Tarbush.

Several million acres of once productive rangeland in arid and semiarid areas have been invaded by noxious shrubs such as creosotebush (Larrea tridentata) and tarbush (Flourensia curnua). These shrubs do not produce useful forage for livestock or wildlife, nor adequate ground cover to prevent soil erosion. A range seeding machine that increases the chances of successful seeding establishment on arid to semiarid rangeland has been designed and tested on 23 plots in southern New Mexico. Working behind a standard rootplow, the machine picks up brush, forms basin pits, firms the soil, plants seed, and replaces the brush over the planted area as a mulch. Most plots were about 5 acres and were seeded with a mixture of desirable forage species adapted to the site. About 5 percent of the seedings were considered successful. Studies demonstrated that much of the depleted rangeland in southern New Mexico can be restored. On sites completely dominated by creosotebush and tarbush, rootplowing followed by seeding with proper equipment can be effective. Site requirements include: fine-textured soil to resist wind erosion, a slope percent low enough to resist water erosion, and reasonable rainfall. (Black-Arizona)

EFFECTS OF LEAF-FOOTED BUGS ON MESQUITE REPRODUCTION,
Texas Tech Univ., Lubbock. Dept. of Range and Wildlife Management.
D. N. Ueckert.
Journal of Range Management, Vol 26,No 3, p 227-229, May 1973. 4 fig, 1 tab, 13 ref.

Descriptors: *Mesquite, *Weed control, *Range management, *Invasion, Desert plants, *Texas, Southwest U.S., Insects, Plant populations, Biocontrol, Seeds, Poisonous plants, Browse utilization, Germination.
Identifiers: *Rolling Plains (Texas).

Mesquite (Prosopis glandulosa) infests millions of acres of arid and semiarid southwestern rangeland and is constantly invading or increasing in herbaceous plant communities. As a method of controlling this weed, conservation of existing weed-feeding insects has been suggested. In a sleeve cage study, various population densities of leaf-footed bugs (Mozena obtusa Uhler) were observed feeding on immature mesquite pods in the Rolling Plains of Texas. Their feeding significantly increased the abortion of immature mesquite pods while decreasing the dry weight of pods and seeds and the germination percentage of seeds. Seedlings from seeds fed upon by this insect were significantly smaller and less bigorous than thos from bug-free seeds. This insect may limit the reproduction of mesquite and may offer a possible method of control. However, where stockmen depend upon mesquite pods for emergency livestock feed, this source of energy and protein would be significantly reduced by the insects if population densities should become high. 4B. Groundwater Management

PREDICTION OF WELL DEVELOPMENT POSSIBILITIES IN DELAWARE BY MEANS OF CALIBRATED GAMMA-RAY LOGS,
Delaware Geological Survey, Newark.
K. D. Woodruff.
Available from the National Technical Information Service as PB-225 120/5, $2.75 in paper copy, $1.45 in microfiche. University of Delaware, Newark. Project Completion Report, August 1973. 19 p, 6 fig, 2 tab, 9 ref. OWRR A-023-DEL (1).

Descriptors: *Borehole geophysics, *Radioactive well logging, *Logging (Recording), *Water wells, Subsurface investigations, Water supply forecasting, Clays, *Delaware.
Identifiers: *Well development prediction.

Small amounts of clay within sandy Coastal Plain sediments of northern Delaware often hinder successful well development. Clays usually show relatively higher gamma radiation than do sands. Thus it was thought that gamma radiation logging techniques could be refined to determine the amount of clay within a given depth interval and thus predict the chances for successful well development. Test holes were augered to various depths in selected formations and cores were taken every five feet. A gamma log was run through the hollow stem augers in the completed hole and again in the open hole after the augers were pulled. The output of the gamma probe was calibrated in counts per second. The core samples were analyzed for clay percentages and the clay percentages compared against the gamma readings for the corresponding depths. Results showed that a rough set of curves showing counts per second versus clay percentage could be made for various hole conditions. However, local drillers report difficulty in well development when clay percentages are as low as 2% to 5%. At this low range the possible statistical error of any one gamma reading can give over a 5% possible error in prediction of clay content. Preliminary work showed that this problem might be overcome by holding the gamma probe at rest opposite the depth of interest and counting pulses with an electronic counter.

RELATIONSHIP OF PUMPING LIFT TO ECONOMIC USE OF GROUNDWATER FOR IRRIGATION,
Idaho Univ., Moscow. Dept. of Agricultural Engineering.
G. L. Corey, and K. H. Lindeborg.
Available from the National Technical Information Service as PB-225 147/8, $2.75 in paper copy, $1.45 in microfiche. Idaho University Water Resources Research Institute, Research Project, Technical Completion Report, April 1971. 4 p, 7 ref. OWRR B-006-IDA (3).

Descriptors: *Irrigation, *Groundwater, *Pumping, *Economic efficiency, *Idaho, Crop response, Crop production, Agriculture, Costs, Evaluation, Economic justification, Data collections, Grains (Crops), Potatoes, Alfalfa, Beans, Sugar beets.

Field data were collected on projects and farms in the irrigated areas of southern Idaho. Guidelines were made as to how high groundwater could be lifted and still be economically supplied to irrigation farmers. The economic maximum lift was about 680 feet on a 400-acre farm, and about 770 feet on a 600-acre farm with an irrigation efficiency of 55% on both farms. The five major crops included in the analysis were grain, potatoes, alfalfa, beans and sugar beets. The total farm returns to water and management for the typical farms ranged from $25 on the 200-acre farm to $52 on the 600-acre farm. The comparable optimum farm returns ranged from $30 on the 200-acre farm to $56 on the 600-acre farm. The results of the optimum allocation of the resource are very close to the results of the typical farms, which indicates that the farmers included in the sampling are actually operating their farm at the economic optimum level. (Woodard-USGS)

Descriptors: *Groundwater resources, *Groundwater basins, *Artesian aquifers, *Confined water, *Water balance, Precipitation (Atmospheric), Runoff, Flow, Base flow, Hydrodynamics, Estimating.
Identifiers: *USSR (Caucasus Mountains), Water exchange.

The northwestern slope of the Caucasus is the major source of supply of natural groundwater to the large Azov-Kuban' artesian basin, covering more than 110,000 sq km. Precipitation in the area of the basin is 533 mm; total runoff is 167 mm; surface runoff 92 mm; groundwater runoff is 51 mm; artesian flow is 24 mm; and evaporation is 366 mm. The rate of groundwater recharge is 2.1 million cu m/day. Groundwater discharge into the Kuban' River is 700,000 cu m/day, into the Don and Manych Rivers--90,000 cu m/day, and into the Sea of Azov--1.17 million cu m/day. Formation and distribution patterns of deep artesian flow in the basin are examined, and rates of exchange of water between Neogene and Paleogene artesian aquifers are determined. (Josefson-USGS)

SENSITIVITY OF GROUNDWATER FLOW MODELS TO VERTICAL VARIABILITY OF AQUIFER CONSTANTS,
Oklahoma State Univ., Stillwater. Dept. of Civil Engineering.
R. N. DeVries, and D. C. Kent.
Water Resources Bulletin, Vol 9, No 5, p 998-1005, October 1973. 4 fig, 5 ref.

Descriptors: *Hydrogeology, *Mathematical models, *Drawdown, *Water yield, Withdrawal, Aquifers, Aquifer characteristics, Water management (Applied), *Oklahoma, Groundwater movement, Permeability, Stratification, *Computer models.
Identifiers: *Ogallala aquifer (Okla).

A computer model developed for the Ogallala aquifer in the Texas Panhandle treats the aquifer as a homogeneous system. The model evaluates the effects of vertical layering on semistatic water level changes which occur during the dewatering of a single unconfined aquifer. Near Guymon, Oklahoma, the aquifer is characterized by a saturated thickness of 400 feet. The accumulated drawdown values of the homogeneous and the multilayered cases demonstrate that an average difference of approximately 22% of the original saturated thickness occurs between the two cases before the base of the aquifer is encountered. Approximately 25% more time is required to dewater the layered aquifer. Thus, vertical variations of lithology in an aquifer such as the Ogallala should be considered when prediction is made relative to groundwater management. (Knapp-USGS)

ASCE Proceedings, Journal of the Hydraulics Division, Vol 99, No HY11, Paper 10136, p 2097-2111, November 1973. 13 fig, 1 tab, 7 ref.

Descriptors: *Geothermal studies, *California, Desalination, Groundwater, Heat flow, Water management (Applied), Thermal water, Water yield improvement.
Identifiers: Geothermal powerplants, *Imperial Valley (Calif).

As a major step toward augmentation of the water supply of the Lower Colorado River basin, the Bureau of Reclamation is investigating the geothermal resource potential of the basin underlying California's Imperial Valley. Multipurpose development of hot geothermal brines may produce upward of 2,500,000 acre-ft of high quality water per year, and add up to 10,000,000 kw of electrical generating capacity to Pacific Southwest power systems. Investigations to date indicate that several billion acre-ft of hot brine exist in the Imperial Valley geothermal field. When subsurface pressures are tapped by a deep well, the hot brine will flash into a mixture of steam and water. This mixture will flow to the surface and can be used to produce not only desalted water but, also, electrical power and, possibly, mineral byproducts. A deep geothermal test well, Mesa 6-1, was drilled and tested in 1972 and a portable research desalting unit installed in 1973. (Knapp-USGS)

An irrigation system consisting of a river and a groundwater aquifer from which irrigation water can be obtained and of land suitable for irrigation development is modeled to examine economic implications of alternative allocations of surface and ground waters. The planning objective is to select well and canal capacities which minimize the expected value of project costs while meeting crop water requirements, preventing excess water applications, and requiring the expected annual change in the amount of groundwater storage to be zero. Decision rules for canal diversions and well pumpages in each time period are considered functions of (stochastic) rainfall and streamflow. The formulation of reasonable decision rules is discussed and a model incorporating stochastic demands and supplies is constructed. A series of more complex decision rules is tested; for these rules, at each iteration of the algorithm a separation is made in a 'master' linear program of the effects of stochastic supplies from those of stochastic demands. The algorithm utilizes a Monte Carlo technique to adjust the 'supply and demand effects' at each iteration in accordance with the desired probabilistic relations and the optimal solutions to the previous iteration's dual problem. Results are presented for a proposed irrigation scheme in Bangladesh. (Bell-Cornell)

ON THE OPTIMAL OPERATION OF GROUNDWATER BASINS: A CALCULUS OF VARIATIONS APPROACH,
Illinois Univ., Urbana. Dept. of Geology.
V. V. Palciauskas, and P. A. Domenico.
Journal of Hydrology, Vol 20, (Amsterdam), p 181-189, October 1973. 5 ref.

Descriptors: *Groundwater basins, *Groundwater mining, *Storage volume, *Economic efficiency, Water supply, Resource allocation, Optimization, Equations, Mathematical models, Systems analysis.
Identifiers: *Calculus of variations, *Groundwater allocation, Benefit maximization.

The calculus of variations in employed to determine the maximum of a functional expressing the groundwater allocation problem. Emphasis is on deriving simply-structured decision rules for efficient use of groundwater basins and efficiency is interpreted as benefit maximization consistent with stability of supply. A general ordinary differential equation for the lumped parameter groundwater allocation problem is derived using variational techniques and solved by specifying either the length of a mining period or the total volume to be mined. Specifying either one of these, uniquely determines the other in terms of economic parameters entering through the benefit function. An infinite mining period sets an upper limit to the total volume to be optimally extracted and provides for the greatest economic benefit. As the mining period is shortened, the one-time exploitable volume is reduced. Although most of the calculations have been carried out for a quadratic benefit function, the detected competition between marginal productivity and the rate of interest insofar as they influence the optimal storage volume and its allocation through use rates appears to be valid in general. REGIONAL WATER RESOURCES STUDIES -- A SPANISH EXPERIENCE,
Garaghty and Miller, Port Washington, N.Y.
F. van der Leeden.
Paper presented at Internation Symposium on Water Resources Planning, Mexico City, December 1972, 37 p, 9 fig, 8 ref.

Descriptors: *Groundwater, *Water supply, *Surface water, *Water resources, Subsurface water, Aquifer characteristics, Groundwater resources, Surface water availability, Groundwater availability, Resource development, Water resources development, *Regional analysis.
Identifiers: *Spain.

The Spanish government has carried out a series of unique regional hydrologic studies for the purpose of evaluating national water resources since 1968, which have proved a valuable tool in the assessment of Spain's groundwater resources and in planning, development, and management. These studies have investigated water demand, identified serious water oriented problems, estimated surface and groundwater resources available for use, identified schemes for possible water development and for solving critical water problems, and recommended additional investigations. The studies were short and intense; field work was kept to an absolute minimum and stress in placed on the evaluation of existing data. One of these studies, which examines a 25,000 sq mi. semi-arid region of Spain, is used as an example of the regional water resources analysis used in the area. (Muller-Arizona)

UNDERGROUND STORAGE OF TEXAS PLAYA LAKE WATERS BY INJECTION INTO THE OGALLALA FORMATION UNDER MODERATE PUMP PRESSURE,
Texas Tech Univ., Lubbock.
F. B. Conselman, P. Johnson, and D. A. Crawford.
Paper presented at International Symposium on Water Resources Planning, Mexico City, December 1972, 16 p, 20 ref.

Descriptors: *Recharge, *Artificial recharge, *Injection, *Recharge wells, *Playas, Groundwater, Overdraft, Pumping, Withdrawal, Groundwater resources, Aquifers, Lake basins, Surface waters, *Texas, Storage, Groundwater recharge, Underground reservoirs.
Identifiers: *Ogallala Formation (West Texas).

An update is presented on an investigation being conducted to determine the feasibility of recharging the Ogallala Formation by injection of surface playa lake waters in the semi-arid High Plains of West Texas. Ogallala groundwater is now being mined, since there are no rechargeable outcrops to the aquifer. Runoff collects in shallow playas, since there is no well developed drainage in the area. By injection of such unused waters into the Ogallala, it is hoped to establish a method of recharging the aquifer with good quality water that would help end the need for mining the aquifer. Past studies have shown that aquifer clogging by suspended solids and colloids in playa water is a significant problem. In this study effects of injection are monitored by observation wells, with quality determinations showing playa water better than that of the Ogallala. The major result of this study is that the injection well clogging has been overcome by wells which apply moderate pump pressure and maintain sufficient fluid turbulence at aquifer entry. Flow rates have been attained near 2000 gpm and one well has successfully injected 64 acre feet of playa water at 1500 gpm at 55 surface psi. Low cost injection wells using good quality waste playa water may increase the aquifer storage in the area to a large extent while offering flood control and new drained agricultural lands. Descriptors: Ecosystems, *Watersheds (Basins), *Trees, Water chemistry, *New Mexico, Weathering, *Cycling nutrients, *Watershed management, Mountain forest, Elevation, Precipitation (Atmospheric), Temperature, Throughfall, Fir trees, Pinon pine trees, Juniper trees, Forests, Conifers, Magnesium, Calcium, Sodium, Potassium, Water pollution, *Nitrates, Cations, Anions, Climate, Minerals, Water pollution sources, Nutrients.
Identifiers: *Mineral cycling, Climatic conditions, Litterfall, Faunal, Tesuque Watershed, Cation flux, Spruce trees, Aspen.

The objectives were to understand mineral cycling and stream water chemistry of forested watersheds on New Mexico as influenced by vegetational communities, climatic conditions, weathering of soil minerals, and man. Studies to date show water quality changes over elevation, with the lowest concentrations of elements occurring at the highest elevations. This trend is consistent throughout the year; however, actual concentration values vary due to the source of water (e.g. snow melt at high or low elevations) and seasonal patterns of biological activity. Variation in concentration is greatest at lower elevations. The reasons for the higher concentrations at lower elevations are increased evapotranspiration and a combination of biological controls and bedrock weathering differences. For nitrate, variation in concentration is a result, primarily, of biological activity and climatic factors (precipitation, temperature). Research needed to identify mechanisms of biological control involve transfer of materials within the system. A limited number of these results are presented. The information gathered from natural areas is essential in evaluating man's activities. The only land use activity evaluated to date has been minor; replacing a poma ski lift on the border of a watershed. An additional loss of Ca and Mg did occur during September and October and was attributed to the construction of the new lift. Additional ski area development is currently being evaluated. Identifiers: *USSR.

Some aspects of the effects of urban development on regimen and quality of natural waters are considered. The effects of urbanization on water quantity and quality alterations can be determined from the changes in water balance, hydrologic regimen, and water quality in urban and suburban areas, and from the effects of cities on water balance, hydrologic regimen, and water quality of surrounding areas. Soviet and foreign data on the effects of urbanization on regimen and quality of water can be used in calculating the hydrologic and hydrochemical effects of urbanization and in studying the contemporary trend toward more intensive urban development. 4D. Watershed Protection

OBJECTIVE REGIONALIZATION OF PEAK FLOW RATES,
Agricultural Research Service, Chickasha Okla. Soil and Water Conservation Research Div.
D. G. DeCoursey.
In: Proceedings of the Second International Symposium in Hydrology, September 11-13, 1972, Fort Collins, Colorado, p 395-405, (1972). 3 fig, 6 tab, 6 ref.

Descriptors: *Regional analysis, *Floods, *Regression analysis, *Peak discharge, Watersheds (Basins), Drainage area, Precipitation, Rainfall intensity, Least squares method, Water resources, *Watershed management, *Oklahoma.
Identifiers: *Multivariate statistics, *Discriminant analysis, Stepwise regression.

Similarity of hydrologic response using discriminant analysis and an iterative algorithm was used as a basis for regionalizing 4 peak flow rates from 90 stations in Oklahoma. Sixty stations were used to develop the equations and 30 were used as a test set. Three distinct regions were obtained; however, they were not geographically contiguous. Therefore, discriminant functions using watershed characteristics as discriminators were used to define the regions. It can be shown that the intercorrelation of a group of dependent variables can be retained if the same set of independent variables is used in all equations. Therefore, since hydrologic continuity is important in the prediction of peak flow rates, all four peak rates, for each group, were predicted using linear multiple regression equations based on the same set of watershed characteristics: drainage area, mean annual precipitation, and the 2- and 100-year precipitation intensities. Peak rates of the 30 independent stations were also predicted by equations developed using conventional stepwise regression on the base set of 60 observations. Comparison of the results of the test data showed smaller standard errors of estimate and better hydrologic continuity using regionalized data and the same set of independent variables in the regression equations. TALLULAH CREEK WATERSHED (LONG CREED PORTION) GRAHAM COUNTY, NORTH CAROLINA (FINAL ENVIRONMENTAL IMPACT STATEMENT).
Soil Conservation Service, Washington, D.C.

Available from National Technical Information Service as EIS-NC-72-5512-F. $4.25 in paper copy, $1.45 in microfiche. September 1972. 42 p, 1 map, 1 tab.

Descriptors: *North Carolina, *Environmental effects, *Watershed management, Multiple purpose projects, Flood prevention, Water supply, Erosion control, Flood control, Recreation, Agriculture, Water resources development.
Identifiers: *Environmental impact statement, *Robbinsville, N.C.

The Tallulah Creek Watershed (Long Creek Portion) is located in Graham County, North Carolina. Project measures include land treatment and one multiple-purpose structure for flood prevention and water supply. The project will serve to reduce soil erosion, reduce sediment delivery, reduce sediment delivery to Santeetlah Lake, reduce flood damage greatly, improve the economic and social values, provide municipal and industrial water, provide 18 acres of fishing habitat, and provide 1,806 visitor-days of recreation. Adverse environmental effects include loss of 36 acres of agricultural and forest land from production and upland game habitat, and the inundation of 4,000 feet of trout stream. Alternatives to the proposed project include the purchase of flood plain land, flood proofing, conservation land treatment, using Santeetlah Lake as an alternate source of municipal water supply, and leaving the area in its existing condition. CONCENTRATIONS OF PLUTONIUM, COBALT, AND SILVER RADIONUCLIDES IN SELECTED PACIFIC SEAWEEDS,
Scripps Institution of Oceanography, La Jolla, Calif.
K. M. Wong, V. F. Hodge, and T. R. Folsom.
Available from NTIS, Springfield, Va., 22151 as AD-741 997 for $3.00 paper copy, $1.45 microfiche. Report Nos. LA-4756, UC-41, December 1971. 6 p, 1 fig, 4 tab, 8 ref. Contract No. N00014-69-A-0200-6011.

Descriptors: *Absorption, *Marine algae, Marine animals, Radioisotopes, Cobalt, Metals, Heavy metals, Sea water, Algae, Grasses, Phaeophyta, Rhodophyta, Chlorophyta, Marine plants, Kelps, Bioindicators, *Cobalt radioisotopes, Radioactivity techniques, Analytical techniques, *Spectroscopy.
Identifiers: Co-60, Co-58, Pu-239, Ag-110m, Alpha spectrometry, Bioaccumulation, Gelidium, Macrocystis, Eisenia, Egregia, Zonaria, Sargassum, Phyllospadix, Aplysia californica, *Silver radionuclides, *Plutonium radionuclides, Sample preparation, Ashing, Biological mangification, Biological samples, Aplysia, *Seaweeds (Pacific Ocean).

The high uptake of radionuclides and the relative ease of sampling suggest that seaweeds may be ideal for monitoring certain radio-activities in the marine environment. Consequently, studies were undertaken to survey the concentrations of plutonium, radiocobalt, and radiosilver in several species of seaweeds collected along the coastal water of Southern California. Twelve species of seaweed were collected from five stations, sorted by species, washed, weighed, dried, and ashed. The ashed samples were dissolved in HNO3-HCl and Pu-236 added as a radiochemical yield monitor. The plutonium was separated and purified by anion exchange column, electroplated onto a stainless steel disk, and determined by alpha-spectrometry. From preliminary results, it was concluded that all species of seaweeds concentrate plutonium and may be a sensitive indicator for the detection of variations of plutonium concentration in the marine environment; also, further work should be done to correlate plutonium concentration between seawater and algae, and a more comprehensive survey of the marine environment is needed. By comparing samples collected near the nuclear plant with samples of the same species on

other coastal collection sites no evidence of anomalous Pua239 was found near the plant, and definite evidence was found that Co-58, Co-60 and Ag-110m had been coming from the plant. By comparing different species collected near the nuclear plant, it was found that the red algae, Gelidium and Corallina, and a surf grass, Phyllospadix, accumulate higher concentrations of cobalt and silver radionuclides than did the brown algae. One species of sea hare, Aplysia californica, that is believed to prefer red algae as food also shows higher concentrations of Co-58, Co-60 and Ag-110m. Typical concentrations were: 2200, 180, 260 dpm/kg wet sample respectively. (Little-Battelle)

5A. Identification of Pollutants

EVALUATION OF FLAME EMISSION DETERMINATION OF PHOSPHORUS IN WATER,
Environmental Protection Agency, Athens, Ga. Southeast Environmental Research Lab.
W. R. Seitz.
Copy available from GPO Sup Doc as EP1.23:660-2-73-007, $0.50; microfiche from NTIS as PB-225 142/9, $1.45. Environmental Protection Agency, Technology Series, Report EPA-660-2-73-007, August 1973. 18 p, 4 fig, 2 tab, 18 ref. EPA RAOP 16ADN-31.

Descriptors: *Phosphorus, *Phosphates, *Flame photometry, Phosphorus compounds, Organophosphorus compounds, Inorganic compounds, Analytical techniques, *Spectrophotometry, *Pollutant identification.
Identifiers: *Flame emission spectrometry.

NUCOR's flame spectrometer for phosphorus analysis was evaluated. Response to phosphorus in the form of H3PO4 was linear from 3 micro g/liter, the detection limit, to 120 mg/liter, the highest concentration tested. Metal ions depress phosphorus emission and must be removed by cation exchange prior to analysis. High concentrations (> or equal to 5 mg/liter) of sulfur interfere positively. Volatile phosphorus compounds produce a larger signal for a given phosphorus concentration than nonvolatile compounds. River water samples were spiked with inorganic and organic phosphorus and analyzed. The measured phosphorus concentrations were 10-25% lower in river water than in deionized water. (EPA)

UTILIZATION OF REMOTE SENSING IN RIVER BASIN STUDIES,
Army Engineer Waterways Experiment Station, Vicksburg, Miss.
L. E. Link, and A. Shindala.
Water Resources Bulletin, Vol 9, No 5, p 901-907, October 1973. 8 ref.

Descriptors: *Remote sensing, *Data collections, *River basin development, Water resources, Water pollution, *Water quality, Hydrogeology, Hydrologic data, *Pollutant identification.

Remote sensing techniques have the potential for significantly reducing the level of effort in a river basin water quality study. A general methodology is proposed for conduct of river basin water quality studies. The primary advantage is rapid evaluation of the water quality conditions of a river basin. Remote sensing techniques are a fundamental part of the methodology. The proposed methodology consists of two phases. Phase I deals with the study of the water resource characteristics of the basin as a system and identification of 'critical areas'. Phase II of the methodology involves the detailed study of the critical areas by means of computerized water quality simulation models. (Knapp-USGS)

In: Symposium on Significant Results Obtained from Earth Resources Technology Satellite-1, Vol III, Discipline Summary Reports; Greenbelt, Md, March 5-9, 1973: NASA, Goddard Space Flight Center Publication X-650-73-155, p 47-56, p 47-56, May 1973. 2 append.

Descriptors: *Remote sensing, *Satellites (Artificial), *Monitoring, Environment, Path of pollutants, Data collections, Water pollution, Strip mines, Surveys, Erosion, Waste disposal.
Identifiers: *ERTS.

The spectral and spatial resolution of the ERTS-1 sensors may be used to monitor and assess specific sources of air pollution. Density slicing was used in the identification of smoke plumes. It was possible to detect previously unreported emission sources leading to possible law-enforcement applications. Smoke plumes over Lake Michigan were related to nucleation in snow showers. On a broader scale, atmospheric aerosol content and haze were studied, primarily with regard to their effect on the deterioration of signals from the earth's surface. Chemical discharge from a paper mill into Lake Champlain was detected. This information, along with numerous aircraft photographs, is being used in court by the State of Vermont to affect a cease and desist order gainst the polluter located in New York State. Differences in sediment content within rivers, bays, lakes, and reservoirs are easily discernible. It is possible to monitor the location of dumping in oceans. Rate and extent of beach erosion can be evaluated through study of coastal circulation dynamics. Strip-mine and mine-dump investigations are also described. (See also W74-01163) (Knapp-USGS)

DETERMINATION OF GRISEOFULVIN BY TIME-RESOLVED PHOSPHORIMETRY,
Auburn Univ., Ala. Charles Richard Saunders Chemical Lab.
J. R. McDuffie, and W. C. Neely.
Analytical Biochemistry, Vol 54, No 2, p 507-512, August 1973,. 2 fig, 18 ref. OWRR A-017-ALA (3).

Descriptors: Pollutants, *Fungi, *Pollutant identification.
Identifiers: *Griseofulvin, *Dechlorogriseofulvin, *Fungal metabolites, Antibiotics, *Phosphorimetry, Penicillium.

Griseofulvin, an antibiotic, is a fungal metabolite produced by several species of pennicillium. Because of its use as an antibiotic, many procedures have been explored recently for the detection and determination of griseofulvin. Methods which have been used are based on glc and tlc, spectrophotometry, colorimetry and some luminescence. Of these methods, only the glc is a direct and easy way to differentiate between griseofulvin and a common contaminant, dechlorogriseofulvin. The phosphorescence lifetimes of griseofulvin and dechlorogriseofulvin are shown to be 0.11 sec and 1.16 sec, respectively. This tenfold difference is shown to enable the use of time-resolved phosphorimetry for the determination of griseofulvin in mixtures with dechlorogriseofulvin.
W74-01224

FOOD CONSUMPTION OF THE FREE-LIVING AQUATIC NEMATODE PELODERA CHITWOODI,
Auburn Univ., Montgomery, Ala. Dept. of Biology.
E. K. Mercer, and E. J. Cairns.
Journal of Nematology, Vol 5, No 3, p 201-208, July 1973. 4 fig, 4 tab, 21 ref. OWRR A-004-ALA (2).

Descriptors: *Nematodes, *Aquatic animals, Invertebrates, *Food habits, Respiration, Bacteria.
Identifiers: Calorimetry, Cartesian diver respirometer, *Pelodera chitwoodi, *Respirometers.

A Cartesian diver respirometer was used to measure 02 uptake and respiratory quotients at 25C. Respiratory quotients were about 0.70 in starved nematodes, and 0.80 in third-stage and adult nematodes that had fed on bacteria. The energy output as measured by 02 uptake was inversely related to the concentration of bacteria in the medium, indicating reduction in feeding effort. Feeding bacteria to third-stage nematodes in divers quickly resulted in peak respiration rates averaging 6.4 nl 02/micron g wet weight nematode per hour (Q02) or six times the endogenous rate. In about 4 hr, the rates fell and then stabilized at a Q02 of 2.5. Adult males fed bacteria in divers had a peak Q02 of 2.8 or twice the starved rate. Adult females fed bacteria had a peak Q02 of 3.7. Starving adult males and third-stage larvae were estimated to lose 2.4% and 1.4%, respectively, of their body weight per day in the form of fat based on the caloric equivalent of oxygen used and a respiratory quotient of 0.70. The caloric content of the bacteria fed to nematodes in divers was determined. It was then calculated that both third-stage larvae and adult males ingested bacteria equivalent to 4.4 X 0.00001 cal/micron g wet weight nematode tissue per hour when feeding. Of the bacterial calories ingested, the larvae used 27% and adults 21% for respiration. It was estimated that males ingested 3.1 X 1,000,000 bacteria and females 10 X 1,000,000 bacteria during an 8-day life span.

Identifiers: Dhengur Nala, Hasdeo River, *India (Korba-M.P.), *Minerals, Raw waters, River, *Water treatment, Alkalinity, Dissolved solids, Demineralization, Corrosion.

Investigations on the raw surface waters in the Korba region (Madhya Pradesh, India) carried out during April 1964-March 1965 revealed that the Hasdeo river and Dhengur nala waters are very soft with very low alkalinity, sulfate, chloride and dissolved solids contents but moderately high in silica. The low mineral content of these waters had certain inherent advantages and disadvantages. The main advantage is the low cost involved in their demineralization. The primary disadvantage is their high corrosivity requiring adequate treatment with lime of alum and lime in a conventional clarifier/softener to make them suitable as industrial cooling water or for domestic use.--Copyright 1973, Biological Abstracts, Inc.

VARIATION OF ORGANOCHLORINE RESIDUE LEVELS WITH AGE IN GULF OF ST. LAWRENCE HARP SEALS (PAGOPHILUS GROENLANDICUS),
Bedford Inst., Dartmouth (Nova Scotia).
R. F. Addison, S. R. Kerr, and J. Dale.
Journal of the Fisheries Research Board of Canada, Vol 31, No 5, p 595-600, May 1973. 1 fig, 3 tab, 13 ref.

Descriptors: *Chlorinated hydrocarbon pesticides, *Pesticide residues, *Polychlorinated biphenyls, Age, Size, Chemical analysis, Variability, Insecticides, Marine animals, Mammals, DDE, DDT, Dieldrin, Pollutant identification, DDD, Statistical methods, *Gas chromatography.
Identifiers: *Harp seals, Electron capture gas chromatography, Animal tissues, Metabolites, Bioaccumulation, *Gulf of St. Lawrence, Sample preparation, Data interpretation, Pagophilus groenlandicus, Blubber, Aroclor 1254, Gas liquid chromatography.

Blubber samples from 18 harp seals taken near the Seguenay River in the Gulf of St. Lawrence were analyzed for DDT metabolites, PCBs, and dieldrin. The concentration of total DDT and metabolites (sigma DDT) ranged from 3.1 to 22.6 ppm, PCBs (as Aroclor 1254) from 2 to 22 ppm, dieldrin from 0.1 to 0.3 ppm of blubber. Rank correlation of residue level and age indicated that significant portions of the sigma DDT and PCB variance could be assigned to increased residue levels with age. Within the sigma DDT group, DDE alone showed a strong proportional increase in concentration with age. Dieldrin concentration was not appreciably correlated with age. Among factors other than age, changes in blubber thickness did not account for any significant amount of the variance in blubber residue concentration. Examination of other published data suggested that parturition and/or lactation may cause reductions in blubber residue concentrations. (Holoman-Battelle)

Identifiers: Natural organics, *Ketones, *Isoprenoids, Marine environment, *Tanner Basin (Calif), Sample preparation, 6 10 14-Trimethylpentadecan-2-one, Column chromatography, GC-mass spectrometry, Mass spectra, Thin layer chromatography, Hydrocarbons, Gas liquid chromatography.

A C18-isoprenoid ketone (6,10,14-trimethylpentadecan-2-one) has been isolated from Tanner Basin, Southern California continental shelf. Samples of sediments were sealed in glass bombs and exposed to temperatures from 60 to 150C for 7, 30, and 60 days. The sediment was then extracted with benzene-methanol and chromatographed on a silicic acid column. This compound was found in both heat-treated and untreated sediment from which it was extracted with the fatty acid fraction which had been converted to methyl esters, and was separated with the other branched components by the urea adduction method. A mass spectrum was obtained using a gas chromatograph coupled with a CEC-21-491 mass spectrometer. The identity of the ketone was further substantiated by in situ formation of a yellow 2,4-dinitrophenylhydrazone on thin-layer plates. The measured R sub F value of 0.66 was the same as for the C18-isoprenoid ketone that was synthesized. The maximum ketone yield was obtained by heating the sediment sample at 150C for one month. MICRODETERMINATION OF CHLORO--S-TRIAZINES IN SOIL BY GAS-LIQUID CHROMATOGRAPHY WITH NICKEL ELECTRON CAPTURE OR ELECTROLYTIC CONDUCTIVITY DETECTION,
Hawaii Univ., Honolulu.
H. Y. Young, and A. Chu.
Journal of Agricultural and Food Chemistry, Vol 21, No 4, p 711-713, July/August 1973. 2 fig, 2 tab, 7 ref.

Descriptors: *Triazine pesticides, *Chlorinated hydrocarbon pesticides, *Pollutant identification, *Soil analysis, Herbicides, Chemical analysis, Methodology, Pesticide residues, Solvent extraction, Soil contamination, Water pollution sources, Separation techniques, *Gas chromatography.
Identifiers: Atrazine, Propazine, Simazine, Electron capture gas chromatography, Electrolytic conductivity gas chromatography, Chemical recovery, Cleanup, Chloro-s-triazines, Selectivity, Sample preparation, Helemano soil, Kapaa soil, Hanalei soil, Gas liquid chromatography.

The method applied to the determination of chloro-s-triazine (simazine, atrazine, and propazine) residues in soil involves extraction with a mixture of ethyl acetate and methanol and analysis by gas-liquid chromatography with nickel electron capture or electrolytic conductivity detection. Cleanup is necessary for the former but not the latter detector. Sensitivity is placed at 1 ng in the injected samples the least determinable concentration at 0.1 ppm of soil. The recovery values of chloro-s-triazines added to two Hawaiian soils were 84-112 percent using the EC detector and 88-110 precent using the CD detector. The application of this method to the analysis of water and river and ocean sediments is being tested. (Holoman-Battelle)

REVISION OF FAMILY AND SOME GENERIC DEFINITIONS IN THE PHAENNIDAE AND SCOLECITHRICIDAE (COPEPODA: CALANOIDA),
New Zealand Oceanographic Inst., Wellington. Dept. of Scientific and Industrial Research.
J. Bradford.
New Zealand Journal of Marine and Freshwater Research, Vol 7, Nos 1/2, p 133-152, June 1973. 4 fig, 2 tab, 58 ref.

Descriptors: *Systematics, *Copepods, *Zooplankton.
Identifiers: Scolecithrix, Amallothrix, Cornucalanus, Onchocalanus, *Phaenna, Racovitzanus, Scaphocalanus, *Scolecithricella, Scottocalanus, Xanthocalanus, Macroinvertebrates.

Some genera have been removed from the family Phaennidae which, with the Scolecithricidae, are redefined. All other genera have been placed close to the Diaixidae and Tharybidae. The scolecithricid genera Scolecithrix, Scolecithricella, Amallothrix, Scaphocalanus and Lophothrix are redefined. It is suggested that the species Scolecithrix ctenopus, S. autopecten, S. fowleri and Amallophora altera represent four groups of species which probably should be given generic status. A new species of Parundinella is named and a juvenile Neoscolecithrix described. (Little-Battelle)

Waterloo Univ., (Ontario). Dept. of Biology.
M. R. Sreenivasa, and H. C. Duthie.
Hydrobiologia, Vol 42, Nos 2-3, p 161-224, August 15, 1973. 224 fig, 2 tab, 23 ref.

Descriptors: *Diatoms, *Hydrogen ion concentration, Alkalinity, Sampling, Varieties, Speciation, Water quality, Aquatic plants, Sediments, Systematics, Separation techniques, Aquatic algae, *Canada.
Identifiers: *Grand River (Canada), Sample preparation, *Cymbella caespitosa.

Samples of diatom flora were collected from 12 stations on the Grand River during 1965-70. Collections were made by plankton net, by scraping rocks, and by collecting leaves of whole aquatic plants. Sediments were collected with an Ekman dredge. Samples were boiled in a mixture of nitric and sulfuric acids, washed and centrifuged with distilled water, and mounted in hyrax or clearax for microscopic examination. Of 273 taxa identified the most abundant species overall were Cymbella caespitosa and Diatoma vulgare. Most of the species identified are common to moderately alkaline rivers and lakes in eastern and central North America. (Little-Battelle)

THE DETERMINATION OF THALLIUM IN URINE AND PLASMA BY DELVES CUP ATOMIC ABSORPTION,
Illinois Univ., Urbana. Coll. of Veterinary Medicine.
G. M. Shkolnik, and R. F. Bevill.
Atomic Absorption Newsletter, Vol 12, No 5, p 112-114, September-October 1973. 4 fig, 1 tab, 8 ref.

Descriptors: *Pollutant identification, *Urine, Chemical analysis, Methodology, Metals.
Identifiers: *Plasma, *Thallium, Delves cup, *Atomic absorption spectrophotometry, Body fluids, Biological samples, Sensitivity, Reproducibility, Sample size.

A rapid and accurate method is described for determining thallium in plasma and urine utilizing Delves cup atomic absorption. Microliter quantities of plasma and urine were pipetted into decontaminated Delves cups and dried at 150C. Hydrogen peroxide was added to the plasma samples to partially oxidize the organic material; these samples were again dried after oxidation. The Delves cup method is more sensitive than that reported by previous investigators. The sensitivity for 1 percent absorption is 0.7 ng for plasma and 0.6 ng for urine when 10-microliters samples of each are analyzed. The values obtained were comparable to those obtained by flame atomic absorption. The effect of background correction is discussed. (Holoman-Battelle)

DETERMINATION OF MERCURY AFTER ROOM TEMPERATURE DIGESTION BY FLAMELESS ATOMIC ABSORPTION,
A. Bouchard.
Atomic Absorption Newsletter, Vol 12, No 5, p 115-117, September-October 1973. 8 tab, 7 ref.

Descriptors: *Mercury, *Pollutant identification, *Chemical analysis, *Plant tissues, *Chemical degradation, Urine, Methodology, Heavy metals, Fish, Vegetation, Organic matter, Eels, Shrimp, Leaves.
Identifiers: *Sample preparation, *Flameless atomic absorption spectrophotometry, *Animal tissues, Biological samples, Environmental samples, Tuna, Haddock, Perch oil, Anchovy, Precision, Chemical digestion.

A new method for the digestion of organic materials has been developed and used for the determination of total mercury in organic samples. This procedure, which takes place at room temperature (25C), is based on the oxidizing power of chromic acid (CrO3) alone, or combined with red fuming nitric acid. The method has been applied successfully to samples of urine, fish and vegetation. Each sample was prepared following available procedures and the proposed method. Mercury determinations by flameless atomic absorption spectrophotometry were compared in each case. The results obtained using the proposed method were comparable in all cases to the other methods used. (Holoman-Battelle)

EVALUATION OF THE USE OF THE HEATED GRAPHITE ATOMIZER FOR THE ROUTINE DETERMINATION OF TRACE METALS IN WATER,
State Univ., Coll., Fredonia, N.Y. Dept. of Geology.
W. M. Barnard, and M. J. Fishman.
Atomic Absorption Newsletter, Vol 12, No 5, p 118-124, September/October 1973. 7 tab, 10 ref.

Descriptors: *Trace elements, *Water analysis, Laboratory equipment, *Metals, Chemical analysis, Copper, Lead, Cadmium, Manganese, Chromium, Instrumentation, *Heavy metals, Chelation, Solvent extractions, Evaluation, Pollutant identification, Mercury, Water pollution, Methodology.
Identifiers: *Atomic absorption spectrophotometry, *Heated graphite atomizer, Sensitivity, Performance evaluation, Chemical concentration, Standard addition technique, Detection limits, Arsenic, Selenium, Graphite furnace.

Analysis of four standard reference water samples for Cu, Pb, Cd, Mn, and Cr by flameless atomic absorption spectrophotometry using a heated graphite atomizer permits an evaluation of the atomizer for the routine, practical analysis of water samples. Trace metals analysis of water by direct comparison with aqueous standards is impractical because of matrix interference. Analysis by combining a chelation and solvent extraction with subsequent atomization is effective for Cu, Pb, and Cr, but not for Cd and Mn. Analysis by standard additions appears to be reliable, but time consuming. The sensitivity of the atomizer for As, Hg, Se and certain other elements is too low for practical, routine determination of these elements in most natural waters. Although the heated graphite atomizer has high capability of sensitivity and detection limits for many elements and may have potential applications for specific problems encountered in water analysis, its use for determination of trace metals in waters of varied composition, especially by laboratories engaged in the analysis of large numbers of samples, is limited. (Holoman-Battelle)

A COMPARISON OF FAST DESTRUCTION METHODS FOR THE DETERMINATION OF TRACE METALS IN BIOLOGICAL MATERIALS,
Brussels Univ. (England). Pharmaceutical Inst.
S. Luyten, J. Smeyers-Verbeke, and D. L. Massart.
Atomic Absorption Newsletter, Vol 12, No 5, p 131-132, September-October 1973. 2 tab, 4 ref.

Descriptors: Methodology, *Metals, *Chemical degradation, *Copper, *Zinc, *Trace elements, Chemical analysis, Organic matter, Heavy metals, Pollutant identification, Pollutants.
Identifiers: Biological materials, *Atomic absorption spectrophotometry, Sample preparation, Biological samples, Animal tissues, Brain, Fish meal, Standard addition technique, Soluene method, Wet digestion, Pressure bottle method.

Two new procedures for the destruction of biological materials - soluene method and pressure bottle method - were applied to the determination of Cu and Zn in human brain tissue and in fish meal by atomic absorption spectroscopy. No significant differences were observed for the destruction procedures studied. Good results were obtained by the soluene method for brain tissue but the fish meal could not be dissolved in soluene. It was impossible to obtain a clear solution for brain tissue with the pressure bottle method, but it worked well in dissolving the fish meal. The soluene and pressure digestion methods do allow for fast and accurate analyses in some cases, but not all. (Holoman-Battelle)

A MODIFIED FILTRATION METHOD FOR THE ANALYSIS OF WASTEWATER SUSPENDED SOLIDS,
Metropolitan Denver Sewage Disposal District No. 1, Commerce City, Colo.
H. M. Harada, Jr., G. H. Reid, E. R. Bennett, and K. D. Linstedt.
Journal Water Pollution Control Federation, Vol 45, No 9, p 1853-1858, September 1973. 2 fig, 4 tab, 3 ref.

Descriptors: *Suspended solids, *Waste water (Pollution), *Chemical analysis, *Pollutant identification, *Filtration, Methodology, Pollutants, Water analysis, Efficiencies.
Identifiers: Method evaluation, Asbestos mat, Fiber glass filter, Reproducibility, Abestos cream mat, Fiber glass disk mat.

A modified asbestos mat/fiber glass filter method has been presented for the analysis of suspended solids in wastewater process streams. A comparative evaluation was made between this method, the conventional asbestos mat, and the fiber glass disk method. From the standpoint of analytical performance the three mats compared favorably in terms of precision of measurement. All of the mats showed good reproducibility. For the raw wastewater samples, the individual samples were all within plus or minus 0.5 percent of the average for the asbestos cream mats. In all of the solids determinations, the individual results from each sample were within plus or minus 10 percent of the combined mean for all three types of filter media. Tests showed that the use of a combination filter mat facilitates considerably more rapid analysis for wastewater suspended solids than the two established methods used for comparison. With this improved analytical efficiency, there is no apparent loss of analytical accuracy. (Holoman-Battelle)

HEAVY METALS IN WASTEWATER AND TREATMENT PLANT EFFLUENTS,
Interstate Sanitation Commission, New York.
A. I. Mytelka, J. S. Czachor, W. B. Guggino, and H. Golub.
Journal Water Pollution Control Federation, Vol 45, No 9, p 1859-1864, September 1973. 1 fig, 3 tab, 2 ref.

Descriptors: *Waste water (Pollution), *Heavy metals, *Sewage effluents, *Chemical analysis, *Pollutant identification, Treatment facilities, Interstate commissions, Water sampling, Water analysis, Connecticut, New Jersey, New York, Methodology, Copper, Zinc, Chromium, Lead, Iron, Nickel, Cadmium, Manganese, Mercury, Cobalt, Data storage and retrieval, Computers.
Identifiers: *Atomic absorption spectrophotometry, Data interpretation, Silver, Detection limits.

The findings are presented of the Interstate Sanitary Commission's (New York, New Jersey, and Connecticut) routine heavy metals analyses of municipal waste water treatment plants. All samples were collected by the Commission's personnel with nonmetallic equipment and stored in nonmetallic containers. The effluent and influent samples were all composite samples collected during the same 5- to 6-hr period. Concentrations of heavy metals in the waste water were determined by atomic absorption spectrophotometry. The results show that many plants receive and discharge heavy metals above prudent limits. In order to minimize the harmful effects of these heavy metals (and of those not discussed in this paper), state-of-the-art techniques must be implemented to achieve as close to 100 percent removal as possible before these metal enter the sewer system. This is especially important in the New York/New Jersey/Connecticut area, where combined sewer systems allow waste water to by-pass treatment plants and discharge, untreated, directly into the receiving waterways. (Holoman-Battelle)

IMPROVED DISTILLATION METHOD FOR VOLATILE ACIDS ANALYSIS,
Somerset Raritan Valley Sewerage, Somerville, N.J.
J. B. Lombardo.
Journal Water Pollution Control Federation, Vol 45, No 9, p 1946-1951, September 1973. 1 tab, 11 ref.

Descriptors: *Distillation, Methodology, *Chemical analysis, *Pollutant identification, *Organic acids, Time, Temperature, Pollutants.
Identifiers: *Volatile acids, Precision, Repeatability, Standard methods, Chemical recovery, Acetic acid, Carbon dioxide evolution.

The direct distillation method for volatile acids given in 'Standard Methods' was studied to learn the reason for poor recovery and poor repeatability. As a result of this work, the poor recovery was attributed to hold-back of the volatile acid in the boiler and the poor repeatability to the CO2 formed. The CO2 collected in the distillate can vary widely because of temperature effects, geometry of the apparatus, and time conditions. In the standard procedure this variability affects the repeatability of the volatile acid value, because CO2 and volatile acids are analytically combined. A procedure is suggested by which both recovery and repeatability can be significantly improved. The proposed method requires less than 2 hr to carry out, gives a recovery of 97 percent, and a standard deviation of plus or minus 3.8 mg/l as acetic acid in the range of 0 to 1,000 mg/l. (Holoman-Battelle)

WASTEWATER CHARACTERIZATION OF SWEET POTATO PROCESSING,
North Carolina State Univ., Raleigh.
N. V. Colston, and C. Smallwood, Jr.
Journal Water Pollution Control Federation, Vol 45, No 9, p 1972-1977, September 1973. 5 tab, 2 ref.

Descriptors: *Food processing industry, Waste water (Pollution), *Chemical analysis, *Water analysis, Chemical properties, Industrial wastes, Sweet potatoes, Biochemical oxygen demand, Chemical oxygen demand, Suspended solids, Nitrogen, Phosphorus, Temperature, Hydrogen ion concentration, Venturi flumes, Instrumentation, Water sampling, *Pollutant identification, Solid wastes, *North Carolina.
Identifiers: *Cannery wastes, Characterization, *Sweet potato processing wastes, Unit processes, Settleable solids.

A study was conducted at a sweet potato processing plant in North Carolina during September through December 1971. The purpose of the research was to determine what waste loads were being produced in each of the unit processes throughout the cannery. The results indicated that 40 percent of the original input was yielded as saleable merchandise. Water consumption in the plant amounted to 2,600 gal/ton of raw product input (10.8 cu m/metric ton) and biochemical oxygen demand, chemical oxygen demand, total solids, and suspended solids were, respectively, 60 lb (27.2 kg), 140 lb (63.5 kg), 160 lb (72.6 kg), and 30 lb (13.6 kg) per ton (0.907 metric ton) of product produced. (Holoman-Battelle)

CHARACTERIZATION AND TREATABILITY OF POMACE STILLAGE,
California Univ., Davis. Dept. of Civil Engineering.
T. H. Chadwick, and E. D. Schroeder.
Journal Water Pollution Control Federation, Vol 45, No 9, p 1978-1984, September 1973. 1 fig, 5 tab, 10 ref.

Descriptors: *California, Chemical properties, *Waste water treatment, Physical properties, *Waste identification, Sampling, Waste water (Pollution), Chemical analysis, Industrial wastes, Chemical oxygen demand, Biochemical oxygen demand, Aerobic treatment, Anaerobic digestion, Biological treatment, Suspended solids, Hydrogen ion concentration, Acidity, Nitrates, Nitrites, Phosphates, Ammonia, Nitrogen, Pollutant identification.
Identifiers: *Pomace stillage, *Winery wastes, Characterization, Distillery wastes, Loading rates, Orthophosphates, Polyphosphates, Volatile solids, Tartrates.

Washed pomace stillage from the Bear Creek Winery (California) was characterized and subjected to biological treatment and processes for solids removal. The pomace distilling material was a mixture of Tokay, Thompson, Seedless, Zinfandel, and Palomino grape skins, pulp, and seeds.

Samples were collected at 150 F and placed in plastic utility cans, lined with polyethylene bags, and frozen. Suspended solids, acidity, and pH were determined prior to freezing. Other constituents and characteristics measured were total and ammonia nitrogen, nitrate, nitrite, total phosphate, orthophosphate, polyphosphate, suspended and volatile solids, tartrate and total biological oxygen demand. The study showed that pomace stillage contains high concentrations of organic materials that can be oxidized easily under both aerobic and anaerobic conditions. A residual chemical oxygen demand of 1,000 to 2,500 mg/l existed; this was apparently nonbiodegradable. Loading rates for anaerobic digestion ranges from 0.46 to 1.38 kg/day/cu m, and acclimation over 5 to 7 days behave satisfactorily biologically, but some solids were lost in clarifiers. Chemical treatment of the stillage gave unsatisfactory effluents even at large chemical doses. (Holoman-Battelle)

CRITICAL STUDY OF THE APCD-MIBK EXTRACTION SYSTEM FOR ATOMIC ABSORPTION,
Missouri Univ., Columbia. Dept. of Agricultural Chemistry.
S. R. Koirtyohann, and J. W. Wen.
Analytical Chemistry, Vol 45, No 12, p 1986-1989, October 1973. 4 fig, 2 tab, 10 ref.

Descriptors: *Aqueous solutions, *Heavy metals, Hydrogen ion concentration, Copper, Zinc, Lead, Solvent extractions, Separation techniques, Methodology, Plant tissues, Pollutant identification.
Identifiers: *Ketones, *Carbodithioates, Solvent extraction systems, *Atomic absorption spectrophotometry, Sample preparation, *Atomic emission spectrophotometry, Organic solvents, Zn-65, Perchloric acid, Animal tissues.

A detailed study was conducted to explain the inconsistent results obtained when the APCD-MIBK extraction system was applied to complex samples such as plant or animal tissues. The aqueous phase containing sample or standard with or without radioisotope labeling was buffered with ammonium acetate and the pH adjusted to the desired value. Extractions were performed in separatory funnels shaken for 1 minute by hand. Atomic absorption and emission measurements were made on the separated organic phase. When the highest possible accuracy was required the organic phase was diluted to 10 ml with water-saturated MIBK. Atomic absorption response from metals extracted into methyl isobutyl ketone decreased as the pH of the aqueous phase prior to extraction was increased, in spite of the fact that the extraction efficiency was near 100 percent for all pH values used. The change in response was the same for copper, lead, and zinc. The difference was critically dependent on the nebulizer adjustment. The effect appears to be associated with nebulization and transport of the organic solvent to the flame, but no satisfactory explanation for the observations were found. (Holoman-Battelle)

CHEMICAL CONSTANTS OF METAL COMPLEXES FROM A COMPLEXOMETRIC TITRATION FOLLOWED WITH ANODIC STRIPPING VOLTAMMETRY,
North Carolina Univ., Chapel Hill. School of Public Health.
M. S. Shuman, and G. P. Woodward, Jr.
Analytical Chemistry, Vol 45, No 12, p 2032-2035, October 1973. 3 fig, 1 tab, 12 ref.

Descriptors: *Chemical analysis, *Pollutant identification, *Water analysis, Methodology, Estimating, Chelation, Cadmium, Heavy metals, Metals, *Volumetric analysis.
Identifiers: Conditional formation constants, Complexometric titration, *Anodic stripping voltammetry, *Metal complexes, *Ligands, Natural waters, Ethylenediaminetetraacetic acid, Metal chelates.

A method based solely on data obtained from a complexometric titration followed with anodic stripping voltammetry is developed which permits conditional formation constants of metal complexes to be estimated. This method was applied to ethylenediaminetetraacetic acid (EDTA) titrated with cadmium and gave a formation constant for CdEDTA that agreed well with values previously reported. It was observed that in addition to convective diffusion, chemical dissociation of the complex during pre-electrolysis contributed to stripping currents. A general diagnostic that evaluates the extent of such kinetic contributions to stripping voltammetry and that is based upon the complexometric titration is also presented. Estimation of the rate constant for dissociation of CdEDTA is made from these experiments. The method described above is a significant improvement both in accuracy and simplicity over stripping voltammetry procedures presently used for estimating formation constants of metals in natural water solutions. Both concentration of free ligands from the end point and information on chemical composition from the formation constants can be obtained from this titration. The composition of existing complexes can be inferred either from titration of the sample as received or from titrations carried out after selective and exhaustive constant potential electrolysis of a metal from solution. Identifiers: *Semiintegral electroanalysis, Mercury electrodes, *Neopolarograms, Transfer coefficients, Rate constants, Electrode reactions, Thallium, Indium, Rare earth elements.

'Neopolarograms' are graphs vs. potential of the semiintegral of the current which flows when a stationary electrode is progressively polarized in the presence of electroactive species. Theory is presented which predicts the shapes of neopolarograms for reversible electrode processes. For irreversible and quasireversible reactions, a concise relationship exists between potential, current, and the semiintegral of the current. The theory has been verified using the electrode reactions of Tl (plus), Pb (2 plus), Cd (2 plus), In (III), Fe (II), Hg2 (2 plus), Ni (2 plus), O2, and Zn (2 plus) at a mercury electrode. These studies demonstrate the value of semiintegral electroanalysis in the determination of electron number, transfer coefficients, and rate constants of electrode reactions. Four advantages of neopolarography are enumerated. (Holoman-Battelle)

Identifiers: Metabolic products, Metabolites, beta-Phenylethylamine, Tryptamine, Isoamylamine, Putrescine, Lactic acid, alpha-Hydroxybutyric acid, alpha-Hydroxyisocaproic acid, alpha-Hydroxyvaleric acid, alpha-Hydroxycaproic acid, 1-Hexanol, 2-Hexanol, 1-Heptanol, Derivation.

A Perkin-Elmer Model 900 gas chromatograph, equipped with an electron capture detector and a Hamilton Autosampler, has been modified to permit automatic injection and analysis of a variety of important bacterial metabolic products. The Autosampler was modified to correct leak problems connected with the inlet system, and a microswitch was installed to permit temperature programming. The gas chromatograph was modified by adding a Beckman switching valve that permits use of two columns (polar and nonpolar) at different time intervals through the same detector or the venting of undesirable compounds. In order to convert the Model 900 gas chromatograph equipped with an autosampler into a two-column system, an injector block through which samples could be injected manually was added to the system. The system was tested by analyzing HFBA derivatives prepared from pH10 chloroform extracts of Clostridium sordelli and C. bifermentans incubated on cooked meat and standard mixtures of acids and alcohols. NEW DETECTOR FOR ION-EXCHANGE CHROMATOGRAPHY,
Cincinnati Univ., Ohio. Dept. of Chemistry.
T. W. Gilbert, and R. A. Dobbs.
Analytical Chemistry, Vol 45, No 8, p 1390-1393, July 1973. 4 fig, 2 tab, 11 ref.

Descriptors: *Anions, *Cations, *Heavy metals, Sodium, Potassium, Cesium, Magnesium, Calcium, Maganese, Iron, Cobalt, Nickel, Copper, Cadium, Mercury, Aluminum, Strontium, Zinc, Chromium, Fluorides, Chlorides, Bromides, Iodides, Nitrates, Sulfates, Carbonates, Laboratory equipment, Water analysis, Aqueous solutions.
Identifiers: *Ion exchange chromatography, Ion exchange membranes, Lithium, Rubidium, Silver, Barium, Cyanides, Tartrates, Citrates, Acetates, Detectors, Sensitivity, Chlorates, Bromates, Iodates, Perchlorates, Uranyl, Thicoyanates, Ammonium, Tin.

A thermomechanical analyzer is used to measure the linear dimension change in membrane length as a function of the time or effluent volume. Peak heights or areas caused by the sorption and desorption of ions are used for quantitative determinations. Cation test solutions studied were: chlorides of Li, Na, K, Rb, Cs, NH4, Et4N, Mg, Ca, Sr, Ba, Mn, Co, Ni, Cu, Cd, Hg, Sn, and Al; nitrates of Ag, Zn, and UO2; and perchlorates of Cr and Fe. Anions investigated were F, Cl, Br, I, SCN, CN, NO3, C2H302, CL03, BRO3, IO3, C104, SO4, CO3, C4H606, and C6H507. Fundamental characteristics of the cation and anion membranes used are presented. Application of the detector in the separation of both cationic and anionic species is demonstrated. (Little-Battelle)

PREVENTION OF SELENIUM INTERFERENCE WITH MEASUREMENT OF PHOSPHATE AS ITS MOLYBDENUM (V-VI) COMPLEX,
New South Wales Dept. of Agriculture, Rydalmere (Australia). Biological and Chemical Research Inst.
P. J. Milham, and C. C. Short.
Journal of the Association of Official Analytical Chemists, Vol 56, No 4, p 882-885, July 1973. 2 fig, 1 tab, 8 ref.

Descriptors: *Phosphates, *Plant tissues, Measurement, Chemical analysis, Chemical degradation, Catalysts, Pollutant identification, Methodology.
Identifiers: *Selenium, *Chemical interference, *Phosphomolybdates, Complexation, Reproducibility, Selenocyanates, Sample preparation.

Selenium used as a catalyst in Kjeldahl digests of plant samples was found to interfere with an automated molybdenum blue technique for determination of phosphate. Interference was prevented by formation of selenocyanate in the presence of excess cyanide. No modification of the apparatus was required and the rate of analysis was unchanged from 40 sampler/hr. Reproducibility of the modified technique was good and results were not signigicantly different (P equals 0.01) from those obtained by a manual molybdovanadate procedure. (Holoman-Battelle)

Massachusetts Univ., Gloucester. Marine Station.
J. R. Sears, and R. T. Wilce.
Phycologia, Vol 12, Nos 1/2, p 75-82, June 1973. 15 fig, 2 tab, 11 ref.

Descriptors: *Benthic flora, *Phaeophyta, *Marine algae, *Speciation, *Cytological studies, Sampling, Systematics, Kelps, Cultures, Plant morphology.
Identifiers: *Pseudolithoderma paradoxum, Sublittoral, Sample preparation, Pseudolithoderma roscoffensis, Pseudolithoderma rosenvingii, Lithoderma, Pseudolithoderma subextensum, Pseudolithoderma extensum, Petroderma, Sorapion, Ralsia, Symphyocarpus.

Pseudolithoderma paradoxum is described as a new crustose member of the Ralfsiaceae, Ectocarpales, based on year-round observation of field collected and laboratory cultured plants. The terminal unilocular sporangia, soft character, presence of six to nine plastids in each vegetative cell, and the absence of a gel covering distinguish P. paradoxum from other brown crustose algae. (Holoman-Battelle)

TEMPERATURE SELECTION BY JUVENILE AND ADULT YELLOW PERCH (PERCA FLAVESCENS) ACCLIMATED TO 24 C,
Waterloo Lutheran Univ. (Ontario).
R. W. McCauley, and L. A. A. Read.
Journal of the Fisheries Research Board of Canada, Vol 30, No 8, p 1253-1255, August 1973. 1 tab, 7 ref.

Descriptors: *Perches, *Water temperature, *Bioassay, *Age, Freshwater fish.
Identifiers: *Temperature selection.

Samples of juvenile and adult yellow perch (Perca flavescens) were obtained from the same habitat and at the same time from two separate water sources to study the differences, if any, in their preferred temperatures. The fish, acclimated to 24C, were subjected to a vertical temperature gradient. Juveniles selected temperatures in the range 20.0-23.2C and adults in the range 17.6-20.1C. It is concluded that age plays an important role in temperature selection in this species. (Little-Battelle)

Identifiers: *Phenanthroline, Preconcentration, *Metal complexes, *Nitrobenzene, Trace levels, Organic solvents, Extraction efficiency, Sample preparation, Reagents, Complexing agents, Perchlorates, Lauryl sulfate, Lithium, Vanadium, Silver, Thallium, Tin, Bismuth, Atomic absorption spectrophotometry, Sensitivity.

The use of 1,10-phenanthroline as an extraction reagent to facilitate separation and concentration of metal ions prior to their determination has been investigated. Various solvents, anions, and solution conditions were evaluated to discover optimum conditions and procedures for quantitative extractions. Distribution ratios, extraction efficiencies, and identities of extracted complexes were determined for a number of selected metal ions. The effectiveness of 1,10-phenanthroline as an extraction reagent was demonstrated by its application to determine trace amounts of zinc and iron in water. Nitrobenzene was not only effective as an extraction solvent but also suitable as an aspiration solvent for flame spectrometry. (Holoman-Battelle)
W74-01354

SIMPLE DIRECT COMBINATION OF GAS CHROMATOGRAPHY AND VAPOR PHASE INFRARED SPECTROMETRY,
J. E. Crooks, D. L. Gerrard, and W. F. Maddams.
Analytical Chemistry, Vol 45, No 11, p 1823-1827, September 1973. 2 fig, 1 tab, 13 ref.

Descriptors: *Gas chromatography, *Laboratory equipment, *Analytical techniques, *Organic compounds, Instrumentation, Methodology, Research equipment, Chemical analysis, Spectrometers, Pollutant identification.
Identifiers: *Vapor phase infrared spectrometry, Performance evaluation, *Infrared spectra, Sensitivity, Hydrocarbons.

A combined gas chromatography/infrared spectrometry system is described which is based, as far as possible, on the equipment to be found in a smaller spectrometry laboratory, for use by staff who do not specialize in infrared spectrometry. The components of a sample are separated by gas chromatography and are passed separately into a heated multireflection gas cell. A spectrum is obtained for each component, using conventional scanning conditions, and while the spectrophotometer is running, the flow of carrier gas through the column is stopped. When the spectrum

of a particular component has been obtained, the carrier gas flow is resumed and the next component passes into the cell. Spectra may be obtained for as many as five components in one sample without seriously impairing the column resolution. Useful spectra are obtained from 100-microgram quantities of most organic compounds which, for a total sample size of 10 microliters, permits examination of components down to the 1 percent level. The system is readily assembled and the constituent gas chromatograph and infrared spectrometer may be used for other analytical work. (Holoman-Battelle)

PRECOLUMN INLET SYSTEM FOR THE GAS CHROMATOGRAPHIC ANALYSIS OF TRACE QUANTITIES OF SHORT-CHAIN ALIPHATIC AMINES,
Agricultural Research Service, Fort Collins, Colo.
C. E. Andre, and A. R. Mosier.
Analytical Chemistry, Vol 45, No 11, p 1971-1973, September 1973. 2 fig, 1 tab, 10 ref.

Descriptors: *Gas chromatography, *Chemical analysis, Methodology, *Aqueous solutions, *Pollutant identification, Organic compounds, Nitrogen compounds.
Identifiers: *Aliphatic amines, *Trace levels, Linearity, Reproducibility, Sensitivity, Amines, Monomethylamine, Dimethylamine, Trimethylamine, Monoethylamine, Diethylamine, Isopropylamine, n-Propylamine, N-Butylamine, Isobutylamine, sec-Butylamine, Flame ionization gas chromatography, n-Amylamine, tert-Butylamine.

A gas chromatographic system is described that is capable of analyzing aqueous solutions of salts of short-chain aliphatic amines. A standard GC inlet modified with the Ascarite precolumn described provides the reproducibility, sensitivity, and convenience necessary for routine analyses. Because the Teflon reactor tube is easy to inspect and because it is not part of the column, routine replacement involves no more work than changing a septum. The analytical procedure which utilized a gas chromatograph equipped with a dual flame ionization detector is similar to that used for the analysis of any liquid sample. To ensure reproducibility, the precolumn inlet tubes were changed after 75 to 100 five-microliter injections. Quantitative information was obtained using peak height. Reproducibility of the system was determined using 5 and 50 ppm monomethylamine and 20 ppm isopropylamine. The relative standard deviations were respectively 3.39, 1.97, and 3.39 percent. Linearity in the 5-50 ppm working range was confirmed by a linear regression coefficient significant at the 0.1 percent level. (Holoman-Battelle)

A SYSTEMATIC STUDY OF THE VARIABLES INVOLVED IN THE REVERSE-PHASE THIN-LAYER CHROMATOGRAPHY OF OXYETHYLATED ALKYL SULFATE SURFACTANTS,
Beaver Coll., Glenside, Pa.
A. C. Breyer, M. Fischl, and E. J. Seltzer.
Journal of Chromatography, Vol 82, No 1, p 37-52, July 18, 1973. 7 fig, 15 tab, 26 ref.

Descriptors: *Separation techniques, *Pollutant identification, Temperature, Humidity, Methodology, Iodine, *Surfactants, *Sulfates.
Identifiers: Anionic surfactants, *Thin layer chromatography, Oxyethylated alkyl sulfates, Chromogenic reagents, Organic solvents, Adsorbents, Rhodamine B, Rhodamine 6G, Bromocresol green, Silver nitrate, Sodium fluoresceinate, Sulfuric acid, Pinacryptol yellow.

Reverse-phase thin-layer chromatography was used to separate a homologous series of oxyethylated alkyl sulfate surfactants derivable from waste animal fats. The separations were designed on the basis of a systematic study of the variation in the R sub F values and spot shapes and areas of the anionic surfactants with the major variables of the chromatographic system. The best separations were obtained with commercially available glass plates covered with a 250-microgram layer of Alumina H, Alumina G or Silica Gel G impregnated with a 3-5 percent (v/v) solution of n-dodecanol ethanol, at 15-30 degrees using tanks preequilibrated and developed with a 3:2 (v/v) methanol-ammonia solution solvent system. The use of pinacryptol yellow (0.05 percent w/v in water) together with an ultraviolet viewing chamber was found to be the most satisfactory spot detection procedure. Sample sizes of 0.1-10 micrograms in 0.5-2.0 micrograms of solution were applied with a Hamilton syringe or capillary micropipets 2 cm above the base of the plate. A 100-ml volume of solvent was added to the tanks and the solvent was permitted to run a distance of 15 cm from the spotting line. The present study lays the foundation for effecting excellent separations of other homologous series of anionic surfactants. (Holoman-Battelle)

EMERGENCE, REPRODUCTION, AND GROWTH OF SETIPALPIAN PLECOPTERA IN SOUTHERN ONTARIO,
Waterloo Univ. (Ontario).
P. P. Harper.
OIKOS, Vol 24, No 1, p 94-107, 1973. 23 fig, 3 tab, 20 ref.

Descriptors: *Stoneflies, *Life cycles, *Life history studies, *Reproduction, *Growth stages, Sampling, Streams, Growth rates, Hatching, Size, *Canada.
Identifiers: Emergence, Isoperla, Alloperla, Hastaperla, Perlesta, Acroneuria, Phasganophora, Paragnetina, Neoperla, Alloperia (Sweltsa).

Plecopteran nymphs were collected at monthly intervals for one year from 11 streams in southern Ontario to study their emergence, reproduction, and growth. Samples were collected from riffles by hand picking, netting, and by using emergence traps. Of 81, 372 stonefly nymphs collected, 6 207 or about 7.6 percent were Setipalpia. The Perlodidae were represented by eight species of Isoperla: I. nana, I. decepta, I. transmarina, I. clio, I. cotta, I. frisoni, I. dicala, and I. lata. Chloroperlidae were represented by two species: Alloperla (Sweltsa) onka and Hastoperla brevis. Perlidae were represented by six species: Perlesta placida, Acroneuria carolinensis, Phasganophora capitata, Paragnetina media, Neoperla clymene, and Acroeuria evoluta. Only seven species occurred in sufficient numbers to permit a study of their life cycle. Special emphasis was given in the study to the biology of the eggs, the younger nymphs, and the adults. The results show that Isoperla clio, I. transmarina, I. cotta, and I. frisoni are univoltine with a simple and straight forward life history. There is, however, in some species a differential growth of the nyphs which results in a wide siaerange of the nyphs at any one time. The chloroperlid Alloperla onkos has a two-year cycle. The perlids Paragentina media and Phasganophora capitata require three and two years respectively to complete their cycle. Pharthenogensis is reported in P. media. (Little-Battelle)
W74-01359

A PROCEDURE FOR THE ESTIMATION OF MICROGRAM QUANTITIES OF TRITON X--100,
McGill Univ., Montreal (Quebec). Dept. of Biochemistry.
H. S. Garewal.
Analytical Biochemistry, Vol 54, No 2, p 319-324, August 1973. 2 fig, 1 tab, 10 ref.

Descriptors: *Methodology, *Estimating, *Spectrophotometry, *Pollutant identification, Chemical analysis, Color reactions, Assay, Proteins, Ions, *Detergents.
Identifiers: *Trace levels, Nonionic detergents, Triton X-100, Nonionic surfactants, Chemical interferences, Octylphenoxypolyethoxyethanol.

A spectrophotometric procedure is reported for the assay of microgram amounts of the nonionic detergent Triton X-100. The method is based on the reaction of ammonium cobaltothiocyanate with the poly (ethylene oxide) groups of Triton X-100 to form a blue precipitate. The latter is extracted into ethylene dichloride and assayed spectrophotometrically. Capable of assaying as little as 40 micrograms of Triton X-100, the procedure is applicable in the presence of proteins provided a small easily determined correction is applied. High ionic strength (up to 2 M NaCl tested) did not interfere with the method. (Holoman-Battelle)
W74-01360

SIMULTANEOUS DETERMINATION OF MANGANESE, COPPER, ARSENIC, CADMIUM, ANTIMONY AND MERCURY IN GLACIAL ICE BY RADIOACTIVATION,
Naval Undersea Center, San Diego, Calif.
H. V. Weiss, and K. K. Bertine.
Analytica Chimica Acta, Vol 65, No 2, p 253-259, July 1973. 1 fig, 2 tab, 2 ref.

Descriptors: *Neutron activation analysis, *Heavy metals, *Chemical analysis, *Radioactivity techniques, *Pollutant identification, Manganese, Copper, Cadmium, Mercury, Ice, Separation techniques, Gamma rays, Irradiation, Methodology.
Identifiers: *Glacial ice, Sample preparation, *Multielemental analysis, Mn-56, Cu-64, Arsenic, As-76, Sb-122, Antimony, Hg-197, Cd-115, In-115, Chemical concentration, Detection limits, Trace levels.

A method was developed to measure simultaneously the concentration of the elements manganese, copper, arsenic, cadmium, antimony, and mercury in glacial ice. Samples and comparators were irradiated for 60 min in a thermal flux of 1.8 billion n/sq cm/s. The six elements were separated from the irradiated samples sequentially; mercury, arsenic, and cadmium received additional radiochemical purification. The gamma-rays of the Mn-56, Cu-64, As-76, Sb-122, and Hg-197 and the beta rays of the Cd-115-In-115 were measured. All the elements were detectable at the subnanogram level. Comparison of the detection limits with the concentration of elements in the samples indicated that, even with the moderate neutron flux available and for ice from a relatively uncontaminated environment, the methods used were sensitive enough for adequate characterization. (Holoman-Battelle)
W74-01361

THE DETERMINATION OF LEAD AND NICKEL BY ATOMIC-ABSORPTION SPECTROMETRY WITH A FLAMELESS WIRE LOOP ATOMIZER,
Louisiana State Univ., New Orleans. Dept. of Chemistry.
J. V. Chauvin, M. P. Newton, and D. G. Davis.
Analytica Chimica Acta, Vol 65, No 2, p 291-302, July 1973. 6 fig, 4 tab, 32 ref.

Descriptors: *Lead, *Nickel, *Pollutant identification, Methodology, *Aqueous solutions, Optimization, Heavy metals, Anions, Cations, Temperature, Pollutants, Wavelengths, Flow rates, Gases, Absorption, Chemical analysis.
Identifiers: *Atomic absorption spectrophotometry, Flameless wire loop atomizer, Ionic interference, Sample size, Sensitivity, Detection limits, Chemical interference, Vaporization, Slit width.

In an extension of studies of flameless atomizers for atomic-absorption spectrometry, an electrically heated tungsten-rhenium alloy wire loop was examined. Reduction of metallic salts to ground-state metal atoms was accomplished with the high temperature produced by the loop. Experimental parameters such as wavelength, slit width, atomization temperature and sheathing gas flow rate were optimized. Aqueous solutions of lead and nickel were analyzed by this method using 2-microliter aliquots. Nickel was investigated as a representative less volatile metal. Absolute detection limits of 66 and 12 ng, and absolute sensitivities of 70 and 800 ng of lead, were established for unenclosed and enclosed cells, respectively. An absolute detection limit of 1.6 ng and an absolute sensitivity of 90 ng of nickel were obtained. Interference studies of lead using 20 cations and 16 anions showed that no straightforward correlation could be found between interference and any one physical property considered. Solubility problems had some effect on the anion studies especially with phosphate, sulfate, hydrogencarbonate, and acetate. Foreign cations generally enchanced the lead absorption by retarding its vaporization, allowing the slow detection system to respond more efficiently. (Holoman-Battelle)
W74-01363

EXTRACTION-PHOTOMETRIC DETERMINATION OF URANIUM (IV) WITH CHLOROPHOSPHONAZO-III,
Japan Atomic Energy Research Inst., Tokai.
T. Yamamoto.
Analytica Chimica Acta, Vol 65, No 2, p 329-334, July 1973. 3 fig, 3 tab, 9 ref.

Descriptors: *Solvent extractions, *Pollutant identification, *Spectrophotometry, Methodology, Chemical analysis, Separation techniques, Heavy metals, Chemical reactions, Cations, Anions, Alkaline earth metals, Photometry, Fluorides, Sulfates, Phosphates, Nitrates, Chromium, Copper, Iron, Time, Acidity, Stability, Molybdenum, Aluminum, Calcium, Magnesium, Chlorides.
Identifiers: *Uranium, *Metal complexes, *Chlorophosphanzo-III, Molar absorptivity, Chemical interference, Absorption spectra, Precision, Rare earth elements, Oxalates, Thorium, Zirconium, Niobium, Barium, Cerium, Lanthanum, Perchlorates.

A sensitive spectrophotometric method has been developed for the determination of uranium. The uranium (IV)-chlorophosphonazo-III complex is extracted into 3-methyl-l-butanol from 1.5-3.0 M hydrochloric acid solution. Maximal absorbance occurs at 673 nm and Beer's law is obeyed over the range of 0-15 micrograms per 10 ml of the organic phase. The molar absorptivity is 121,000 l/mole/cm. Uranium can be determined in the presence of fluoride, sulfate and phosphate. Nitrate ion and elements (chromium, copper, iron) which affect the reduction of uranium (IV) or stability of uranium (IV) interfered. The absorbance of the uranium (IV)-chlorophosphonazo-III complex in the organic phase did not change for at least 2 h at room temperature. The relative standard deviation was plus or minus 2.2 percent for 10 determinations of 10 micrograms of uranium. (Holoman-Battelle)

SEPARATION OF POLYPHOSPHATES BY PAPER CHROMATOGRAPHY WITH A NEW SOLVENT,
Tennessee Valley Authority, Muscle Shoals, Ala. Div. of Chemical Development.
T. C. Woodis, Jr., J. R. Trimm, and R. D. Duncan.
Analytica Chimica Acta, Vol 65, No 2, p 469-473, July 1973. 5 tab, 3 ref.

Descriptors: *Solvents, *Separation techniques, *Pollutant identification, *Phosphates, Hydrogen ion concentration, Temperature.
Identifiers: *Paper chromatography, Sodium tripolyphosphate, Hexammonium tetrapolyphosphate, Pentapolyphosphates, Hexapolyphosphates, Heptapolyphosphates, Octapolyphosphates, Orthophosphates, Pyrophosphates, Tripolyphosphates, Tetrapolyphosphates.

Study of the effect of solvent pH on chromatographic separation of polyphosphates led to development of a new solvent with a pH of 4. The solvent consists of 50 g of monochloroacetic acid, 250 ml of isopropanol, 350 ml of acetone, 300 ml of water, 100 ml of 25 percent EDTA solution, and 15 ml of concentrated ammonia liquor. The solvent did not give a blue front on chromatograms of sodium tripolyphosphate and hexammonium tetrapolyphosphate as did Ebel's solvent. In addition R sub F values were higher and more conveniently distributed. The new solvent has proved to be superior to Ebel's solvent since more species can be determined, hydrolysis is significantly reduced, and separations can be carried out on thinner paper and at room temperature. FLUOROMETRIC DETERMINATION OF SELENIUM IN WATER WITH 2,3--DIAMINONAPHTHALENE,
New York State Dept. of Health, Albany. Div. of Lab., and Research.
J. M. Rankin.
Environmental Science and Technology, Vol 7, No 9, p 823-824, September 1973. 2 tab, 7 ref.

Descriptors: *Water analysis, *Fluorometry, *Potable water, Streams.
Identifiers: *Selenium, Sample preparation, Recovery, Precision, Chemical interference.

A simple procedure is described for determining all forms of inorganic selenium in clean water such as potable water and freshwater receiving waste effluents containing small amounts of organic matter. The method involves hydrogen peroxide oxidation to destroy organic matter and convert inorganic selenium to selenate, addition of HCl to reduce selenate to selenite and addition of 2,3-diaminonaphthalene (DAN) to form piazselenol which is extracted into cyclohexane and measured fluorometrically. Nitrate interference is removed by oxidation to nitrate and metal interferences are masked by complexation. Samples of potable water and water receiving waste effluent were spiked with selenium and analyzed with average recoveries of 101.9 and 101.7 percent. Calibration curves were linear in the range of 0.2-1.0 micrograms Se. Standard deviation of results was 6.3 percent. (Little-Battelle)

M. E. Fox.
Environmental Science and Technology, Vol 7, No 9, p 838-840, September 1973. 2 fig, 3 tab, 8 ref.

Descriptors: Methodology, *Chemical analysis, *Pollutant identification, *Sewage effluents, *Gas chromatography, Sewage, Organic compounds.
Identifiers: Flame ionization gas chromatography, Residual methanol, *Methanol, Sample preservation, Sample preparation, Accuracy, Precision, Repeatability, Reproducibility.

Described in a rapid and specific flame ionization gas chromatographic method for the determination of low concentrations of methanol over the range 0.5-100 ppm in sewage or other aqueous solutions. The method involves the use of direct aqueous injection gas chromatography on a porous polymer column. No preconcentration or extraction is required. Acidification of the sample at the time of collection to about pH 2 with HCl was found to inhibit completely further loss of residual methanol. Detector response to methanol was linear over a chosen range of 0.5-100 ppm. Feedstock solutions of about 25,000 ppm were found to be best analyzed by dilution to about 25 ppm. The precision (1.2 standard deviation, 2.4 percent coefficient of variation using peak heights) of the method was determined from replicate analyses (10) of a sewage effluent sample containing 50 ppm methanol. The analysis time of approximately 1 min/sample makes the procedure especially suited to process control applications. (Homoman-Battelle)

CRITERIA FOR MYCOTOXIN STANDARDS,
Food and Drug Administration, Washington, D.C. Div. of Chemistry and Physics.
J. V. Rodricks.
Journal of the Association of Official Analytical Chemists, Vol 56, No 5, p 1290-1291, September 1973. 5 ref.

Descriptors: Standards, Analytical techniques.
Identifiers: *Analytical standards, *Purity, *Aflatoxin M1, *Mycotoxin standards.

Since the quality of analytical standards affects results of analyses, it is recommended that mycotoxin standards meet prescribed criteria of purity and that methods be available for analysts to check the concentration and purity of these standards. Criteria should include source of the compound and method of isolation, method of purification and criteria of purity and stability. A procedure for the determination of the concentration and purity of aflatoxin M1 standards which was used in a collaborative study by the International Union of Pure and Applied Chemistry is recommended. (Little-Battelle)

MODIFIED DELVES CUP ATOMIC ABSORPTION DETERMINATION OF LEAD IN BLOOD,
Center for Disease Control, Atlanta, Ga.
W. F. Barthel, A. L. Smrek, G. P. Angel, J. A. Liddle, and P. J. Landrigan.
Journal of the Association of Official Analytical Chemists, Vol 56, No 5, p 1252-1256, September 1973. 5 tab, 13 ref.

Descriptors: *Lead, *Chemical analysis, *Pollutant identification, Heavy metals, Methodology, Pollutants, Sheep, Goats, Cattle.
Identifiers: Delves cup method, *Atomic absorption spectrophotometry, *Blood, *Animal tissues, Serum, Blood plasma, Bovine serum, Humans.

A modification of the Delves atomic absorption micro method for blood lead determinations is presented. The principal differences between the present modification and the original Delves method are the improvement in hardware to overcome problems is reproducibility and a char method to essentially eliminate the smoke peak which normally causes serious interference. The method has been applied to several different types of blood samples with excellent results. (Holoman-Battelle)

HERBICIDE ANALYSIS: RELATIONSHIP BETWEEN MOLECULAR STRUCTURE AND RETENTION INDEX,
Department of the Environment, Burlington (Ontario). Inland Waters Branch.
R. H. Larose, and A. S. Y. Chau.
Journal of the Association of Official Analytical Chemists, Vol 56, No 5, p 1183-1187, September 1973. 6 tab, 8 ref.

Descriptors: *Chlorinated hydrocarbon pesticides, 2 4-D, 2 4 5-T, Molecular structure.
Identifiers: *Retention time, *Gas liquid chromatography, *Esters, Silvex, 2 4-DB, 2 4 6-T, Retention index, Sample preparation.

Five chlorophenoxy acids, 2,4-D, 2,4,5-T, silvex, 2,4-DB, and 2,4,6-T, were esterified with methanol, ethanol, n-propanol, isopropanol, n-butanol, isobutanol, tert-butanol, and 2-chloroethanol to investigate the retention times of the esters on three different GLC columns. A linear relationship was found between the logarithm of the retention time of a series of esters of a particular chlorophenoxy acid and the number of carbon atoms in the alcohol used for esterification, provided the alcohols were part of a homologous series. This relationship can be used to predict the retention time of an ester without having to synthesize it. It is also possible to predict which alcohol will yield esters with retention times different from those of co-extractive peaks and which will yield esters which can best be separated by the particular chromatographic system. The total retention index is divided into three additive components: the alcohol, the acid, and the interaction contributions. (Little-Battelle)
W74-01416

DETERMINATION OF CHLORINATED PESTICIDES IN WHOLE BLOOD,
Iowa State Univ., Ames. Veterinary Diagnostic Lab.
P. E. Stretz, and H. M. Stahr.
Journal of the Association of Official Analytical Chemists, Vol 56, No 5, p 1173-1177, September 1973. 4 tab, 6 ref.

Descriptors: *Chlorinated hydrocarbon pesticides, *Dieldrin, Methodology, *Pollutant identification, Insecticides, *DDT, Chemical analysis, Statistical methods, *Gas chromatography.
Identifiers: *Blood, Electron capture gas chromatography, Quantitative analysis, p p' DDT, *Lindane, Biological samples, Sample preparation, Data interpretation, Collaborative studies, Body fluids, Gas liquid chromatography.

Eight whole blood samples spiked with lindane, dieldrin, and p,p'-DDT at levels of 2.5, 12.6, 126, and 630 ppb each were sent to 11 collaborators for analysis. The method evaluated uses sulfuric acid to liberate the pesticides from the blood matrix. The pesticides are then extracted with 10 percent acetone in hexane. Pesticides were identified and quantitatively analyzed by gas-liquid chromatography using an electron capture detector. Mean values at all levels are in good agreement with the spiking levels. However, statistical analysis of the data reveals a large systematic error. Further evaluation of the sulfuric acid method by comparison with other methods is recommended. (Holoman-Battelle)
W74-01417

DETERMINATION OF MELEIC HYDRAZIDE RESIDUES IN TOBACCO AND VEGETABLES,
Department of Agriculture, Ottawa (Ontario). Chemistry and Biology Research Inst.
M. Inhat, R. J. Westerby, and I. Hoffman.
Journal of the Association of Official Analytical Chemists, Vol 56, No 5, p 1164-1172, September 1973. 7 fig, 4 tab, 19 ref.

Descriptors: *Plant growth regulators, *Pollutant identification, Methodology, *Chemical analysis, Plant tissues, *Tobacco, *Vegetable crops, Distallation, Spectrophotometry, Plant growth, Agronomic crops, Water pollution sources, Potatoes, Carrots.
Identifiers: *Maleic hydrazide, Chemical recovery, Precision, Sensitivity, Detection limits, 1 2-Dihydropyridazone-3 6-dione.

The distillation-spectrophotometric method of Hoffman for determining maleic hydrazide has been modified to include a double distillation and was applied to the determination of 1-30 ppm maleic hydrazide residues in tobacco and vegetables. Recoveries of 1-23 micrograms added maleic hydrazide were independent of weight of maleic hydrazide, but did depend on sample and sample weight. The following recoveries were obtained from 0.5 g sample: pipe tobacco, 84 percent; commercially dehydrated potato, 83 percent; cigar tobacco, 81 percent; dried potato, 76 percent; fluecured tobacco, 73 percent; dried carrot, 71 percent. In the absence of sample, the recovery was 82 percent. When appropriate standard curves were used, maleic hydrazide levels determined in tobacco samples were essentially independent of sample weight in the range 0.1-3 g. The means relative standard deviation for a variety of field-treated and fortified tobacco samples containing 1-28 ppm maleic hydrazide was 3 percent. The precision and sensitivity of this procedure seem to be substantial improvements over official method 29.111-29.117. It is recommended that the present method be subjected to a collaborative study. (Holoman-Battelle)

AN OXYGEN ELECTRODE MICRORESPIROMETER,
Newcastle-upon-Type Univ. (England). Dept. of Zoology.

H. J. Atkinson, and L. Smith.
Journal of Experimental Biology, Vol 59, No 1, p 247-253, August 1973. 2 fig, 15 ref.

Descriptors: *Nematodes, *Oxygen requirements, Laboratory equipment, Calibrations, Respiration, Oxygen demand, Bioassay, Cultures.
Identifiers: Enoplus brevis, *Respirometers, Detection limits, *Membrane electrodes, Macroinvertebrates.

Ocygen consumption of individual small organisms (60-380 micrograms body weight) such as nematodes can be measured using a Clark-type oxygen electrode. The apparatus consists of the electrode within a stainless steel housing which is surrounded by a constant-temperature water jacket. The membrane of the electrode forms part of an enclosed chamber which holds the animal to be tested. The chamber can be sealed and a magnetic stirrer reduces the diffusion gradient between the animal and the electrode. The procedure for calibrating the respirometer is described. In tests with marine mematodes, Enoplus brevis, oxygen consumption ranges from 0.135 to 0.036 cu mm/hr. The procedure is accurate and reliable for measurements of 0.02-0.2 cu mm/hr. (Little-Battelle)

AN IMPROVED METHOD OF CELL ENUMERATION FOR FILAMENTOUS ALGAE AND BACTERIA,
Medical Coll. of Ohio, Toledo. Dept. of Microbiology.
J. C. Burnham, T. Stetak, and J. Boulger.
Journal of Phycology, Vol 9, No 3, p 346-349, September 1973. 2 fig, 10 ref.

Descriptors: Population, *Algae, Bacteria, Statistical methods, Cultures, Microscopy, Cyanophyta.
Identifiers: *Cell counts, *Filamentous algae, *Filamentous bacteria, Phormidium luridum, Accuracy.

Cells of filamentous algae and bacteria can be simply counted by applying a drop from the shaken culture to a 400 square grid of a Petroff-Hausser Bacterial Counting Chamber, applying a coverslip, and counting cells in 10 selected squares under a microscope (number of cells is termed C). In addition, the grid is organized into 25 blocks of 16 squares per block, and 15 of these blocks are examined. The total number of squares containing any part of a filament is termed B. The mean number of cells per chamber square can then be calculated as CB/2400. The total count can be determined using the conversion from cells per square to cells per milliliter. Statistical analysis of results with Phormidium luridum var. olivacea and comparsion with other methods showed that the method is useful for routine cell enumerations. (Little-Battelle)

MODIFICATIONS IN FILTRATION METHODS FOR THE MEASUREMENT OF INORGANIC C--14 UPTAKE BY PHOTOSYNTHESIZING ALGAE,
Kinnerat Limnology Lab., Tiberias (Israel).
T. Berman.
Journal of Phycology, Vol 9, No 3, p 327-330, September 1973. 1 fig, 4 tab, 16 ref.

Descriptors: *Filtration, *Carbon, Absorption, *Photosynthesis, *Primary productivity, *Phytoplankton, Separation techniques, Radioactivity techniques, Cultures.
Identifiers: Errors, Sample preparation, *Lauderia, *Gonyaulax polyedra.

In the course of routine primary productivity experiments with phytoplankton, the filtration step may introduce errors into the determination of inorganic C-14 uptake into particulate and filtrate organic fractions. However, when ultrafine glass fiber filters, low filtration pressures, and fuming over HCl were used, and corrections made for nonbiological adsorption of radioactivity on filters, no significant changes of cpm retained on filters per milliliter of filtration volume were found in tests with various algal populations. Cultures of Lauderia sp. and Gonyaulax polyedra, when photosynthesizing in 1 compartment of a 2-chambered diffusion apparatus, released similar amounts of radioactive dissolved organic compounds measured after diffusion or upon filtration. Under our conditions, only negligible amounts of dissolved organic compounds were retained by filters. For many natural waters, therefore, these filtration techniques permit adequate accuracy for primary productivity measurements. (Little-Battelle)

ELECTROPHORETIC AND IMMUNOLOGICAL ANALYSES OF SEVEN CHLOROSARCINACEAN ALGAE,
Louisiana State Univ., New Orleans. Dept. of Biological Sciences.
D. L. Thomas, and R. D. Groover.
Journal of Phycology, Vol 9, No 3, p 289-296, September 1973. 10 fig, 1 tab, 34 ref.

Descriptors: *Chlorophyta, *Biological properties, *Chemical analysis, Enzymes, Aquatic algae, Systematics, Biochemistry, Proteins, Pollutant identification, *Electrophoresis.
Identifiers: *Chemotaxonomy, *Biochemical characteristics, Starch gel electrophoresis, Disc gel electrophoresis, Serology, Immunology, Culturing techniques, Malate dehydrogenase, Glutamate dehydrogenase, Leucine aminopeptidase, Peroxidase, Chemical concentration, Alpha esterases, Benzidine, Pyrogallol.

Proteins from 7 species of chlorosarcinacean algae representing 4 genera were studies with starch and disc gel electrophoresis and immunology to determine biochemical relationships. Migration patterns of enzymes and serological reactions indicated that 4 species of Chlorosarcinopsis were closely related, whereas Friedmannia israeliensis, Fasciculochloris boldii, and Chlorosarcina longispinosa were more diverse. Malate dehydrogenase, glutamate dehydrogenase, nonspecific alpha esterases, and peroxidase (using pyrogallol as the hydrogen donor) were present in all 7 species. No peroxidase activity occurred with benzidine. Leucine aminopeptidase was obvious in only 2 species. A single distinct band of general protein in F. israeliensis and C. longispinosa suggested the presence of homogenous reserve protein. The 7 species exhibited serological affinity to 4 isolates of Protosiphon representing diverse morphology within the genus. The data are discussed relative to current knowledge of comparative morphology of chlorosarcinacean algae. (Holoman-Battelle)

RELIABILITY OF AN AMMONIA PROBE FOR ELECTROMETRIC DETERMINATION OF TOTAL AMMONIA NITROGEN IN FISH TANKS,
Fisheries Research Board of Canada, Winnipeg (Manitoba). Freshwater Inti.
J. Barica.
Journal of the Fisheries Research Board of Canada, Vol 30, No 9, p 1389-1392, September 1973. 3 fig, 1 tab, 4 ref.

Descriptors: *Ammonia, Water analysis, *Calibrations, Electrodes, Aquaria.
Identifiers: *Gas-membrane electrodes, *Sample preparation, Detection limits, Precision, Ammonia-nitrogen, Membrane electrodes, Calibration curves.

The Orion ammonia electrode model 95-10, which is a gas sensing probe, was evaluated for determining total ammonia nitrogen in fish tanks. The probe senses ammonia which diffuses through a hydrophobic gas-permeable membrane until the partial pressure is the same on both sides of the membrane. Since the probe senses only ammonia gas, it is necessary to raise the pH of the test solution to 12-13 to convert NH (plus) to the unionized form by adding NaOH. At low levels of NH3-N found in aquaria (0.3-2 mg/1) the probe response does not follow the Nernstian equation. Therefore, it is necessary to construct calibration curves using fresh aquarium water for greatest accuracy. The probe response stabilizes after about 5 minutes at low levels (about 1 mg/1) of ammonia. Comparison of probe results with those obtained spectrophotometrically showed that the probe was unsuitable below 0.1 mg/1 and gave values differing by plus or minus 17 percent in the range 0.2-0.5 mg/1. AN AUTOMATED METHOD FOR THE DERTEMINATION OF TRACE AMOUNTS OF METAL IONS BY ION-EXCHANGE CHROMATOGRAPHY. DETERMINATION OF ZINC (II) IN WATERS,
Government Industrial Research Inst., Nagoya (Japan).
H. Matsui.
Analytica Chimica Acta, Vol 66, No 1, p 143-146, August 1973. 1 fig, 3 tab, 9 ref.

Descriptors: *Zinc, *Water analysis, Methodology, *Colorimetry, Chemical analysis, Cations, Heavy metals, Automatic control, Sea water, Municipal water, Groundwater, Potable water, *Trace elements.
Identifiers: Natural waters, *Ion exchange chromatography, Trace levels, Zincon, Chromogenic reagents, 2-Carboxy-2'hydroxy-5'sulfoformazylbenzene, Precision, Shonai-gawa River, Yadagawa River, Ise Bay, Chemical interference, Ionic interference.

An automated method for the determination of trace amounts of zinc- (II) by ion-exchange chromatography and colorimetry is described; zinc is determined colorimetrically with zincon, 2-carboxy-2'-hydroxy-5'-sulfoformazylbenzene. In the proposed method, 2.0-15.0 micrograms of zinc can be determined without interference and with a maximum error of 3 percent. In applications of this method, the zinc content of several kinds of water was determined. Zinc was adsorbed quantitatively from water containing the same amounts of these ions as seawater, acidified to 4 percent acetic acid. (Holoman-Battelle)

THE DETERMINATION OF ORGANO-SULFUR COMPOUNDS BY THIN-LAYER CHROMATOGRAPHY VIA A LIGAND-EXCHANGE PRECESS,
Dalhousie Univ., Halifax (Nova Scotia). Trace Analysis Research Center.
R. W. Frei, B. L. MacLellan, and J. D. MacNeil.
Analytica Chimica Acta, Vol 66, No 1, p 139-142, August 1973. 2 tab, 5 ref.

Descriptors: *Chemical analysis, *Separation techniques, *Pollutant identification, *Sulfur compounds, Organic compounds, Fluorescence.
Identifiers: *Organosulfur compounds, *Ligand exchange method, Quantitative analysis, Palladium chloride-calcein reagent, Thin layer chromatography, Detection limits, Accuracy, Precision, Chromogenic reagents, Reproducibility, Method evaluation, Palladium, Calcein, 2-Benzimidazolethiol, 5-Benzol-2-thiohydantoin, 2-Mercaptobenzoic acid, Thioacetamide, 2-Mercaptobenzothiazole, Mercaptosuccinic acid, 2-Thiobarbituric acid, Thiocarbanilide, Thioglycollic acid, Thiourea.

The palladium chloride-calcein spray reagent may be used for the detection of many sulfur-containing compounds after separation on thin-layer chromatograms. Palladium forms stable complexes with sulfur in certain oxidation states, thus releasing the calcein with which it had been complexed. The sulfur-containing compounds investigated were detected by the fluorescence of the free calcein. Maximum fluorescence intensity was observed 15-60 min after spraying with a gradual loss in intensity over 15 h. The quantitative application of the method was investigated for thioacetamide and the results showed that thioacetamide could be determined semiquantitatively at the visual detection limit (10 ng/spot) with acceptable precision and accuracy. All results obtained indicate that the method has excellent possibilities for development as a routine technique. (Holoman-Battelle)
W74-01439

STUDY OF CHELATED MIXTURES OF FERRIC IONS WITH NITRILOTRIACETIC, SULFO--5-SALICYLIC AND PYROCATECHOL-3,5-DISULFONIC ACIDS, (IN FRENCH),
M.Morin, and J. P. Scharff.
Analytica Chimica Acta, Vol 66, No 1, p 113-121, August 1973. 3 fig, 2 tab, 28 ref.

Descriptors: *Iron, *Nitrilotriacetic acid, *Pollutant identification, Chelation, Cations, Heavy metals, *Organic acids, Methodology, *Sulfur compounds.
Identifiers: Sulfo-5-salicylic acid, Pyrocatechol-3 5-disulfonic acid, Mixtures, *Metal chelates, Potentiometry, Tristimulus colorimetry, Stability constants, Chelating agents.

A detailed examination of mixed chelate formation in systems containing iron (III), nitrilotriacetic acid, and 5-sulfosalicylic acid or pyrocatechol-3,5-disulfonic acid, has been made. Precise stability constants for the iron (III)-nitrilotriacetic acid system were established. Potentiometric methods and tristimulus colorimetry were used to establish mixed chelate formation. The compositions and stability constants of all the species formed are given. (Holoman-Battelle)
W74-01440

THE DETERMINATION OF CADMIUM BY ATOMIC ABSORPTION IN AIR, WATER, SEA WATER AND URINE WITH A R.F. CARBON BED ATOMIZER,
Louisiana State Univ., Baton Rouge. Dept. of Chemistry.
J. W. Robinson, D. K. Wolcott, P. J. Slevin, and G. D. Hindman.
Analytica Chimica Acta, Vol 66, No 1, p 13-21, August 1973. 7 fig, 2 tab, 11 ref.

Descriptors: *Cadmium. Air, *Water analysis, Methodology, *Chemical analysis, *Pollutant identification, Heavy metals, Sea water, Freshwater, Urine, Aqueous solutions, Water pollution, *Air pollution.
Identifiers: *Atomic absorption spectrophotometry, Biological samples, Detection limits, Absorbance, Perchlorates, Borates, Ionic interference, Chemical interference, Carbon bed atomizers, Sensitivity.

The analytical parameters are described for the determination of cadmium by atomic absorption in air, water, seawater, and urine. The technique involves the use of an R. F. generator which heats up a carbon bed to approximately 1400 degrees. The sample is reduced to free metal atoms and is analyzed directly afterwards. The atomization step and the measuring step are separate steps in this procedure. Detection limits of 0.1 pg were reached. Quantitative analyses were carried out on the types of samples indicated. Chemical interferences were studied with a 100-fold excess of the interfering ion. No interference was noted; a slight depression of the absorption signal was noted in the presence of perchlorate, and a more severe (30 percent) depression of signal was noted when borate was present. Absorption traces were compared for Cd in drops injected directly onto the carbon bed and for Cd solution introduced using carbon slivers. The Cd concentrations were the same in both cases; the results showed the direct drop technique to be more sensitive than the carbon sliver technique. (Holoman-Battelle)

THE POTENTIOMETRIC TITRATION OF POTASSIUM IN SEA WATER WITH A VALINOMYCIN ELECTRODE,
Goteborg Univ. (Sweden). Dept. of Analytical Chemistry.
T. Anfalt, and D. Jagner.
Analytica Chimica Acta, Vol 66, No 1, p 152-155, August 1973. 1 tab, 13 ref.

Descriptors: *Potassium, *Sea water, *Water analysis, *Volumetric analysis, Alkali metals, Pollutant identification, Salinity, Methodology, Cations, *Electrodes.
Identifiers: *Potentiometric titration, Valinomycin electrode, Precision, Ion selective electrodes.

The valinomycin electrode was investigated to determine if it could be used for highly precise determinations of potassium. Using Standard Sea Water, the potassium concentration was determined, from 97 titrations in which freshly prepared electrodes were used for approximately every tenth titration, to be 10.22 plus or minus 0.03 mmole/100 g of seawater. The relative standard deviation for a single titration is not, however, better than 0.026. (Holoman-Battelle)

COMPUTER IDENTIFICATION OF BACTERIA ON THE BASIS OF THEIR ANTIBIOTIC SUSCEPTIBILITY PATTERNS,
National Institutes of Health, Bethesda, Md. Clinical Pathology Dept.
R. Friedman, and J. MacLowry.
Applied Microbiology, Vol 26, No 3, p 314-317, September 1973. 3 tab, 10 ref.

Descriptors: *Computer programs, *Pollutant identification, *Pathogenic bacteria, *Enteric bacteria, *Antibiotics (Pesticides), *Mathematical models, Pseudomonas, Salmonella, Streptococcus, E. coli.
Identifiers: Sensitivity, Accuracy, Selective media, Staphylococcus, Klebsiella, Proteus, Serratia, Enterobacter, Citrobacter, Bacteroides, Haemophilus, Herellea, Bacillus, Providence.

A computer program utilizing a Baysean mathematical model was developed to identify bacteria solely on the basis of their antibiotic sensitivities. The model contains probability data on the antibiotic sensitivity patterns of 31 species of bacteria of the following genera: Staphylococcus, Pseudomonas, Klebsiella, Escherichia, Proteus, Streptococcus, Enterobacter, Serratia, Citrobacter, Bacteroides, Haemophilus, Bacillus, Salmonella, and Providence. During a 4-month test period, antibiotic sensitivity data on 1,000 clinical isolates were processed by the program. The identification achieved by using the model was the same as that of the laboratory for over 86 percent of the isolates. (Little-Battelle)

SAND BEACH BACTERIA: ENUMERATION AND CHARACTERIZATION,
American Univ., Beirut (Lebanon). Dept. of Biology.
H. M. Khiyama, and J. C. Makemson.
Applied Microbiology, Vol 26, No 3, p 293-297, September 1973. 1 fig, 5 tab, 17 ref.

Descriptors: *Connate water, *Sands, *Separation techniques, *Cultures, Seashores, Temperature, Hydrogen ion concentration, Biochemistry, Fermentation, Enzymes, Microscopy, Beaches, Marine bacteria.
Identifiers: Characterization, Culture media, Sample preparation, Motility, Voges-Proskauer reaction, *Lebanon (Sinbad Beach), Biochemical tests, Enumeration.

Sand and interstitial water from Sindbad Beach, 30 km south of Beirut, Lebanon, were collected for enumeration of bacteria and for determination of biochemical, morphological, and cultural characteristics of several hundred individual strains. Total counts were determined by placing small samples in screw-cap tubes, adding peptone, shaking, plating a sample from the tube on peptone-yeast extract medium. Interstitial bacteria were collected with interstitial water samples suctioned through an HA-Millipore filter. PYE broth was then added to the absorbant pad below the membrane. Bacteria from sand and water were counted using the microscope after suctioning through Millipore filters and fixing and staining with erythrosin in aqueous phenol. Additional tests included sugar fermentation, hydrolysis of gelatin and starch, Voges - Proskauer reaction, indole production, motility, catalase, oxidase, flagellar stain, ability to grow aerobically on single carbon sources, and ability to grow at various temperatures and pH values. The number of interstitial bacteria was estimated to be a significant fraction of the total number of bacteria present. Three hun-

dred sixty-two strains were isolated and submitted to the cultural and biochemical tests. Fermentational abilities and the production of indole suggested that a significant number of these bacteria were symbiotically associated with resident metazoans. (Little-Battelle)

SOLUBLE ALUMINUM IN MARINE AND FRESH WATER BY GAS-LIQUID CHROMATOGRAPHY,
Alaska Univ., College. Inst. of Marine Science.
M-L. Lee, and D. C. Burrell.
Analytica Chimica Acta, Vol 66, No 2, p 245-250, September 1973. 5 fig, 17 ref.

Descriptors: *Sea water, *Aluminum, *Freshwater, *Pollutant identification, Chemical analysis, Water analysis, Heavy metals, Separation techniques, Solvent extractions.
Identifiers: Natural waters, *Gas liquid chromatography, Metal chelates, Trifluoroacetylacetone, Partition chromatography, Electron capture gas chromatography, Aluminum trifluoroacetylacetonate, Sample preparation.

The feasibility of determining the extractable aluminum contents of natural waters, with particular emphasis on seawater, by gas-liquid partition chromatography has been demonstrated. The metal is chelated with trifluoroacetylacetone, extracted into toluene and injected into the chromatograph using direct on-column injection. Under optimized instrumental conditions, better than picogram quantities of aluminum as the trifluoroacetylacetone complex may be detected. (Holoman-Battelle)

ATOMIC ABSORPTION METHOD FOR DETERMINING MICROMOLAR QUANTITIES OF ALIPHATIC SECONDARY AMINES,
Massachusetts Univ., Amherst. Dept. of Chemistry.
P. J. Oles, and S. Siggia.
Analytical Chemistry, Vol 45, No 12, p 2150-2151, October 1973. 2 tab, 7 ref.

Descriptors: Chemical analysis, *Pollutant identification, *Aqueous solutions, Methodology, Chemical reactions, Chemical precipitation, Nitrogen compounds, Organic compounds.
Identifiers: *Amines, *Atomic absorption spectrophotometry, *Organonitrogen compounds, *Aromatic amines, Dialkyldithiocarbamic acids, Detection limits, Chemical recovery, Diethylamine, N-methylaniline, N-Ethyl-n-butylamine, Nickel dialkyldithiocarbamate, Di-n-butylamine, Di-n-hexylamine, Di-n-octylamine, N-Butyl-n-dodecylamine, Di-n-dodecylamine, Dicyclohexylamine, Piperidine.

The formation of a Cu or Ni dialkyldithiocarbamate (Cu (DTC)2 or Ni (DTC)2) precipitate from the reaction between either metal and dialkyldithiocarbamic acids (DTCH) in aqueous solution serves as the basis for the qualitative identification of secondary amines. In this study the Ni (DTC)2 formed in the reaction is separated from the reaction medium by filtering and is digested in a mixture of 1:1 HNO3:HCl. The resultant solution is then analyzed for nickel content by means of conventional atomic absorption spectrophotometry. A single calibration curve is required and, in this work, nickel di-n-butyldithiocarbamate (Ni (n-But2DTC)2) was used to prepare all calibration curves. Nine secondary amines and one aromatic amine (N-methylaniline) were studied by this procedure. Xanthate formation occurred in the secondary amine samples containing alcohol, but there was no interference observed. If the filter containing the precipitate is treated with the acid mixture, high recoveries result. The practical detection limit for the method is approximately 0.30 micromole of secondary amine per ml of solution with a reaction time of 1.5-2 hr, a medium fritted glass funnel for filtration and a temperature of 20C. N-methylaniline failed to react quantitatively under a wide range of conditions. Various temperatures, amounts of reagents, and reaction times were studied with recoveries of 60 to 90 percent, and the reproducibility obtained under identical experimental conditions was only fair. (Holoman-Battelle)

ANALYTICAL METHODOLOGY FOR BIOACTIVE COMPOUNDS. PHOTOCHEMICALLY ASSISTED ANALYSIS OF CHLORINATED HYDROCARBON PESTICIDES IN THE PRESENCE OF POLYCHLORINATED BIPHENYLS,
Michigan State Univ., East Lansing. Pesticide Research Center.
R. A. Leavitt, G. C. C. Su, and M. J. Zabik.
Analytical Chemistry, Vol 45, No 12, p 2130-2131, October 1973. 2 fig, 1 tab, 12 ref.

Descriptors: *Chlorinated hydrocarbon pesticides, *Polychlorinated biphenyls, Methodology, *Pollutant identification, Pesticide residues, Chemical analysis, *Gas chromatography, DDE, Dieldrin, DDT, Insecticides.
Identifiers: *Electron capture gas chromatography, Quantitative analysis, *Photodegradation, Isomers, Degradation products, Precision, Photolysis, Chemical interference, Accuracy, Detection limits, Aroclor 1254, Reproducibility, Photodecomposition, p p'-Dichlorobenzophenone, 2 2-bis- (p-Chlorophenyl)-1-chloroethylene, Gas liquid chromatography, 2-(p-Chlorophenyl)-2- (dichlorophenyl)-1-chloroethylene.

Three chlorinated pesticides, dieldrin, DDT, and DDE were chosen to test the applicability of removing PCB's and the chlorinated pesticides in the presence of each other. Under the gas-liquid chromatographic conditions used in the study, certain PCB peaks interfered with each pesticide peak. In addition, the GLC peaks for DDE and dieldrin had similar retention times. To determine the optimum period of irradiation at 280-320 nm (Irradiation at 253.7 nm was quite destructive to the pesticides and caused large trailing solvent peaks probably due to chlorination of the solvent.), two concentrations (1 and 10 ppm) of Aroclor 1254 were photolyzed and the total GLC peak area was measured as a function of time. In addition to the reduction in total PCB peak area, there was, a general shift to peaks of shorter retention times as the PCB's were stepwise photochemically degraded to the less chlorinated isomers. Under the photolytic conditions used, the chlorinated pesticides also underwent varying degrees of degradation. Use of photochemical degradation to remove PCB's from samples also containing chlorinated hydrocarbon pesticide residues can be a very effective method even when the PCB concentration is much larger than the individual pesticide concentrations. Total analysis time is less than one hour per sample with photolysis carried out over night. The lower limits of practical quantitation are equivalent to 0.5 ppm for PCB's and equivalent to 0.05 ppm for the individual chlorinated pesticides. Reproducibility tests showed this method to be very precise. (Holoman-Battelle)

DISTRIBUTION STUDIES OF RADIUM AND OTHER METALLIC ELEMENTS BETWEEN THENOYLTRIFLUOROACETONE IN METHYL ISOBUTYL KETONE AND AQUEOUS SOLUTIONS,
Oak Ridge Associated Universities, Inc., Tenn. Special Training Div.
W. M. Jackson, and G. I. Gleason.
Analytical Chemistry, Vol 45, No 12, p 2125-2129, October 1973. 7 tab, 7 ref.

Descriptors: *Aqueous solutions, Separation techniques, Heavy metals, Solvent extractions, *Alkaline earth metals, *Alkali metals, *Radioactivity techniques, Separation techniques, Tracers, Methodology, Radioisotopes, Iron, Molybdenum, Gold, Magnesium, Manganese, Cobalt, Nickel, Copper, Lead, Radium radiosiotopes, Hydrogen ion concentration, Zinc, Cadmium, Calcium, Strontium.
Identifiers: Distribution coefficients, *Thenoyltrifluoroacetone, *Ketones, *Radium, Rare earth elements, Organic solvents, Ra-224, Liquid scintillation, Atomic absorption spectrophotometry, Thorium, Praseodymium, Barium, Technetium, Tungsten, Indium, Yttrium, Lanthanum, Thallium, Co-60, Fe-59, Mn-54, Ni-63, Cu-64, As-76, Au-198, Mo-99, Pr-142, W-187, Pb-212, Th-228.

Using a standardized procedure previously reported, the distribution of radium and 13 other metallic elements were quantitatively compared, by distributing a radiotracter of the element of interest between an aqueous phase and an organic phase consisting of 0.1 M TTA in MIBK. From the ratio of activity in the organic phase to activity in the aqueous phase, distribution coefficients were calculated as a function of pH (Atomic absorption was used for measuring the concentration of magnesium). Using radium-224, the extraction of radium by TTA in MIBK was successfully demonstrated to occur under almost identical pH conditions as previously reported for barium. In addition, distribution coefficients for reversible extractions into the TTA-MIBK phase from the aqueous phase were measured for magnesium, manganese, cobalt, nickel, copper, praseodymium, lead, and thorium. When the log D values were plotted vs. pH for iron, molybdenum, technetium, tungsten, and gold, the normal S-shaped curves were not obtained. From the data, pH conditions can be selected to allow the separation of the daughter elements, radium and lead, from thorium, as well as for many other element pairs. (Holoman-Battelle)

GAS-SOLID CHROMATOGRAPHY ON MACRORETICULAR CATION EXCHANGE RESINS,
Seton Hall Univ., South Orange, N.J. Dept. of Chemistry.
R. F. Hirsch, H. C. Stober, M. Kowblansky, F. N. Hubner, and A. W. O'Connell.
Analytical Chemistry, Vol 45, No 12, p 2100-2105, October 1973. 2 fig, 7 tab, 22 ref.

Descriptors: *Cation exchange, *Pollutant identification, Alkali metals, Alkaline earth metals, Selectivity, Heavy metals, Separation techniques, Methodology, Organic compounds, Aromatic compounds, Cations, Hydrogen, Sodium, Potassium, Cesium, Magnesium, Calcium, Strontium, Zinc, Chromium.
Identifiers: *Macroreticular cation exchange resins, *Aromatic hydrocarbons, *Gas solid chromatography, *Aliphatic hydrocarbons, Olefins, Thermal stability, Retention time, n-Alkanes, Amberlyst A-15, Ion exchange resins, Lithium, Rubidium, Barium, Lanthanum, Pentane, Hexane, Heptane, Octane, Cyclohexene, Benzene, Cyclopentane, Cyclohexane, Cycloheptane, Cyclooctane, 2-Methylpentane, 2 2 4-Trimethylpentane, Methylcyclopentane, 1-Heptene, 1-Hexene, 1-Octene, 2 3-Dimethyl-2-butene, 3 3-Dimethyl-1-butene.

Several metal ion forms of the macroreticular cation exchanger Amberlyst 15 were prepared and tested for use as gas-solid chromatographic (GSC) packings for the separation of a wide variety of hydrocarbons including normal alkanes and aromatic hydrocarbons. A drop of the test compound was evaporated inside a stoppered flask to which a small amount of methane had been added. Samples were withdrawn and injected into the chromatograph with methane being used as a marker for the calculation of retention times. Macroreticular cation exchange resins were found to be adsorptive packings for gas-solid chromatography, and to show good selectivity among hydrocarbons. Short columns were satisfactory even at temperatures well above the boiling points of the compounds being separated. Retention indices correlated with the size and electronic structure of the resins cation. In the alkali metal and alkaline earth series, retention indices of aromatic compounds increase with cation size. The silver form of the resin retains aromatic and olefinic compounds strongly, and separates geometric isomers of the olefins. Data are also presented on the effect of specific surface area and sample size on retention, and on the thermal stability of the various resin forms. (Holoman-Battelle)

ION PAIR PARTITION CHROMATOGRAPHY OF ORGANIC AMMONIUM COMPOUNDS,
Uppsala Univ. (Sweden). Dept. of Analytical Chemistry.
S. Eksborg, and G. Schill.
Analytical Chemistry, Vol 45, No 12, p 2092-2100, October 1973. 8 fig, 7 tab, 28 ref.

Descriptors: *Separation techniques, *Pollutant identification, Methodology, Organic compounds, Ammonium compounds, Solvent extractions.
Identifiers: *Ion pair partition chromatography, *Quaternary alkylammonium ions, *Quantitative analysis, *Organoammonium compounds, Alkylammonium picrates, Extraction constants, Liquid liquid chromatography, Chemical recovery, Molar absorptivity, Chromatographic peaks, Chemical concentration, 2-Hydroxyethyltrimethylammonium picrate, Organic solvents, Tetrabutylammonium benzoate, Tetrabutylammonium salicylate, Tetrabutylammonium toluene-4-sulfonate, Tetrabutylammonium dipicrylamate, Tetrabutylammonium chloride.

Liquid-liquid chromatography systems based on ion pair partition have been studied with quaternary alkylammonium ions as samples, chloroform plus 1-pentanol (19 plus 1) as mobile phase and aqueous picrate solution as stationary phase on a cellulose support. The highest separating efficiency was obtained in 2.7 mm columns with stationary phase loadings of 25-38 percent of the support weight. Maximum separating speed was obtained at k prime equals 5 in the 2.7-mm column, where a mobile phase speed of 3 mm/sec gave H equals 0.5 mm. The influence of stagnant mobile phase was negligible. H was not affected by the amount of sample within the range 0.01 nmole-0.1 micromole in columns with a high counterion concentration. An increase of the sample volume to 500 microliters (V sub m equals 1.4 ml) decreased the number of theoretical plates by less than 20 percent. Leading of the chromatographic peaks appeared at low sample concentrations due to dissociation of the ion pair in the organic phase. It could be suppressed by a controlled bleeding of the counterion. Quantitative determinations based on the peak area and the molar absorptivity of the ion pair gave recoveries of 95 plus or minus 9 percent with 30-pmole samples. (Holoman-Battelle)

MICROBIAL CULTURE MEDIA PREPARATION,
Western Australian Inst. of Tech., Perth. Dept. of Medical Technology.
J. D. Neal.
Laboratory Practice, Vol 22, No 7, p 477-495, July 1973. 16 ref.

Descriptors: *Bacteria, Cultures.
Identifiers: *Culture media, *Sample preparation.

General guidelines are given based on experience in industrial, educational, and medical laboratories for preparing satisfactory culture media. The effects of storage of media; materials used in preparing media such as water, agar, gelatin, carbohydrates, peptones, meat extracts, blood, serum, plasma, and selective agents; control of pH; sterilization; and media testing on results are discussed. Possible areas of future development are considered. (Little-Battelle)

ION SELECTIVE SENSORS,
State Univ. of New York, Buffalo. Dept. of Chemistry.
G. A. Rechnitz.
Research/Development, Vol 24, No 8, p 18-20, August 1973. 4 fig, 2 tab, 6 ref.

Descriptors: Automation, Heavy metals, *Cadmium, *Lead, *Copper, Halides, Enzymes, Urine, *Electrodes.
Identifiers: *Ion selective electrodes, Miniaturaization, Membrane electrodes, Flow-through electrodes, Serum, Immobilized enzymes, *Silver.

Microsize ion-selective membrane electrodes have been developed which can be used to measure specific ions in human bodies by inserting them with hypodermic needles. Crystal membrane electrodes with tip diameters of 50 microns can detect Ag, Cd, Pb, Cu and halide ions in geological samples. Flow-through electrodes in 'lollipop' shape can detect anions and cations in solutions. These electrodes have proved useful in automated analysis systems where they have replaced optical components. The system operates at 20 to 70 samples per hour and is limited by mechanical components of the system. Future possibilities for ion electrodes are given. (Little-Battelle)

INFRARED STUDIES OF CHLORINATED DIBENZO-P-DIOXINS AND STRUCTURALLY RELATED COMPOUNDS,
Food and Drug Administration, Washington, D.C. Div. of Chemistry and Physics.
J-Y. T. Chen.
Journal of the Association of Official Analytical Chemists, Vol 56, No 4, p 962-975, July 1973. 24 fig, 7 tab, 20 ref.

Descriptors: *Pollutant identification, Pollutants, Organic compounds.
Identifiers: *Chlorinated hydrocarbons, *Infrared spectra, *Infrared spectophotometry, *Chlorodibenzo-p-dioxins, Chlorodibenzodioxins, Characterization, Dibenzo-p-dioxin, 1-Chlorodibenzo-p-dioxin, 2-Chlorodibenzo-p-dioxin, 1 6-Dichlorodibenzo-p-dioxin, 2 3-Dichlorodibenzo-p-dioxin, 2 7-Dichlorodibenzo-p-dioxin, 2 8-Dichlorodibenzo-p-dioxin, 1 2 4-Trichlorodibenzo-p-dioxin, 2 8-Dichlorodibenzo-p-dioxin, Octachlorodibenzofuran, 1 2 3 4-Tetrachlorodibenzo-p-dioxin, 1 3 6 8-Tetrachlorodibenzo-p-dioxin.

Reference infrared spectra of 24 chlorinated dibenzo-p-dioxins (DPD) and structurally related compounds are presented. These reference spectra are recorded using micro quantities of synthesized compounds in order to obtain spectra like those expected from chlorinated DPD residue isolates. The observed characteristic frequencies are tabulated in correlation tables. Their significance is interpreted in terms of the substituents and electronic effects. The positions of various absorption bands depend on the total number and positions of the chlorine substituents. The positions of the absorption bands indicate relative bond strengths. Identifiers: Ion selective electrodes, Membrane electrodes, *Glucose, Biological samples, *Continuous flow system, Reproducibility, Precision, Enzymatic techniques, Serum, Iodide electrodes, Chemical interference.

An automated analysis system is described which utilizes a novel flow-through type ion-selective membrane electrode for the enzymatic determination of glucose. The system functions well in conjunction with aqueous, protein-loaded, and serum samples containing glucose in the physiological concentration range at sampling rates of up to 70 determinations per hour. The proposed methodology eleiminates the need for color development or dialysis steps and successfully overcomes protein interference at membrane electrodes via improved electrode design. ANALYTICAL APPLICATIONS OF PULSED VOLTAMMETRIC STRIPPING AT THIN FILM MERCURY ELECTRODES,
Colorado State Univ., Fort Collins. Dept. of Chemistry.
T. R. Copeland, J. H. Christie, R. A. Osteryoung, and R. K. Skogerboe.
Analytical Chemistry, Vol 45, No 13, p 2171-2174, November 1973. 4 fig, 3 tab, 17 ref.

Descriptors: *Analytical techniques, *Lead, *Cadmium, Pollutant identification, Reliability, Heavy metals, Chemical analysis, Methodology, Water analysis, Urine, Aqueous solutions, *Electrodes.
Identifiers: Thin film mercury electrodes, *Voltammetry (Differential pulse stripping), Sensitivity, Biological samples, Sample preparation, Ion selective electrodes, Natural waters, Blood, Plasma, Body fluids, Linear scan stripping voltammetry.

The use of differential pulse stripping analysis with thin film electrodes for the determination of lead and cadmium in a variety of samples is described. Instrumental and chemical parameters have been thoroughly investigated and optimized for the direct determination of these elements in natural waters, blood, blood plasma, urine. Sample solutions were deoxygenated with prepurified nitrogen while in position in the rotating electrode assembly. Water samples and HNO3 digests of blood were prepared for analysis by adding 2 ml of acetate buffer to 25 ml of sample. Urine and blood plasma samples were prepared as above or by diluting 2 ml of sample and of buffer to 25 ml with distilled, deionized water. The results indicate that reliable analyses are obtained on samples as small as a few microliters under conditions which are more sensitive than linear scan stripping techniques by factors ranging from 4 to 20 or more. NITROGEN/ARGON RATIOS BY DIFFERENCE THERMAL CONDUCTIVITY,
California Univ., Los Angeles. Inst. of Geophysics and Planetary Physics.
J. D. Cline, and S. Ben-Yaakov.
Deep-Sea Research and Oceanographic Abstracts, Vol 20, No 8, p 763-768, August 1973. 3 fig, 1 tab, 12 ref.

Descriptors: *Water analysis, Separation techniques, Sea water, Calibrations, *Nitrogen, *Argon.
Identifiers: Dissolved nitrogen, Dissolved argon, *Difference thermal conductivity, Precision, Sample preparation, Accuracy.

A method has been developed for the precise determination of dissolved nitrogen/argon ratios in seawater for the purpose of evaluating small changes in the dissolved nitrogen content. Nitrogen and argon are extracted from seawater (in vacuo) and separated from water vapor, carbon dioxide and oxygen. The residual nitrogen-argon mixture is swept over a thermal conductivity detector with a carrier gas of the same composition, except for having a slightly different argon mole fraction. Calibration is carried out by equilibrating seawater at various temperatures with air. The technique has been used successfully in the analysis of N2/Ar ratios from the intermediate depths of the eastern tropical Pacific Ocean and the Cariaco Trench. Precision is estimated at plus or minus 0.2 percent at the 95 percent confidence level; the accuracy depends on the solubility tables used and the method of equilibration. (Little-Battelle)

Identifiers: Sample preparation, Emission spectroscopy.

Thirty species of submersed and floating leaved Aquatic Vascular Plants (AVPs) and fifteen species of rooted emergent AVPs were collected from fourty-four and forty-two locations, respectively, in the Delaware, Susquehanna and Allegheny river watersheds in Pennsylvania and analysed by emission spectrometry for element constitution of eleven potentially-polluting ions including: P, K, Ca, Mg, Mn, Fe, Cu, B, Al, Zn, and Na. The purpose was to attempt to identify plants which might serve as bioindicators of water pollution. The areas sampled are widely diverse with respect to geological, geographical, and cultural conditions. Entire plants were collected from strategic locations, washed, blotted dry, wrapped in Kraft-paper towelling and placed in numbered Kraft bags for oven drying. Additional plants were placed in polyethylene bags for identification. Results of elemental analysis were subjected to analysis of variance. Because of their wide occurrence and response to potentially polluting ions, Elodea canadensis, Potamogeton crispus, Myriophyllum exalbescens, Justicia americana and the Sparganiums were selected for additional studies designed to investigate pathways of nutrient assimilation and the effect of nutrient pollution upon productivity, morphology and reproduction. (Little-Battelle)

GROWTH RATES OF SEDIMENT-LIVING MARINE PROTOZOAN AS A TOXICITY INDICATOR FOR HEAVY METALS,
Leeds Univ. (England). Wellcome Marine Lab.
J. S. Gray, and R. J. Ventilla.
AMBIO, Vol 11, No 4, p 118-121, 1973. 3 fig, 2 tab, 15 ref.

Descriptors: *Growth rates, *Protozoa, *Toxicity, Water quality, *Heavy metals, *Bioindicators, *Bioassay, Animal growth, Water pollution effects, Mortality, Water pollution, Lethal limit, Invertebrates, Mercury, Zinc, Lead, Salinity, Water temperature, Environmental effects, Laboratory tests.
Identifiers: *Cristigera spp, Median tolerance limit, Data interpretation, Factorial analysis, Culture media.

The classical method for measuring the toxicity of a chemical to a marine organism is by the LC50 test. Considerations should be given to the criticisms directed toward the test: (1) duration of the test, (2) survival and subsequent behavior of test organisms, (3) selection of temperature, (4) trophic level of the test organisms, and (5) use of single chemicals as opposed to mixtures as present in nature. In an attempt to allay such criticisms an organism of low trophic level, a bacterivorous ciliate was used and changes in growth rate rather than mortality were measured as criteria of pollution. It was also deemed necessary to investigate responses of test organisms to interacting environmental variables prior to testing chemical toxicity. Using factorial designs and response surface analysis, experimental conditions were optimized with respect to salinity-temperature combinations. With near optimum conditions the effects of mercuric ions (HgC12), lead ions (Pb (NO3)2) and zinc ions (ZnSO4) were tested each at three concentrations in a 3 to the 3rd power factorial design. HgC12 at an added concentration of 0.0025 ppm reduced growth rate by 9.7 percent, Pb (NO3) at 0.15 ppm by 8.5 percent and ZnSO4 at 0.125 ppm by 8.3 percent. On mixing the chemicals, significant supplemental synergistic effects were found at all two factor and three factor combinations. Models of the effects and graphical response surface contours are given. Since many chemicals are likely to interact (supplementally or antagonistically), the method used seems of widespread relevance to toxicity testing. (Holoman-Battelle)

SILICA GEL MEDIUM FOR ENUMERATION OF PETROLEUMLYTIC MICROORGANISMS IN THE MARINE ENVIRONMENT,
Tokyo Univ. (Japan). Ocean Research Inst.
H. Seki.
Applied Microbiology, Vol 26, No 3, p 318-320, September 1973. 2 fig, 1 tab, 11 ref.

Descriptors: *Sea water, Microbial degradation, Marine microorganisms, Oil, Marine bacteria, Water sampling, Cultures, Pacific Ocean, Ecological distribution.
Identifiers: *Enumeration, *Culture media, *Silica gel medium, *Petroleumlytic microorganisms, *Heterotrophic bacteria, Vertical distribution, Marine environment, *Japan (Tokyo Bay).

A silica gel medium was developed for the enumeration of petroleumlytic microorganisms and used aboard the research vessel Hakuho-maru of the University of Tokyo during the Leg KH-73-1 expedition in 1973. Seawater samples were collected with sterilized J-Z type bacteriological samplers (ORIT samplers). Enumerations were carried using a direct microscope count method and a plate count method. Autoclaved Gelman glass fiber filters type A were used to collect microorganisms from 100-ml samples and the inoculated filters were placed on the silica gel media and incubated at 20 C for 30 days before counting colonies. Petroleumlytic bacteria were enumerated by the method employed here in the pelagic region of the Pacific Ocean, as well as in the coastel region of Japan. Petroleumlytic bacteria formed colonies from only 44 samples among the 104 samples from the pelagic region, and usually less than 10 colonies of petroleumlytic bacteria were enumerated for each 100-ml seawater sample from the surface to 1,000 m depth at stations in the western north Pacific central water, whereas more than 10 colonies of the bacteria were enumerated for each 100-ml seawater sample in Tokyo Bay. This means that less than 0.001 percent of the total bacteria or less than 0.1 percent of the heterotrophic bacteria are petroleumlytic at the pelagic region. (Holoman-Battelle)

ACRIDINE ORANGE-EPIFLUORESCENCE TECHNIQUE FOR COUNTING BACTERIA IN NATURAL WATERS,
North Carolina Univ., Chapel Hill. School of Public Health.
D. E. Francisco, R. A. Mah, and A. C. Rabin.
Transactions of the American Microscopical Society, Vol 92, No 3, p 416-421, July 1973. 6 fig, 2 tab, 12 ref.

Descriptors: *Aquatic bacteria, *Pollutant identification, *Viability, *Ecological distribution, Methodology, Filtration, Fluorescence, E. coli.
Identifiers: Acridine orange-epifluorescence technique, *Bacteria counting, Viable count, Membrane filters, Epifluorescence microscopy, Counting chambers, Pure cultures, Acridine orange, Staining, Fluorescence microscopy, Selenastrum capricornutum, Desmids, Bacillus megaterium, Staphylococcus aureus, Azotobacter vinelandii, Klebsiella, Bacillus subtilis, Coulter counter, Petroff-Hauser counter.

The utility of acridine orange staining and epifluorescence microscopy (AO-E) as a method for estimating bacterial numbers in natural waters has been examined. Total direct counts of aquatic bacteria from natural samples were estimated by epifluorescence microscopy after acridine orange staining. Cells were concentrated by membrane filtration on black membrane filters and counted directly. Using this method, bacterial counts of pure cultures corresponded to those obtained by the Petroff-Hauser and Coulter counter methods. Epifluorescence counting is the method of choice for ecological studies of the natural distribution of bacteria in aquatic environments since it permits ready discrimination of bacteria from detritus and does not rely on the adequacy of culture methods to elicit growth of all viable organisms. Total counts obtained in this way were related to glucose and acetate uptake by resident microbial populations of lake water sample. Viable counts of the same samples were not related. EMISSION SPECTROMETRIC DETERMINATION OF TRACE METALS IN BIOLOGICAL TISSUES,
Alabama Univ., Birmingham. School of Medicine.
J. Webb, W. Niedermeier, and J. H. Griggs.
Applied Spectroscopy, Vol 27, No 5, p 342-347, September/October 1973. 3 fig, 5 tab, 24 ref.

Descriptors: *Trace elements, *Pollutant identification, *Chemical analysis, Hogs, Heavy metals, Alkali metals, Alkaline earth metals, Copper, Aluminum, Manganese, Nickel, Cesium, Strontium, Chromium, Zinc, Lead, Molybdenum, Cadmium, Phosphorus.
Identifiers: *Animal tissues, *Emission spectoscopy, Sample preparation, *Matrix effects, Biological samples, Precision, Heart, Biological materials, Barium, Tin, Wet digestion.

An emission spectometric method of analysis is described which permits duplicate analyses to be performed on 1-g specimens of tissue for 13 elements in the microgram percent range. Pig hearts were dissected into 17 separate pieces representing discrete anatomic sites. Samples were prepared for analysis by low temperature wet digestion. On the basis of their composition of the macro elements sodium, potassium, and phosphorus, these tissues could be divided into two groups: one including blood vessels and heart valves, and the other including ordinary and specialized myocardium. A method is described for adjuting the macro element composition of these tissues to that of a common matrix, thus allowing trace metal analysis of both groups of tissues to be performed using only a single set of standards. A solution of the ash was placed in hollow cup graphite electrodes with center posts, evaporated to dryness, and analyzed in the dc arc with a Jarrell-Ash model 66,000 direct reading emission spectrometer. At concentrations above 10 microgram percent the coefficient of variation was about 10 percent for most of the trace metals studied. (Holoman-Battelle)

LITMUS MILK REACTION AS A DISTINGUISHING FEATURE BETWEEN STREPTOCOCCUS FAECALIS OF HUMAN AND NON-HUMAN ORIGINS,
Tennessee Univ., Knoxville. Dept. of Microbiology.
J. O. Mundt.
Journal of Milk and Food Technology, Vol 36, No 7, p 364-367, July 1973. 4 tab, 38 ref.

Descriptors: *Pollutant identification, *Separation techniques, Chemical reactions, Enteric bacteria, Wildlife, Insects, Public health, Streptococcus, Aerobic bacteria, Methodology, Fermentation.
Identifiers: *Streptococcus faecalis, *Enterococci, *Litmus milk reaction, Pollutant sources, Biochemical tests, Heterotrophic bacteria, Biochemical characteristics, Fecal bacteria, Characterization.

More than 90 percent of 1618 cultures of Streptococcus faecalis obtained from plants, wild animals, and insects produced a soft, reduced, rennet-like curd which underwent stratiform digestion in litmus milk, or else produced no reaction. Cultures of human origin produced a reduced, hard, acidic curd which sometimes was followed by acid-proteolytic digestion. Ten percent of the cultures commensal in nature fermented lactose in litmus milk to produce the hard, acidic curd which sometimes underwent acid-proteolytic digestion. One-third of this group of organisms failed to follow the typical pattern of fermentation by S. faecalis of human origin, that is fermentation of melezitose but not of melibiose. It is suggested that for cultures obtained during analytical procedures the reaction in litmus milk and the fermentation of melezitose and melibiose may be employed to distinguish between contamination representing recent pollution of human origin and the presence of S. faecalis as a member of the microflora of plants with no sanitary significance. SHIGELLA SONNEI ISOLATED FROM WELL WATER,
Iowa Univ., Iowa City. State Hygienic Lab.
S. S. Lindell, and P. Quinn.
Applied Microbiology, Vol 26, No 3, p 424-425, September 1973. 5 ref.

Descriptors: *Potable water, *Water wells, *Isolation, *Pollutant identification, *Pathogenic bacteria, Methodology, Cultures, Aerobic bacteria, Epidemics, Public health, Human diseases.
Identifiers: *Shigella sonnei, Selective media, Culture media, Membrane filters, Xylose-sysine-deoxcholate agar, Triple sugar-iron agar, Lysine-iron agar, Biochemical tests, Eosin methylene blue agar, MacConkey agar, Gram-negative broth, Differential media.

A method is described which led to the isolation of Shigella sonnei from well water suspected of being the primary foci in a school-associated shigellosis outbreak. Tap water samples were filtered by suction through a membrane filter. After filtration the membranes were placed on xylose-lysine-deoxycholate agar plates and incubated at 37C for 18 h. Suspicious colonies were further cultured on triple sugar-iron agar and lysine-iron agar for primary differentiation; only one colony was confirmed biochemically and serologically as Shigella sonnei. Results show that other media are necessary for a more comprehensive isolation of the organism. Further plans for such a study involve filtering smaller samples of the water and hence more membrane filters for inoculation of prescribed media. The membranes will be placed on both selective and differential media such as eosin methylene blue, MacConkey agar, and XLD. Membranes exhibiting growth will then be placed in gram-negative broth followed by plating on the above-mentioned media, thus enhancing the

chances for isolation of suspected pathogens. (Holoman-Battelle)

COMPARISON OF GELMAN AND MILLIPORE MEMBRANE FILTERS FOR ENUMERATING FECAL COLIFORM BACTERIA,
Tennessee Valley Authority, Chattanooga. Div. of Environmental Planning.
W. G. Presswood, and L. R. Brown.
Applied Microbiology, Vol 26, No 3, p 332-336, September 1973. 4 fig, 2 tab, 4 ref.

Descriptors: *Methodology, *E. coli, *Enteric bacteria, Temperature, Water analysis, Isolation, Cultures, Regression analysis, Statistical methods.
Identifiers: *Enumeration, *Fecal coliforms, *Membrane filters, Culture media, Data interpretation, Precision, Recovery, Biochemical tests, Gelman membrane filters, Millipore membrane filters, Culturing techniques, Species density, Pure cultures.

Tests of two leading brands of membrane filters used for enumerating fecal coliform bacteria showed that Gelman GN-6 filters recovered statistically more colonies of bacteria than did Millipore HAWG 047SO filters from pure cultures incubated at either 35C (the optimal growth temperature) or 44.5C (the standard temperature for the fecal coliform test). Standard membrane filter procedures with M-FC broth base were used to enumerate the organisms. Densities of colonies incubated on Gelman filters at 44.5C averaged 2.3 times greater than those on Millipore filters. Plate counts of the bacteria at both temperatures indicated that incumbation at 44.5C did not inhibit propagation of fecal coliform bacteria. For the pour plates, M-FC broth base plus 1.5 percent agar was used. This modified medium compared favorably to plate count agar for enumerating Escherichia coli. At 35 and 44.5C, colony counts on Gelman filters agreed closely with plate counts prepared concurrently, but Millipore counts were consistently lower than plate counts, especially at 44.5C. Comparative analyses of river water for fecal coliform bacteria by the membrane filter technique gave results comparable to those for the pure cultures. (Holoman-Battelle)

NUTRIENT SOURCES AND TRANSPORT IN THE UPPER AND CENTRAL REGIONS OF THE BIG SIOUX RIVER,
South Dakota Cooperative Fishery Unit, Brookings.
D. C. Hales, and R. L. Applegate.
Available from the National Technical Information Service as PB-225 140/3, $3.75 in paper copy, $1.45 in microfiche. South Dakota State University, Brookings, Water Resources Institute Completion Report, June 1973. 88 p, 31 fig, 11 tab, 37 ref. OWRR A-029-SDAK (1). 14-01-0001-3842.

Descriptors: *Nutrients, Water quality, *Path of pollutants, Surface waters, *South Dakota, Nitrogen, Phosphates, Water pollution sources.
Identifiers: *Big Sioux River (SDak).

The upper Big Sioux River Basin, in northeastern South Dakota, was studied to determine the origin and transport of nutrients in the Big Sioux River. The area was divided into three segments. Two of the segments, the Big Sioux River and Willow Creek Basins, were primarily agricultural drainage areas, and one segment was the city of Watertown. Sampling stations were selected to facilitate the determination of nutrient inputs to the river from each of these segments and to determine the nutrient load in the river leaving the study area. Nutrients studied included total orthophosphate and the particulate and dissolved fractions of organic carbon, organic nitrogen, and total phosphate. The annual load leaving the study area amounted to 1,507,820 kg, 127,320 kg, and 140,310 kg of TOC, TON, and TP, respectively. Approximately 90 percent of the TOC, 87 percent of the TON, and 67 percent of the TP was attributed to the agricultural drainage areas. Eleven percent of the TOC, 27 percent of the TON, and 41 percent of the TP was attributed to the city of Watertown. (Wiersma-South Dakota)

MATHEMATICAL MODELING OF NUTRIENT - TRANSPORT,
Massachusetts Univ., Amherst. Water Resources Research Center.
F. A. Di Giano.
Available from the National Technical Information Service as PB-225 127/0, $3.00 in paper copy, $1.45 in microfiche. Publication No 17, 1971. 37 p, 12 fig, 6 ref. OWRR B-005-MASS (3).

Descriptors: *Nutrients, Movement, Surface waters, *Bottom sediments, *Model studies, Analytical techniques, Chemical reactions, Diffusion, Adsorption, Porosity, *Path of pollutants, *Mathematical models, Equations, Water chemistry, Biochemistry, Inorganic compounds.
Identifiers: *Nutrient transport.

The derivation of the mathematical models for nutrient transport in deposit-water systems is based upon the mode of physical mass transfer via diffusion and adsorption. The influence of biological and chemical interactions on the transfer are not directly involved. Both porosity and tortuosity of the deposit are physical properties of import. Porosity controls the total flux of nutrients per unit area of deposit. Tortuosity which is a measure of the 'effective' diffusional path, determines the depth of nutrient penetration. Both of these properties may be altered by chemical changes within the bottom deposit. The two primary objectives in seeking a simple but valid model of the system are: (1) to obtain a physical system constant, i.e. and 'effective' diffusion coefficient which can be used to estimate the flux of nutrients through the deposit and the depth of penetration; and (2) to examine the rate-limiting step (steps) of nutrient transport by modeling the interplay of 'interfacial resistance' and pore diffusion and adsorption. The four models described are (1) pore diffusion through interstitial water of deposit, (2) interfacial

mass transport, (3) diffusion with simultaneous adsorption, and (4) release of nutrients via diffusion. This last model of simultaneous adsorption and diffusion may be most useful in gaining an understanding of nutrient interchange. (Woodard-USGS)

HOLBROOK COVE SURVEY--A 1972 STUDENT SUMMER OCEAN ENGINEERING LABORATORY RESEARCH PROJECT.
Massachusetts Inst. of Tech., Cambridge.

Available from NTIS, Springfield, Va., 22151 as COM-73-10621 Price $3.00 printed copy; $1.45 microfiche. Massachusetts Institute of Technology Sea Grant Project Office Report No MITSG 72-19, December 31, 1972. 162 p, 29 fig, 11 tab.

Descriptors: *Water pollution sources, *Heavy metals, *Mine wastes, *Maine, Data collections, Oceanography, Coasts, Geomorphology, Ocean currents, Tidal effects, Bottom sediments, Computer programs, Path of pollutants, Ecology.
Identifiers: *Holbrook Cove (Me).

This report is the first of two volumes concerning the accomplishments of the 1972 M.I.T./Maine Maritime Academy Sea Grant Summer Ocean Engineering Laboratory. It describes the investigations students conducted in an oceanographic and biological survey of Holbrook Cove, Maine, in July 1972. The objective of the survey was to gain an understanding of the hydraulics and ecology of the coves in order to ascertain the effect of heavy metal pollution from the Callahan mine outfall. Holbrook Cove is located approximately one-half mile southwest of Castine, Maine. Data for study projects include: tidal current streamlines and velocity; temperature and salinity; chlorophyll 'A' content; benthic infauna distribution; tidal height fluctuations; detailed bottom topography; bottom soil structure; and water oxygen content. Computer programs are presented in the appendix. (Woodard-USGS)

ON THE SMALL-SCALE HORIZONTAL DIFFUSION NEAR THE COAST,
Japan Atomic Energy Research Inst., Tokyo.
N. Ito.
Journal of the Oceanographical Society of Japan, Vol 19, No 4, p 182-186, January 1964. 3 fig, 1 tab, 4 ref.

Descriptors: Dye releases, *Coasts, *Diffusion, Radioactive wastes, Pollutant identification, Dilution, *Path of pollutants.
Identifiers: Japan (Tokaimura).

Several small-scale dye-release experiments, which were carried out off Tokaimura by Japan Atomic Energy Research Institute and other research institutes, are described. The results showed that the diffusion constant defined in this paper was approximately fitted in all the experiments performed and the horizontal concentration distribution of released material could be estimated, using the constant. These may be applicable in the problem of environmental safety around atomic establishments to estimate the dilution of radioactive effluent diffusing into sea water. (Sinha-OEIS)

A STUDY OF TIDAL DISPERSION IN THE POTOMAC RIVER,
Federal Water Pollution Control Administration, Annapolis, Md. Chesapeake Bay-Susquehanna River Basin Project.
L. J. Hetling, and R. L. O'Connell.
Water Resources Research, Vol 2, No 4, p 825-841, 1966. 12 fig, 3 tab, 7 ref.

Descriptors: *Potomac River, *Estuaries, *Dispersion, Water pollution sources, Density currents, *Tidal effects, Dye dispersion, Tracers, *Outfall sewers, *Path of pollutants.

A dye tracer experiment was performed to determine the dispersive properties of the Potomac estuary. A fluorescent dye, Rhodamine WT, released continuously for 13 days through a submerged outfall sewer, was traced effectively over the upper 25 miles of the estuary for 34 days. Observed dye distributions were analyzed using a classical 1-dimensional advection-diffusion model applied to each of 16 discrete volume segments. Repetitive analog computer solution of the resulting set of 16 linear differential equations showed that dispersion coefficients increasing from 0.2 to 0.6 sq mi/day in a downstream direction gave a satisfactory temporal and spatial description of the observed dye distribution. The dye loss in the estuary was found to be described by a first-order reaction rate constant that had an upper limit of 0.034 day-1. The effect of river inflow on the distribution of a nonconservative pollutant from a point source discharge was calculated using the model. (Sinha-OEIS)

INVESTIGATIONS ON THE CHANGES IN THE CONTENT OF HEAVY METALS IN LAKE WATERS OF THE MASURIAN LAKE DISTRICT,
Wyzsza Szkola Rolnicza, Olsztyn-Kortowa (Poland). Instytut Hydrobiologii Ochrany Wodnego.
F. Wieclawski.
Acta Hydrobiol. Vol 14, No 2, p 149-163, 1972. Illus.
Identifiers: *Heavy metals, *Zinc, Lakes, *Poland (Masurian Lake Dist.), Water pollution sources.

Waters from 2 levels of lakes of the Masurian Lake District (Poland) were investigated from 13th Nov. 1967 to 13th May 1968 for the content of traces of heavy metals in ionic form. The chosen lakes (Trzcinno, Kortowskie, Mutek, Starodworskie and Dlugie) represent types from Beta-mesotrophy to advanced eutrophy remaining under the influence of pollution. The range of variations in the content of traces of ions of heavy metals in microgram/1 determined according to the polarographic method after their preliminary concentration on a dithizone column is the following: Pb 0.2-2.2, Cd 0.0-0.3, Zn 0.2-9.7, Mn 0.0-9.8, Cu 0.1-4.5, Co<0.1. These microelements, ordered in a sequence of decreasing concentrations, form the following series: Mn, Zn, Cu, Pb, Cd, and Co. Mn and Zn showed the greatest seasonal variability and Pb the least. The occurrence of a larger amount of microcomponents of waters, particularly distinct for Zn, was observed 3 times in the course of these investigations, namely during the period of culminant inflows of waters from the catchment basins to the lakes, and in the early season of spring 'blooms' of lake waters. No passing of ions of heavy metals from sediments to water was observed.--Copyright 1973, Biological Abstracts, Inc.

THE EFFECT OF MICROBIAL ACTIVITY UPON THE SEDIMENTARY SULPHUR CYCLE,
University of the South Pacific, Suva (Fiji).
D. B. Nedwell, and G. D. Floodgate.
Mar Biol (Berl). Vol 16, No 3, p 192-200. 1972. Illus.
Identifiers: *Microbial activity, *Sulfur cycle, Sulfates, *Intertidal sediments.

The sulfate content of an intertidal sediment at Anglesey (UK) varied during the year, the sulfate-reducing activity of the microbial population being limited by low temperature during winter, and by the low numbers of sulfate-reducing bacteria during May, 1969. A corresponding annual variation of the sedimentary sulfide could not be demonstrated, and the sulfide which was formed biologically during the course of the year was almost entirely lost from the sediment. This loss of sulfide was probably due to subsurface oxidation; and flushing, by water entering at the base of the sediment. It is suggested that sulfide was only precipitated within the sediment during summer when sulfate reduction was active.--Copyright 1973, Biological Abstracts, Inc.

SOME OBSERVATIONS ON BACTERIAL POPULATIONS IN WILGREEN LAKE, MADISON, KY.,
Eastern Kentucky Univ., Richmond. Dept. of Biological Sciences.
R. B. Otero, and S. Leung.
Trans Ky Acad Sci. Vol 33, No 1/2, p 16-26, 1972, Illus.
Identifiers: *Bacterial populations, Cattle, *Fecal coliforms, *Kentucky (Wilgreen Lake), Lakes, *Water quality standards.

Wilgreen Lake is being polluted by several important sources: Old Town Branch which flows into Wilgreen Lake from the southern end, Taylor Fork Creek which enters Wilgreen Lake from the eastern end, septic tank leakage from housing development on the eastern tip of the lake, cattle which graze along the shorelines of the lake and tributaries, the creek along Route 52 coming from the University Shopping Center-Lancaster Woods Estate which eventually empties into Taylor Fork Creek, an aeroflow disposal plant on the northeastern tip of Wilgreen Lake and Caleast tributary which flows into the lake from the western end. Fecal coliforms ranged from a low of 100/100 ml at many stations to a high of 100,00/100 ml at Station 43 in Oct. Total coliforms ranged from about 100/100 ml at several stations to 1.3 x 107/100 ml at Station 43 in Oct. Of the 192 samples tested for total coliform, all but 24 (87%) were higher than the 1000 organisms/100 ml allowed by the Proposed Standards for Water Quality of the Kentucky Water Pollution Control Commission, 1971.--Copyright 1973, Biological Abstracts, Inc.

W74-01242

SURVIVAL OF COLIFORM BACTERIA IN NATURAL WATERS: FIELD AND LABORATORY STUDIES WITH MEMBRANE-FILTER CHAMBERS,
Montana State Univ., Bozeman. Dept. of Botany and Microbiology.
G. A. McFeters, and D. G. Stuart.
Appl Microbiol. Vol 24, No 5, p 805-811. 1972, Illus.
Identifiers: *Bacteria, *Coliform, Field studies, Laboratory studies, *Montana (Middle Creek), Natural water, Survival, *Membrane filter chambers.

Chambers with membrane-filter side walls were designed for studies of the survival of coliform bacteria in natural and artificial waters. Experiments were carried out in the field and in the laboratory. The initial uptake rate of inorganic ions, total carbon and glucose into the chamber was greater than twice as fast as the accumulation of each into dialysis tubing. When the survival of a water-isolated fecal coliform bacterium was examined in 2 adjacent mountain streams, the organism persisted longer in Bozeman Creek than in Middle Creek, Montana. These data may be a reflection of the water chemistry because the concentration of inorganic constituents of the former was greater. Laboratory studies of the survival of a fecal coliform bacterium in artificial and natural water with continuous flow were used to determine the effect of chemical composition, temperature and pH. The relation of this type of data to the use of fecal coliform bacteria as indicators of health hazard in water is discussed.--Copyright 1973, Biological Abstracts, Inc.

ADSORPTION OF COLLOIDAL IRON BY BACTERIA,
Queensland Univ., Brisbane (Australia). Dept. of Microbiology.
I. C. Macrae, and J. F. Edwards.
Appl Microbiol. Vol 24, No 5, p 819-823. 1972, Illus.
Identifiers: *Adsorption, *Bacteria, Caulobacter, Colloidal iron, Corynebacterium-Pseudodiphtheriticum, Escherichia-Coli, *Iron, Klebsiella-Pneumoniae, Micrococcus, Mycobacterium-Phlei, Pseudomonas-Fluorescens.

The adsorption of iron from a positive-iron sol by species of 7 bacterial genera (Caulobacter, Micrococcus, Pseudomonas fluorescens, Mycobacterium phlei, Escherichia coli, Klebsiella pneumoniae and Corynebacterium pseudodiphtheriticum) was examined by electron microscopy. All species precipitated the iron from the sol and the bacterial cells became encrusted with iron. This was related to iron deposition in surface water supplied.--Copyright 1973, Biological Abstracts, Inc.
W74-01253

A WATERBORNE ACTINOMYCETE RESEMBLING STRAINS CAUSING MYCETOMA,
Unversity of the Witwatersrand, Johannesburg (South Africa).
E. N. Lawson, and L. M. Davey.
J Appl Bacteriol. Vol 35, No 3, p 389-394. 1972.
Identifiers: Actinomadura-Madurae, *Actinomycetes, *Mycetoma, *South Africa, Organic pollution.

An actinomycete, closely resembling strains of Actinomadura madurae causing mycetoma, was isolated from a stream in South Africa. The organism was present in all water samples collected monthly for 1 yr. It is considered to be indigenous in the stream because its population density was not influenced by water run-off from the soil into the stream or by organic pollution.--Copyright 1973, Biological Abstracts, Inc.

RELATIONSHIPS BETWEEN TURBIDITY AND HYDROGRAPHICAL FACTORS IN FRESH AND BRACKISH WATER REGION OF THE ELBE ESTUARY, (IN GERMAN),
I. Noethlich.
Arch Hydrobiol Supplement B. Vol 43, No 1, p 1-32. 1972, Illus, (English summary).
Identifiers: *Brackish water, *Germany (Elbe estuary), Hydrographical studies, Phytoplankton, *Turbidity, *Zooplankton, Estuaries.

For hydrographical reasons a turbidity zone is formed in the brackish-water region of the Elbe estuary, West Germany. This zone contains remains of the limnic production of phyto- and zooplankton as well as of marine sediments. The location of this zone is correlated with the inflow of fresh water from the river. The tidal currents as well as the amount of vertical turbulence are of great importance for the distribution of suspended matter. Much vertical turbulence, and also the morphology of the estuary bottom form patterns of suspended matter, which often drift to the surface building up clouds of turbidity. These patches are soon destroyed by waves and by the force of tidal currents.--Copyright 1973, Biological Abstracts, Inc.

LOSS OF PHOTOSYNTHETIC ACTIVITY IN TWO BLUE-GREEN ALGAE AS A RESULT OF OSMOTIC STRESS,
York Univ., Downsview (Ontario). Dept. of Biology.
B. Grodzinski, and B. Colman.
Journal of Bacteriology, Vol 115, No 1, p 456-458, July 1973. 1 fig, 1 tab, 11 ref.

Descriptors: *Cultures, *Photosynthesis, *Cyanophyta, Anabaena.
Identifiers: Culture media, *Anacystis, *Coccochloris, Mannitol, Gleocapsa, Oscillatoria.

Spheroplasts of the blue-green algae Anabaena flos-aquae, Anacystis nidulans, Gleocapsa alpicola, Coccochloris peniocystis, and Oscillatoria sp. were prepared using lysozyme in mannitol-phosphate buffer. Photosynthetic rates were determined for the spheroplasts in the mannitol-phosphate buffer, for untreated cells suspended in the same buffer, and for untreated cells suspended in phosphate buffer by manometric measurement of oxygen evolution or by measurement of C-14 uptake from labeled NaHCO3. No effects were noted for Anabaena, Oscillatoria, or Gleocapsa. However, with Anacystis and Coccochloris the photosynthetic rates for spheroplasts and cells in mannitol-phosphate buffer were much lower than that of cells in phosphate buffer. Washing of cells failed to produce recovery of photosynthetic activity and a fluorescent material identified as pteridine was found in the incubation medium. The quantity of pteridine was proportional to the loss of photosynthetic activity. Similar results were obtained with other compounds exerting osmotic pressure comparable to that of mannitol. These compounds were: sucrose, D-glucose, D-sorbitol, and fructose. (Little-Battelle)

NATURAL DISPERSION OF MERCURY FROM PUHIPUHI, NORTHLAND, NEW ZEALAND,
Massey Univ., Palmerston North (New Zealand). Dept. of Chemistry and Biochemistry.
F. E. Hoggins, and R. R. Brooks.
New Zealand Journal of Marine and Freshwater Research, Vol 7, Nos 1-2, p 125-132, June 1973. 2 fig, 1 tab, 16 ref.

Descriptors: *Mercury, Ecological distribution, *Path of pollutants, *Pollutant identification, Chemical analysis, Oysters, Mussels, Soil analysis, Heavy metals, Pollutants, Mollusks, Aquatic soils, Sediments, Bottom sampling, Water sampling.
Identifiers: *New Zealand (Wairua River), Animal tissues, Cockles, Crassostrea glomerata, Paphies australe, Perna canaliculus, Wairoa River, Chione strutchburyi, Foot, Gills, Mantle, Shell, Viscera.

The mercury content of sediments and water in the Wairua (Wairoa) River, Northland, and of molluscs from the estuary of the river was determined to establish the extent of natural dispersion of mercury from deposits at the source of the river at Puhipuhi. The mercury content per gram wet weight of cockles, Chione stutchburyi, (0.032 ppm); rock oysters, Crassostrea glomerata, (0.081 ppm); pipi Paphies australe, (0.019 ppm); and green-lipped mussles, Perna canaliculus, (0.017 ppm) was compared with that of specimens of the same species from other areas where presumably only background concentrations exist. Mercury could be detected in sediments at least 35 km from the deposits, but in water only up to about 8 km. Normal background levels were established for the soft parts and individual organs of the four species of molluscs investigated; of the molluscs found in the estuary of the Wairua River, only C. glomerata had anomalous amounts of mercury, but whether this indicates abnormally high mercury levels in the environment is unknown, because many other factors still need to be evaluated. Mercury levels of all molloscs were well below the generally accepted safety level of 0.5 ppm for fish for human consumption. (Holoman-Battelle)

FATE OF LIGNIN IN KRAFT EFFLUENT TREATMENT,
Toronto Univ. (Ontario). Dept. of Civil Engineering.
J. Ganczarczyk.
Journal Water Pollution Control Federation, Vol 45, No 9, p 1898-1907, September 1973. 2 fig, 6 tab, 20 ref.

Descriptors: *Fibers (Plant), *Pulp wastes, *Activated sludge, *Sewage treatment, Waste water (Pollution), Effluents, Waste water treatment, Methodology, Aeration, Biological treatment, Chemical analysis, Chemical reactions, Industrial wastes, Organic compounds, Pollutant identification, Water analysis, *Sorption.
Identifiers: *Lignin, *Fate of pollutants, Biotransformation, Kraft black liquor, Indulin ATR solutions, Pollutant removal, Organic carbon, Methoxyl, Oxidative condensation.

The purpose of this study was to obtain additional experimental support for the hypothesis that the main mechanism of lignin removal in activated sludge treatment is by sorption, as well as to receive some insight into the possible chemical and biochemical transformations of lignin in this process. To achieve this purpose the aeration of kraft black liquor and indulin ATR solutions without any biological growth was studied. The laboratory experiments on activated sludge treatment of kraft black liquor solutions also were continued at very low loadings of aeration tanks and activated sludge. In addition, several chemical analyses of activated sludges from these experiments and from various technical installations were performed. The experiments showed that simple aeration of alkaline solution of kraft black liquor in the absence of biological growth and aeration of indulin ATR solutions precipitated some organic material and decreased pH, color, and nitrosolignin reaction possibly by oxidative condensation of lignin molecules. Lignin accumulated in sludge may be released into solution. Accumulation of lignin in the sludge may vary substantially. The accumulated material seems richer in methoxyl than the kraft lignin precipitate; thus, some selective transformation of lignin material may occur during activated sludge treatment. (Holoman-Battelle)

THE IMPORTANCE OF CHELATING AGENTS IN NATURAL WATERS AND WASTEWATERS,
Missouri Univ., Columbia.
S. E. Manahan, and M. J. Smith.
Water and Sewage Works, Vol 120, No 9, p 102-106, September 1973. 2 fig, 1 tab, 6 ref.

Descriptors: *Heavy metals, Waste water (Pollution), *Water analysis, *Pollutant identification, *Chelation, Nitrilotriacetic acid, Chemical analysis, Amino acids, Methodology, Water pollution, Humic acids, Metals, Water pollution sources, Iron, Manganese, Copper, Zinc, Cobalt, Nickel, Cadmium, Mercury, Lead, Pollutants, Ions, Sewage effluents.
Identifiers: *Chelating agents, Natural waters, *Metal chelates, Complexation, Detergent builders, Ethylenediaminetetraacetic acid, Atomic absorption spectrophotometry, Chemical interference, Sodium citrate, Polyphosphates, Polypeptides, Leucine, Valine, Alanine, Serine, Glutamic acid, Aspartic acid, Tyrosine, Histidine, Glycine, Cysteine, Ionic interference.

Chelation drastically changes the behavior of a metal ion in water. Some of the most important metals that form very stable chelates in water are Mn, Fe, Co, Ni, Cu, Zn, Cd, Hg, and Pb. Each of these must be considered in some way in the maintenance of water quality and the selection of suitable water supplies. Whether or not a particular chelating agent in water will chelate a given metal ion in water depends upon pH, the presence of species forming insoluble compounds with the metal, and the presence of metal ions which will compete for the chelating agent. Sources of chelating agents include detergent builders, proteinaceous wastes, sewage effluents and the naturally occurring plant degradation products, the humic acids. Whenever conventional wastewater treatment processes fail to remove metals, the presence of chelates should be considered. An atomic absorption method is presented for the analysis of heavy metal chelating agents in water and a brief discussion given of chemical interference, with special emphasis on iron interference. N-NITROSATION BY NITRITE ION IN NEUTRAL AND BASIC MEDIUM,
National Cancer Inst., Bethesda, Md. Div. of Cancer Cause and Prevention.
L. K. Keefer, and P. P. Roller.
Science, Vol 181, No 4106, p 1245-1247, September 1973. 1 fig, 23 ref.

Descriptors: *Water pollution effects, *Chemical reactions, Hydrogen ion concentration, Aqueous solutions, Nitrites, *Path of pollutants.
Identifiers: *Nitrosation, *Nitrosamines, *Carcinogens, Amines, N-nitrosation, Formaldehyde, Chloral, Diethylamine, Pyrrolidine, Piperidine, Dimethylamine, Di-n-propylamine, Diisopropylamine.

Studies with aqueous buffer solutions of diethylamine and sodium nitrite showed that formaldehyde catalyzed the production of diethylnitrosamine at room temperature over the entire pH range studied (pH 6.4 to 11.0). Additional studies with other secondary amines (pyrrolidine, piperidine, dimethylamine, di-n-propylamine, and diisopropylamine) showed that formaldehyde chloral catalyzed N-nitrosation of these compounds. A mechanism for the reaction is proposed and demonstrated. It is concluded that significant synthesis of N-nitroso compounds must be considered possible even in nonacidic media since formaldehyde, chloral, and other aldehydes are common industrial by-products or wastes. (Little-Battelle)

ETHYLENETHIOUREA DEGRADATION,
FMC Corp., Princeton, N.J. Niagara Chemical Div.
A. Cruickshank, and H. C. Jarrow.
Journal of Agricultural and Food Chemistry, Vol 21, No 3, p 333-335, May/June 1973. 3 fig, 4 tab, 11 ref.

Descriptors: *Degradation (Decomposition), *Hydrolysis, Environmental effects, Ultraviolet radiation, *Fungicides, Thiocarbamate pesticides, Hydrogen ion concentration, Aqueous solutions, Pollutant identification, Methodology, Carbamate pesticides, Stability, Temperature.
Identifiers: *Photolysis, *Ethylenethiourea, *Fate of pollutants, Degradation products, Silica gel, Photodecomposition, Bis (imidazolin-2-yl)sulfide, Photosensitizers, 1-Acetonaphthone, Eosin, 1-Naphthaldehyde, trans-Stilbene, Methylene blue, Flavone, Benzophenone, Benzil, Carbazole, 2-Imidazolidinethione, 2-Imidazolidone, Crystal violet, Thin layer chromatography, Chromogenic reagents, Autoradiography.

A laboratory study was conducted on the photolytic and hydrolytic degradation of ehtylenethiourea (ETU), an ethylenebisdithiocarbamate fungicide. Photolysis was studied on a solid substrate (silica gel) and in aqueous solution; hydrolysis was studied over a pH range of 5.0-9.0. Ultraviolet irradiation (above 285 nm) of ethylenethiourea (ETU) on silica gel gave 2-imidazolidone as the major identifiable product. Several other products were formed, of which only bis (imidazolin-2-yl) sulfide has been identified. The 2-imidazolidone does not appear to undergo further degradation under these conditions. Decomposition of ETU is rapid, particularly in the presence of photosensitizers. Aqueous solutions of ETU undergo a very slow photolysis, which is markedly accelerated by sensitizers. ETU is stable to hydrolysis over the pH range 5.0 to 9.0 at 90C. (Holoman-Battelle)

SEASONAL VARIATION OF CHEMICAL PARAMETERS IN ALASKAN TUNDRA LAKES,
Skidmore Coll., Saratoga Springs, N. Y. Dept. of Biology.
H. H. Howard, and G. W. Prescott.
American Midland Naturalist, Vol 90, No 1, p 154-164, July 1973. 2 fig, 3 tab, 37 ref.

Descriptors: Tundra, *Water chemistry, *Alaska, Water sampling, Chemical analysis, Supersaturation, Chemical properties, Water properties, Shallow water, Lakes, Alkalinity, Dissolved oxygen, Bicarbonates, Hydrogen ion concentration, Chlorides, Hardness (Water), Calcium, Magnesium, Sulfates, Calcium carbonate, Methodology, *Ice cover, Thawing, Water analysis, Water quality.
Identifiers: Imikpuk Lake (Alas), Ikroavik Lake (Alas), *Seasonal variation, *Tundra lakes.

Chemical parameters were monitored for 20 months in two shallow lakes near Barrow, Alaska. After formation of an ice cover, all parameters, except dissolved oxygen and pH, increased to a maximum at time of maximum ice depth. The pH values were essentially the inverse of other parameters after an ice cover was formed. Dissolved oxygen increased to supersaturation values in January and then gradually decreased until photosynthetic rates became significant. The lakes did not become anaerobic at any time. During and immediately after thawing, dissolved oxygen was near saturation and all other solutes (except pH) fell to minimum values. After this low point, concentrations began to increase toward another maximum in the following year. Solutes may be concentrated up to about 30 times by the thick ice cover. Ratios of solutes deviated widely from mean world values, probably because of the close proximity of the lakes to the ocean. Imikpuk, nearer to the ocean, had most ratios closer to ocean values. Seasonally, except at the time of the thaw, ratios were essentially constant except for Cl/HC03. Cl/HC03 decreased after ice formation and until photosynthetic rates became significant. During ice melt, ratios differed from values at other times, possibly because of differential occlusion of solutes in ice. (Holoman-Battelle)

STUDIES OF RAPID NTA-UTILIZING BACTERIAL MUTANT,
Department of the Environment, Burlington (Ontario). Centre for Inland Waters.
D. Liu, P. T. S. Wong, and B. J. Dutka.
Journal Water Pollution Control Federation, Vol 45, No 8, p 1728-1735, August 1973. 6 fig, 14 ref.

Descriptors: *Nitrilotriacetic acid, *Microbial degradation, *Cultures, *Pseudomonas, *Absorption, *Respiration, Bioassay, Waste water (Pollution), Oxidation, Separation techniques, Systematics, Isolation.
Identifiers: Ion transport.

A bacterial mutant with high affinity for NTA was isolated from wastewater after ultraviolet mutagenization and penicillin selection. Isolates were cultured in an NTA solution to study respiration, uptake (with C-14-labeled NTA), and morphological and biochemical characteristics. Specimens were examined by electron microscopy. Morphological and biochemical characteristics of the mutant suggest that it is a Pseudomonas sp. The rate and amount of oxygen utilization is a function of NTA concentration with 99 percent of an initial concentration of 514 mg NTA/l being oxidized within 3 hours. Optimum degradation occurs at 25 C and is significantly lowered at 10 and 4C. The mutant prefers NTA to wastewater with the rate of oxidation 5 times faster with NTA than with wastewater. The uptake studies suggest that NTA might enter the mutant via a specific transport protein. (Little-Battelle)

PEAT FLOATING IN THE RESERVOIR OF THE KIEV HYDROELECTRIC STATION AND ITS ROLE IN WATER CONTAMINATION, (IN RUSSIAN),
Akademiya Nauk URSR, Kiev. Insytut Botaniki.
L. S. Balashov.
Ukr Bot Zh., Vol 29, No 1, p 49-54. 1972. Illus. (English summary).
Identifiers: Alder, Contamination, Dryopteris-Thelypteris, Electric power, *Peat, Phragmites, Communis, Reservoirs, Seasons, Sphagnum, Typha-Angustifolia, *USSR (Kiev hydroelectric station), Willow.

In 1967-1968, islands of the upper layer of peat deposits (up to 0.5 m) were observed near the western shoreline within the limits of the Chernobyl district (USSR); in 1969-1970, islands existing for some years (peat thickness: up to 1.5-2.0 m) as well as peat island annually floating and sinking in autumn were found. Weak- and medium-decayed peat containing Sphagnum remains come to the surface from depth of 0.7-1.0 up to 2.5-3.0 m, in the area of some m2 to 0.15-0.2 ha. Floating occurs in the second half of summer. The plant cover consists of rhizome herbs, annuals are less frequent. On the perennial islands there occurs sprout adler and willow with thickets of Phragmites communis, Dryopteris thelypteris and Typha angustifolia. Preventive measures are necessary against peat floating before reservoir is built (clearing of bed).--Copyright 1973, Biological Abstracts, Inc.

MERCURY IN THE ENVIRONMENT--A GLOBAL REVIEW INCLUDING RECENT STUDIES IN THE DELAWARE BAY REGION,
Delaware Univ., Newark. Coll., of Marine Studies.
F. K. Lepple.

Available from NTIS, Springfield, Va 22151, COM-73-10620 Price $3.00 printed copy; $1.45 microfiche. Report DEL-SG-8-73, March 1973. 75 p, 3 fig, 7 tab, 153 ref. NOAA-SG-3-35223.

Descriptors: *Water pollution sources, *Mercury, *Surface waters, *Sediments, *Delaware, Bays, Atmosphere, Toxicity, Chemical analysis, Analytical techniques, Data collections, Sampling, Environmental effects, Environmental control, Evaluation, Oceans, Rivers.
Identifiers: *Delaware Bay region.

The first section of this two-part report reviews basic properties of mercury and its compounds as related to their effect on various facets of the environment. Among the topics discussed are the chemical forms and hazards of mercury, incidents of mercury contamination, governmental standards and tolerance limits, levels of mercury in the atmosphere, biosphere, lithosphere and hydrosphere, and the flux through each segiment. The reality of the 'mercury problem' globally and locally is evaluated. A comprehensive review of the accepted methods of analyses for mercury and its compounds is also presented. The second section reports on recent studies of mercury levels in the Delaware Bay region and compares the concentrations found in the waters and sediments to values from other areas. Mercury levels tend to decrease near the mouth of the bay and again reach minimum value of 0.1 ppb near Dewey Beach, approximately 8 miles south of Cape Henlopen. Relatively high concentrations (0.4 to 0.5 ppb mercury) were in the region near the center of the bay. (Woodard-USGS)

CONTRIBUTION TO BIOLOGICAL AND CHEMICAL STUDY OF THE PORT OF OSTENDE, (IN FRENCH),
Brussels Univ. (Belgium). Laboratorium voor Ekologie en Systematiek.
J. Podamo.
Ann Soc R Zool Belg. Vol 102, No 1/2, p 105-127. 1972, Illus, (English summary).
Identifiers: Bacteria, *Belgium (Ostende harbor), *Biological studies, *Chemical studies, Phytoplankton, Pollution, Ports, Zooplankton, Harbors, Sampling, Outfall sewers, Water stratification, Water pollution sources.

A biological and chemical study was made on the harbor of Ostend (Belgium). The harbor was surveyed on the 6th of Aug. 1970 at low water and high water. Samples were taken at various depths for chemical analysis, bacteriological, phytoplankton and zooplankton investigations. All the results demonstrate an obvious water stratification and heavy pollution by sewage outfalls and inland water.--Copyright 1973, Biological Abstracts, Inc.

CHLORINATED HYDROCARBON INSECTICIDES IN SEDIMENTS OF SOUTHERN LAKE MICHIGAN,
Illinois Univ., Urbana. Dept. of Civil Engineering.
H. V. Leland, W. N. Bruce, and N. F. Shimp.
Environmental Science and Technology, Vol 7, No 9, p 833-838, September 1973. 7 fig, 1 tab, 22 ref.

Descriptors: Sediments, *DDT, *Distribution patterns, *Organic matter, Particle size, Particle shape, DDD, DDE, Dieldrin, *Degradation (Decomposition), *Lake Michigan, *Gas chromatography, Sampling, Statistical methods, Separation techniques, Laboratory equipment, *Lake sediments.
Identifiers: Lindane, Heptachlor epoxide, Sample preservation, Sample preparation, Dechlorination, Electron capture detectors.

A profile was developed of the extent of chlorinated hydrocarbon contamination of sediments of southern Lake Michigan, and factors affecting t-DDT distribution and DDT degradation are discussed. Sediments were collected with a Shipek grab or a Benthos gravity corer. Temperature, pH, AND ELECTRODE POTENTIAL WERE DETERMINED IMMEDIATELY. Samples which were frozen until analysis, were thawed, drained of excess water, and subsampled for particle-size and insecticide determinations. A remaining portion was air-dried and used for total and inorganic carbon determinations. Samples were extracted with acetone, cleaned up by passage through a Fluorisil column, and analyzed for chlorinated hydrocarbon insecticides using a Varian Aerograph 204 with an Ni-63 electron-capture detector and glass column containing 1.95 percent QF-1 and 1.5 percent OV-17 on Supelcoport 100-120 mesh Chromosorb at 195 C. The pesticides identified were DDT, DDD, DDE, dieldrin, and traces of lindane and heptachlor epoxide. Statistical analysis showed high positive correlations between t-DDT (DDT, DDE, DDD) and dieldrin concentrations in the sample and organic carbon content. The amount of organic carbon in surficial sediments was directly proportional to the clay-size fraction of sediment. Dechlorination of DDT to form DDD apparently predominates under the reducing conditions of sediments on the eastern side of the south basin of Lake Michigan. In other areas, DDT is the principal component of the t-DDT complex in sediments and DDE and DDD are major degradative products. (Little-Battelle)

LIGAND PHOTOOXIDATION IN COPPER (II) COMPLEXES OF NITRILOTRIACETIC ACID. IMPLICATIONS FOR NATURAL WATERS,
Carleton Univ., Ottawa (Ontario). Dept. of Chemistry.
C. H. Langford, M. Wingham, and V. S. Sastri.
Environmental Science and Technology, Vol 7, No 9, p 820-822, September 1973. 3 fig, 14 ref.

Descriptors: *Aqueous solutions, *Copper, *Nitrilotriacetic acid, Path of pollutants, Heavy metals, Carbon dioxide, Irradiation, Spectrophotometry.
Identifiers: *Fate of pollutants, *Photodecomposition, Iminodiacetic acid, Formaldehyde, Thin layer chromatography, Actinometry.

Solutions of Cu-NTA complex were prepared from stock solutions of Cu (II) and H3NTA and irradiated in a Rayonet photoreactor for 100 minutes to study their photodecomposition. Despite low absorptivity of the complexes, significant decomposition occurred with the production of formaldehyde, iminodiacetic acid, and carbon dioxide (by inference). The quantity of photodecomposition was estimated by spectrophotometric determination of the formaldehyde produced. Iminodiacetic acid was determined by thin-layer chromatography. The quantum yield, as determined by ferrioxalate actinometry decreases linearly with increasing pH over the range of 2-12. The efficiency of photodecomposition decreases with increasing concentration above 0.001 M but approaches a limiting value below about 0.0005 M. The low concentration limit of the efficiency of decomposition is approximately 1.0. There is no direct evidence for the intervention of Cu (I) species although a photoredox pathway involving Cu seems the most plausible mechanism. (Little-Battelle)

PATHWAYS OF TRACE ELEMENTS IN ARCTIC LAKE ECOSYSTEMS,
Alaska Univ., College. Inst. of Marine Science.
R. J. Barsdate.
Available from NTIS Springfield, Va., 22151, as RLO-2229-T2-1 for $3.00 paper copy $1.45 microfiche. Progress Report No. RLO-2229-T2-1, 1972. 87 p, 19 fig, 15 tab, 57 ref. Contract No. AT (45-1)-2229 No. 2.

Descriptors: *Trace elements, *Phytoplankton, Tundra, Ponds, Lakes, Ecosystems, *Path of pollutants, *Water pollution effects, Humic acids, Phytotoxicity, Heavy metals, Lake sediments, Pollutant identification, Biomass, Primary productivity, Bioassay, Alkaline earth metals, Water analysis, Chemical analysis, Cycling nutrients, Plant tissues, Zinc, Lead, *Alaska, Aquatic algae, Food webs, Food chains, Copper, Silica, Chrysophyta, Cobalt, Manganese, Chlorophyta, Pyrrophyta, Cyanophyta, Calcium, Magnesium, Strontium, Surface waters, Eutrophication, Methodology, Electrochemistry, Sediments, Dinoflagellates, Color, Diatoms, Euglenophyta, Laboratory tests, Absorption, Lagoons, Standing crops, Limiting factors.
Identifiers: *Metals complexes, Natural organics, Chemical composition, Phosphorus cycle, Bioaccumulation, Fate of pollutants, Dissolved carbon, Dissolved nitrogen, Dissolved copper, Dissolved silica, Rhodomonas minuta, Dissolved organic carbon, Zostera marinus, Sensitivity.

The primary emphasis of this report is the interactions between planktonic algae and trace metals (principally zinc) in solution as related to lake ecosystems in the Arctic. Distinctions were made, where possible, between pathways and effects of metals in simple ionic forms and those bound to naturally occurring organic ligands. The results from studies of tundra pond waters indicate that increases in metal concentrations may be responsible for the absence of fall phytoplankton blooms and a dramatic shift in phytoplankton population from Rhodomonas minuta to Chrysophyta. In lakes with high natural concentrations of humic complexing agents there was a pronounced suppression of phytoplankton production by the addition of trace metals. This suggested that such complexed metals are available physiologically to phytoplankton. The shallow marine or estuarine lagoons bordering the Bering Sea have vast eelgrass meadows which are responsible for exporting substantial quantities of dissolved C, N, P, Cu, and silica; Pb is also removed but in smaller quantities. The somewhat detailed study of zinc showed that in organic-rich lakes, a large fraction of the total Zn is in the form of dissolved complexes or colloidal complexes, and a smaller fraction is in simple inorganic forms. Precision in the determination of complexed zinc is considered to be extremely important. (Holoman-Battelle)

LEAVES AS SOURCE OF PHOSPHORUS,
Wisconsin Univ., Madison. Water Chemistry Program.
W. F. Cowen, and G. F. Lee.
Environmental Science and Technology, Vol 7, No 9, p 853-854, September 1973. 3 tab, 6 ref.

Descriptors: *Leaves, *Water pollution sources, *Phosphorus, *Oak trees, Model studies, *Urban runoff, Nutrients, Leaching, Sampling,

Colorimetry, Pollutant identification, Color reactions, Methodology.
Identifiers: *Poplar trees, Sample preparation, Soluble phosphorus.

Oak and poplar leaves were leached with distilled water in laboratory columns to simulate the release of soluble phosphorus (P) forms to urban runoff. Most of the soluble phosphorus leached was reactive in a molybdenum blue analysis. The leaves tested yielded 54-230 micrograms P/g of leaves. Consecutive leachings of an oak leaf sample yielded soluble P in amounts related to the effective soaking period between leachings and to the number of proceding leachings. Cut up leaves released almost three times as much soluble P as intact leaves. Leaves collected from the littoral zone of Lake Mendota leached less P than control leaves collected on the shore nearby. The moisture retained on leaves after a rainstorm contained significant soluble reactive P. The results point to the importance of proper leaf pickup and control in order to minimize the phosphorus content of urban drainage during the fall of the year. (Holoman-Battelle)

RELATION BETWEEN TOTAL BODY WEIGHT AND CONCENTRATIONS OF MANGANESE, IRON, COPPER, ZINC, AND MERCURY IN WHITE MUSCLE OF BLUEFISH (POMATOMUS SALTATRIX) AND A BATHYL--DIMERSAL FISH ANTIMORA ROSTRATA,
National Marine Fisheries Service, Beaufort, N.C. Atlantic Estuarine Fisheries Center.
F. A. Cross, L. H. Hardy, N. Y. Jones, and R. T. Barber.
Journal of the Fisheries Research Board of Canada, Vol 30, No 9, p 1287-1291, September 1973. 1 fig, 2 tab, 19 ref.

Descriptors: *Size, *Weight, *Heavy metals, Iron, Copper, Zinc, Mercury, Chemical analysis, Pollutant identification, Marine fish, Deep-water habitats, Demersal fish, Trace elements.
Identifiers: *Muscle, Bioaccumulation, *Bluefish, *Morids, Chemical concentration, Animal tissues, Pomatomus saltatrix, Antimora rostrata.

The purpose was to compare the relation between total body weight and concentrations of Hg with that of four biologically-essential transition metals (Mn, Fe, Cu, and Zn) in white muscle of two species of marine fish that inhabit different environments in the Atlantic Ocean. These species were bluefish (Pomatomus saltatrix), an epipelagic carnivore found in coastal waters of the western Atlantic Ocean, and a bathyl-demersal morid Antimora rostrata collected from 2500-m depth. The mercury concentrations increased significantly with size (P less than 0.001) in both species of fish but concentrations of Mn, Fe, Cu, and Zn either remained constant or decreased. These results indicated that fish residing in two different ecosystems in the Atlantic Ocean may be in a steady state with their environment with respect to Mn, Fe, Cu, and Zn but not Hg. The observed variations in accumulation patterns of trace metals in muscle of these two species as a function of size are discussed. (Holoman-Battelle)

DIATOM ASSOCIATIONS IN YAQUINA ESTUARY, OREGON : A MULTIVARIATE ANALYSIS,
Oregon State Univ., Corvallis. Dept. of Botany.
C. D. McIntire.
Journal of Phycology, Vol 9, No 3, p 254-259, September 1973. 2 fig, 5 tab, 13 ref.

Descriptors: *Diatoms, *Bioindicators, Distribution patterns, *Oregon, Statistical methods, Sampling, Salinity, Seasonal.
Identifiers: Data interpretation, *Yaquina Estuary (Ore.), *Cluster analysis, Principal components analysis, Species diversity, *Multivariate analysis.

In August 1968 and February 1969, 15,445 diatom cells were collected from several sites in the Yaquina Estuary, identified and counted, and the data subjected to cluster analysis and principal components analysis. The purpose of the analysis was to examine the degree to which the diatom flora can be partitioned into discrete associations and to relate their composition to selected physical properties of the estuary. Samples were collected with PVC sampling devices attached to pilings. The results show that the species composition of the diatom flora during the winter was more closely associated with salinity and intertidal exposure than in the summer. A cluster of freshwater taxa obtained for the winter data was the most conspicuous diatom association defined by the cluster analysis. Although taxa within a cluster had more similar distributions than taxa from different clusters, there was considerable variation in the distributions of marine and brackish water taxa within a multispecies cluster. B. T. Hargrave.
Journal of the Fisheries Research Board of Canada, Vol 30, No 9, p 1317-1326, September 1973. 3 fig, 3 tab, 48 ref.

Descriptors: *Primary productivity, *Oxygen demand, *Sediments, *Carbon, *Photosynthesis, *Regression analysis, Data processing, Correlation analysis.
Identifiers: Organic carbon.

Undisturbed sediment cores (10-15 cm long) were taken with 300-500 ml overlying water using a Kajak corer for measurement of oxygen uptake and organic carbon to attempt to relate to two values. Multiple linear regression was used to evaluate the effects of total water column depth, mixed-layer depth, temperature at sediment surface, and carbon supply (primary production) on oxygen uptake by sediment cores from various lakes, bays, and coastal areas for which mean annual estimates are available. Sediment core oxygen uptake was found to be correlated positively with primary production and inversely with mixed-layer depth in various aquatic ecosystems for which the input of organic matter is predominantly autochthonous. In these areas organic carbon sedimentation is proportional to the ratio of carbon input: mixed-layer depth which reflects increased mineralization with increased depth of mixing. The ratio of primary production: mixed-layer depth is compared with the carbon equivalent of exygen uptake by sediments to derive an expression which is used to calculate the amount of photosynthetically fixed carbon respired at the sediment surface. PHYTOPLANKTON NUTRIENTS AND FLUSHING OF INLETS ON THE COAST OF NOVA SCOTIA,
Bedford Inst., Datrmouth (Nova Scotia). Marine Ecology Lab.
T. Platt, A. Prakash, and B. Irwin.
Nat Can (Que). Vol 99, No 4, p 253-261. 1972. Illus.
Identifiers: *Canada (Nova Scotia coast), Coasts, *Flushing, Inlets, *Nutrients, *Phytoplankton.

In 2 inlets 35 km apart on the Atlantic coast of Nova Scotia, Canada, fluctuations of phytoplankton nutrients during 1967 were strikingly similar. It is concluded that, except during the spring bloom, nutrient levels in the inlets on this coast are controlled more by water movements on the continental shelf than by biological processes within the inlets. Flushing of the inlets is more extensive in late summer and autumn. Water replacement occurs every year on this coast and the flushing takes place on a broad front rather than affecting isolated inlets.--Copyright (c) 1973, Biological Abstracts, Inc.

APPLICATION OF MATHEMATICAL MODELLING TO WATER QUALITY MANAGEMENT,
EASAMS, Camberley (England).
J. G. Mellor, and N. C. Oxley.
Effluent and Water Treatment Journal, Vol 13, No 8, p 47-479, August 1973. 2 fig, 4 tab, 2 ref.

Descriptors: *Water quality, *Monitoring, *Management, River systems, *Pollution abatement, *Mathematical models, Systems analysis, Decision making, Biochemical oxygen demand, Dissolved oxygen, Water resources.

Identifiers: *River Itchen (Hampshire-England), *Ammoniacal nitrogen decay.

A quality model is the framework upon which more comprehensive mathematical models of water quality control systems can be developed where the economics of alternative water quality improvement measures are considered. It is essential that all water quality management decisions be based on an accurate description of the quality system itself, and the river basin must be treated as one interrelated system. Needed is a precise, descriptive, predictive model for monitoring river water quality, enabling quick and rational water quality decisions; the model should be based on existing information and consider all constituents (not only DO and BOD) which may have undesirable or toxic effects at even very low levels of concentration. Recognizing the uniqueness of cause and effect relationships in any system, the model can be developed at a simple level incorporating those processes directly affecting water quality. Such a model can be developed from the statistical treatment of water quality data collected on a routine basis by any river authority. This technique is described in its application to the state of ammoniacal nitrogen in the River Itchen in Hampshire, England. (Bell-Cornell)

Descriptors: *Hydrolysis, *Chemical degradation, *Spectroscopy, Carbamate pesticides, Pollutant identification, Synthesis, Methodology, Solubility, Fungicides, Chemical reactions, Isolation, Pollutants.
Identifiers: *Degradation products, *Benomyl, Methyl 2-benzimidazole carbamate, *Spectral analysis, 1 2 3 4-Tetrahydro-3-butyl-2 4-dioxo-s-triazino (a)benzimidazole, 1- (2-Benzimidazolyl)-3-n-butyl urea, Fate of pollutants, Chemical structure, Thin layer chromatography, Methyl 1- (butylcarbamoyl)-2-benzimidazole carbamate, Infrared spectra, Infrared spectrophotometry, MBC, NMR spectra, Mass spectra, STB, BBU, Characterization.

The chemical fate of benomyl (methyl 1- (butylcarbamoyl)-2-benzimidazolecarbamate) fungicide in practical use situations was investigated. Conversion products were isolate, purified, and subsequently subjected to a number of spectroscopic techniques appropriate for structural characterization. Synthesis routes for obtaining otherwise unavailable reference standards of hydrolysis products are described and a degradative pathway of benomyl to these conversion products is proposed. MECHANISM OF NTA DEGRADATION BY A BACTERIAL MUTANT,
Department of the Environment, Burlington (Ontario). Centre for Inland Waters.
P. T. S. Wong, D. Liu, and D. J. McGirr.
Water Research, Vol 7, No 9, p 1367-1374, September 1973. 3 fig, 2 tab, 22 ref.

Descriptors: *Nitrilotriacetic acid, *Microbial degradation, *Kinetics, Bacteria, Cultures, Bioassay, Radioactivity techniques, Absorption.
Identifiers: *Transport, *Metabolites, *Bioaccumulation, Scintillation counting, Sample preparation, Exchange diffusion, Glycine, Acetic acid.

A bacterial mutant which was found previously to degrade NTA was used to investigate the mechanism and conditions of NTA degradation. Energy requirements for NTA transport were investigated by measuring the rate and level of uptake of C-14-labeled NTA by untreated bacteria and bacteria treated with sodium azide or potassium cyanide to abolish energy production in the cells. The results suggest that energy is involved in NTA transport and the bacteria can concentrate NTA from environments in which it may be otherwise too dilute for growth. An attempt was made to identify metabolic products of NTA degradation by exchange diffusion which involved labeling cells with C-14 NTA; exposing them to unlabeled NTA, IDA, succinate, citrate, glycine, and acetate; and measuring the change in C-14 NTA content of the cells. The results suggest that glycine and acetate may be intermediates of NTA degradation, and the other compounds are either transient intermediates or not produced. The mutant was able to degrade NTA from an initial concentration of 290,000 micrograms/l to less than 50 micrograms/l in 45 min, representing a degradation rate of 486 micrograms/hour/mg dry weight of cells. This result was substantiated by kinetic studies which gave a Km of 82 micrograms/l and a V sub max of 370 micrograms/hour/mg dry weight cells. Maximal degradation occurred at 50 C. The ability of the mutant to metabolize NTA resides mainly in the cell membrane fraction. (Little-Battelle)

SR-87/SR-86 RATIOS AND TOTAL STRONTIUM CONCENTRATIONS IN SURFACE WATERS OF THE SCIOTO RIVER DRAINAGE BASIN, OHIO,
Miami Univ., Oxford, Ohio. Dept. of Geology.
J. B. Curtis, Jr., and A. M. Stueber.
The Ohio Journal of Science, Vol 73, No 3, p 166-175, May 1973. 4 fig, 2 tab, 12 ref.

Descriptors: *Water analysis, *Strontium, *Tracers, *Monitoring, Mass spectrometry, Water pollution sources, Sampling, Separation techniques, Radioisotopes, Strontium radioisotopes, *Ohio.
Identifiers: *Scioto River (Ohio), Sr-86, Sr-87, Background levels, Atomic absorption spectrophotometry, Ion exchange chromatography.

Water samples were collected from 16 locations on the Scioto River to determine whether variations exist in Sr-87/Sr-86 ratios, to evaluate the effects of rock types on the ratios, and to evaluate the effect of input from tributaries on isotopic composition. Samples were collected from the Scioto River above and below tributary confluences and from tributaries above their confluence with the Scioto. Polyethylene containers were used to store the samples until determination of Sr by atomic absorption spectrophotometry. Sr was separated from water by cation-exchange chromatography, and isotopic compositions were determined on a solid-source mass spectrometer. Total Sr concentrations were quite variable and, in the northern portion of the basin, they were unusually high compared to most North American rivers, probably due to to weathering of celestite in the Silurian carbonate bedrock and overlying glacial till. The Sr-87/Sr-86 ratios of the Scioto River throughout its length are constant at about 0.7084, whereas tributaries have a range of values from about 0.708 to about 0.715. The effect of bedrock on the strontium-isotopic compositions of these waters is apparently superseded by the effect of readily soluble carbonate and celestite in the glacial till. Based on this survey, application of the Sr-87/Sr-86 ratio as a tracer of surface-water provenance in Ohio should be restricted to unglaciated terrain. (Little-Battelle)

BENTHIC MACROINVERTEBRATES AS INDEXES OF WATER QUALITY IN WHETSTONE CREEK, MORROW COUNTY, OHIO (SCIOTO RIVER BASIN),
Akron Univ., Ohio.
J. H. Olive, and C. A. Dambach.
The Ohio Journal of Science, Vol 73, No 3, p 129-149, May 1973. 4 fig, 1 tab, 58 ref.

Descriptors: *Benthic fauna, *Bioindicators, *Water quality, *Systematics, Animal groupings, Water pollution, Water pollution sources, Crustaceans, Waste water (Pollution), Aquatic insects, Water properties, Biological properties, Bottom sampling, Water analysis, Annelids, Mollusks, *Ohio, Invertebrates, Brines, Storm runoff, Domestic wastes, Sewage effluents, Sewage treatment, Treatment facilities, Septic tanks, Water sampling.
Identifiers: *Macroinvertebrates, *Whetstone Creek (Ohio), Species diversity index, Species diversity, Community-ordination technique, Flatworms, Shannon-Wiener diversity index, Leeches, Chironomids, Sampling techniques, Turbellaria, Scuds, Black flies, Bugs, Pelecypoda, Pouch snails, Alderflies, Water boatmen, Small water striders, Predaceous diving beetles, Whirling beetles, Crawling water beetles, Water scavenger beetles, Anthomyiid flies, Long-legged flies, Dance flies, Shore flies, Biting midges, Flower flies, Horse flies.

During the summer of 1966, Whetstone Creek, a tributary of the Olentangy River in central Ohio, received (1) domestic wastes from a secondary sewage-treatment plant at Mt. Gilead, (2) septic-tank drainage near Cardington, (3) brines from oil-field operations between Mt. Gilead and Cardington, and (4) stormwater runoff from agricultural lands. Dissolved-oxygen levels as low as 4.3 ppm and total-phosphate concentrations as high as 4.2 ppm were noted 1 km below Mt. Gilead. Chlorides ranging from 105-276 ppm were recorded in the stream between Mt. Gilead and the Delaware Reservoir. Seventy-nine taxa of benthic macroinvertebrates were collected from six sampling locations. The largest variety of organisms (35-39 respectively) was taken from a relatively unpolluted headwater area and from a site 1 km below the Mt. Gilead wastewater-treatment facility. Average Shannon-Wiener diversity indexes exceeded 3.0 at the uppermost sampling station and at two locations 7-15 km below Mt. Gilead. Values less than 2.0 were recorded 9 km above Mt. Gilead and at the lowermost station near the Delaware Reservoir. Low Shannon-Wiener diversity indexes for the latter two areas appear to be related to low diversity of habitat and temporal effects, rather than to poor water quality. Pollution-sensitive and facultative organisms, including certain chironomids, stoneflies, mayflies, caddisflies, and gill-bearing snails, accounted for 98 percent of the benthic organisms collected from upstream stations. Pollution-tolerant tubificids, leeches, certain chironomids, and pulmonate snails increased in abundance and percentage composition at all stations below Mt. Gilead, accounting for as much as 50-60 percent of the benthic community at the lowermost station. (Holoman-Battelle)

PARTICULATE METALS IN WATERS OF SORFJORD WEST NORWAY,
Edinburgh Univ. (Scotland). Grant Inst. of Geology.
J. M. Skei, N. B. Price, and S. E. Calvert.
AMBIO, Vol 11, No 4, p 122-124, 1973. 3 fig, 1 tab, 11 ref.

Descriptors: *Distribution patterns, *Path of pollutants, Suspended solids, Dispersion, *Copper, *Lead, *Zinc, *X-ray analysis, Water pollution sources, Water pollution effects, Heavy metals, Industrial wastes, Water analysis, Estuaries, Sea water, Runoff, Separation techniques, Sampling.
Identifiers: *Norway (Sorfjord), Background levels, Particulate matter, Sample preparation.

Water samples were collected in PVC/nylon water bottles from various depths at eight stations on the Sorfjord, West Norway, filtered through membrane filters, and the Cu, Zn, Pb content of suspended matter determined by x-ray emission analysis. The purpose of the study was to trace the dispersal pattern of metal-containing waste discharged by industrial plants near the town of Odda. The concentrations of the metals in the fjord, especially Zn and Pb, are up to two or three times higher than in natural seawater. Metals have been detected in both surface and subsurface waters 40 km away from the area of metal discharge. Considering the hydrography and the relationship of Zn and Pb in different waters, it seems possible that two distinct bodies of contaminated water outflow from the fjord. However, during periods of high river runoff, the dispersal of metals in subsurface waters will be different, and it is predicted that at such times pollution of the inner fjord will be greatest. BOTTOM FAUNA AS AN INDICATOR OF WATER QUALITY IN SWEDEN'S LARGE LAKES (LAKES MALAREN, VATTERN AND VANERN),
Uppsala Univ. (Sweden). Inst. of Zoology.
T. Wiederholm.
AMBIO, Vol 11, No 4, p 107-110, 1973. 2 fig, 1 tab, 10 ref.

Descriptors: *Benthic fauna, *Bioindicators, *Midges, *Trophic level, Invertebrates, Tubificids, Aquatic insects, Larvae, Lakes, Aquatic animals, Water pollution, Diptera, Annelids, Oligochaetes, Oligotrophy, Eutrophication, Larval growth stage.
Identifiers: Lake Malaren, Lake Vattern, Lake Vanern, *Sweden, Sensitivity, Chironomids, Microspectra spp, Heterotrissocladius subpilosus, Stictochironomus rosenscholdii, Sergentia coracina, Chironomus anthracinus, Chironomus plumosus, Procladius spp, Chaoborus flavicans, Macroinvertebrates.

During recent years, comprehensive chemical and biological investigations of the large lakes of Sweden have been conducted. The studies were initiated in 1964 as a consequence of the alarming deterioration of the water quality in Lake Malaren. The biological section of the Lake Malaren Research project, later renamed the Limnological Survey of the National Swedish Environment Protection Board (NLU), has undertaken studies of phytoplankton, primary production, zooplankton, bacteria, bottom fauna, macrophytes and fish. The composition of the bottom fauna has proved to give valuable information about the water quality. The use of certain midge larvae as indicator organisms is demonstrated with examples from the lakes mentioned above. It is concluded that comprehensive information on the trophic state and the degree of pollution in a water may be obtained through analysis of a few, ecologically significant species. (Holoman-Battelle)

DEGRADATIVE VERSATILITY OF CORYNEBACTERIUM PSEUDODIPHTHERITICUM NCIB 10803 WHICH USES AMIDES AS CARBON SOURCE,
Nottingham Univ. (England). Dept. of Pharmacy.
D. J. W. Grant.
Antonie van Leeuwenhoek, Vol 39, No 2, p 273-279, 1973. 1 tab, 12 ref.

Descriptors: *Microbial degradation, *Organic compounds, *Aerobic conditions, Metabolism, Amino acids, Carbohydrates, Biodegration, Ureas, Cellulose, Hexadecanol, Phenols, Aromatic compounds, Organic acids, Biological properties, Aerobic bacteria.
Identifiers: *Corynebacterium pseudodiphtheriticum, *Bacterial physiology, *Amides, *Carbon sources, Substrate utilization, Aromatic hydrocarbons, Organonitrogen compounds, Fate of pollutants, Biochemical characteristics, Nitriles, Fatty acids, Paraffins, alpha omega-Alkandioic acids, Benzenoid compounds, Nutrient sources, Aliphatic hydrocarbons, Culture media, Polysaccharides, Disaccharides, Monosaccharides, Heterotrophic bacteria, Catechol, Alanine, Arginine, Asparagine, Glutamates, Glutamine, Histidine, Leucine.

Corynebacterium pseudodiphtheriticum NCIB 10803 was tested for aerobic growth with a large number of C sources in mineral salts medium with NH4 (plus) as N source. Growth was supported by some amino acids, some sugars, compounds of the Krebs' cycle, the higher normal paraffins, normal aliphatic alchols, fatty acids, the amides and nitriles of fatty acids, alpha omega-alkandioic acids and some simple benzenoid compounds. Possible metabolic pathways are discussed. Degradation of catechol proceeded by ortho-fission via cis-cis-muconate. (Holoman-Battelle)

Identifiers: *Brevibacterium, *Flavobacterium, Mineralization, *Crude oil, Synergistic effects, *Fatty acids, Petroleum hydrocarbons, Substrate utilization, Metabolites, Caprylic acid, Lauric acid, Myristic acid, Palmitic acid, Stearic acid, Degradation products, Flame ionization gas chromatography, Gas liquid chromatography, Sweden crude oil, Oxygen consumption, Octanoic acid, Dodecanoic acid, Tetradecanoic acid, Hexadecanoic acid, Octadecanoic acid, n-Paraffins, Thin layer chromatography, Fate of pollutants.

The accumulation of toxic intermediary metabolites, possibly fatty acids, has been investigated as the probable cause for the cessation of the biodegradation of crude oil over a period of time. Dialysis cultures of Brevibacterium and Flavobacterium which contained Sweden crude oil were used in the study. The residual oil was extracted at the end of each experiment and its amount determined by gas chromatography. Artificial seawater media plus Sweden crude oil or a simplified model petroleum were inoculated with one of the bacteria and the cultures incubated for 8 days at 28 C on a rotary shaker at 200 rev/min. Extracts of the media were analyzed by thin-layer and flame ionization gas-liquid chromatography to determine the fatty acid metabolites. Biodegradation and mineralization of crude oil in the presence of fatty acids were measured. The extent of biodegradation of petroleum by the two marine bacterial isolates was found to increase when the organisms were grown in dialysis culture. This suggests that inhibitory products are formed during growth on petroleum. Fatty acids were produced by both organisms and were present in the dialyzate (dialyzable material). Fatty acids and crude oil were found to have a synergistic toxic effect. Short-chain acids were more toxic than longer-chain ones. (Holoman-Battelle)

Microscopic examination of bulking activated sludge samples showed the presence of a variety of filamentous microorganisms, some of which have not yet been described in the literature. A method was developed to obtain pure cultures of these threaded bacteria. To date, five clearly different groups of filamentous bacteria may be distinguished by the determination of a few morphological and physiological characteristics of the isolates. A variety of sheathed bacteria are included in Group I. Group II includes non-motile, gram-negative, orange- or yellow-pigmented filamentous bacteria. These microorganisms are thought to be related to some species of the genus

Flavobacterium. The gram-negative, threaded bacteria of Group III show a more or less distinct gliding movement and form red colonies on rich agar media. These bacteria may apparently be related to species described in the genera Microscilla and Flexibacter. The filamentous bacteria of Group IV structually resembled some Cyanophyceae, but do not contain photosynthetic pigments. They are gram-positive and non-motile. A number of unknown, non-motile bacteria which stain gram-positive with a variable number of gram-negative autolyzed cells in the filaments, are assigned to Group V. The properties of the isolated bacteria are described briefly and their occurrence in bulking activated sludge is discussed. (Holoman-Battelle)

ISOTOPE FRACTIONATION OF N-15 AND N-14 IN MICROBIOLOGICAL NITROGEN TRANSFORMATIONS: A THEORETICAL MODEL,
California Univ., Riverside.
D. D. Focht.
Journal of Environmental Quality, Vol 2, No 2, p 247-252, April-June, 1973. 2 fig, 1 tab, 29 ref.

Descriptors: *Nitrogen, *Model studies, *Isotope fractionation, *Microbial degradation, Ammonification, Nitrification, Microorganisms, Metabolism, Kinetics, Nutrients, Chemical reactions, Regression analysis, Theoretical analysis, Nitrates.
Identifiers: *Biotransformation, N-14, N-15, Fate of pollutants, Data interpretation, Isotope discrimination, Isotope effect, Nitrogen radioisotopes, Enrichment, Substrate utilization.

The kinetics for first-order multisequence reactions are derived for microbial fractionation of N-14 and N-15 isotopes. The isotope effect accounts for unreacted substrate becoming progressively enriched in the heavier isotope due to preferential utilization of the lighter isotope by microorganisms. Consequently, during denitrification nitrate becomes enriched in N-15 as its concentration diminishes. This inverse proportional relationship is expressed as a hyperbolic function, y equals ax to the minus b power. Similar curves are derived for nitrate originating from ammonification and/or nitrification. Regression coefficients for a straight line approximation are better than 0.98, but not as good as the actual coefficients for the derived hyperbolic equations. A negative regression 'line' for nitrate occurs for all denitrification reactions during isotope discrimination. Nitrate originating from caesin, ammonium, and nitrate are respectively less enriched in N-15 or equal nitrate concentration due to ammonium and nitrate being initially enriched in N-14 during ammonification and nitrification, respectively. (Holoman-Battelle)

RHODOPSEUDOMONAS SULFIDOPHILA, NOV. SPEC., A NEW SPECIES OF THE PURPLE NONSULFUR BACTERIA,
Groningen Rijksuniversiteit (Netherlands). Dept. of Microbiology.
T. A. Hansen, and H. Veldkamp.
Archiv fur Mikrobiologie, Vol 92, No 1, p 45-58, July 10, 1973. 3 fig, 3 tab, 26 ref.

Descriptors: *Photosynthetic bacteria, *Pollutant identification, *Isolation, *Nutrient requirements, *Cytological studies, Pigments, Biological properties, Speciation, Intertidal areas, Mud flats, Anaerobic bacteria, Hydrogen sulfide, Organic compounds, Marine bacteria, Vitamins, Limiting factors, Electron microscopy, Systematics.
Identifiers: Biochemical characteristics, *Rhodopseudomonas sulfidophila, Substrate utilization, Bacterial physiology, Cell morphology, Culture media, Bacteriochlorophyll a, Absorption spectra, Rhodopseudomonas capsulata, Rhodopseudomonas palustris, Chromatium vinosum, Ectothiorhodospira.

From marine mud flats a new type of photosynthetic purple bacterium was isolated. This type is described as a new species of the Rhodospirillaceae and is named Rhodopseudomonas sulfidophila. The cells are rod-shaped, 0.6 to 0.9 micron wide and 0.9 to 2.0 microns long, and motile by means of polar flagella. Cell division occurs by binary fission. The photosynthetic membrane system is of the vesicular type. The pigments consist of bacteriochlorophyll a and of carotenoids, most probably of the speroidene group. A wide range of organic compounds can be utilized anaerobically in the light. Growth on organic compounds aerobically in the dark is also possible. Niacin, thiamin, biotin and p-aminobenzoic acid are required as growth factors. The new species needs 2.5 percent (w/v) sodium chloride for optimal growth. All strains show excellent photolithotrophic growth on hydrogen, hydrogen sulfide, and theiosulfate. They show a remarkably high sulfide tolerance. Sulfide and thiosulfate are oxidized to sulfate without an intermediate accumulation of elemental sulfur. The new species seems to be one of the most versatile types of photosynthetic bacteria isolated thus far. (Holoman-Battelle)

2,4-DICHLOROPHENOXYACETATE METABOLISM BY ARTHROBACTER SP.: ACCUMULATION OF A CHLOROBUTENOLIDE,
Cornell Univ., Ithaca, N.Y. Dept. of Agronomy.
K. W. Sharpee, J. M. Duxbury, and M. Alexander.
Applied Microbiology, Vol 26, No 3, p 445-447, September 1973. 1 fig, 5 ref.

Descriptors: *2 4-D, *Metabolism, *Microbial degradation, *Assay, Enzymes, Herbicides, Chlorinated hydrocarbon pesticides, Cultures, Bacteria, Pollutant identification, Chromatography, Aerobic bacteria.
Identifiers: Fate of pollutants, *Arthrobacter, 2-Chloro-4-carboxymethylene but-2-enolide, Delactonizing enzymes, Sample preparation, Heterotrophic bacteria, Bioaccumulation, *Chlorobutenolides, Lactonizing enzymes, cis cis-2 4-Dichloromuconate, Degradation products, Metabolites.

A study was conducted to determine whether cis,cis-2,4-dichloromuconate is an intermediate in 2,4-D metabolism by Arthrobacter sp. Cultures of the microbe were grown at 25C in a 0.2 percent 2,4-D mineral salts medium. The cells were collected by centrifugation and washed three times in a cold buffer, suspended in the buffer containing glass beads and deoxyribonuclease, and disrupted with a sonic oscillator. The preparation was centrifuged at 55,000 g for 1 hr to yield the crude extract. The cis,cis-2,4-dichloromuconate-lactonizing enzyme was assayed by measuring the change in absorbance at 268 nm. This enzyme preparation coverted cis,cis-2,4-dichloromuconate to chloromaleylacetate. The enzyme lactonizing the dichloromuconate to yield 2-chloro-4-carboxymethylene but-2-enolide was separated from the butenolide-delactonizing enzyme. (Holoman-Battelle)

BIODEGRADATION OF O-BENZYL--P-CHLOROPHENOL,
Monsanto Co., St. Louis, Mo.
R. D. Swisher, and W. E. Gledhill.
Applied Microbiology, Vol 26, No 3, p 394-398, September 1973. 5 fig, 1 tab, 12 ref.

Descriptors: *Biodegradation, *Sewage, *Activated sludge, *Bactericides, Microbial degradation, Phenols, Water, Rivers, Colorimetry, Methodology, Phenolic pesticides, Pollutants, Linear alkylate sulfonates, Organic compounds.
Identifiers: Natural waters, *Stanophen 1, Carbon dioxide evolution, o-Benzyl-p-chlorophenol, Degradation products, Dissolved organic carbon, Trisodium citrate, Chemical interference.

The extent of biodegradation of o-benzyl-p-chlorophenol, marketed as a germicide under the name Santophen 1 (Monsanto Co.), in river water, sewage, and activated sludge was determined. Biodegradation was assessed by use of a clorimetric procedure for phenolic materials, carbon analysis, and CO2 evolution. In unacclimated river water, 0.1 mg of Santophen 1 per liter was degraded within 6 days. In sewage 0.5 and 1.0 mg/liter levels of Santophen 1 were degraded in 1 day. Acclimated activated sludge achieve 80 percent biodegradation of 1.0 mg/liter Santophen 1 in 8 h and 100 percent in 24 h. When effluent from a semicontinuous activated sludge unit, acclimated to 20 mg of Santophen 1 per liter was used as the inoculum for the CO2 evolution procedure, 60 percent of the total theoretical CO2 was evolved from Santophen 1. Based on the results, indicating santophen 1 to be readily biodegraded in at least four biological systems, the continued use of present levels of Santophen 1 should present no significant environmental problems. (Holoman-Battelle)

Descriptors: *Microbial degradation, *Metabolism, Mercury, Isolation, Cultures, *Biodegradation, Heavy metals, Pseudomonas, Estuarine environment, Radioactivity techniques, Fungicides, Metal organic pesticides, Resistance, *Bacteria.
Identifiers: *Phenylmercuric acetate, Degradation products, Biotransformation, *Fate of pollutants, Mercury-resistant bacteria, Mercurials (Pesticides), Benzene, Selective media, Vibrio, Arthrobacter, Citrobacter, Enterobacter, Flavobacterium, Organometallics, Slimicides, Flameless atomic absorption spectrophotometry, Vapor phase chromatography, Metabolites.

The metabolism of phenylmercuric acetate (PMA) by selected strains of bacteria was investigated in order to gain an understanding of bacterial mercury resistance, as well as to assess the role of bacteria in transformations of mercury in the natural environment. Mercury-resistant bacteria were isolated from water and sediment on a solid selective medium containing PMA and HgC12. Out of nearly 900 cultures, a group of nine representative cultures was selected and screened for the degradative ability using radioisotope and bioreactor experiments. By means of a closed system incorporating a flameless atomic absorption spectrophotometer and a vapor phase chromatograph, it was demonstrated that elemental mercury vapor and benzene were products of phenylmercuric acetate degradation. OCCURRENCE AND CUMULATION OF MICROCOMPONENTS IN BOTTOM SEDIMENTS OF DAM RESERVOIRS OF SOUTHERN POLAND,
Polish Academy of Sciences, Krakow. Zaklad Biologii Wod.
K. Pasternak, and J. Glinski.
Acta Hydrobiol, Vol 14, No 3, p 225-255, 1972, Illus.
Identifiers: *Bottom sediments, Cumulation, Dams, Micro components, *Poland, Pollution, Reservoirs, *Sediments.

The total amount of microcomponents in sediments depends above all on their grain composition. An exception here are sediments of reservoirs supplied with strongly polluted water. The quantitative differentiation of microcomponents within each granulometric group of sediments, as well as between single samples from various zones of the reservoirs, shows a tendency to a relationship with the quantity and quality of clayey and organic matter in the sediment. The presence in the substratum of the catchment basin of the reservoirs of rock layers containing Zn and Pb minerals, or dust coming from the Zn and Pb industries, has some influence on the increase in the amount of these components in the sediments. The main sources of microcomponents in the sediments of pure reservoirs are suspensions brought in by the water of the river, and remains of organisms developing in the reservoirs. The degree of cumulation of microcomponents in the sediments of dam reservoirs is much higher than in land soils and the soils of fish-ponds. Vm accumulates in the sediments in particularly large amounts. The degree of concentration of some microcomponents in the sediments of polluted reservoirs corresponds in general to the quantity and quality of pollution.--Copyright 1973, Biological Abstracts, Inc.

RELATIONSHIPS OF INDICATOR AND PATHOGENIC BACTERIA IN STREAM WATERS,
Detroit Univ., Mich.
R. J. Smith, R. M. Twedt, and L. K. Flanigan.
Journal Water Pollution Control Federation, Vol 45, No 8, p 1736-1745, August 1973. 7 fig, 5 tab, 14 ref.

Descriptors: *Pathogenic bacteria, *Cultures, *Bioindicators, *Salmonella, Density, Water pollution effects, Coliforms, Streptococcus, Separation techniques, Seasonal, E. coli, Pollutant identification, Viability.
Identifiers: *Fecal coliforms, *Fecal streptococci, *Survival, Culture media, Enrichment, Saline River, Huron River, MPN, Membrane filter, Validity.

The Saline and Huron Rivers (Michigan) were bacteriologically examined from August 1969 through July 1970 to determine whether a stable relationship exists between indicator organisms and Salmonella organisms. The analysis determined density relationships of Salmonella, coliform, and streptococcus organisms and survival of Salmonella in natural environments. Coliforms and fecal streptococci were determined by membrane filter techniques. Salmonellae were determined by MPN techniques using dulcitol selenite enrichment and XLD agar. Survival studies were conducted by suspending cellulose dialysis tubing containing organisms in one of the rivers for four days. Viability was determined daily. Salmonellae were isolated when the fecal coliform concentration was as low as 52/100 ml in the Saline River and 4/100 ml in the Huron. The fecal coliform concentration was greater than 200/100 ml in two-thirds of the samples from the Saline and in one-third of the samples from the Huron that were positive for salmonellae. Samples from both rivers exhibited seasonal trends in the distribution of feal coliform to fecal streptococcus concentrations. The relationship of Salmonella survival resembled that of fecal coliforms. (Little-Battelle)

5C. Effects of Pollution

BIOCHEMISTRY OF ESTUARINE ECOSYSTEM WITH EMPHASIS ON HEAVY METALS AND SHELLFISH,
Maryland Univ., College Park. Dept. of Chemistry.
M. Keeney.
Available from the National Technical Information Service as PB-225 121/3, $2.75 in paper copy, $1.45 in microfiche. Maryland Water Resources Research Center, College Park, Technical Report No. 15, March 1973. 7 p, 8 ref. OWRR B-012-MD (1).

Descriptors: Heavy metals, Shellfish, *Oysters, *Sea nettles, *Copper, Water pollution effects, Biochemistry, *Chesapeake Bay, Estuarine environment, Ecosystems, *Enzymes.
Identifiers: Glutathione, Proline.

The main purpose was to obtain basic information on the biochemistry of estuarine animals in order to understand the mechanism and effects of heavy metal uptake on these animals. An M.S. thesis has been completed on factors influencing the uptake of copper by oysters under controlled laboratory environments. An abstract of the thesis (The Accumulation of Copper by the American Oyster (Crassostrea virginica) Gmelin, by J. W. Warner, 1972) is included as part of this report. A paper on the effect of glutathione, proline, and shrimp extract on the gastric fluid of the Chesapeake sea nettle has been accepted for publication in Chesapeake Science. A copy of this manuscript (Some Observations on the Effect of Glutathione Proline, and Shrimp Extract on the Gastric Fluid of the Chesapeake Bay Sea Nettle, Chrysaora quinquecirrha (Desor), by B. C. Stewart, S. Lakshmanan, and H. J. Linder (1973)) is included in this report. A Ph.D. thesis is in preparation on the properties of the enzymes of gluconeogenesis in oysters. The results of this part of the work will be reported under the extension of this project.
W74-01108

THE DISTRIBUTION, COMPOSITION AND BIOMASS OF THE CRUSTACEAN ZOOPLANKTON POPULATION IN WESTERN LAKE SUPERIOR,
Wright State Univ., Dayton, Ohio. Dept. of Biological Sciences.
J. B. Conway, O. R. Ruschmeyer, T. A. Olson, and T. O. Odlaug.
Available from the National Technical Information Service as PB-225 137/9, $4.75 in paper copy, $1.45 in microfiche. University of Minnesota, Minneapolis. Water Resources Research Center, Bulletin 63, August 1973. 157 p, 44 fig, 26 tab, 54 ref. OWRR A-022-MINN (3).

Descriptors: Zooplankton, *Lake Superior, *Productivity, *Biomass, *Crustaceans, Cladocerans, Copepods, Phytoplankton, Lakes, Water pollution effects.
Identifiers: *Alona guttata Sars, *Holopedium gibberum Zaddach, *Zooplankton patchiness.

Although data were collected for two years, 1970 and 1971, the major portion of this research was carried out the second year. This research took place in western Lake Superior and most of the data were collected at two stations, Larsmont and Stony Point, which were twenty miles northeast of Duluth. The major purposes were to study the productivity and the vertical, seasonal and horizontal distribution of the crustacean zooplankton population in western Lake Superior. A limited study of the biology of the copepod, Limnocalanus macrurus, was also conducted. Productivity differences were found between the various sites and stations. These differences point to the lack of homogeneity in the horizontal distribution of the crustacean zooplankton population and support the phenomenon of 'zooplankton patchiness'. Productivity levels at the Little Marais and Sugar Loaf Cove area were from one-third to two-thirds of those at Larsmont and Stony Point. The Larsmont station was slightly more productive than Stony Point. The Stony Point inshore site was slightly more productive than the offshore site. The period of maximum productivity occurred at the Larsmont inshore site and at both Stony Point sites in September. Maximum productivity was recorded at the Larsmont offshore site in July. EFFECTS OF PROTOZOA ON THE FATE OF PARTICULATE CARBON,
Environmental Protection Agency, Athens, Ga. Southeast Environmental Research Lab.
H. W. Holm, and F. A. Smith.
Copy available from GPO Sup Doc as EP1.23:660-73-007, $0.70; microfiche from NTIS as PB-225 143/7, $1.45. Environmental Protection Agency, Ecological Research Series Report EPA-660/3-73-007, August 1973. 36 p, 10 fig, 8 tab, 24 ref. EPA Project 16050 GJC.

Descriptors: *Protozoa, *Aquatic microbiology, *Aquatic bacteria, *Carbon cycle, *Cycling nutrients, Carbon dioxide, Aquatic microorganisms, Food chain, Secondary productivity, Growth rates, Predation.
Identifiers: *Carbon transformation, Carbon utilization, Population dynamics, Organic carbon, Citrobacter, Tetrahymena pyriformis.

Laboratory studies were designed to define the role of protozoa in the fate of particulate (bacteria) organic carbon. Specific objectives were (1) to measure the effects of selected environmental parameters on protozoan growth rates, (2) to mea-

sure organic carbon in bacteria and protozoa, and (3) to quantitate carbon transformations in predator-prey experimental systems. A growth system containing 2 x 10 to the 8th power Citrobacter/ml in 1 x 0.001 M phosphate of pH 7.5, incubated at 25 deg C at a shaking rate of 100 rpm, was found to be an optimal environment for protozoan growth. The nutrient bacterium, Citrobacter, contained 8.6 x 10 to the minus 11th power mg C/cell, and Tetrahymena pyriformis contained 1.1 x 0.000001 mg C/cell. T. pyriformis altered the amount and form of carbon in the system while growing on bacteria. Of the total organic carbon present at the initiation of the predator-prey experiment (93 mg), 93% was in the bacterial fraction. Within 96 hours, 38% of the carbon was released as CO2; 5% was present as inorganic carbon in the water and the remainder (57%) was present as organic carbon. The organic carbon in the bacterial fraction decreased from 86 to 2 mg within 96 hours, while the carbon in the protozoan biomass increased from 1 to 40 mg. In the bacterial control, 11% of the organic carbon was released as CO2 within 96 hours while negligible amounts of inorganic carbon remained in the water. (EPA)

A DISEASED TROUT: MICROBIOLOGICAL STUDY OF ITS PRINCIPAL ORGANS AND ITS ENVIRONMENT,
Lyon Univ. (France). Unite d'Enseignement et de Recherche Sciences Pharm.
R. Moreau, and J. Brisou.
Bull Mens Soc Linn Lyon, Vol 40, No 8, p 237-243, 1971.
Identifiers: Aeromonas-liquefaciens, *Bacteria, Citrobacter-freundii, Diseased fish, Empedobacter, Environment, Erwinia-cacticida, Erwinia-ichthyosmia, Escherichia-freundii, *France (Haute-Savoie), Innominatus, Microbiological studies, Organs, Phytobacterium, Phytobacterium-fabae, Phytobacterium-liquefaciens, Pseudomonas-fabae, *Trout (Diseased).

An etiological investigation of an infectious epizootic among rainbow trout at a hatchery in the Haute-Savoie department of France was conducted. There was considerable pollution of the culturing pools, attributable to a lack of maintenance. An infected trout (gyrating motion was symptomatic) was septicemic: Erwinia ichthyosmia was isolated from the blood and heart, E. cacticida from the liver, and Phytobacterium (± Aeromonas) liquefaciens from the gills, blood, heart and intestine. P. (Pseudomonas) fabae was present in all organs examined and Citrobacter (Escherichia) freundii was also present in the blood. The 2 bacteria found in most organs examined (P. fabae and P. liquefaciens) were not found in the pools. P. liquefaciens is especially pathogenic for fish and was probably introduced into the pools by young fish. The taxonomic validity of the genera Phytobacterium, Empedobacter, and Innominatus was defended. A number of bacteria were isolated in biotopes different from those normally reported for them.--Copyright 1973, Biological Abstracts, Inc.

THE BOTTOM MACROFAUNA OF THE OLIGOTROPHIC LAKE KONNEVESI, FINLAND,
Jyvaskyla Univ. (Finland). Dept. of Biology.
J. Sarkka.
Ann Zool Fenn. Vol 9, No 3, p 141-146. 1972. Illus.
Identifiers: Biomass, *Bottom fauna, *Chironomids, Fauna, *Finland (Lake Konnevesi), Gammaracanthus-Lacustris, Lakes, Mysis-Relicta, *Oligotrophic lakes, Pallasea-Quadrispinosa, Pisidium-Conventus, Pontoporeia-Affinis.

The abundance of the bottom fauna of this lake is lowest around the thermocline and in the greatest depths (>35m). The dominant species of the profundal zone is Pisidium conventus, and larvae of Chironomids dominate in the sublittoral. The abundances of the dominant species, the toal numbers of individuals and the biomasses were practically the same in the different parts of the lake. The glacial relects Gammaracanthus lacustris, Pallasea quadrispinosa, Pontoporeia affinis, and Mysis relicta are new records for lake Konnevesi. Diversity indices were calculated to compare the different sub-areas. The values of these indices and the factors affecting them are discussed. It is suggested that the low abundances observed for the greatest depths are chiefly due to the low O2 content in winter. It is difficult to classify this lake on the basis of its bottom fauna into any one of the conventional limnological lake types.--Copyright 1973, Biological Abstracts, Inc.

EFFECTS OF PARAQUAT ON INVERTEBRATES IN A CANTEBURY STREAM, NEW ZEALAND,
Ministry of Agriculture and Fisheries, Wellington (New Zealand). Fisheries Research Div.
A. M. R. Burnet.
New Zealand Journal of Marine and Freshwater Research, Vol 6, No 4, p 448-455, December 1972. 3 fig, 3 tab, 5 ref.

Descriptors: *Herbicdies, *Invertebrates, *Aquatic animals, *Water pollution effects, Aquatic insects, Mollusks, Crustaceans, Pesticides, Halogenated pesticides, Water sampling, Caddisflies, Amphipoda, Mayflies, Water beetles, Diptera.
Identifiers: *Paraquat, Macroinvertebrates, *New Zealand (Waimakariri River), Ostracods, Bugs, Seed shrimp, Scuds.

During 1966 and 1967, paraquat was applied on three occasions at 2 ppm for 30 min to control aquatic weeds in the South Branch experimental stream, a tributary of the lower Waimakariri River, Canterbury, South Island, New Zealand. Effects on the invertebrate fauna of the stream were studied before, during, and after the applications, by Surber and drift-net samples. After a heavy initial kill, the paraquat treatment reduced the number of amphipods caught in the drift fauna to 5 percent of the pre-treatment level, and there was a slight reduction in the numbers of hemipterans. The total numbers in Surber samples increased markedly a year after treatments ended, mainly due to increased numbers of trichopterans. (Holoman-Battelle)

PROTOZOA FROM BLUE LAKE, RAOUL ISLAND,
Massey Univ., Palmerston North (New Zealand). Dept. of Microbiology and Genetics.
T. J. Brown, and J. A. Peart.
New Zealand Journal of Marine and Freshwater Research, Vol 7, Nos 1/2, p 171-178, June 1973. 2 fig, 1 tab, 11 ref.

Descriptors: *Hydrogen ion concentration, *Protozoa, *Water quality, Mud, Benthos, Sampling, Population, Adaptation.
Identifiers: Amoeba, Acanthamoeba, Aulacantha, Paramecium, Vorticella, Euplotes, Oncychodromus, Oxytricha, *New Zealand (Blue Lake), Species diversity.

Protozoa were collected in universal bottles from four microhabitats of Blue Lake: (1) within the bottom mud, (2) on the surface of the mud, (3) from midwater, and (4) from the water surface. The pH of each sample was determined at the time of collection and regularly throughout the observation period in the laboratory. Upon arrival at the laboratory, samples were transferred to petri dishes and maintained for observation without the addition of enrichment media. Protozoan populations were measured with a modified Fuchs-Rosenthal haemocytometer, and classification and identification were carried out by staining and observation by light microscropy and by phase contrast microscopy. The in situ pH values of the four microhabitats ranged from 6.8 to 9.0. After 2 days in vitro, the mud zones showed a marked drop in pH. The protozoan population contained few species, all showing a well developed ability to endure a wide pH range and/or related phenomena such as redox potential. The genera represented were Amoeba, Acanthamoeba, Aulacantha, Paramecium, Vorticella, Euplotes, Oncychodromus, and Oxytricha. (Little-Battelle)

FIELD AND EXPERIMENTAL STUDIES ON THE EFFECTS OF A POWER STATION EFFLUENT ON TUBIFICIDAE (OLIGOCHAETA, ANNELIDA),
Central Electricity Generating Board, Ratcliffe-on-Soar (England). Freshwater Biology Unit.
R. J. Aston.
Hydrobiologia, Vol 42, Nos 2/3, p 225-242, August 15, 1973. 10 fig, 4 tab, 16 ref.

Descriptors: *Tubificids, *Powerplants, *Heated water, *Water pollution effects, Effluents, Annelids, On-site investigations, Laboratory tests, Water temperature, Dissolved oxygen, Animal physiology, Upstream, Downstream, Oligochaetes, Invertebrates, Bottom sampling, Reproduction, Cooling water, Animal populations, Mortality, Aquatic animals, *Thermal pollution.
Identifiers: Population density, Limnodrilus hoffmeisteri, Limnodrilus profundicola, Tubifex tubifex, Limnodrilus udekemianus, *United Kingdom (River Trent).

In order to study the effects of power plant effluents on tubificids, mud cores containing tubificids were collected downstream from three power plants which discharge warm condenser water into the River Trent. The worms were removed from the formalin-preserved cores and counted. Laboratory experiments were conducted to determine the effects of temperature on the reproductive rate of Limnodrilus hoffmeisteri and Tubifex tubifex and the combined effects of dissolved oxygen concentration and temperature on the reproductive rate of L. hoffmeisteri. Higher numbers of sexually mature worms of L. hoffmeisteri were found in the River Trent downstrem from Dradelow Power Stations than upstream. In the laboratory experiments it was found that: L. hoffmeisteri increased its rate of egg production with increase in temperature up to about 25 C while T. tubifex maintained a fairly steady rate of egg and cocoon production over a wide range of oxygen concentrations above 2 ppm. It seems likely that the difference between the numbers of sexually mature L. hoffmeisteri upstream and downstream from the power station were influenced more by the increased temperature, than in increased oxygen levels of the power station effluent, though under extreme conditions of deoxygenation, aeration of the river by the cooling towers at the power stations could increase the abundance of this species. (Holoman-Battelle)
W74-01312

THE ECOLOGY OF THE DIATOMS OF THE KLIP RIVER, SOUTHERN TRANSVAAL,
University of the Witwatersrand, Johannesburg (South Africa). Dept. of Botany.
F. D. Hancock.
Hydrobiologia, Vol 42, Nos 2/3, p 243-284, August 15, 1973. 5 fig, 2 tab, 33 ref, 2 append.

Descriptors: *Diatoms, *Ecology, *Aquatic algae, *Biological communities, Water properties, Water quality, Bioindicators, Chrysophyta, Physical properties, Chemical properties, Hydrogen ion concentration, Nitrogen, Dissolved oxygen, Alkalinity, Water pollution, Water sampling, Calcium, Industrial wastes, Conductivity, Sulfates, Dissolved solids, Magnesium, Turbidity, Ammonia, Nitrates, Bicarbonates, Iron, Chlorides, Statistical methods.
Identifiers: *South Africa (Klip River), Sample preparation, Sample preservation, Data interpretation, Frustulia rhomboides, Neidium affine, Fragilaria construens, Synedra tabulata, Surirella angusta, Melosira distans, Navicula ammophila, Nitzschia filiformis, Nitzschia kuetzingiana, Nitzschia laevidensis, Navicula thomasii, Achnanthes lanceolata.

Diatom associations formed by 2 percent or more of species, found by the Thomasson analysis method, are discussed in relation to the physical and chemical vicissitudes of a stream in which the head waters become cut off from those of the middle reaches by a barren zone caused by mineral and acid pollution from dumps resulting from the gold-mining industry on the Witwaterstrand. Associations are found indicative of the originating waters, of regions of instability due to the pollution, whether it be its onset or recovery therefrom and of the lower recovered middle reaches. In each reach there are found to be associations indicative of pH, nitrogen content, dissolved oxygen and alkalinity. Thus the associations enable one to 'read' the conditions of the river. An additional association occurs at the very turbid mouth of the river which is indicative of low light requirement. The work supports the findings of Cholnoky (1958 et seq.) in his researches into the diatom ecology of South African streams. (Holoman-Battelle)
W74-01313

NUTRIENT REMOVAL USING LEMNA MINOR,
Florida Dept. of Pollution Control, Tallahassee.
R. M. Harvey, and J. L. Fox.
Journal Water Pollution Control Federation, Vol 45, No 9, p 1928-1938, September 1973. 9 fig, 6 tab, 25 ref.

Descriptors: *Bioassay, *Nutrients, *Digestion, *Nutrient removal, Nitrates, Nitrites, Phosphates, Potassium, Copper, Magnesium, Calcium, Zinc, Manganese, Iron, Sodium, Aluminum, Colorimetry, Nitrogen, Chlorophyll, Growth rates, Water analysis, Waste water (Pollution), Water treatment, Phosphorus, Flame photometry, Forages.
Identifiers: Bioaccumulation, *Lemna minor, *Cattle feed, Forageability, Biological samples, Wolffia columbiana, Salvinia rotundifolia, Removal, Emission spectroscopy, Sample preparation, Atomic absorption spectrophotometry, Chlorophyll a.

Lemna minor, Wolffia columbiana, and Salvinia rotundifolia, which have potential value for removing nutrients from wastewater, were studied with respect to four characteristics: (1) rapid growth, (2) large nutrient uptake potential, (3) ease of handling, and (4) potential economic resource (use as cattle feed). Preliminary studies showed Lemna to be the most promising of the three; therefore, it was chosen for further study. Plants were grown in 8-1 aquaria containing filtered undiluted secondary wastewater recirculated from a carboy. Control and test run effluent samples were taken at 0, 2, 4, 6, 8, and 10 days to measure percent removal of Kjeldahl nitrogen, nitrate nitrogen, nitrite nitrogen, and all forms of phosphorus. Plant tissues were analyzed for N, P, K, Cu, Zn, Mn, Fe, Na, and Al by emission spectrography, colorimetry, flame photometry, and atomic absorption. Chlorophyll a and growth rates were also measured. Forageability was determined by in vitro organic matter digestion involving 48-hr fermentation followed by HCl pepsin digestion and determination of residual organic matter. Total Kjeldahl nitrogen and total phosphorus were found to decrease 86.5 and 67 percent, respectively, over a 10-day period. Lemna was found to be more digestible by cattle than common pasture grass. These characteristics, combined with a rapid growth rate, could make duckweed desirable for use in tertiary treatment of wastewater. (Little-Battelle)

THERMOPHILIC OSTRACOD: AQUATIC METAZOAN WITH THE HIGHEST KNOWN TEMPERATURE TOLERANCE,
Oregon Univ., Eugene. Dept. of Biology.
C. E. Wickstrom, and R. W. Castenholz.
Science, Vol 181, No 4104, p 1063-1064, September 1973. 1 fig, 1 tab, 12 ref.

Descriptors: *Water temperature, *Bioassay, Resistance, *Thermal pollution, Water pollution effects, Lethal limit, *Heat resistance.
Identifiers: *Potamocypris, *Lethal temperature, Invertebrates, Survival, Lethal dosage, Seed shrimp.

Ostracods of the genus Potamocypris were collected from a thermal spring in Oregon and incubated from 1 minute up to 12 hrs. at temperatures ranging from 40 to 55.75 C to determine their thermal resistance. After exposure to elevated temperatures, the test tubes containing the organisms were immediately cooled to 40-45 C and observed for harmful effects. The upper lethal temperature ranged from 49 C for incubation of more than 5 hours to 55.75 C for 1-minute incubations. Calculated temperatures for 50 percent mortality for 60, 40, 20, 10, 5, and 1 minute of exposure were 50.44, 50.96, 51.43, 52.03, 52.77, and 55.12 C, respectively. This ostracod may have the highest temperature tolerance of any aquatic metazoan. (Little-Battelle)

ROLE OF SILT IN MICROCYSTIS AERUGINOSA DEVELOPMENT, (IN RUSSIAN),
Akademiya Nauk URSR, Kiev. Instytut Hidrobiologii.
M. I. Kuz'menko.
Gidrobiol Zh. Vol 8, No 1, p 38-43, 1972. Illus. (English summary).
Identifiers: *Amino acids, *Fertilization, *Microcystis-Aeruginosa, Reservoirs, *Silt, Cyanphyta.

The water layer contiguous to silt is considered as a dynamic system through which absorption of bio- and organogens by silts takes place. Mixing of the 2 phase system of silt-water favors water fertilization with amino acids and other compounds, which has a positive effect on M. aeruginosa development. It is shown that when introducing silt (50 g/l of mineral medium) the number of cells of the alga increases as much as 1.5 times. Expansion of silted areas in reservoirs will promote the fertilization of tropic base for blue-green algae, in particular, the main agent of "bloom", M. aeruginosa. EPIDEMIOLOGICAL AND TOXICOLOGICAL ASPECTS OF NITRATES AND NITRITES IN THE ENVIRONMENT,
Hadassah Medical School, Jerusalem (Israel). Environmental Health Lab.
H. I. Shuval, and G. P. Kalinin.
Am J Public Health. Vol 62, No 8, p 1045-1052. 1972, Illus.
Identifiers: Diseases, Electroencephalogram, Environment, Epidemiological studies, Foods, Heart, Infants, Lung, Milk, *Nitrates, *Nitrites, Placental, Rat, Tomato, *Toxicological studies, Vitamin C, Potable water, *Methemoglobin.

Infants (2473) in areas with medium-high (50-90 mg/l as NO3) and low nitrate (5 mg/l as NO3) concentrations in drinking water were studied in an effort to determine whether there is any association between methemoglobin (MetHb) levels and nitrates in drinking water. No differences were found between the mean MetHb level in the study and control areas. A possible explanation that only

6% of the infants consumed appreciable amounts of tap water together with powdered milk formula. The remainder were breast-fed or consumed whole cow's milk. Of the infants, 87% were fed vitamin C rich foods which are known for their anti-MetHb effects. MetHb levels are highest in the first 60 days of life with a mean of 1.33%. The mean MetHb level for the entire infant population studied was 1.04 plus or minus .72%. Rats chronically exposed to 2000 and 3000 mg/l NaNO2 (250-350 mg/kg) in drinking water for two years showed distinct pathology in the heart and lung tissues as compared to controls. Pregnent rats given acute doses of NaNO2 varying from 2.5-50 mg/kg show transplacental passage of the chemical with the production of MetHb in the fetuses. Mice chronically exposed to 1000-2000 mg/l NaNO2 in their water showed lowered motor activity as compared to controls. Rats with electrodes implanted on the cortex were chronically exposed to nitrites in their drinking water in concentrations ranging from 100-2000 mg/l of NaNO2. All experimental groups showed major brain electrical activity changes as shown by EEG recordings after 2 wk as compared to their own controls and the control group. On cessation of exposed to nitrites after 2 mo., brain electrical activity changes in EEG recordings remained, suggesting some form of irreversible damage. The findings are being rechecked; if found to be correct, standards for allowable concentrations of nitrate and nitrite in food and water should be re-examined.--Copyright 1973, Biological Abstracts, Inc.

COPPER MICRONUTRIENT REQUIREMENT FOR ALGAE,
Missouri Univ., Columbia. Dept. of Chemistry.
S. E. Manahan, and M. J. Smith.
Environmental Science and Technology, Vol 7, No 9, p 829-833, September 1973. 6 fig, 2 tab, 10 ref.

Descriptors: *Bioassay, *Copper, Growth rates, *Nutrient requirements, *Chelation, Heavy metals, Limiting factors, Nutrients, Methodology, Essential nutrients, Water pollution effects, Plant growth.
Identifiers: *Chlorella vulgaris, *Oocystis marssonii, Culture media, Sample preparation, Ion selective electrodes.

Copper micronutrient requirements of Chlorella vulgaris and Oocystis marssonii were determined by measuring growth rates versus copper concentration in a culture mediumcontaining EDTA as a strong chelating agent. Since reagents used to prepare the medium contained variable amounts of Cu, electrolytic and extraction procedures were developed to purify them. The Cu concentration was monitored during purification and during growth tests with a cupric ion electrode. Growth tests were carried out in cleaned 500-ml polyethylene wash bottles to avoid erratic results which occur with glass containers. Solutions of CuSO4 in H2SO4 were diluted to prepare the Cu additions. A CO2-air mixture was bubbled through the cultures as a source of carbon and for pH control. Algal growth rates were determined by absorbance at 560 nm, and dry cell weight was measured by filtering and weighing the cells. The results show that the growth of the two algae is dependent upon the concentration of the free copper ion. Optimal growth occurred above 40 micrograms/l for Oocystis and above 30 micrograms/l for Chlorella. It appears that the presence of natural and pollutant chelating agents in water stimulate algal growth by creating a reservoir of trace metal species. (Little-Battelle)

EVALUATION OF THE RESPONSE OF DUGESIA TIGRINA TO AFLATOXIN B1,
Virginia Commonwealth Univ., Richmond. Dept. of Biology.
G. C. Llewellyn.
Journal of the Association of Official Analytical Chemists, Vol 56, No 5, p 1119-1122, September 1973. 1 fig, 22 ref.

Descriptors: *Bioassay, *Toxicity, *Bioindicators, Animal growth, Laboratory tests, Laboratory animals, Invertebrates, Water pollution effects, Evaluation, Toxins, Mortality, Animal pathology, Lethal limit, Aquatic animals.
Identifiers: *Dugesia tigrina, *Alflatoxin B1, *Planarians, Regeneration, Sensitivity, Flatworms, Phytotoxins, Mycotoxins.

Groups of brown planaria, Dugesia tigrina, were exposed to varying concentrations of aflatoxin B1. Whole animals maintained in 3.125 micrograms/ml of toxic solution showed 50 percent lethality in 2 days; 1.562 micrograms/ml required 4 days; 0.781 microgram/ml required 7 days; and 0.312 microgram/ml required 15 days. Even greater lethal responses occurred when cut portions of planaria were exposed to the toxin, with the head sections in all concentrations showing higher levels of lethality than the tail sections. Regeneration of excised heads and tails was inhibited in 3.125 micrograms/ml medium; minimal regeneration occurred in 1.562 and 0.781 microgram/ml environments. D. tigrina, exposed to concentration levels of 0.312 and 0.156 microgram/ml of aflatoxin B1 in spring water, regenerated head and tail portions in a normal manner. No gross pathological abnormalities were observed in any regenerated tissue. The lethal response to low concentrations of the toxin suggests that the head portion of D. tigrina is one of the more sensitive organisms to aflatoxin B1. (Holoman-Battelle)

DIELDRIN. EFFECTS OF CHRONIC SUBLETHAL EXPOSURE ON ADAPTATION TO THERMAL STRESS IN FRESHWATER FISH,
Academy of Natural Sciences of Philadelphia, Avondale, Pa. Stroud Water Research Center.
E. K. Silbergeld.
Environmental Science and Technology, Vol 7, No 9, p 846-849, September 1973. 2 fig, 3 tab, 31 ref.

Descriptors: *Darters, *Bioassay, *Thermal pollution, *Dieldrin, Fish physiology, *Animal metabolism, Toxicity, Water temperature, Growth rates, Water pollution effects, Mortality.
Identifiers: *Pretreatment, Chronic tests.

The freshwater fish, Etheostoma nigrum, were pretreated with 2.3 ppb dieldrin for 30 days and then exposed to thermal stress by heating the water at a rate of 1 C/hr to a maximum of 7-9C above ambient temperature. These conditions simulate natural conditions which can occur in the U. S. Results were assessed by exposing other groups of fish to dieldrin alone or to thermal stress alone. Several indicators of metabolism and condition were measured during pretreatment, during thermal stress, and at the end of the tests: growth rate, feeding rate, whole blood glucose levels, oxygen consumption, rate of opercular movement, whole body lipid content, condition of liver, and liver histology. Pretreated fish demonstrated significant changes in all of the above parameters except opercular movement during the first 15 days of exposure to dieldrin. After 15 days, pretreated fish were found to have adapted to dieldrin exposure, as indicated by significant reversals of the above changes (except for liver damage, which was not reversed but progressed over time). In the adapted state, the pretreated fish remained different from untreated fish, in terms of these parameters. These differences provide grounds for predicting differential response to sublethal thermal stress for the pretreated and untreated fish. Such response is discussed as it may relate to the effects of chronic sublethal exposure to dieldrin. (Little-Battelle)

DISTRIBUTION OF ALKYL ARSENICALS IN MODEL ECOSYSTEM,
Agricultural Research Service, Beltsville, Md. Agricultural Environmental Quality Inst.
A. R. Isensee, P. C. Kearney, E. A. Woolson, G. E. Jones, and V. P. Williams.
Environmental Science and Technology, Vol 7, No 9, p 841-845, September 1973. 2 fig, 4 tab, 13 ref.

Descriptors: *Bioassay, Model studies, Toxicity, *Snails, *Waterfleas, Freshwater fish, *Chlorophyta, Absorption, Food chains, Path of pollutants, Distribution patterns, Tracers, Ecosystems, Arsenicals (Pesticides).
Identifiers: Bioaccumulation, Biomagnification, *Cacodylic acid, *Dimethylarsine, *Mosquitofish, Scintillation counting, Macroinvertebrates, Sample preparation, Biological samples, Physa, Daphnia magna, Gambusia affinis, Oedogonium cardiacum, Alkyl arsenicals.

Mosquitofish (Gambusia affinis), waterfleas (Daphnia magna), snails (Physa), and algae (Oedogonium cardiacum) were exposed to C-14-labeled cavodylic acid (CA) and dimethylarsine (DMA), for 3, 29, 32, and 32 days, respectively, in a model ecosystem. The model systems consisted of glass aquaria 25.4 X 5.2 X 17.8 cm filled with 4 liter of standard reference water with increased NH4NO3 and K2HPO4. CA was added directly and DMA was adsorbed on soil and added to the system. After exposure for the specified period, bioaccumulation and biomagnification were determined in the organisms. Algae and Daphnia were ground, combusted in oxygen, and the evolved CO2 assayed for radioactivity by liquid scintillation counting. Fish and snails were homogenized in methanol, filtered, the filtrate concentrated and radioactivity determined by liquid scintillation counting. The organisms thrived in the model system indicating that CA and DMA were not toxic. Lower food chain organisms (algae and Daphnia) bioaccumulated more CA and DMA than did higher food chain organisms (snails and fish). Amounts accumulated indicate that CA and DMA do not show a high potential to biomagnify in the environment. An increase in biomass (primarily algae) over 32 days largely accounted for a gradual loss of CA and DMA from solution. (Little-Battelle)

METABOLISM AND BILIARY EXCRETION OF SULFOBROMOPHTHALEIN BY RAINBOW TROUT (SALMO GAIRDNERI),
Oregon State Univ., Corvallis. Dept. of Fisheries and Wildlife.
D. C. Schmidt, and L. J. Weber.
Journal of the Fisheries Research Board of Canada, Vol 30, No 9, p 1301-1308, September 1973. 2 fig, 4 tab, 27 ref.

Descriptors: *Animal metabolism, *Rainbow trout, *Bioassay, Dyes.
Identifiers: *Sulfobromophthalein, *Elimination, *Bile, Plasma, Blood, Transport maximum, Excretion.

Biliary excretion of sulfobromophthalein (BSP) by rainbow trout as studied in free-swimming fish and in fish immobilized by spinal transection or anesthetization with M.S. 222. Bile was collected by catheterizing the common bile duct with PE 10 tubing and ligating the cystic duct. Plasma decay of BAP was determined by injecting 5, 10, and 15 mg/kg of BSP in Cortland's saline into the caudal vein. A single blood sample was then obtained by cardiac puncture. BSP and metabolites in bile were measured by colorimetry. The transport maximum (TM) was determined by infusing the dye into a cannulated ventral intestinal vein and collecting bile from the bile duct. Excretion of BSP across gills and into the urine was tested by analyzing water and urine samples. The plasma half-life of BSP was 13 min for doses of 5 and 10 mg/kg and 29 min for a dose of 15 mg/kg. The biliary BSP transport maximum (Tm) averaged 9.6 micrograms min per kg for five fish while the blood clearance averaged 1.7 ml/min per kg for two fish. Normal bile flows of 0.87 microliter/min per kg in trout were increased upon anesthetization but were unaffected in fish allowed to recover from spinal transection. The data presented support the conclusion that the transport of BSP from liver cells to bile is the rate-limiting step in the excretion of this dye. (Little-Battelle)

UPTAKE OF METHYL MERCURIC CHLORIDE AND MERCURIC CHLORIDE BY TROUT: A STUDY OF UPTAKE PATHWAYS INTO THE WHOLE ANIMAL AND UPTAKE BY ERYTHROCYTES IN VITRO,
Michigan State Univ., East Lansing. Dept. of Physiology.
K. R. Olson, H. L. Bergman, and P. O. Fromm.
Journal of the Fisheries Research Board of Canada, Vol 30, No 9, p 1293-1299, September 1973. 2 fig, 2 tab, 24 ref.

Descriptors: *Rainbow trout, *Bioassay, Water pollution effects, Animal metabolism, Distribution, Mercury, *Heavy metals, Radioactivity techniques.
Identifiers: *Bioaccumulation, *Mercury compounds, *Metabolic pathways, Methylmercury chloride, Mercury chloride, In vitro tests, Blood, Scintillation counting, Biological samples, Tissue, Gills, Liver, Kidneys, Heart, Muscle, Stomach, Intestine, Sample preparation.

Rainbow trout (Salmo gairdneri) were exposed for 24 hours to 275 mg/l of Hg as HgC12 or CH3HgC1 (both labeled with Hg-203) to determine the uptake pathways and to ascertain some of the properties of mercury interaction with teleost-nucleated erythrocytes. To assess the role of the gastrointestinal (GI) tract, the GI pathway was eliminated in one group of fish by esophageal ligation. After exposure, blood samples were taken, the fish killed, and tissues samples taken from the gills, liver, kidney, heart, skeletal muscle, stomach, and intestine for determination of Hg content. Distribution and cellular uptake of Hg in blood was determined by incubation with either compound and subsequent separation of the cell and plasma components. Uptake of mercury by the fish was not affected by esophageal ligation, and it is concluded that uptake occurs primarily by way of the gills. Methyl mercury enters the fish at a faster rate than the inorganic form and anomalous tissue distribution of these two mercurials suggest that inorganic mercury does not require methylation prior to entry into the fish. In vitro experiments using radioactive mercurials demonstrated high affinity of methyl mercury for red cells, (up to 90 percent was bound to red cells in 40 min). Only 9 percent of inorganic mercury was taken up by red cells, but, this percentage was increased up to 65 percent if the cells were washed and suspended in Ringer solution prior to incubation with mercury. EFFECT OF SPOIL DISPOSAL ON BENTHIC INVERTEBRATES,
Delaware Univ., Lewes. Coll. of Marine Studies.
W. Leathem, P. Kinner, D. Maurer, R. Biggs, and W. Treasure.
Marine Pollution Bulletin, Vol 4, No 8, p 122-125, August 1973. 1 fig, 1 tab, 11 ref.

Descriptors: *Benthic fauna, Environmental effects, *Dredging, *Water pollution effects, Marine animals, Dye dispersion, Water quality, Soil analysis, Crustaceans, Dominant organisms, Water analysis, Aerial photography, Bottom sampling, Water sampling, Hydrograph analysis, Waste disposal, Marine geology, Marine biology, Currents (Water), Surface waters, Subsurface flow, Bathymetry, Salinity, Chemical analysis, Invertebrates, Carbon.
Identifiers: *Macroinvertebrates, *Spoil disposal, *Delaware Bay, Polychaetes, Nemerteans, Echinoderms, Bryozoa, Species diversity, Species density, Physical oceanography, Pelecypoda, Beach fleas, Hermit crabs, Decapods, Shannon-Weaver diversity index, Species diversity index, Rhodamine B.

Hydraulic dredging and spoil disposal behind the inner breakwater in Delaware Bay were studied along with their gross effects on benthic macroinvertebrates. Rhodamine B dye was used to establish the surface flow pattern during flood and ebb tides. Water analyses and aerial photography (color-band and infrared film) were used to trace dye dispersion. A drogue study was performed simultaneously to determine subsurface current flow. 103 sites were sampled for salinity, oxygen, biological and geological analyses. To evaluate the dispersion of spoils, bathymetric surveys were performed before and after disposal using a Raytheon precision depth recorder. The settling rate of the deposited spoil was determined using a sample taken from the discharge pipe. The water content was measured and compared with samples taken in the area of the final spoil distribution. The dissolved oxygen concentration fell after dredging, approaching the minimum water quality standard of 50 percent saturation for the State of Delaware. Salinity was fairly constant and the temperature range was 5.4-19.6 C. The density of individual macroinvetrates was low and the number of species rarely exceeded 10 0.1 sq m with the greatest damage to these animals occurring in the dreding and dump sites. The total impact of the operation, however, appeared to have been small. (Holoman-Battelle)

THE EFFECTS OF BACTERIA ON THE GROWTH AND REPRODUCTION OF OEDOGONIUM CARDIACUM,
California Univ., Berkeley. Dept. of Botany.
L. Machlis.
Journal of Phycology, Vol 9, No 3, p 342-344, September 1973. 1 fig, 1 tab, 8 ref.

Descriptors: *Cultures, *Reproduction, *Growth rates, Chlorophyta, Bioassay, Plant growth.
Identifiers: *Oedogonium cardiacum, *Corynebacterium, *Pseudomonas putida, Culture media.

Isolates of male and female Oedogonium cardiacum for which defined media had been established were subsequently found to be contaminated with a species of Corynebacterium which failed to grow in the nutrient broth used to test for contamination. After the cultures were rendered axenic through treatment with penicillin G, they failed to develop oogonia or sperm except occasionally at a very low level. The addition of small amounts of the bacterium increased the development of the reproductive structures; however a much more striking increase was obtained by constantly infecting the algal cultures with Pseudomonas putida. Neither of the bacteria increased growth as measured by dry weight; however, the P. putida resulted in the growth of very long filaments in contrast to the short filaments characteristic of both the axenic cultures and those infected with Corynebacterium sp. OBSERVATIONS ON THE ECOLOGY OF LAMINARIA SINCLAIRII ON THREE NORTHERN OREGON BEACHES,
Arch Cape Marine Labs., Oreg.
J. W. Markham.
Journal of Phycology, Vol 9, No 3, p 336-341, September 1973. 7 fig, 2 tab, 6 ref.

Descriptors: *Marine algae, *Phaeophyta, Environmental effects, *Biological communities, *Ecology, Plant growth, Life cycles, Seasonal, Ecological distribution, Beaches, Marine plants, Growth rates, Dominant organisms, *Oregon, On-site investigations, Tidal effects, Water temperature, Salinity, Sea water, Chlorophyta, Water sampling.
Identifiers: *Laminaria sinclairii, Marine habitats, Laminari setchellii, Phyllospadix scouleri, Gymnogongrus linearis, Bossiella plumosa, Dilsea california, Ptilota pectinata, Ptilota filicina, Plitota asplenioides, Prionitis lyallii, Microcladia borealis, Iridaea, Farlowia mollis, Codium setchellii, Phaeostrophion irregulare.

Laminaria sinclairii (Harvey) Farlow, Anderson and Eaton occurs only on the Pacific Coast of North America and is usually restricted to rocks on beaches subjected to moderate to heavy surf and a large seasonal fluctuation in sand level. It was observed and measured over a 2-year period on 3 such beaches in northern Oregon. Growth rate and relative dominance are greatest in the lowest and most exposedparts of the intertidal zone, where surf action and sand burial are greatest. The sand level begins to build up on the beach in April and continues to rise, burying the plants, throughout the summer, until the first heavy storms in fall again remove the sand. Maximum growth occurs in early summer, prior to burial. The blades are lost in December and regenerated in January. Ripe sori are produced on the old blades just before they are lost and on the new blades just after they appear. The gametophytes which develop from spores produced by these sori apparently do not usually produce sporophytes. In March and April there is considerable production of new stipes and blades from the haptera at the margins of the holdfast and this is apparently the chief means of reproduction. (Holoman-Battelle)

PHYSIOLOGICAL ECOLOGY OF GELIDIELLA ACEROSA (FORSSKAL) FELDMANN ET HAMEL,
Saurashtra Univ., Rajkot, (India). Dept. of Biosciences.
P. S. Rao, and V. B. Mehta.
Journal of Phycology, Vol 9, No 3, p 333-335, September 1973. 2 fig, 13 ref.

Descriptors: *Marine algae, *Rhodophyta, *Plant physiology, Physiological ecology, Laboratory tests, Environmental effects, *Salinity, *Hydrogen ion concentration, Cultures, Plant growth substances, Growth rates, Nitrogen, Phosphates, Sea water, *Nutrients, Plant growth, Marine plants, Ureas, Phosphorus, Bioassay, Benthic flora.

Identifiers: *Gelidiella acerosa, Nutrient sources, Culture media, Indole acetic acid, Sodium nitrate, Sodium dihydrogen phosphate, Gibberellic acid.

The physiological responses to various ecological factors including salinity, pH, and nutritional and growth substances of Gelidiella acerosa have been investigated in reference to its growth along coasts and in lagoons and backwaters. Samples of the alga were collected from tide pools during low tide and cultured in enriched, pasteurized seawater. NaNo3 and urea were used as nitrogen sources and NaH2P04 as the phosphate source. Different concentrations of IAA and GA were also tried on the growth and production of proliferations. Increase in axis length and the number of proliferations produced were criteria for judging physiological responses. NaNO3 was found to be a better nitrogen source than urea and NaH2PO4 was an effective phosphorus source except at 10 mg/l concentration. Growth-promoting substances were necessary to increase production of poliferations and to hasten vegetative growth; IAA was quite effective at 70-85 mg/l whereas GA was relatively ineffective. Salinity concentrations that were 2 and 4 times that of natural seawater and a pH range of 8.2-9.2 resulted, respectively, in proliferations equal to and greater than that of the controls in natural seawater. SALINITY ADAPTATION BY DUNALIELLA TERTIOLECTA. I. INCREASES IN CARBONIC ANHYDRASE ACTIVITY AND EVIDENCE FOR A LIGHT-DEPENDENT NA (PLUS)/H (PLUS) EXCHANGE,
State Univ. Coll., Geneseo, N.Y. Dept. of Biology.
A. H. Latorella, and R. L. Vadas.
Journal of Phycology, Vol 9, No 3, p 273-277, September 1973. 4 fig, 3 tab, 23 ref.

Descriptors: *Ion exchange, Hydrogen ion concentration, *Enzymes, Light, *Bioassay, *Sodium, *Cytological studies, Cultures, Aquatic algae, *Salinity, Growth rates, Adaptation, Ions.
Identifiers: *Dunaliella tertiolecta, Carbonic anhydrase.

Cells of Dunaliella tertiolecta adapted to 0.5 M NaCl were axenically cultured to investigate H (plus) incorporation, Na (plus) extrusion, and carbonic anhydrase levels in response to changes in external Na (plus) concentrations. Cell densities were determined with a Celloscope electronic particle counter. The Na (plus) content of cells was determined by flame photometry. Proton incorporation was assessed by changing the salinity of the cell suspension solutions and monitoring the pH change ever 2.5 minutes. Carbonic anhydrase was assayed by bubbling CO2 through the suspensions to decrease the pH and then measuring enzyme activity. When Dunaliella tertiolecta was transferred to higher salinities, there was a lag in growth, suggesting an adaptation period. Since there was no significant difference in the Na (plus) content of cells grown between 0.5 and 3.5 M NaCl, a mechanism for Na (plus) extrusion or exclusion was indicated. Increasing the salinity of cell suspensions stimulated an incorporation of H (plus) by the cells, suggesting an H (plus)/Na (plus) exchange. Cells adapted to higher salinities had increased carbonic anhydrase activity, suggesting that increased CO2 or HCO3 (minus) transport may be required at higher salinities. Growth at salinities above 2.5 M required continuous illumination; therefore a light-driven H (plus)/Na (plus) exchange accompanied by a HCO3 (minus) influx is proposed. (Little-Battelle)

SOME THOUGHTS ON NUTRIENT LIMITATION IN ALGAE,
Dunstaffnage Marine Research Lab., Oban (Scotland).
M. R. Droop.
Journal of Phycology, Vol 9, No 3, p 264-272, September 1973. 14 fig, 15 ref.

Descriptors: *Nutrients, *Limiting factors, *Cultures, *Algae, *Absorption, *Growth rates, *Mathematical models, Equations, Biomass, Plant growth.
Identifiers: Bioaccumulation, Substrates, Luxury consumption.

An empirical relation relating specific growth rate in steady state systems to nutrient status with respect to more than one nutrient simultaneously is proposed, based on 3 experimentally verifiable postulates: (1) that uptake depends on the external substrate concentration; (2) that growth depends on the internal substrate concentration; and (3) in a steady state system specific rate of uptake (in the absence of significant excretion) is necessarily the product of the specific growth rate and internal substrate concentration. The implications of this model are discussed in particular in respect to the concept of luxury consumption and Liebig's law of minimum. Some aspects of uptake in transient situations are also discussed. (Little-Battelle)
W74-01428

ALGAL SUCCESSION ON ARTIFICIAL REEFS IN A MARINE LAGOON ENVIRONMENT IN GUAM,
Guam Univ., Agana. Marine Lab.
R. T. Tsuda, and H. T. Kami.
Journal of Phycology, Vol 9, No 3, p 260-264, September 1973. 6 fig, 1 tab, 7 ref.

Descriptors: *Rhodophyta, *Cyanophyta, *Chlorophyta, *Phaeophyta, Climax, *Succession, Population, Browse utilization, Reefs, Marine algae, Lagoons, Diatoms.
Identifiers: *Artificial reefs, Tires, *Guam.

Two artificial reefs were constructed from automobile tires in a marine lagoon in Guam, one in November 1969 and the other in October 1970, and studied for algal succession from January 1970 to February 1972. Monthly cuttings were taken from the tires for identification and quantification of the algae. The increase in number of additional species found each month was plotted to approximate the time span for climax to occur. A total of 18 species of algae (5 Cyanophyta, 3 Chlorophyta, 6 Phaeophyta, and 4 Rhodophyta) was found at both reefs during the 26-mo period. The algal species were of 2 types-the turf which rarely exceeded 2 mm in height and the macroalgae which exceeded 10 mm in height. The number of species present during any one month varied from 1 to 8. The mean number of species per month was 4.4 and 4.6. Filamentous algae, ie, Calothrix crustacea, Feldmannia indica, and Sphacelaria tribuloides, were the primary colonizers; the fleshy brown alga, Dictyota bartayresii, appeared soon after. Lobophora variegata was the only alga present which occurred seasonally. Low light penetration through the silty lagoon water and selective browsing by herbivorous fishes favored the blue-greens Calothrix crustacea and Microcoleus lyngbyaceus to be the dominant algae in the climax community which occurred within a 1-year period. (Little-Battelle)
W74-01429

KINETICS OF SILICON-LIMITED GROWTH IN THE MARINE DIATOM THALASSIOSIRA PSEUDONANA HASLE AND HEIMDAL (EQUALS CYCLOTELLA NANA HUSTEDT),
Woods Hole Oceanographic Institution, Mass.
R. R. L. Guillard, P. Kilham, and T. A. Jackson.
Journal of Phycology, Vol 9, No 8, p 233-237, September 1973. 1 fig, 2 tab, 26 ref.

Descriptors: *Silicates, *Growth rates, Limiting factors, *Succession, *Bioassay, *Diatoms, Nutrients, Primary productivity, Cultures, Kinetics.
Identifiers: Thalassiosira pseudonana, *Sargasso Sea, Silicon.

The half-saturation constant (K sub s) for growth and the maximum growth rate (mu sub max) were determined for 2 clones of Thalassiosira pseudonana (equals Cyclotella nana) under conditions in which external silicon concentrations controlled growth. The estuarine clone (3H) had a higher half-saturation constant (0.98 micromole Si) and maximum growth rate (3.6 divisions/day) than the clone from the Sargasso Sea (0.19 micromole Si, 2.1 divisions/day). The K sub s values for each clone are such that the silicate levels found at certain times in both the Sargasso Sea and the coastal regions are rate limiting to growth, hence can be of significance to plant production and to species succession. The yield data are consistent with the concept that growth rate and cellular silicon content vary together in silicon-limited cultures. (Little-Battelle)

SUPERSATURATION OF NITROGEN IN WATER DURING PASSAGE THROUGH HYDROELECTRIC TURBINES AT MACTAQUAC DAM,
Environmental Protection Service, Halifax (Nova Scotia).
J. R. MacDonald, and R. A. Hyatt.
Journal of the Fisheries Research Board of Canada, Vol 30, No 9, p 1392-1394, September 1973. 2 tab, 6 ref.

Descriptors: *Nitrogen, *Supersaturation, *Air, *Fishkill, *Hydroelectric plants, Water pollution effects, Water pollution sources, Dissolved oxygen, Eels, Salmon, Atlantic salmon, Water analysis, Aeration, *Canada.
Identifiers: Gasometric analyzer, Winkler Method, *Mactaquac Dam (N.B.), American eel.

During 1968, two fish kills occurred below the Mactaquac Hydroelectric Station on the St. John River, New Brunswick. Examination of dead and dying salmon (Salmo salar) and eels (Anguilla rostrata) revealed gas bubbles beneath the skin which is generally associated with supersaturation of water with air. Since the kill occurred at the time of reduced power generation, water above and below the station was analyzed for oxygen and nitrogen saturation under low and high generating conditions. Dissolved oxygen was determined by the Winkler method and nitrogen with a microgasometric analyzer. The results showed that concentrations of dissolved oxygen and nitrogen gases were substantially increased when water passed through the turbine generating system at low generating levels. Concentrations of dissolved nitrogen gas increased by as much as 20 percent above atmospheric equilibrium. (Little-Battelle)

GROWTH RATES OF INTERTIDAL MOLLUSCS AS INDICATORS OF EFFECTS OF UNEXPECTED INCIDENTS OF POLLUTION,
Fisheries Research Board of Canada, St. John's (Newfoundland). Biological Station.
R. Black.
Journal of the Fisheries Research Board of Canada, Vol 30, No 9, p 1385-1388, September 1973. 2 tab, 8 ref.

Descriptors: *Biondicators, *Mussels, Water pollution effects, *Phosphorus, *Growth rates, Toxicity, Animal growth, Snails, *Canada.
Identifiers: *Periwinkles, Macroinvertebrates, Mytilus edulis, Littorian littorea, *Long Harbour (Newfoundland).

Shells of mussels, Mytilus edulis, and periwinkles, Littorina littorea, from several locations were used to determine the effects of phosphorus pollution is Long Harbor, Newfoundland. Such effects were recorded using check marks on the shells. Examination of numerous shells indicated that check marks in both species were probably annual marks. Growth rates of Mytilus in 1969, the year of significant elemental phosphorus pollution at Long Harbour, were no different from those in preceding or succeeding years. No Littorina alive in 1969 occurred at Long Harbour, but they were abundant at other locations. This sort of analysis, used with caution because effects of pollutants may be confounded with effects of other variables, provides a method of examining nonlethal effects of unexpected polluting events. (Little-Battelle)
W74-01434

PROBABLE CAUSES FOR THE 1972 RED TIDE IN THE CAPE ANN REGION OF THE GULF OF MAINE,
New Hampshire Univ., Durham. Dept. of Botany.
H. F. Mulligan.
Journal of the Fisheries Research Board of Canada, Vol 30, No 9, p 1363-1366, September 1973. 2 tab, 13 ref.

Descriptors: *Distribution patterns, *Meteorological data, *Red tide, *Dinoflagellates, Pyrrophyta, Rain, Upwelling, Environmental effects, Marine algae, Nuisance algae.
Identifiers: *Causative factors, *Gonyaulax tamarensis, Flagellates, *Gulf of Maine.

In an attempt to identify causal factors for the occurrence of the red tide bloom in the Gulf of Main during September 1972, data on spatial, temporal, and vertical distributions of Gonyaulax tamarensis were reviewed for the vicinity of Cape Ann. When considered with meteorological records, the probable causes of the bloom were identified: (1) an upwelling of deep water, (2) development of a seed population of G. tamarensis during unusually dry weather in August, and (3) heavy rainfall in September. (Little-Battelle)
W74-01435

BEHAVIORAL RESPONSES TO CHANGES IN HYDROSTATIC PRESSURE AND LIGHT DURING LARVAL DEVELOPMENT OF THE LOBSTER HOMARUS GAMMARUS,
Marine Biological Station, Port Erin, Isle of Man (England).
G. P. Ennis.
Journal of the Fisheries Research Board of Canada, Vol 30, No 9, p1349-1360, September 1973. 9 fig, 3 tab, 13 ref.

Descriptors: *Lobsters, *Larvae, *Bioassay, *Hydrostatic pressure, Laboratory equipment, Light intensity, Distribution, Depth.
Identifiers: Homarus gammarus, Macroinvertebrates.

Larvae of the lobster, Homarus gammarus, were examined with respect to the role of pressure sensitivity as a depth-regulatory mechanism in an attempt to obtain clues to their distribution in nature. Pressure sensitivity was assessed by placing larvae of different stages in a 76-cm Plexiglass cylinder which could be pressurized with a tire pump. Tests were conducted in darkness and with overhead light of varying intensity. Larvae were also release in the sea and observed by divers. (Little-Battelle)

STREAM COMMUNITY RESPONSE TO NUTRIENT ENRICHMENT,
Michigan State Univ., East Lansing. Inst. of Water Research.
R. A. Cole.
Journal Water Pollution Control Federation, Vol 45, No 9, p 1874-1888, September 1973. 3 fig, 6 tab, 33 ref.

Descriptors: Water pollution effects, Inorganic compounds, Natural streams, *Biological communities, *Ecological distribution, Primary productivity, Waste water (Pollution), Periphyton, Benthic fauna, Metabolism, *Pennsylvania, Nematodes, Mollusks, Crustaceans, Aquatic insects, Dominant organisms, Annelids, Aquatic algae, Waste water treatment, Respiration, Sewage effluents, Suspended solids, Chemical properties, Standing crops.
Identifiers: *Spring Creek (Penn), *Species diversity, *Nutrient enrichment, Macrophytes, Macroinvertebrates, Flatworms, Sample preservation, Species diversity index, Enrichment, Orthophosphates, Kjeldahl nitrogen, Reaeration coefficients, Surber sampler, Elodea canadensis, Potamogeton crispus, Crisp pondweed, Bugs, Waterweed, Hirudinea, Pelecypoda, Scuds, Damselflies, Leeches, Tubifex tubifex, Lirceus brachyurus, Sowbug, Planarians, Dugesia doratocephala, Platyhelminthes, Gyraulus, Physa, Chironomus, Ephemerella rotunda.

A study was conducted on Spring Creek in Pennsylvania to examine the effects of inorganic enrichment from the State College wastewater treatment plant. Particular reference was made to the impact of a change in structure of the primary producer assemblage on the community structure and function. Sampling was designed to compare stream sites that were physically similar. Standing crops of macrophytes were estimated at 9 sites and gross primary productivity and community respiration were estimated from diurnal changes in dissolved oxygen concentrations between 2 sampling stations. The sedimented edges of pools and riffles were sampled for macroinvertebrate numbers, weights, diversity, and distribution of species. Fish were sampled by electrofishing and the total standing crop in weight of each size class was calculated. Tests indicated that gross primary productivity was not stimulated by the nutrient addition; biomass of primary producers remained high, while macroinvertebrates and fish were relatively sparse downstream; macroinvertebrate diversity remained unchanged below the gross enrichment; and habitat diversity increased. The study indicated that nutrient enrichment could stimulate productivity and decrease consumer efficiencies. (Holoman-Battelle)

Identifiers: *Diaptomus pallidus, *Population dynamics, Gage Pond (Kan), Population density, Data interpretation, Correlation coefficients, Clarke-Bumpus sampler, Sample preservation, Copepodids, Calanoida, Macroinvertebrates, Chlorophyll a, Nais, Elodea, Notropis, Ictalurus punctatus, Micropterus salmoides, Lepomis cyanellus, Largemouth bass, Green sunfish, Silicon.

The simultaneous and lag relationships between 27 environmental variables and seven population components of a perennial calanoid copepod were examined by simple and partial correlations and stepwise regression. The analyses consistently explained more than 70 percent of the variation of a population component. The multiple correlation coefficient (R) usually was highest in no lag or in 3-week or 4-week lag except for clutch size in which R was highest in 1-week lag. Population control, egg-bearing, and clutch size were affected primarily by enivronmental components categorized as weather; food apparently was relatively minor in affecting population control or reproduction. CHANGES IN SPECIES COMPOSITION OF PHYTOPLANKTON DUE TO ENRICHMENT BY N, P, AND SI OF WATER FROM A NORTH FLORIDA LAKE,
Florida State Univ., Tallahassee. Dept. of Oceanography.
W. A. Gloosechenko, and C. Alvis.
Hydrobiologia, Vol 42, Nos 2-3, p 285-294, August 15, 1973. 4 tab, 18 ref.

Descriptors: *Phytoplankton, Nutrients, *Nitrogen, *Phosphorus, Cyanophyta, Chrysophyta, Pyrrophyta, Chlorophyta, Water sampling, Aquatic algae, Chlorella, Diatoms, Dinoflagellates, Speciation, Biological communities, Water pollution effects, Eutrophication, Seasonal, Cultures, *Florida.
Identifiers: *Lake Jackson (Fla), *Nutrient enrichment, Silicon, Enrichment, Enumeration, Anacystis cyanea, Cosmarium, Lyngbya, Microspora, Desmids, Oedogonium, Oscillatora, Navicula, Aphanizomenon flos-aquae, Botryococcus braunii, Ceratium hirundinella, Hyalotheca muscosa, Nitzschia palea, Pediastrum duplex, Phormidium tenue, Scenedesmus obliquus, Spondylosium planum, Staurastrum paradoxum, Staurastrum pentacerum, Uronema elongatum, Anabaena flos-aquae, Ankistrodesmus falcatus, Asterionella formosa, Dinobryon divergens.

Water samples were collected from Lake Jackson, near Tallahassee, Florada, and enriched with N, P, N plus P, and Si in the laboratory in April, 1969 and January, 1970. After time intervals of 3 and 6 days in April, and 13 days additionally in January, phytoplanktonic algae in the cultures were enumerated as to species composition and cell numbers with an inverted plankton microscope. Controls, to which no nutrients were added, were also maintained to determine changes rising from culture-room conditions. The addition of N and P, alone or in combination, caused increased numbers of algae, along with differences in species composition. This indicated that these two nutrient elements were limiting to production in Lake Jackson besides exerting a chemical control on

succession. Si additions increased diatom numbers, but also stimulated Anacystis cyanea to grow in the April sample. Species attributed as indicators of organic pollution were found to be simulated by inorganic sources of N, P, or Si. Such changes indicated caution must be exercised in interpreting long-term nutrient enrichment experiments using natural phytoplnakton communities. (Holoman-Battelle)

THE STRUCTURE OF AN ACID MOORLAND POND COMMUNITY,
University Coll. of South Wales and Monmouthshire, Cardiff. Dept. of Zoology.
D. Griffiths.
Journal of Animal Ecology, Vol 42, No 2, p 263-283, June 1973. 7 fig, 11 tab, 26 ref, append.

Descriptors: *Biological communities, *Aquatic plants, *Aquatic animals, *Spatial distribution, Invertebrates, Aquatic insects, Newts, Ecological distribution, Mollusks, Distribution patterns, Crustaceans, Nematodes, Annelids, Ponds, Bottom sampling, Methodology, Speciation, Amphibians, Pondweeds, Mosses, Clams, Biomass, Standing crops, Diptera, Midges, Caddisflies, Oligochaetes, Waterfleas, Mites.
Identifiers: *Acid moorland, *United Kingdom (Pen-ffordd-goch Pond), Macroinvertebrates, Bugs, Juncus, Potamogeton, Glyceria, Sphagnum, Glyceria fluitans, Potamogeton polygonifolius, Jancus bulbosus, Juncus effusus, Data interpretation, Chironomids, Alderflies, Ostracods, Seed shrimp, Water boatmen, Water mites, Rushes, Sample preservation, Aeshna, Pyrrhosoma, Notonecta, Sigara, Glaenocorisa, Corixa, Phryganea, Limnephilus spp, Hydroporus spp, Hydrozetes, Cypria, Chydorus, Alona, Ilyocryptus, Cyclops gracilis, Cyclops bicolor, Tripyla.

An investigation was made of the spatial relations between the plants and animals comprising an acid moorland pond community. Samples of plants and animals were taken from Pen-ffordd-goch Pond in spring and autumn with a metal box designed to enclose a vertaical column of water and the surface layer of the substratum. On collection, the samples, consisting of a mixture of mud, plant material and animals, were preserved in Pampel's fluid and sorted in two operations, a purely physical sorting followed by chemical separation. Of the plant species Juncus and Potamogeton were found in the shallow water and Glyceria in the deeper water. There was no obvious difference in the fauna of the two zones and no sharp change in faunal composition corresponding with the floral change. All the animals, except Sialis, has aggregated distributions. This was due to environmental heterogeneity, some areas being more suitable for a species than others. An inverse relationship between the abundances of the animals (in terms of biomass) and the degree of aggregation was demonstrated for the animals from each zone. The associations between plants, plants and animals, and between animals were measured by a rank correlation coefficient. In the Glyceria zone the majority of the animals were associated with the plants. In the Juncus-Potamogeton zone the majority of the animals were associated with the Sphagnum/debris/Juncus complex. Species abundances are compared with various models, the best fit being given by the geometric series. The species size distribution is approximately log-normal. The majority of the animals in the pond were feeding on detritus, very little living vegetation being eaten. (Holoman-Battelle)

ALGAL EXCRETION OF C-14-LABELED COMPOUNDS AND MICROBIAL INTERACTIONS IN CYANIDIUM CALDARIUM MATS,
Wisconsin Univ., Madison. Dept. of Bacteriology.
R. T. Belly, M. R. Tansey, and T. D. Brock.
Journal of Phycology, Vol 9, No 2, p 123-127, June 1973. 4 fig, 23 ref.

Descriptors: *Bioassay, *Bacteria, *Fungi, *Algae, *Bicarbonates, Ecology, Absorption, Proteins, Water temperature, Light, Hydrogen ion concentration, Chlorophyll, Aquatic populations, Biomass, Cultures, Photosynthesis, Laboratory tests, On-site tests.
Identifiers: Excretion, *Cyanidium caldarium, Bacillus coagulans, Dactylaria gallopova.

Because of their low species diversity in hot acid waters, Cyanidium caldarium was used to study bacterial, fungal, and algal interactions in aquatic habitats. Field and laboratory studies included quantification of bacteria, algae, and fungi, determination of protein and chlorophyll content, uptake of C-14-labeled NaHCO3 and excretion of extracellular products. The primary bacterial component of C. caldarium mats is Bacillus coagulans, and the primary fungal component is Dactylaria gallopava. The studies showed that from 2 to 6 percent of the NaHC-14O3 taken up by natural or laboratory populations of the alga was excreted as C-14 labeled materials. However, when excretion was expressed as a percentage of NaHC-14O3 uptake, a higher percentage of the radioactivity was excreted at nonoptimal conditions for NaHC-14O3 uptake. Fungal biomass was directly proportional to algal density, but bacterial numbers varied widely and did not correlate with algal numbers. The bacterial and fungal components could be grown in mixed culture with either growing C. caldarium cultures or in an extract prepared by heating algal cells. (Little-Battelle)

GROWTH AND BUOYANCY OF MICROCYSTIS AERUGINOSA KUTZ. EMEND. ELENKIN IN A SHALLOW EUTROPHIC LAKE,
Freshwater Biological Association, Shrewsbury (England).
C. S. Reynolds.
Proceedings of the Royal Society of London, Series B, Vol 184, No 1074, p 29-50, August 31, 1973. 9 fig, 2 tab, 31 ref.

Descriptors: *Cyanophyta, *Aquatic algae, *Eutrophication, *Lakes, *Plant growth, *Buoyancy, Shallow water, Nutrients, Primary productivity, Plant populations, Thermal stratification, Seasonal, Water temperature, Oxygen, Water sampling, Nitrates, Chemical analysis, Water analysis, Standing crops, Trophic level.
Identifiers: *Microcystis aeruginosa, Survival, Orthophosphates, Vertical distribution, Enumeration.

The growth of Microcystis aeruginosa in a small, shallow eutrophic lake was studied during three consecutive seasons. Standard measurements of temperature, oxygen concentration, and underwater light attenuation were made at weekly intervals. Water samples were analyzed for orthophosphate and nitrate concentrations. Quantitative plankton samples were collected using a 5-m column and population density was estimated by the iodine-sedimentation technique of Lund, Le Crew and Kipling (1958). Liter sedimented samples were used to obtain significant numbers of Microcystis colonies and to determine vertical distribution of the alga. The alga was shown to be continuously present in the plankton throughout the period. Exponential increase in the population was confined to a 5 to 8-week period, following the onset of thermal stratification. Populations appeared to originate near the bottom of the euphotic zone. The possession of an effective light-dependent buoyancy mechanism enabled the alga to maintain station, though progressive deterioration of the photic conditions forced populations to rise and become dissipated within epilimnion. Buoyancy increased after the cessation of growth; surface blooms often led to the physical removal of a majority of colonies to lee shores. Surviving colonies became generally less buoyant after the lake destratified in autumn. (Holoman-Battelle)

CONCENTRATIONS OF SOME TRACE METALS IN PELAGIC ORGANISMS AND OF MERCURY IN NORTHEAST ATLANTIC OCEAN WATER,
Southampton Univ. (England). Dept. of Oceanography.
T. M. Leatherland, J. D. Burton, F. Culkin, M. J. McCartney, and R. J. Morris.
Deep-Sea Research and Oceanographic Abstracts, Vol 20, No 2, p 679-685, August 1973. 1 fig, 3 tab, 29 ref.

Descriptors: Zooplankton, *Zinc, *Mercury, *Neutron activation analysis, Marine fish, *Cadmium, Water analysis, Sea water, Trophic level, Separation techniques, Invertebrates, Copepods, Shrimp, Sharks, Jelly fish, *Trace elements.
Identifiers: *Antimony, *Arsenic, Gas-liquid chromatography, Sample preparation, Electron capture detectors, Methylmercury, Bioaccumulation, Freeze drying, Biological samples, Sample preservation, Tunicates, Decapods, Krill shrimp, Needlefish, Mysids.

Zooplankton and fish, representing different trophic levels, and water were collected mainly from the Northeast Atlantic Ocean for analysis of Sb, As, Cd, Hg, and Zn by neutron activation analysis. Water samples were collected in a plastic bucket and in propylene water bottles, acidified with HCl, and stored in polyethylene bottles. Some organisms were freeze dried, irradiated, digested in sulfuric acid and hydrogen peroxide, and glycine and perchloric acid added to distill the Hg. After the distillate was removed, hydrochloric and hydrobromic acids were added to the main solution, and Sb and As distilled at about 200C and separated by sulfide precipitation. Zn and Cd present in the residual solution were separated by anion exchange of their chloro-complexes. The separated elements were radiochemically purified and converted to suitable forms for gravimetric measurement of chemical yield and counting of beta particles. Other samples were frozen, homogenized, extracted with benzene, back extracted with cysteine acetate solution, and examined by gas-liquid chromatography using an electron capture detector. Concentrations of mercury (0.06 to 0.38 ppm dry weight) showed no clear trend with trophic level. Organomercury analyses on two species showed that the element was present largely in the methylmercuric form. Concentrations of cadmium, which reached 13 ppm dry weight in Systellaspis debilis and Oplophorus sp., and of arsenic, which averaged 25 ppm dry weight in the crustaceans, tended to decrease in the tissues of fishes. Values for antimony which were all below 0.1 ppm dry weight, showed some indication of a similar trend. Concentrations of mercury in seawater from an adjacent area ranged from 17 to 142 mg/l., the highest concentration occurring in deep water. (Little-Battelle)

THE SENSITIVITY OF SUPPRESSED AND UNSUPPRESSED LON STRAINS OF ESCHERICHIA COLI TO CHEMICAL AGENTS WITH INDUCE FILAMENTATION,
Middlesex Hospital Medical School, London (England).
R. James, and N. E. Gillies.
Journal of General Microbiology, Vol 76, No 2, p 429-436, June 1973. 5 fig, 1 tab, 32 ref.

Descriptors: *Toxicity, *E. coli, *Cultures, Varieties, *Organic pesticides, Bioassay, Dyes, Antibiotics (Pesticides), Viability, Genetics.

Identifiers: Nalidixic acid, Gentian violet, Crystal violet, *Penicillin, Sensitivity, Bacterial physiology, Mutants, Organic dyes, Survival, Benzylpenicillin.

The sensitivities of lon strains of Escherichia coli to the filament inducing agents nalidixic acid, gentian violet, crystal violet and penicillin were examined. The strains used included those in which the lon gene is suppressed by sul, exr, and rec as well as strains in which the Lon phenotype is expressed. The sensitivity of the bacteria to agents which act on DNA was reduced when lon was suppressed, but the extent of the decrease in sensitivity was dependent on the mechanism by which suppression was effected. Sensitivity to penicillin, on the other hand, was reduced only in the sul strain and by a mechanism which appears to be independent of the direct suppression of lon. A model to account for these results indicates possible sites at which the lon, sul, exrA and recA genes are expressed. (Little-Battelle)

THE EFFECT OF ALDRIN ON WATER BALANCE IN THE FRESHWATER PULMONATE GASTROPOD (BIOMPHALARIA GLABRATA),
Agricultural Research Council, Brighton (England). Unit of Invertebrate Chemistry and Physiology.
J. A. Cocks.
Environmental Pollution, Vol 5, No 2, p 149-151, September 1973. 2 tab, 2 ref.

Descriptors: *Aldrin, *DDT, *Bioassay, Water pollution effects, Water balance, Insecticides, Animal physiology, Path of pollutants, Pesticide toxicity, Membrane processes, Aquatic animals, Snails, Gastropods, Mollusks, Chlorinated hudrocarbon pesticides, Carbamate pesticides, Phosphothioate pesticides, Animal pathology, Invertebrates, Laboratory tests, Absorption.
Identifiers: *Biomphalaria glabrata, *Orb snails, *Carbaryl, *Malathion, Macroinvertebrates, Bioaccumulation.

Biomphalaria glabrata were kept for 24 h at 26 C in colloidal solutions of aldrin, carbaryl, DDT and malathion in Ringer's containing 0.5 percent gelatine. All four pesticides affected the heart rate and were lethal in 24 h. Of the four pesticides aldrin caused a progressive accumulation of body water over the range tested. At the higher aldrin levels this accumulation resulted in a body water content of 70 percent more than that found in the untreated control animals. Only in the case of aldrin was the impairment of osmoregulation seen, resulting in the accumulation of body water. The swelling was seen during the first few hours of exposure before major decreases in heart beat were produced. On examination of the distended snails, the haemolymph spaces were found to be swollen with fluid. Aldrin appears to interfere with osmoregulation, causing accumulation of fluid in the haemolymph. Whether this fluid accumulates by inhibition of diuresis by the Malpighian tubules, or by increase in water permeability of the body wall, remains to be investigated. (Holoman-Battelle)

THE EFFECT OF CHINA-CLAY WASTES ON STREAM INVERTEBRATES,
Cornwall River Authority, Launceston (England).
P. M. Nuttall, and G. H. Bielby.
Environmental Pollution, Vol 5, No 2, p 77-86, September 1973. 2 fig, 4 tab, 22 ref.

Descriptors: *Invertebrates, *Water pollution effects, *Natural streams, *Aquatic plants, *Water quality, Suspended solids, Aquatic algae, Annelids, Mollusks, Crustaceans, Aquatic insects, Aquatic animals, Industrial wastes, Mosses, Chlorophyta, Benthic fauna, Benthic flora, Tubificids, Water sampling, Pondweeds, Submerged plants, Clams, Snails, Water beetles, Dragonflies, Isopods, Amphipoda, Stoneflies, Mayflies, Caddisflies.
Identifiers: *China clay wastes, Macroinvertebrates, Macrophytes, Water mites, Pond snails, Species abundance, Turbellaria, Sample preservation, Myriophyllum, Ranunculus, Fontinalis, Mougeotia, Crowfoots, Stigeoclonium, Plym River, Yealm River, Tory Brook River, East Looe River, Fowey River, Fal River, St. Austell River, Crinnis River, Par River, Black flies, Horse flies, Soldier flies, Crane flies, Predaceous diving beetles, Riffle beetles, Whirligig beetles, Common skinners, Flatworms, Leeches, Dance flies.

A survey of the macro-invertebrate fauna of rivers receiving china-clay wastes was carried out during 1971-72. A total of 59 samples were taken from 44 sites with a closed triangular net (64 mesh/sq cm) at the riffle sections of the rivers sampled. Samples were preserved in 4 percent formalin for further processing in the laboratory. Rivers polluted by clay waste supported a sparse population of few species. Rooted vegetation was absent, although clean headstreams and unpolluted reaches supported a rich community of aquatic plants. Control streams supported thirty-six times the density of animals found at clay-polluted stations. The composition of species was greater in unpolluted rivers, moorland headstreams and at stations downstream of sewage outfalls compared with clay-polluted reaches. Baetis rhodanii, Perlodes microcephala and the burrowing forms Tubificidae, Naididae and Choronomidae were in greater abundance in clay-polluted reaches. China-clay pollution either eliminated or reduced the abundance of several species frequent in control streams. The poor incidence of plants and macroinvertebrates from rivers receiving china-clay waste was associated with the depositon of fine inert solids derived from the clay extraction process rather than turbidity or abrasion caused by particles in suspension. DISTRIBUTION OF (C-14) PCBS IN CARP,
Tokyo Univ. of Fisheries (Japan).
T. Yoshida, F. Takashima, and T. Watanabe.
AMBIO, Vol 2, No 4, p 111-113, 1973. 2 fig, 1 tab, 11 ref.

Descriptors: *Polychlorinated biphenyls, *Distribution patterns, *Radiochemical analysis, *Carp, *Bioassay, Radioactivity techniques, Absorption, Freshwater fish, Animal metabolism.
Identifiers: *Scintillation counting, Biological samples, Chlorinated hydrocarbons, Bioaccumulation, Gall bladder, Hepatopancreas, Kidneys, Adipose tissue, Brain, Heart, Blood, Gills, Intestine, Skin, Muscle, Tissue.

Young carp (Cyprinus carpio) were exposed to C-14-labeled PCB's by oral dosage and by addition to water to determine the distribtuion of PCB's in fish. The PCB's used were nearly equivalent to Aroclor 1248. Oral dosage was 6 microcuries of C-14 PCB per fish. In the water exposure experiment, fish were exposed to 2 microcuries per liter for 24 hours. After dosing, the fish were kept in a flowing water tank and fed a PCB-free diet for 7 days to equilibrate the distribution in the fish body. Two fish from each experiment were dissected and the amount of radioactive material in the hepatopancreas, gall bladder, kidney, visceral adipose tissue, adipose tissue of the skull, brain, heart, blood, gill, intestine, skin, and dark and white muscle was determined using an automatic sample oxidizer and liquid scintillation counter. Autoradiographic analysis of whole bodies was used for the remaining samples. The compounds were localized mainly in the gall bladder, adipose tissue and hepatopancreas, but only slight radioactivity was detected in muscle, with the exception of dark muscle. In particular, high radioactivity was detected in the gall bladder and adipose tissue of the skull. In the feeding experiment, a higher radioactivity count was observed in the intestine, especially in the posterior segment. (Little-Battelle)

STUDIES ON METHANOL-OXIDIZING BACTERIA. I. ISOLATION AND GROWTH STUDIES,
Texas Univ., Austin. Dept. of Microbiology.
R. J. Mehta.
Antonie van Leeuwenhoek, Vol 39, No 2, p 295-302, 1973. 7 tab, 16 ref.

Descriptors: *Isolation, *Methane bacteria, *Pollutant identification, *Oxidation, Soil bacteria, Assay, Enzymes, Metabolism, Methane, Water pollution sources, Cultures, Inhibition, Pseudomonas, Manometers, Temperature, Organic compounds, Alcohols, Amino acids, Microbial degradation, Aerobic bacteria.
Identifiers: *Bacterial physiology, *Substrate utilization, *Growth studies, *Methanol, Cyanides, Pseudomonas spp, Enzymatic inhibitors, Formate dehydrogenase, Manometric techniques, Enrichment, Carbon sources, Substrate concentration, Glutamates, Acetates, Citrates, Succinates, Lactates, Oxalates, Glycollates, Formates, Cyanides, Sample preparation, Cell yield, Ethanol, n-Propanol, n-Butanol, Isopropanol, Methylamine, Glycine, Serine, Alanine, Glucose, Fructose, Formaldehyde.

Three methanol-oxidizing bacteria were isolated by enrichment culture technique from soil. Two of them were Pseudomonas spp. The third one was obligate methylotroph. The growth characteristics of the 3 microbes were studied in cultures containing a basal salts medium and an appropriate carbon source. Oxygen uptake by washed-cell suspensions or crude cell extracts was measured in conventional Warbury manometers at 30 C with air as the gas phase. Formate dehydrogenase activity was assayed by measuring the rate of CO2 production by a conventional manometric technique. Cell-suspension experiments with Pseudomonas RJ suggest that methanol-, formaldehyde-, and formate-oxidizing enzymes were present. Formate-oxidizing enzyme was detected only from Pseudomonas RJ. It had a pH optimum of 7.0 and required nicotinamide adenine dinucleotide (NAD) for activity. Cyanide at 0.01 mM concentration inhibited the enzyme activity completely. (Holoman-Battelle)

VIABILITY OF LYOPHILIZED MICROORGANISMS AFTER STORAGE,
Agricultural Univ., Wageningen (Netherlands). Lab. of Microbiology.
J. Antheunisse.
Antonie van Leeuwenhoek, Vol 39, No 2, p 243-248, 1973. 2 tab, 8 ref.

Descriptors: *Bacteria, *Yeasts, *Fungi, *Storage, Effects, Pathogenic bacteria, Microorganisms, Pseudomonas, Azotobacter, Aerobic bacteria, Nitrogen fixing bacteria.

Identifiers: *Lyophilization, *Survival, Heterotrophic bacteria, Culture media, Agrobacterium, Beijerinckia, Erwinia, Lipomyces, Microcyclus, Arthrobacter, Brevibacterium, Escherichia, Corynebacterium, Mycobacterium, Rhizobium, Bacillus, Acetobacter, Alcaligenes, Azotobacter agilis, Azotobacter beijerinckii, Azotobacter chroococcum, Azotobacter vinelandii, Brevibacterium linens, Caulobacter, Cellulomonas, Lactobacillus, Leuconostoc, Micrococcus, Mycobacterium, Mycobacterium phlei, Mycobacterium rhodochrous.

Bacteria, yeasts and fungi lyophilized in a dextran-sodium glutaminate solution were stored under vacuum in the dark at room temperature. After 6 years the survival was tested and viability counts were made. Of the 48 genera or groups tested 31 survived well and 9 moderately (respectively, 80-100 percent and 50-80 percent of the strains were still alive). Many strains of the genera Agrobacterium; Azotobacter; Beijerinckia; Erwinia; Pseudomonas; Lipomyces and Microcyclus failed to survive. Lyophilized mushroom mycelium did not grow after 6 years storage. The results of this experiment are compared with those obtained with the same strains preserved on sealed agar slants (Antheunisse, 1972). The results of both methods in relation to some genera are discussed. (Holoman-Battelle)

MICROFAUNA OF ACTIVATED SLUDGE. PART III. THE EFFECT OF PHYSICO-CHEMICAL FACTORS ON THE OCCURRENCE OF MICROFAUNA IN THE ANNUAL CYCLE,
Instytut Gospodarki Kommunalnej, Warsaw (Poland). Pracownia Hydrobiol.
H. Klimowicz.
Acta Hydrobiologica. Cracow, Vol 15, No 2, p 167-188, 1973. 6 fig, 1 tab, 20 ref.

Descriptors: *Activated sludge, *Physicochemical properties, Pollutant identification, *Environmental effects, Domestic sewage, Sewage effluents, Protozoa, Rotifers, Crustaceans, Nematodes, Oligochaetes, Temporal distribution, Dominant organisms, Chemical analysis, Nitrates, Nitrites, Ammonia, Suspended solids, Dissolved oxygen, Air temperature, Hydrogen ion concentration, Biochemical oxygen demand, sampling.
Identifiers: *Sewage microorganisms, *Annual cycles, *Seasonal variation, Characterization, Tardigrades, Gastrotricha, Influents, Organic nitrogen, Flagellates, Arachnids, Amoeba limax, Amoeba proteus, Amoeba gorgenia, Amoeba radiosa, Cochliopodium granulatum, Arcella vulgaris, Euglypha alveolata, Peranema trichophorum, Coleps hirtus, Trachelophyllum pusillum, Litonotus carinatus, Litonotus crinitus, Litonotus fasciola, Chilodonella cucullulus, Chilodonella uncinata, Colpidium campylum Urostyla.

Studies were conducted over a 1-yr period to determine the effect of physiochemical and atmospheric conditions on the development of microfauna in the annual cycle in activated sluge. One hundred and four activated sludge samples were examined immediately after being taken from a Sheffield type aeration tank which receives domestic sewage. Faunistic analyses and the following physiochemical observations were made: concentration and volume of the activated sludge in the aeration tank, temperature of air and sludge, concentration of DO, pH of inflowing and effluent sewage, 5-day BOD, and the amount of suspended solids, ammonia, organic nitrogen, nitrates, and nitrites in the inflowing and effluent sewage. 69 species of microorganisms were identified. It was difficult to determine which fluctuations in the assemblage of the microfauna depended on the technological and which on the atmospheric conditions. The majority of species in the activated sludge appear accidentally in periods which are difficult in anticipate. The remaining species may be divided into frequently and rarely found in the course of the year, and into those characteristic for warm or cold seasons of the year. The rise in temperature from March to September caused a gradual increase in the number of species and the fall in temperature in the cold season an increase in the number of individuals. The number of species and of the individuals representing them depends mainly on the course of the process of sewage purification and to a lesser degree on the season of the year. THE CHEMICAL OXYGEN DEMAND OF WATERS AND BIOLOGICAL MATERIALS FROM PONDS,
Auburn Univ., Ala. Dept. of Fisheries and Allied Aquacultures.
C. E. Boyd.
Transactions of the American Fisheries Society, Vol 102, No 3, p 606-611, July 1973. 6 fig, 12 ref.

Descriptors: *Chemical oxygen demand, Surface waters, *Ponds, *Aquatic algae, Aquatic plants, *Freshwater fish, *Organic matter, Oxidation, Phytoplankton, Aquatic bacteria, Water analysis, Chemical analysis, Oxygen, Water temperature, Euglena, Chlamydomonas, Zooplankton, Chlorophyll, Primary productivity, Water hyacinth, Pondweeds, Carp, Channel catfish, Dissolved oxygen, Water sampling, Alligatorweed.
Identifiers: *Oxygen consumption, Macrophytes, Particulate matter, Sample preparation, Aphanizomenon flos-aquae, Anabaena circinalis, Staurastrum, Nitella, Spirogyra, Elodea densa, Water milfoil, Threadfin shad, Gizzard shad, Stoneworts, Duckweed, Largemouth bass, Bluegills, Wild celery, Spike rushes, Needle rush, White catfish, Scenedesmus dimorphus, Anabaena flos-aquae, Chlorella pyrenoidosa, Ankistrodesmus falcatus, Coelastrum microporum, Pithophora kewensis, Alternanthera philoxeroides, Lemna minor, Eichhornia crassipes.

Water samples were taken from ponds which received feed applications and from fertilized and unfertilized ponds and analyzed to determine if a consistent relationship exists between the COD of pond waters and the rate of oxygen consumption by planktonic organisms. The samples were collected 10 cm beneath the surface with polyethylene bottles and used within 2 hr of collection for the preparation of the following experiments: rate of O2 consumption, COD, and effect of temperature on O2 consumtion. COD determinations were made on unfiltered and the filtrates of filtered water samples. The total amount of O2 required to oxidize fish, algal, and macrophyte samples was determined by COD analysis. The rate of oxygen consumption by organisms in pond waters, as measured by a dark bottle technique for a 24-hr period, increased with increasing chemical oxygen demand (COD). Rate of oxygen consumption increased with temperature between 15 and 35C (Q sub 10 values were 1.5 to 2.0). At the same level of COD, oxygen consumption was greater in unaltered pond water than in water in which the plankton was heat-killed and oxygen was utilized only by bacteria and other decomposers. COD was positively correlated with increasing concentrations of chlorophyll in pond water. The amount of COD in soluble organic matter ranged from 20.2 to 95.0 percent of the total COD. The percentage of the COD in the soluble fraction decreased with increasing quantities of phytoplankton. The average amounts of oxygen (mg oxygen/mg dry wt) required to completely oxidize various types of biological material were: phytoplankton from pure cultures, 1.29; macroscopic algae, 100; higher aquatic plants, 0.99; particulate matter from pond waters 0.98; and fish, 1.19. (Holoman-Battelle)

MICROBIAL FLORA AND LEVEL OF VIBRIO PARAHAEMOLYTICUS OF OYSTERS (CRASSOSTREA VIRGINICA), WATER AND SEDIMENT FROM GALVESTON BAY,
Texas A and M Univ., College Station. Dept. of Animal Science.
C. Vanderzant, C. A. Thompson, Jr., and S. M. Ray.
Journal of Milk and Food Technology, Vol 36, No 9, p 447-452, September 1973. 4 fig, 5 tab, 33 ref.

Descriptors: *Oysters, *Pathogenic bacteria, *Enteric bacteria, Water pollution, *Bottom sediments, *Pollutant identification, Shellfish, Cultures, Iosolation, Dominant organisms, Ecological distribution, Path of pollutants, Aerobic bacteria, Anaerobic bacteria, Fish parasites, Aquatic soils, Soil contamination, Pseudomonas, Soil analysis, Water analysis, Pollutants, Water temperature, Salinity.
Identifiers: *Vibrio parahaemolyticus, Heterotrophic bacteria, Culture media, Plate counts, *Galveston Bay, Aeromonas, Moraxella, Acinetobacter, Flavobacterium, Achromobacter, Bacillus, Micrococcus, Staphylococcus, Enterobacteriaceae, Animal tissues, Biochemical tests, Sample preparation, Trypticase soy broth, Trypticase soy agar, Thoisulfate citrate bile salts sucrose agar.

Oysters taken from Galveston Bay were examined within 6-12 hr after collection in order to obtain some information on the level and type of microbial flora and the distribution of V. parahaemolyticus in oysters, water, and sediment. The shucked oysters were blended and bacterial counts were determined by the spread plate method using trypticase soy agar plates with 3 percent NaCl. Isolation of V. parahaemolyticus was accomplished using oyster-trypticase-peptone homogenate in trypticase soy broth with 7 percent NaCl and subsequently on thiosulfate citrate bile salts surcrose agar plates. MT plates were also used without enrichment for isolations. Aerobic plate counts at 25 C of reshly harvested oysters ranged from 23,000 to 30 million and those of sediment samples from less than 100 to 3 million/g. Counts of water samples were nearly always less than 100/ml. Vibrio, Aeromonas, and Moraxella species predominated in the fresh oysters. Vibrio parahaemolyticus was isolated from 39 to 66 oyster samples and from 9 of 30 sediment and water samples. Isolation was most effective with prior enrichment of samples in trypticase soy broth with 7 percent NaCl and subsequent plating on theiosulfate citrate bile salts sucrose agar. V. parahaemolyticus was detected in only 1 of 8 refrigerated retail oyster samples. Aerobic plate counts at 25 C of refrigerated retail oysters were not much different from those of similar lost shucked under aseptic conditions in the laboratory (Bbefore shucking and washing in the plants). Aeromonas and Moraxella species were predominant in oysters at the retail level. (Holoman-Battelle)

INCREASE OF RESISTANCE OF CARP TO DROPSY BY MEANS OF BREEDING. II. COURSE OF SELECTION AND EVALUATION OF THE BREED GROUPS, (IN RUSSIAN),
Gosudarstvennyi Nauchno-Issledovatelskii Institut Ozernogo i Rechnogo Rybnogo Khozyaistva, Leningrad (USSR).
V. S. Kirpichnikov, and K. A. Faktorovich.
Genetika. Vol 8, No 5, p 44-54. 1972. Illus. (English summary).
Identifiers: Breeding, *Carp, *Dropsy, Genes, Genomes, Growth, Hybrids, Pools, Selection, Strains, *USSR (Krasnodar Territory).

The breeding of carp for the resistance to dropsy in the Krasnodar Territory (USSR) was in progress for 8 yr. Breeding procedures were performed with 3 breed groups: Ropshian carps possessing a considerable proportion of genes from the gene pool of Amur wild carp in their genome, local scattered carps and the hybrids of the Ropshian and the Ukranian carps. During breeding procedures, the Ropshian carps underwent selection for dropsy resistance through 2 generations, while all the other breed groups underwent it in 1 generation. Hybrids between the Ropshian carp and the local scattered carps proved best with respect to growth rate and resistance to dropsy, while the scattered carps were the worst. Fairly good results were obtained with hybrids between the Ropshian and the Ukranian carps. The good characteristics of the inter breed hybrids suggest the urgency of future parallel breeding work with 2 or 3 breed groups with the subsequent use of the heterotic interbreed hybrids for commercial purposes.--Copyright 1973, Biological Abstracts, Inc.

A FIRST RECORD OF RED-WATER PHENOMENON IN KASHMIR, INDIA,
Kashmir Univ., Srinagar (India). Dept. of Zoology.
S. M. Das, and Nisar A. Jan.
Kashmir Sci, Vol 7, No 1/2, p 45-47, 1970, Illus.
Identifiers: Chromatophores, *Euglena-rubra, *India (Kashmir), Record, *Red water, Water pollution effects.

Large expanses of freshwater both permanent and transient were observed, completely covered with a thick red mantle. These waters were devoid of all other life normally supported. The responsible organism was identified as Euglena rubra. These possess a layer of red chromatophores spread throughout the cell body. The estimated Euglena population of a 4-acre shallow water body was about 160,000,000.--Copyright 1973, Biological Abstracts, Inc.

HYDROBIOLOGICAL STUDIES ON THE LEDNICKE RYBNIKY PONDS: SPECIES COMPOSITION AND SEASONAL VARIATION IN THE ABUNDANCE OF PLANKTON (IN CZECH),
Brno Univ. (Czechoslovakia). Hydrobiologicka Laborator.
B. Losos, and J. Hetesa.
Prirodoved Pr Ustavu Cesk Akad Ved Brne, Vol 5, No 10, p 3-54, 1971, Illus.
Identifiers: *Algae, Biocenoses, Chemical composition, *Czechoslovakia (Lednicke-Rybniky Ponds), *Hydrobiological studies, Plankton, Planktonic abundance, Ponds, Seasonal, Species, Zooplankton, *Cyanophyta.

After a rather long break, hydrobiological investigations were resumed on the Lednicke rybniky Ponds (Southern Moravia, Czechoslovakia) during 1956-1962. Besides the structure and development of planktonic biocenoses, investigations also involved the chemical composition of water. Particular attention was paid to the differential species composition and abundance of plankton in individual ponds and in successive years; to the development and composition of blue-green algae water blooms; and to individual types of zooplankton during the growing season. The results of the above observations are compared with the data forwarded by earlier authors, and the changes that had arisen within the past 30 yr.--Copyright 1973, Biological Abstracts, Inc.

THE RELATIONS OF PERIPHYTIC AND PLANKTONIC ALGAL GROWTH IN AN ESTUARY TO HYDROGRAPHIC FACTORS,
Washington Univ., Seattle. Dept. of Civil Engineering.
E. B. Welch, R. M. Emery, R. I. Matsuda, and W. A. Dawson.
Limnol Oceanogr, Vol 17, No 5, p 731-737, 1972, Illus.
Identifiers: *Algal growth, Chlorophyll, Estuaries, Hydrographic studies, Light, Nitrogen, *Periphytic algae, Phosphorus, *Planktonic algae, Seasons, *Washington (Duwamish estuary).

The seasonal periodicity of periphyton growth in the Duwamish estuary (Washington), is compared with that of phytoplankton and lends support to a previous conclusion that hydrographic conditions determine the timing of phytoplankton blooms despite high concentrations of dissolved N and P. Accumulation of periphyton on substrates increased in June and July to around 10 microgram chlorophyll a cm-2 wk-1 and is related to incident light; conversely, phytoplankton blooms were delayed until Aug. and Sept. when hydrographic conditions were optimum for biomass accumulations of from 30-70 microgram chlorophyll a/l. Maximum growth of periphytic and planktonic algae occurred at the same location in the estuary. This similarity in spatial distribution is not directly related to hydrographic conditions since the periphyton algae are sessile and more resistant to washout. The water in this section of the estuary presumably contained a more adequate supply of one or more limiting nutrients than water from adjacent locations.--Copyright 1973, Biological Abstracts, Inc.

ECOLOGICAL IMPACT OF PESTICIDES,
Cornell Univ., Ithaca, N.Y. Dept. of Entomology.
D. Pimentel.
Environ Biol, Vol 72, No 2, p 1-27, 1972.
Identifiers: Animals, Bird, *Ecological impact, Fish, Insects, *Pesticides, Plants, *Environmental effects, Ecosystems.

The ecological effects of pesticides (insecticides, herbicides, and fungicides) were analyzed and an assessment made of the extent of damage to the diverse processes of the environmental life system. Some pesticides reduced some species population numbers in certain regions, altered the natural habitat under some conditions, influenced the normal behavior including learning in animals, stimulated or suppressed growth in animals and plants, increased or decreased the reproductive capacity of animals, altered the nutritional content of foods, increased the susceptibility of certain animals to disease, and were concentrated in certain animals to a level 100,000 times that in the environment. The available evidence suggests that certain current pesticide usage methods have caused measurable damage to some species of birds, fishes, and beneficial insects. The full extent of damage is impossible to assess accurately because only a few (less than 1000) species of plants and animals have been studied. Although data on the detrimental effects of pesticides on the life system are spotty, there is sufficient evidence for concern about pesticide use. To avoid compounding the mistakes of the past, caution should be exercised in employing any pesticide with the following characteristics: pesticides which can be easily concentrated in living organisms; pesticides which can be passed from link to link in the food chain and stored in the life system; and pesticides which persist in the environment.--Copyright 1973, Biological Abstracts, Inc.

SWIMMING ENDURANCE AND RESISTANCE TO COPPER AND MALATHION OF BLUEGILLS TREATED BY LONG-TERM EXPOSURE TO SUBLETHAL LEVELS OF HYDROGEN SULFIDE,
Minnesota Univ., St. Paul. Dept. of Entomology, Fisheries and Wildlife.
D. Oseid, and L. L. Smith, Jr.
Trans Am Fish Soc, Vol 101, No 4, p 620-625, 1972, Illus.
Identifiers: *Bluegills, *Copper, Endurance, Exposure, *Hydrogen sulfide, Long-Term effects, *Malathion, Resistance, Sublethal levels, Swimming endurance.

After 126 or 148 days of exposure to H2S concentrations ranging from 0.0004 to 0.0146 mg/l, young-of-the-year bluegills were tested for swimming endurance and resistance to Cu or malathion. Swimming tests at low speeds indicated increased endurance for fish exposed to .0004 mg/l H2S, but fish exposed to higher concentrations had less endurance than the controls. In the testw conducted at higher speeds, fish in all test concentrations showed less endurance than the controls. Resistance to Cu was increased by exposure to H2S, but resistance to malathion was not affected except in the lowest test concentration. The chronic exposure to H2S reduced growth in the highest concentration, and gill irrigation rate increased with increased concentrations.--Copyright 1973, Biological Abstracts, Inc.

THE VEGETATION OF FINDLEY LAKE BASIN,
Washington Univ., Seattle. Dept. of Botany.
R. Del Moral.
Am Midland Nat. Vol 89, No 1, p 26-40. 1973, Illus.
Identifiers: *Abies-Amabilis, Biological, Bryophytes, Lakes, *Tsuga-Mertensiana, *Washington (Findley Lake) *Vascular plants.

The vascular plant vegetation of the Findley Lake Basin, King Co., Washington, is described and mapped. This pristine basin ranges in elevation from 1128 to 1350 m. The forested portions of the basin are typical of the Abies amabilis and the lower Tsuga mertensiana vegetation zones, and are divided into 3 community types. Five distinct non-forested community types occupy special edaphic situations. These include a wet meadow, a structurally more complex mesic meadow, a depauperate dry meadow, a bryophyte-dominated talus community and a shrub community. Some structural characteristics of each type are discussed. The dominance of A. amabilis increases from dry ridge tops to the mesic lower slopes of the basin. This pattern reflects differences in rates of forest development along this transect. Because it is pristine and similar to A. amabilis forests in other parts of Washington, this basin is being used in studies of productivity and mineral cycling as part of the USA IBP (International Biological Program) effort. The site should be preserved as a representative of a rapidly diminishing resource.--Copyright 1973, Biological Abstract, Inc.

A MATHEMATICAL MODEL OF PRIMARY PRODUCTIVITY AND LIMNOLOGICAL PATTERNS IN LAKE MEAD,
Arizona Univ., Tucson.
L. G. Everett.
Natural Resources System Series, Technical Report No. 13, Department of Hydrology and Water Resources, September 1972. 151 p, 46 fig, 12 tab, 60 ref.

Descriptors: *Primary productivity, *Mathematical models, *Lake stages, *Dissolved solids, *Phytoplankton, Aquatic environment, Water quality, Colorado River, Aquatic microbiology, Pollutants, Zooplankton, Colorado River Basin, Water pollution sources, Salinity, Algae.
Identifiers: *Lake Mead.

Objectives were to analyze the biotic and abiotic components of Lake Mead, and to develop methodology for diagnosing changes in biological productivity as it relates to physical and chemical changes in the aquatic system. Progressive increases in concentration of dissolved solids in the Colorado River, as much as 2-3 times between the Green River in Wyoming and the Imperial Dam, seem to alter plankton dynamics and the biological productivity of the river. A reliable model to predict future trends is needed to support alternative developmental plans for the lower basin. Lake Mead, the largest surface water body in the basin, represents a system of wide variability in limnological conditions, requiring analysis to depict the influences of past activities and to produce a sound base for forecasting environmental effects of its development. This model shows that planktonic organisms may indicate the presence of water probelms. Macro-and micro-nutrient analyses reveal that primary productivity is not inhibited by limiting concentrations. Tested with one set of independent data, this model appears to be worthy of management utility, but while working well for Lake Mead, needs to be tested with independent data. (Muller-Arizona)

METABOLIC EFFECTS OF DRINKING BRACKISH WATER,
Central Negev Hospital, Beersheba (Israel).
G. M. Berlyne, and M. Morag.
Desalination, Vol 10, No 2, p 215-219, April 1972. 4 tab, 10 ref.

Descriptors: *Urine, *Public Health, Ureas, Brines, Arid Lands, Arid Climates, Saline water systems, Salinity, Water pollution effects, Potable water, Domestic water, *Human Diseases, Water quality, *Brackish water.
Identifiers: *Israel (Arava Rift Valley).

Brackish water is common in arid areas, in the form of surface ponds, saline water table and saline artesian aquifer groundwaters, and saline surface streams. Such saline waters may be the only water available. Brackish water in the Arava Rift Valley in Southern Israel has a high sulphate and magnesium content. The inhabitants who drink this water have been found to have hypocalcaemia and hyperphosphataemia suggestive of parathyroid hypofunction. They also have been found to have low urinary pH, massive urinary sulphate excertion, and a compensated metabolic acidosis. It is suggested that the low urinary pH may be one of the reasons for the high incidence of uric nephrolithiasis in the region. At present potable water quality standards are in terms of concentration, without reference to the quantity of such water consumed. In view of the large volumes of fluid drunk in hot and dry climates, and of the potential deleterious effects of the salts as outlined above, standards for drinking water should be redefined in terms of daily intake of ions rather than in terms of the standards currently used. (Muller-Arizona)

FRESHWATER MUSSEL ECOLOGY, KENTUCKY LAKE, TENNESSEE, MAY 1, 1969--JUNE 15, 1972,
Tennessee Game and Fish Commission, Nashville.
P. Yokley, Jr.
Available from NTIS, Springfield, Va 22151 as COM-73-10619 Price $3.00 printed copy; $1.45 microfiche. National Marine Fisheries Service Cooperative Project 4-46-R, 1972. 133 p, 53 fig, 22 tab, 11 ref.

Descriptors: *Ecology, *Water pollution effects, *Mussels, *Tennessee River, Correlation analysis, Ecosystems, Water pollution sources, Mercury, Sampling, Chemical analysis, Lakes, Fish populations, Growth rates.
Identifiers: *Tennessee (Kentucky Lake).

A study of the ecology including species distribution, densities, growth rates, and spawning of freshwater mussels in the Tennessee River, Kentucky Lake, Tennessee has revealed significant information that can serve as a basis for measuring future changes in water quality and habitat in this 160-mile stretch of the Tennessee River below Pickwick Dam. The 5 mile freshwater mussel sanctuary immediately below Pickwick Dam has revealed that protecting a habitat can help maintain a naiad fauna against exploiting commercial uses. Data indicate that some mussel species are successfully propagating and adapting to the impounded conditions that exist along the length of the Tennessee River today. There are indications that acid water pollution has seriously damaged the mussel shells especially in the deeper areas of slower moving water. Also, some mussel populations have been eliminated by pollutants in past years as indicated by dead shells along specific lengths of the river. Enough remaining small mussel populations still exist along the river to use as monitoring organisms and indicators of further pollution. A commercial species, Fusconaia ebena, is abundant enough and sufficiently supported to make commercial harvesting profitable. (Woodard-USGS)

5D. Waste Treatment Processes

RECREATIONAL REUSE OF MUNICIPAL WASTEWATER,
Texas Tech Univ., Lubbock. Water Resources Center.
W. T. Winn, Jr., D. M. Wells, and R. M. Sweazy.
Available from the National Technical Information Service as PB-225 154/4, $3.50 in paper copy, $1.45 in microfiche. Interim Report WRC-73-1, July 1973. 48 p, 12 fig, 2 tab, 9 ref. OWRR C-4270 (No 9043) (1).

Descriptors: *Water reuse, *Waste water disposal, *Eutrophication, Chlorophyta, *Groundwater, Chrysophyta, *Algae, Nutrients, *Texas, *Recreation, Water quality.
Identifiers: *Lubbock (Tex), Canyon Lakes Project (Tex), *Municipal waste water.

The second reuse of municipal wastewater for recreational purposes is becoming a reality in Lubbock, Texas where a series of small lakes will be fed with percolated wastewater which was reused previously for irrigation. In conjunction with the city's project, Texas Tech University has constructed a model of the Canyon Lakes Project consisting of nine ponds 16 x 8 x 6 ft deep fed with percolated wastewater of comparable quality and stocked with channel catfish. Several chemical parameters of H2O quality (COD, NO3, PO4, CO2 and DO) are monitored on a frequent basic along with the daily logging of physical events in an attempt to provide the City with valuable information concerning possible problems and solutions surrounding the project. Only preliminary work has been done on the pilot scale study. Additional studies are in progress.
W74-01103

WATER QUALITY EVALUATION OF REGIONALIZED WASTEWATER SYSTEMS,
Northwestern Univ., Evanston, Ill. Dept. of Civil Engineering.
B. J. Adams, and R. S. Gemmell.
Available from the National Technical Information Service as PB-225 167/6, $5.50 in paper copy, $1.45 in microfiche. Water Resources Center, University of Illinois, Urbana, Research Report No. 70, 1973. 193 p, 36 fig, 45 tab, 82 ref. OWWR A-050-ILL (1). 14-31-0001-3076.

Descriptors: *Water quality management, *Regional analysis, *Illinois, *Waste water treatment, Performance, Economics, Treatment facilities, Regional planning, Systems analysis, Stochastic processes, Simulation analysis, Model studies, Evaluation.
Identifiers: Chicago (Ill), *Regional waste water systems.

A water quality evaluation of regional wastewater system centralization was undertaken to test the hypothesis that water quality improvement may result from the spatial and temporal variations of wasteloads attributed to decentralized regional systems. The evaluation employed water quality models developed for both deterministic and stochastic analyses. Each analysis considered a set of experiments which involved a determination of the water quality resulting from alternative degrees of regional wastewater aggregation. The experiments treated not only the degree of aggregation or equivalently the number of plants in the system but also the stream system length as an indicator of regional morphology and the streamwater/wastewater dilution ratio as an indicator of relative stream size. The water quality assessment was made in terms of the minimum dissolved oxygen level experienced by the system. With a water quality evaluation of regional wastewater system centralization completed, an economic evaluation was undertaken. Cost functions for regional wastewater system components were developed, and costs of the physical systems hypothesized in the water quality analyses were estimated with these cost functions. Finally, a comparison was made between the water quality impact of various regional wastewater systems and the economic impact of these systems. It was concluded that substantial benefits, both economic and water quality, may result from decentralized regional wastewater systems.
W74-01107

EVALUATION OF THE BIO-DISC TREATMENT PROCESS FOR SUMMER CAMP APPLICATION,
West Virginia Univ., Morgantown. Dept. of Civil Engineering.

W. A. Sack, and S. A. Phillips.
Copy available from GPO Sup Doc as EP1.23:670-73-022, $1.05; microfiche from NTIS as PB-225 126/2, $1.45. Environmental Protection Agency, Technology Series Report EPA-670/2-73-022, August 1973. 76 p, 30 fig, 8 tab, 9 ref. EPA Project S-800707.

Descriptors: *Waste water treatment, *Biological treatment, *Nutrient removal, Recreation facilities, *Nitrogen, *Phosphorus, Biochemical oxygen demand, Chemical oxygen demand, Suspended solids, Treatment facilities.
Identifiers: *Bio-disc treatment, Process, Rotating biological contractor, Tauchtropkorper.

The bio-disc wastewater treatment process was evaluated during operation for one summer at a recreational camp. The bio-disc section consisted of four stages, each of 22 polystyrene discs 1.98 m (6.5 ft) in diameter, and was preceded by a septic tank that served to handle both the primary and the biological sludge produced. Evaluation of the plant included time required for start-up, organic removal efficiency, response to flow variations, nutrient removals, aesthetic impact, and required maintenance and operation attention. Overall organic removals reached essentially full efficiency by the end of the first week of operation. However, removals across the bio-disc section continued to increase somewhat till about the fifth or sixth week of operation. Average bio-disc unit percent removals were BOD - 84.5, COD - 71, TOC - 71, and suspended solids - 75. Average overall plant percent removals were 87.5, 79, 75, and 97.5 respectively. Total nitrogen removal through the plant averaged 40.3 percent. Ammonia nitrogen removal in the disc section was only 25.2 percent. Overall total phosphorus removal was 15 percent. Maintenance and operational requirements for the plant were minimal requiring an average of 1.3 hours per week during the summer. (EPA)
W74-01118

REMOVAL OF PHOSPHATE AND SECONDARY B.O.D. FROM TERTIARY TREATED WASTEWATER BY AQUATIC ANIMALS,
Arizona Univ., Tucson.
C. D. Ziebell.
Available from the National Technical Information Service as PB-225 210/4, $3.50 in paper copy, $1.45 in microfiche. Project Completion Report, August 1971. 13 p, 1 fig, 3 tab, 5 ref. OWRR A-019-ARIZ (1). 14-31-0001-3203.

Descriptors: Water pollution control, *Waste water treatment, *Municipal wastes, Phosphates, Aquatic life, Fish, Aquatic plants, Ecosystems, Waste assimilative capacity, Water reuse, Fisheries, *Biochemical oxygen demand, *Aquatic animals.
Identifiers: *Phosphate removal.

Various organisms were tested for their ability to remove the orthophosphate ion from solution. After preliminary testing of fish, several aquatic plants, algae and clams, a system of natural algal succession and beds of the oriental clam Corbicula fluminea Muller was chosen. Experiments were conducted under controlled conditions at phosphate concentrations of 5.0, 10.0, and 15.0 mg/liter. The results indicated that this system can remove the phosphate ion to below 0.30 mg/liter in 16 days or less and yield a clear effluent acceptable for reuse. A potential fishery and possibly other water-based recreation appears feasible. Originally this research was to be conducted with tertiary treated municipal wastewater, but completion of the city facility was delayed and consequently it was necessary to simulate 'wastewater' by adding phosphates and nitrates to local well water. STUDY OF WATER RECOVERY AND SOLID WASTE PROCESSING FOR AEROSPACE AND DOMESTIC APPLICATIONS: VOLUME 1 - FINAL REPORT SUMMARY,
Grumman Aerospace Corp., Bethpage, N.Y.
C. A. Guarneri, A. Reed, and R. E. Renman.
Available from NTIS, Springfield, Va 22151, N73-19158 - Price $3.00 printed copy; $1.45 microfiche. National Aeronautics and Space Administration, Contract Report CR-128857, 1973. 28 p, 8 fig, 2 tab. NAS-9-12503.

Descriptors: *Water reuse, *Waste water treatment, Water resources development, Model studies, Economics, Water utilization, Community development, Surveys, Evaluation, Land use, Land development, Costs, *Solid wastes.
Identifiers: Commercial equipment, *Aerospace technology, Community models.

During the past decade, the NASA, and aerospace and commercial industries have been concurrently advancing water and waste management technology. This study explores the application of advanced concepts for water recovery and solid waste processing systems for residential use. Its objective is to define a system concept which offers the best potential for near term and future usage. Concepts are developed and evaluated within the context of a total system that would provide all necessary utilities to a 'free standing' community. For this study a community model consisting of 500 newly constructed low rise apartment units with four occupants per unit has been assumed. The study was initiated with a regional overview of water resource factors as they affect new community planning. Determinations of residential water use and waste generation rates were also made. (Woodard-USGS)
W74-01280

1968 INVENTORY OF MUNICIPAL WASTE FACILITIES, A COOPERATIVE STATE REPORT: REGION 5, ILLINOIS, INDIANA, MICHIGAN, MINNESOTA, OHIO, WISCONSIN.
Environmental Protection Agency, Washington, D.C. Office of Water Programs.

Available from GPO, Washington, D.C., 20402, Price $2.00. EPA Publication No OWP-1, Vol 5, 1971. 249 p.

Descriptors: *Waste water treatment, *Municipal wastes, *Treatment facilities, Documentation, Classification, Indexing, Illinois, Indiana, Michigan, Minnesota, Ohio, Wisconsin, Sites, Waste water disposal, Sewage effluents, Industrial wastes, Streams, *Great Lakes region.

The municipal waste facilities described in this publication (10 volumes of which this report is Vol 5) are those reported by the States and Territories of the United States as being in place on January 1, 1968. The data presented were collected by the various State and Territorial water pollution control agencies and processed through the Regional and Headquarters offices of the Federal Water Pollution Control Administration (now Environmental Protection Agency). Volume 5 includes waste facilities in Illinois, Indiana, Michigan, Minnesota, Ohio, and Wisconsin. A facility is defined as a treatment plant, or, where wastewater is discharged raw, the collection system, for dispoal of domestic and industrial wastewaters. The facilities reported are those associated with municipal-type operations. Facilities are listed alphabetically within States by community or, where a sanitary district, public utility district, etc., is concerned, by the name of that entity. Following the listing of individual facilties there is for each State a summary of plants serving communities other than their own with the names of the 'served' communities. (Woodard-USGS)
W74-01282

IMPROVED WASTE DISPOSAL UNIT,
Army Land Warfare Lab., Aberdeen Proving Ground, Md.
H. H. Rosen.
Available from NTIS, Springfield, Va., 22151, AD-758 842 Price $3.00 printed copy; $1.45 microfiche. Technical Report No LWL-CR-04B71, March 1973. 21 p, 16 fig, 1 append.

Descriptors: *Sewage disposal, *Environmental sanitation, Environmental control, Water pollution control, Design, *Waste disposal, Specifications, Structural engineering, Military aspects, *Septic tanks, *Waste water treatment.
Identifiers: Latrines.

In Vietnam the practice of using burn-out type latrines proved to be highly unsatisfactory. The requirements for ecological acceptability for systems accentuated the search for new developments in waste disposal. The septic tank principle is an acceptable solution to the problem. The principle has been in effective use for a long time and as applied here, without the large quantities of flush water generally associated with home use, even soils with poor percolation are amenable to this system. Using this principle, an inexpensive and disposable unit, compact, light weight, but capable of handling the waste of up to two hundred men per day, is described. The system, weighing approximately 125 pounds, consists of a 4 ft x 2 ft x 2 ft fiberglass box and lid with plastic piping. It is field assembled without special tools and requires only the digging of a trench and the fabrication of a latrine box for its emplacement. (Woodard-USGS)
W74-01284

PRESSURIZED SEWER COLLECTION SYSTEMS,
Illinois Inst. for Environmental Quality, Chicago.
J. Leckman.
Available from NTIS, Springfield, Va., 22151, PB-216 166 Price $3.75 Printed copy; $1.45 microfiche. Illinois Institute for Environmental Quality, Chicago, Contract report, November 1972. 36 p, 1 fig, 4 tab, 11 ref.

Descriptors: *Sewerage, *Sewage treatment, *Sewers, *Domestic wastes, Pumps, Pipes, Design criteria, Pressure, Costs, Installation costs, Maintenance costs, *Waste water treatment.
Identifiers: *Pressurized sewers, Grinder pump equipment.

The grinder pump/pressurized collection systems have different characteristics than a conventional gravity sewage system. For example, the wastewater is stored at the home site and then discharged at a uniform rate at some future time that is not necessarily related to consumption of the water; consequently, sewage discharge is not as directly related to water consumption as it is in a gravity sewage collection system. Also, being in a pressurized system, infiltration is not encountered; therefore, the total volume of water delivered to a sewage treatment plant is considerably less. The commercial grinder pump package unit generally consists of a grinder, pump, shut off valve, check valve, electrical controls, fiberglass or stell housing, and accessories to make the unit completely operable with only the electrical power connections and sewer inlet-outlet connections required for field installation. The cost for the package unit with installation is between $1,000 to $1,500 depending on the manufacturer selected and whether an indoor or outdoor location is used. Monthly operational cost of

a pump grinder unit is minimal and consists primarily of the cost of electricity. (Woodard-USGS)

FUNCTIONAL WATER AND SEWERAGE PLAN AND PROGRAM.
LBC and W Associates, Columbia, S.C.

Final report prepared for Isothermal Planning and Development Commission, Rutherfordton, N.C., July, 1973. 123 p, 5 maps, 22 tab, 3 append. HUD Grant NCP-1006-NM2.

Descriptors: *Planning, *Water supply, *Sewerage, *North Carolina, Water demand, Water quality, Environmental effects, Waste water treatment, Treatment facilities.
Identifiers: *Utility extension, Goals, Cleveland County (N.C), Rutherford County (N.C.), Polk County (N.C.), McDowell County (N.C.).

This comprehensive planning report identifies existing water supply and distribution facilities, wastewater collection and treatment facilities, projects trends in population growth and land use, sets environmental goals, objectives, and criteria for planning, and recommends general programs for improving water and sewerage services. The area consists of Cleveland, Rutherford, Polk, and McDowell Counties, N. C., located between Asheville and Charlotte. Twenty-five organizations supply water to residences within the region, serving 53% of the population. Ten percent of supply for these systems comes from groundwater, the remainder from surface sources. Sixteen organizations collect or treat residential wastewater. Only 29% of the region's population is served. Population is projected to increase from 162,276 in 1970 to 179,197 in 1990. Population and water demands are projected for sub-regions. Environmental goals for water and sewerage services include encouraging adequate water and wastewater disposal services where feasible, using these services to control new development, and bringing waste discharges up to federal and state standards. Other objectives are insuring adequate water supplies for emergencies, insuring that stream water quality stays within prescribed state limits, protecting aquifer recharge areas by prohibiting incompatible development in high groundwater areas, and requiring secondary wastewater treatment. Criteria are set for feasibility of services related to population density, line sizes, water pressures, plant capacities, and minimum design periods. It is recommended that interconnections be made between several specific water and sewer systems. Other recommendations are made for subregions. (Stein-North Carolina)

PROMOTING ENVIRONMENTAL QUALITY THROUGH URBAN PLANNING AND CONTROLS,
North Carolina Univ., Chapel Hill. Center for Urban and Regional Studies.
E. J. Kaiser, K. Elfers, S. Cohn, P. A. Reichert, and M. M. Hufschmidt.
Prepared for Environmental Protection Agency, Washington, D.C., June, 1973. 465 p, 16 fig, 2 tab, 1 append. EPA grant R801376.

Descriptors: *Planning, *Environmental effects, *Water management (Applied), Waste water, *Storm drainage, Watersheds (Basins), *Flood plains, *Urbanization, Land use, Estuaries, Regional development.
Identifiers: *Urban guidance systems, Water-land use interfaces, Land use planning, Urban waterfronts, Metropolitan planning.

This comprehensive study focuses on the current practices of local and metropolitan planning agencies in promoting environmental quality through urban planning and controls. The report looks at the beginnings of local environmental quality planning in the 1960's, presents the results of a questionnaire to local planning agencies on the state of current planning, and then focuses on more detailed examples of promising environmental quality planning approaches for the 1970's. These promising approaches of planning and urban guidance cover the substantive areas of land use planning, water resources management, urban design, and residuals management. The water resources management chapter emphasizes the interface between urban land use and water resources with particular attention to the problems and planning approaches related to the urbanization of watersheds, shorelands, floodplains, and estuarine areas. Emphasis is also placed on the improvement and redevelopment of urban-water interfaces in fully developed urban areas. These interfaces include wastewater management systems, storm water drainage, and urban waterfronts. A final section discusses the potential for integration of water resources systems on a metropolitan basis. Some of the key planning and guidance tools identified include development of guideline reports, policy statements, permit systems, floodplain zoning, effluents charges, utility extensions, tax policies, on-site storm water detention, and wastewater reclamation. (Eflers-North Carolina)

RELATING COMPREHENSIVE SEWER AND WATER PLANS TO THE COUNTY LAND USE PLAN. GOALS, POLICIES AND STANDARDS.
Chenango County Planning Board, Norwich, N.Y.

Available from the National Technical Information Service as PB-218 242 $3.00, in paper copy, $1.45 in microfiche. June, 1972. 20 p, 3 maps. HUD grant N.Y.P. 223.

Descriptors: *Planning, *Sewerage, *Water supply, Priorities, Project planning, Project post-evaluation, Land use, Water resource development, *New York.
Identifiers: *Land use/water, Sewage plan interface, Chenango County (NY).

This report divides into three sections. The first reviews HUD circular MPD-6415-2A, which outlines requirements for certification to meet water and sewer facilities grant program planning requirements. The second section describes how the county's comprehensive land use plan must relate to the sewer and water program, including priority assignments to be developed by the County Planning Board. Citizen participation is also requisite. The final section reviews the county's functional water and sewer plans with the three proposed land use plans, in terms of service area, level of anticipated development, and plan concept. The three land use plans range from minimum planning, direction, and control of the consequences of existing land use patterns to commitment to consolidating growth in the present population centers capable of handling development. The basic concept of both the water and sewage plans was consistent with each land use plan in recognizing that each urbanized area should develop as an independent unit providing its own services to supply its own needs. A regional or inter-community approach would not be feasible. (Hoffman-North Carolina)
W74-01473

COMPREHENSIVE WATER AND SEWER PLAN, RANDOLPH COUNTY, ILLINOIS.
Southwestern Illinois Metropolitan Area Planning Commission, Collinsville.

Available from the National Technical Information Service as PB-216 396, $6.00 in paper copy, $1.45 in microfiche. Report SWIL-MAPC-72-08, prepared for Randolph County Regional Planning Commission, December, 1972. 355 p, 16 fig, 35 plates, 100 tab, 97 ref, 3 append.

Descriptors: *Water supply development, *Sewerage, *Planning, *Illinois, Projections, Financing, Coordination, Water demand, Data collection, Treatment facilities, *Comprehensive planning, Waste water treatment.
Identifiers: *Randolph County (Ill), Water system expansion, Sewage treatment expansion.

The existing water and sewer systems in Randolph County, Illinois, are inventoried and analyzed with respect to their abilities to meet present and future projected demands. The upland areas, and in particular the northeast part of the county, lack adequate sources of water supply. Many of the municipal systems have low pressure areas that affect flow and quality. At least 18 sewage treatment facilities do not meet Illinois State Effluent Requirements. Furthermore, three facilities are operating at either full capacity or past design capacity levels. Local and countywide development policies, as reflected in comprehensive development plans, were used as a guide in developing recommendations. On the basis of yield capacity and the quality of the source being used to supply the individual household, central water systems were recommended for 13 communities. The county was divided into three study areas for delineation of improvement of water facilities. Details of the recommended plan for each area are included. Each sewer system is separately evaluated for needed short term and long range improvements. While a stated objective was to consolidate treatment facilities whenever possible, this was judged not cost-effective for short term planning. As short term improvements could meet existing and long range needs, the sewer facilities plan consists of maintaining individual sewer system and treatment facilities. Various methods of financing are discussed. (Hoffman-North Carolina)

REVIEW OF PLANNING FOR THE GRAND RIVER WATERSHED.

October 20, 1971. 107 p, 16 fig, 7 tab, 29 ref, 5 append. 229.

Descriptors: *Watershed management, *Water quality control, *Low-flow augmentation, *Computer models, Dams, Reservoirs, Waste water treatment, *Canada, Soil conservation, Groundwater, Flood control.
Identifiers: Computer simulation, Kitchener (Ont), Guelph (Ont), Brantford (Ont), *Grand River (Ont).

An investigation was made of issues related to watershed management for the 2,600-square mile Grand River watershed in Ontario, in which are located the cities of Kitchener, Guelph, and Brantford. Twenty-four recommendations for water management are discussed. The first priority: construction of a dam on the Speed River above Guelph, primarily for low-flow augmentation needed to maintain water quality, but also for flood control and recreation. Second priority: investigate methods to reduce loadings on the Speed River from the Guelph wastewater treatment plant. Third and fourth priorities: permit industrial wastes to be input to the Elmira treatment plant without adversely affecting the treatment process and construction of a low-flow augmentation dam above Elmira. Other recommendations call for other specific reservoirs for low-flow augmentation, employment of computer simulation to plan water management around water quality constraints, control of pollutants not now regulated by the Ontario Water Resources Commission and restricted growth upstream from certain cities. Conservation practices, intergovernmental cooperation, and several specific further studies are recommended. It is felt that Guleph should continue to obtain its water supply from groundwater for at least 30 years, thereby freeing surface water for use elsewhere. Appendices consider recreation facilities, flood control alternatives, and water supply alternatives in the basin. (Stein-North Carolina)

A GROWING COMMUNITY: 1973 UPDATE, (LEXINGTON, KENTUCKY).
Lexington and Fayette County Planning Commission, Lexington, Ky.

1973. 159 P, 37 FIG, 41 MAPS, 145 TAB.

Descriptors: *Comprehensive planning, *Water supply, *Sewage disposal, *Kentucky, River basin development, Drainage, Storm runoff, Septic tanks.
Identifiers: *Lexington (Ky), Kentucky River, Red River (Ky), Gorges.

A many-faceted comprehensive development plan describes present situations, identifies goals and/or trends, and projects future actions. The major surface water quality problem is pollution from sewage effluent discharges. Offenders include point and non-point sources, but there is no quantification of pollution contributions. Bacterial, chemical, and detergent pollution is found in all streams. Bacterial pollution characterizes 70% of groundwater samples. The Lexington area is provided with 62 MGD raw water in 1973 from the Kentucky River and Hickman Creek watersheds. The Kentucky River is judged capable of supplying a sufficient quantity of water until 1980, but the proposed Red River Dam and other sources may become necessary suppliers. Cause for delay in building of Red River Dam has been protests from environmentalists that Red River Gorge is a unique site. Water demand by type of customer is projected in 5-year increments to 1990. Seven storm drainage basins and their $22 million of improvement needs are discussed individually. A cost summary is also given. The natural drainage system of Lexington is complicated by the city's position on a divide with watersheds falling off in all directions; sewage disposal problems are thereby complicated by the need for many sewage treatment plants. Two municipal sewage treatment plants serve the area, along with eighteen smaller non-municipal plants. Since 1964, a minimum of 10 acres has been required for septic tank installation. Plans are detailed for expansion of sewers to presently unserviced areas. (Stein-North Carolina)

SKETCH DEVELOPMENT PLAN, CHAMBERS COUNTY, ALABAMA.
East Alabama Regional Planning and Development Commission, Anniston.

Final Report, June 1973. 111 p, 34 fig, 20 tab, 12 ref. HUD 701 Grant no. 1020.

Descriptors: *Planning, *Water supply, *Alabama, *Sewage districts, Water treatment, Water pollution, Water districts.
Identifiers: *Chattahoochee River (Ala), Lafayette (Ala), Lanett (Ala), Chambers County (Ala).

The sketch development plan is a compilation of data with analysis, some suggested goals, and some recommendations pertaining to the county's development, with the degree of detail varying for different problem areas. Chambers County, Alabama, is rural, but contains two urban centers, Lafayette and Lanett. Population is declining, but urbanization continues in the urban clusters, especially in the 'sprawling' Chattahoochee Valley area around Lanett. Water supplies for the county come primarily from groundwater although Lafayette draws its supply from a small lake and the Valley district from the Chattahoochee. There are 5 public water systems serving 70% of the population. Samples reveal a high number of contaminated wells in use in rural areas. Four sewer systems serve 37% of the county's population. All sewer collection systems presently dispose sewage raw into collector streams. Plants which will provide primary and secondary treatment are now under construction in all four systems. The remaining unsewered areas of Chambers County are said to be too sparsely populated to warrant public sewers, save for an area adjacent to Lanett. Each water, sewerage, and storm sewer system in the county is examined individually. An unusual provider of services is the East Alabama, Water, Sewer, and Fire Protection District, a public corporation created to serve the urbanized but unincorporated areas south of Lanett, but empowered by the State to expand into municipalities and other counties. Treated water supplies for the entire Chattahoochee Valley urban corridor are purchased from West Point Pepperell, Inc., a textile manufacturer. Other water-related plans for the county are given. (Stein-North Carolina)

VIRUS CONCENTRATION FROM SEWAGE,
Baylor Coll. of Medicine, Houston, Tex. Dept. of Virology and Epidemiology.
A. Homma, M. D. Sobsey, C. Wallis, and J. L. Melnick.
Water Research, Vol 7, No 7, p 945-950, July 1973. 1 fig, 5 tab, 7 ref.

Descriptors: *Separation techniques, *Filtration, *Sewage, *Adsorption, *Viruses, Filters, Waste water treatment.
Identifiers: Preconcentration, Sample preparation.

Optimal conditions for concentrating poliovirus from large volumes of raw sewage have been established. Solids 1 millimicron or larger, present in the raw sewage, were removed by textile clarifying filters without significant retention of virus. By acidification of the clarified sewage and addition of salts to enhance virus attachment to the adsorbent, virus in the sewage was concentrated on a fibre glass depth filter, with subsequent elution of virus into small volumes suitable for assay. An 80-95 percent efficiency of virus concentration was effected. (Little-Battelle)

THE ROLE OF MICRO-ORGANISMS IN WASTE TIP-LAGOON SYSTEMS PURIFYING COKE-OVEN EFFLUENTS,
University Coll. of South Wales and Monmouthshire, Cardiff. Dept. of Microbiology.
D. A. Stafford, and A. G. Callely.
Journal of Applied Bacteriology, Vol 36, No 1, p 77-87, March 1973. 6 fig, 3 tab, 12 ref.

Descriptors: *Aerobic bacteria, *Microbial degradation, *Lagoons, Liquid wastes, Microorganisms, *Phenols, Biodegradation, Waste water (Pollution), Waste water treatment, Water purification.
Identifiers: *Coke-oven effluents, Colliery waste tips, Orthophosphates, Substrate utilization, Fate of pollutants, Tip liquors, Thiocyanates, Coking industry, Monohydric phenols, Heterotrophic bacteria, Enrichment.

The population of aerobic bacteria present in the waters of a tip-lagoon system being used to purify a coke-oven effluent has been investigated. Though organisms capable of degrading phenol were detected, the total bacterial population was low, mainly due to a deficiency of orthophosphate and lack of aeration. Phenols can be removed from coke-oven effluents by allowing them to percolate through columns of material from colliery waste tips. Bacteria need not be present for this to occur though the presence of bacteria capable of degrading phenol was detected in the liquid coming from such columns. Only traces of thiocyanate are removed. If a biological filter can be developed, as on columns packed with gravel, better removal of phenols and thiocyanate occurs, but it is doubtful if bacteria play any significant role in the purification of coke-oven waste liquors percolating through tips of colliery waste. A COST-EFFECTIVENESS STUDY AND ANALYSIS OF MUNICIPAL REFUSE DISPOSAL SYSTEMS,
Arizona Univ., Tucson.
M. L. Popovich.
Department of Hydrology and Water Resources, Technical Report No. 20, Natural Resources Systems Series, Jun 1973. 70 p, 7 tab, 40 ref.

Descriptors: *Solid wastes, *Waste disposal, *Landfills, *Water pollution sources, *Cost analysis, Leaching, Recycling, Groundwater, Water quality, Waste dumps, *Arizona, Economic inpact, Social values, Burining.
Identifiers: *Tucson (Ariz).

A comparison of alternative systems of disposing efficiently and effectively of four to five pounds of solid waste per person per day in U.S. urban communities is undertaken by using standardized cost-effectiveness methodology. The economic criteria for studying this problem are often limited to cost or marketing measures; in contrast, use of a cost-effectiveness approach allows the inclusion of non-quantifiable measures of effectiveness such as public acceptance, politics, health risks, environmental considerations, and soil benefits. Data from a case study in Tucson, Arizona, are used to illustrate the problem. The specifically arid conditions of the example area are important in the analysis of such problems in other desert areas. Emphasis is placed on the effects of solid waste disposal in sanitary land fills on groundwater quality in arid regions, such as Tucson. Due to the shallow infiltration of surface water on the desert floor and the consumption of this water by desert plants, coupled with up to six feet of soil, the possibility of water infiltration into such fills seems small. (Muller-Arizona)

5F. Water Treatment and Quality Alteration

WATER. EXAMINATION. ASSESSMENT. CONDITIONING. CHEMISTRY. BACTERIOLOGY. BIOLOGY,
K. Hoell.
Walter de Gruyter: Berlin, West Germany; New York, N.Y., 1972. 389 p. Illus. $24.00.
Identifiers: Assessment, *Bacteriology, Biology, Chemistry, Conditioning, Examination, *Potable water, *Water analysis, *Water treatment, Pollutant identification.

Although this book, translated from the 5th German edition, is primarily devoted to drinking water, discussions on other closely related uses for water are included. The book is based on practical experience and is written for practical use, omitting theoretical discussions and chemical equations where possible. In Part 1 dealing with the chemistry of water, investigations of drinking water, general remarks about chemical examination of water, drinking water analysis, assessment of drinking water, major drinking water analysis of tap water, assessment of drinking water and service water for central water supply, examination and assessment of bath water, water for building purposes, surface water and waste-water and mineral water and medicinal water are discussed. In Part 2 bacteriology of drinking water, water and disease, inspection of the site, sampling, determination of the bacterial count, detection of various foreign organisms in the water and the membrane filter procedure are included. In the final part, biology of water, methods of biological water investigations and methods of combatting organisms in drinking water supply plants are considered. Many diagrams and tables are provided throughout. Each of the 3 sections ends with a related bibliography.--Copyright 1973, Biological Abstracts, Inc.

DRINKING WATER,
J. Crossland, and V. Brodine.
Environment, Vol 15, No 3, p 11-19, April, 1973.

Descriptors: *Water supply, *Water quality standards, *Water pollution, Water quality, Viruses, Nitrates, Nitrites, Potable water, Chlorine, Salts, Oil, Soil microorganisms, *Potable water.
Identifiers: Toxic metals, Chlorinated hydrocarbons.

Chemicals and viruses present in drinking water in the U. S. which have either been proven or are suspected to be dangerous to humans are surveyed. A Bureau of Water Hygiene study in 1969 found that 41% of 969 drinking water systems failed to meet 1962 Public Health Service standards, while 36% of 2,595 water taps sampled contained at least one contaminant in amount exceeding drinking water standards, and 10% exceeded standards for total organic chemical compounds. There are 496 organic chemicals found or suspected to be contaminating water in various parts of the country. Nitrates, which may be converted to nitrites which react with hemoglobin in the red blood cells, causing disability to carry oxygen, were found in 19 of the 969 water systems sampled by the Public Health Service. Application of highway deicing salts contributes large amounts of chloride and sodium to public water supplies. There is speculation as to the effects of toxic metals, chlorinated hydrocarbons, oil, viruses, and soil microorganisms in water supplies. The adequacy of current Public Health Service bacteriological standards is questioned in light of several major disease outbreaks in recent years. The difficulty of assessing safety margins provided by present treatment methods when polluted sources are used is emphasized. It is concluded that current standards and treatment processes are inadequate to provide water pure enough for drinking and swimming when supplies receive domestic, agricultural, and industrial wastes. SENSITIVITY OF THREE SELECTED BACTERIAL SPECIES TO OZONE,
Brooke Army Medical Center, Fort Sam Houston, Tex. Health Care Research Div.
W. T. Broadwater, R. C. Hoehn, and P. H. King.
Applied Microbiology, Vol 26, No 3, p 391-393, September 1973. 2 fig, 15 ref.

Descriptors: *Ozone, Water pollution effects, *Lethal limit, Laboratory tests, *Bacteria, *E. coli, Bioassay, Disinfection, Water purification, Aerobic bacteria, Enteric bacteria, Coliforms, *Water treatment, Water quality, Bactericides.
Identifiers: *Sensitivity, Spores, Vegetative cells, Bacillus megaterium, Bacillus cereus, Bacterial physiology, Sample preparation.

The minimal lethal concentration of ozone in water was determined for three bacterial species: Escherichia coli, Bacillus cereus, and Bacillus megaterium. A contact period of 5 min was selected. The lethal threshold concentration for the cells of B. cereus was 0.12 mg/liter while that for E. coli and B. megaterium was 0.19 mg/liter. Low concentrations of ozone were ineffective when organic matter was present to interfere with the action of ozone on the bacterial cells. Also determined during the study was the sensitivity of spores of B. cereus and B. megaterium to ozone in water. The threshold concentration required to kill the spores of both species was 2.29 mg/liter. The cells and spores of these organisms exhibited the 'all-or-none' die-away phenomenon normally associated with ozone treatment. The results indicate that ozone, in relatively low concentrations, is an effective bactericide against both vegetative cells and spores of three bacterial species. In practical applications, ozone most probably would be applied at higher dosages (0.5-10 mg/liter) and for longer contact periods (2-10 min) because, as was shown in this research, organic matter present in the water will exert an ozone demand and prevent the full utilization of the applied dose as a disinfectant. (Holoman-Battelle)

COMPARATIVE EVALUATION OF THE EFFICACY OF OZONIZATION AND OTHER MEANS OF TREATING WATER CONTAIMINATED WITH OIL PRODUCTS (IN RUSSIAN),
Moskovskii Gosudarstvennyi Meditsinskii Institut (I).
S. N. Cherkinskii, and A. A. Korolev.
Gig Sanit, Vol 37, No 4, p 14-18, 1972, Illus, English summary.
Identifiers: Comparative, Contaminated water, *Oil wastes, *Ozonization, *Water treatment, Potable water, Oil pollution, *Waste water treatment.

The efficacy of ozonization and certain widely used methods of treatment of drinking water contaminated with oil products was studied. Ozonization is an effective means of improving the quality of such water. The possibility of attaining the hygienic effect when only ozone is used depends on the initial concentration of oil products in the water. Thus, in cases of heavy contamination of water with oil products, the ozone treatment must be preceded by other means of decontamination.--Copyright 1973, Biological Abstracts, Inc.

5G. Water Quality Control

THE IMPACT OF WATER POLLUTION ABATEMENT ON COMPETITION AND PRICING IN THE ALABAMA TEXTILE INDUSTRY,
Auburn Univ., Ala. Water Resources Research Inst.
Hal B. Pickle, and A. C. Rucks.
Available from the National Technical Information Service as PB-225 156/9, $4.50 in paper copy, $1.45 in microfiche. Bulletin 11, 1973. 145 p, 21 fig, 30 tab, 175 ref. OWRR C-3292 (No 3715) (1).

Descriptors: *Alabama, *Economic impact, *Industrial wastes, Marketing, *Pollution abatement, *Prices, Value, *Competitive prices, Competition, Cost analysis, Textiles.
Identifiers: *Textile industry.

In order to access the impact of water pollution abatement on competition and pricing in the Alabama textile industry, three questions were answered. (1) How much is water pollution abatement costing the textile industry. (2) How is the intermediate consumer affected by these costs. (3) How is the ultimate consumer affected by the cost of water pollution control. The cost of water pollution control for firms in the Alabama textile industry ranges from $64.40 per million gallons (MG) to $85.50 per MG. As a percent of total manufacturing costs, the cost of waste treatment ranges from 0.33 percent to 1.31 percent. Due to the competitive condition of the textile industry, all firms will absorb the cost of water pollution control. If a firm in the textile industry were to decide to pass on a cost increase to customers the firm could expect 30 percent of the customers to shift to either another domestic or a foreign supplier, at price increases of less than 3 percent. At price increase in excess of 3 percent, a firm could expect 85 percent of its customers to shift to either another domestic or a foreign supplier. There will be no price increase on textile products to ultimate or final consumer.

Available from NTIS, Springfield, Va. 22151 as AD-758 320, $3.00 printed copy; $1.45 microfiche. Final Engineering Report No. L911354-8 to U.S. Coast Guard, January 1973. 77 p, 35 fig, 8 tab, 9 ref. DOT Contract CG-20253-A.

Descriptors: *Oily water, *Separation techniques, *Ships, Methodology, Vortices, Scaling, Flow separations, Testing procedures, Equipment, Centrifugal pumps, Evaluation.
Identifiers: *Vortex oil and water separator.

The vortex separator separates oil from an oil-water mixture on a continuous flow basis. This study was in three parts: (1) an experimental investigation of 10- and 50-gpm separators to determine performance throughout ranges of geometric and flow conditions, (2) experiments and analyses to determine a technique for scaling, and (3) an analytical evaluation of 100-, 1000-, and 10,000-gpm separator systems for shipboard operation. The tests with the two separators showed that for oil concentrations of the inlet oil-water mixture up to 5000 ppm, the concentration of oil in the clean water exhaust was 30 ppm or less; for oil concentrations of the mixture up to 10,000 ppm, the concentration of oil in the exhaust was 60 ppm or less. The scaling of vortex separators indicated that separators having good performance can be designed for flows up to about 200 gpm. Parallel operation with two or more separators will be required for flow rates greater than 200 gpm. The analytical evaluation of separators for shipboard operation indicated that 100- and 1000-gpm systems appear feasible. For larger systems, the space and power requirements may be excessive. The results of a study of a 250,000 dwt tanker indicate that an 800- or 900-gpm system would provide sufficient capacity for ballast water cleaning. (Woodard-USGS)

MOBILE OXYGEN DISPERSION CRAFT,
Rutgers - The State Univ., New Brunswick, N.J. Water Resources Research Inst.
W. Whipple, Jr.
Water Resources Bulletin, American Water Resources Association, Vol 9, No 4, p 639-646. August 1973. 3 fig, 1 tab, 4 ref.

Descriptors: *Aeration, *Oxygenation, *Water quality, Economic analysis, Waterways, Dispersion, Water pollution control, Pollution abatement, Bubbles.
Identifiers: *Instream aeration, *Induced oxygenation.

Water pollution control by effluent treatment becomes increasingly expensive as the degree of treatment is increased. As has previously been demonstrated, instream aeration provides an economical alternative for the higher degrees of treatment. For large, deep, navigable rivers, another alternative may be still more economical, namely, mobile oxygenating craft, using fine bubble diffusers. The propellors in the craft plus its mobility would give important advantages in dispersing the oxygenated water; and one craft could replace a multiplicity of static aeration sites.

SWEDISH LAKE RESTORATION PROGRAM GETS RESULTS,
Lund Univ. (Sweden). Limnological Inst.
S. Bjork.
Ambio, Vol 1, No 5, p 153-165, 1972, Illus.
Identifiers: *Lake restoration, Tunis, Tunisia, *Sweden, *Aeration.

Lake restoration projects are being carried out in Sweden in order to obtain methods for restoring irreversibly damaged lakes, to train limnologists and to contribute knowledge to theoretical ecology. Lake Trummen was a shallow, over-exploited recipient, and the black sediment from the lake's receiver period was pumped up into settling ponds on land. In Jarla Lake, a deep recipient, the O2 deficiency in the hypolimnion was remedied by aeration without disturbing the thermal stratification. Hornborga Lake became overgrown with

macrophytes after the water level was lowered. Methods for directing the development from emergent to underwater vegetation have been worked out in order to reestablish the environmental conditions of a waterfowl lake. Methods and experience gained in the Swedish projects are being applied in the planning of the restoration of the Lake of Tunis in Tunisia.--Copyright 1973, Biological Abstracts, Inc.

THE SHIPOWNER AND OIL POLLUTION LIABILITY,
P. D. Lowry.
McGill Law Journal, Vol 18, No 4, p 577-591, December 1972. 76 ref.

Descriptors: *Legislation, *Canada, *Water pollution, Oceans, Ships, Water pollution sources, Water law, Oil wastes, Oily water, Law enforcement, Governments, Water quality standards, International law, Foreign waters.

A comprehensive analysis is presented of the shipowner's civil and criminal liability for oil pollution in Canadian waters. This liability was, on September 21, 1971, substantially increased by the promulgation of extensive amendments to the Canada Shipping Act. The shipowner's responsibility to the government for the costs of remedying the effects of an oil spill will become a matter of strict liability while previously it was limited to little more than a moral obligation. In like manner, damages suffered by individuals and private concerns will become recoverable from the shipowner or his insurers by a statutory right of action with provision for guaranteeing payment where previously such claimants had only common law remedies on which to rely. The maximum penalty which may be imposed for the wrongful discharge of oil from a ship has been increased to $100,000. The legislative background of the Act is reviewed, and the weight and practical effect of the liability for marine pollution are discussed. (Mockler-Florida)

MARINE POLLUTION: A CRITIQUE OF PRESENT AND PROPOSED INTERNATIONAL AGREEMENTS AND INSTITUTIONS--A SUGGESTED GLOBAL OCEANS' ENVIRONMENTAL REGIME,
San Francisco Univ., Calif.
L. R. Lanctot.
Hastings Law Journal, Vol 24, No 1, p 67-109, November 1972. 175 ref.

Descriptors: *Oceans, *Legal aspects, *Sea water, Water law, Water pollution control, Water resources development, International commissions, International law, International waters, Jurisdiction, Governments, Law of the sea, Foreign waters, Treaties.
Identifiers: *Territorial waters.

Because the vast resources of the oceans were inaccessible in the past, international law does not provide any certain rules governing the ownership and development of marine resources which lie beyond the limits of national jurisdiction. In response to this legal uncertainty and in the face of accelerating technology, the United Nations General Assembly has called a General Conference on the Law of the Sea to formulate international conventions governing the development of the seabed and ocean floor. In preparation for the conference many countries have submitted proposed international seabed regimes for consideration. The existing law of the sea and the proposed seabed regimes are examined to determine to what extent they will ensure and enhance the environmental quality of the oceans and protect the marine environment from further deterioration. Features for a global oceans' environmental regime are suggested. (Mockler-Florida)
W74-01449

THE INTERSTATE WATER POLLUTION COMPACT--PAPER TIGER OR EFFECTIVE REGULATORY DEVICE,
Oak Ridge National Lab., Tenn.
J. W. Curlin.
Ecology Law Quarterly, Vol 2, p 333-356, Spring 1972. 135 ref, append.

Descriptors: *Interstate compacts, *Water pollution control, Governments, Water policy, Water resources development, Interstate rivers, Water law, Governmental interrelations, Water quality standards, Federal governments.

It is the express intention of Congress that the states are to bear the responsibility for the control of pollution of both intrastate and interstate waters. Federal intervention is to be restricted to the following specific instances of danger to public health and welfare: When the states have refused to accept this responsibility, when requested by the downstream state receiving the pollutants, when requested by the governor of the state in which the discharge originates, or when substantial economic injury to shellfish has occurred in a non-discharge state. As a result, water quality standards for interstate waters can be violated so long as the discharge does not endanger human health or welfare and does not cause significant damage to the marketability of the shellfish. The act lacks substance since abatement of sub-hazardous violations depends upon voluntary action by the state wherein the discharge occurs. (Mockler-Florida)

WATER POLLUTION IN LOUISIANA: AN ATTEMPT AT CONTROL,
I. R. Silverstein.
Loyola Law Review, Vol 18, No 3, p 734-745, 1971-1972. 61 ref.

Descriptors: *Louisiana, *Legislation, *Water pollution, *Water quality, Water quality standards, Pollutants, Legal aspects, Common law, Constitutional law, Judicial decisions, Law enforcement, Penalties (Legal), Economics, Competing uses.

A bill introduced into the Louisiana state legislature is analyzed as to its chances for success as a curb on the pollution of state waters. Existing federal legislation is reviewed. Because of the federal government's refusal to enforce legislation regarding water pollution, the onus of enforcement is in the individual states. Furthermore, because of the vast extent of water resources in Louisiana, and the rapid industrialization now taking place there, water pollution in the state of Louisiana poses an especially dangerous threat unless controls are instituted immediately. The legislature restricted the prohibition of the proposed bill to discharges into public bodies of water. If the proposed bill had not been so restricted, the chances of its success in halting the discharge of pollution into the waters of the state would have been good. Even so, some merit is seen in the bill as the legislature has extended its authority over water pollution, and in doing so has hopefully abated the premature death that would otherwise be suffered by Louisiana's bayous, streams, and marshlands. FLORIDA POLLUTION STATUTE INFRINGES UPON EXCLUSIVE FEDERAL MARITIME LEGISLATIVE DOMAIN, THE AMERICAN WATERWAYS OPERATORS, INC. V. ASKEW, 335 F. SUPP. 1241 (M.D. FLA).
Journal of Maritime Law and Commerce, Vol 4, No 1, p 163-168, October 1972.

Descriptors: *Statutes, *Judicial decisions, *Pollution, *Jurisdiction, Oil wastes, Vessels, Port authorities, Harbors, Legal review, Governmental interrelations, Competing uses, Water pollution control.

This case note presents a comprehensive discussion of the state of Florida's pollution statute as an infringement upon exclusive federal maritime legislative domain. In the subject case, a variety of plaintiffs challenged the statute's validity on several federal constitutional grounds. They contended that Florida sought to legislate substantive maritime law which, under the United States Constitution, is exclusively within the federal domain; that the Act violated the Commerce Clause, since it attempted to regulate interstate and foreign commerce; and, that certain parts of the Act violated the due process and equal protection provisions of the Fourteenth Amendment. The three judge federal court agreed with the first contention and declared the Florida statute null and void and without effect because it violated Article III, Section 2, Clause 3 of the U.S. Constitution. The court rejected the argument that the Florida Act was valid under the provision of the Federal Water Quality Improvement Act on the ground that Congress may not confer on the states authority to legislate within the admirality jurisdiction. (Mockler-Florida)

THE PORTER-COLOGNE WATER QUALITY CONTROL ACT, AND RELATED WATER CODE SECTIONS (CONTAINING THE 1971 AMENDMENTS).
California State Water Resources Control Board, Sacramento.

March 1972. 55p.

Descriptors: *California, *Legislation, *Water quality control, *Water resources development, Administration, Comprehensive planning, Conservation, Local governments, Regional development, Water policy, Water resources, Wells, Well regulation, Waste water disposal.

The California state policy on water quality control consists of water quality principles and guidelines for long-range resource planning, water quality objectives for the planning of water resource development projects, and such other principles and guidelines deemed essential by the State Water Resources Board. The function and duties of the Board, as well as the means for establishing policies are stated in the Porter-Colgne Water Quality Control Act. A regional board is established for each of the nine regions into which the state is divided, and the duties of this board are specified. Each regional board is to formulate and adopt water quality control plans in conformity to the state policy. The regional board may prescribe requirements as to the nature of any proposed discharge, taking into consideration the conditions existing from time to time in the disposal area. The Act provides for the enforcement and implementation of regional board orders. The state board and the judiciary may review such orders. The state board is authorized to provide loans for the development of water reclamation facilities. The Act provides for the regulation of water and cathodic wells. The transportation and disposal of wastes is also covered by the Act. (Reed-Florida)

EARLY THOUGHTS ON PROSECUTING POLLUTERS,
Santa Clara, Univ., Calif.
K. A. Manaster.
Ecology Law Quarterly, Vol 2, No 3, p 471-492, Summer 1972. 55 ref.

Descriptors: *Illinois, *Water pollution control, *Legal aspects, Law enforcement, Judicial decisions, Governments, Water quality standards, Water law, Water policy, Administration, Water resources development, Legislation.

Reflections are presented of a former prosecutor who represented the people of Illinois in the beginning stages of enforcing the new environmental laws of that state through government-sponsored litigation. General principles and policies involved and the concerns that prosecutors should bear in mind are discussed. The article is intended as a partial how-to-do-it manual for a pollution prosecution office at any level of government. The emphasis is upon the principal tools identified in the state of Illinois thus far for use by government lawyers in combating polluting. No systematic philosophy or structural scheme is offered. The attorney must depend primarily upon the statutory and judicial statements in his own jurisdiction. (Mockler-Florida)

FEDERAL WATER POLLUTION CONTROL ACT AMENDMENTS OF 1972.
Conference Report No 92-1465 -- U.S. House of Representatives, 92d Cong, 2d Sess, September 28, 1972. 156 p, 3 tab.

Descriptors: *Legislation, *Water pollution control, *Water quality standards, *United States, Legal aspects, Comprehensive planning, Jurisdiction, Economics, Water policy, Water law, Permits, Water utilization, Research and development.

The objectives of the amendments are to restore and maintain the chemical, physical, and biological integrity of the Nation's waters. The amendments contain sections concerning research and related programs, comprehensive plans for water pollution control, interstate cooperation and uniform laws, grants for research and development, pollution control in the Great Lakes, grants for construction of treatment works, standards and enforcement, permits and licenses. In addition to the full text of the 1972 amendments, the document contains a joint House-Senate Conference Report. The Senate bill, House amendment, and the substitute measure proposed by the conference are included. While many of the amendments remain substantially the same, others were changed to a considerable extent by the conference committee. This is especially evident in title v, which contains the general provisions dealing with emergency powers, citizen suits, employee protection, and administrative procedure and judicial review. THE MANAGEMENT OF BAY AND ESTUARINE SYSTEMS IN THE TEXAS COASTAL ZONE, PHASE II.
Texas Univ., Austin. Div. of Natural Resources and the Environment.

Prepared for Office of the Governor, State of Texas, March 1973. 105 p, 5 fig, 5 tab, 160 ref, 2 append.

Descriptors: *Estuarine environment, *Texas, *Bays, *Coastal areas, Bodies of water, Oceans, Coastal engineering, Economics, Environmental effects, Resources management, Water quality control, Comprehensive planning.
Identifiers: *Coastal zone management.

The major emphasis is on those activities of man that may detrimentally affect coastal environmental units and resources. Hypothetical examples are given to indicate the economic and social consequences arising from the implementation of management tools to lessen detrimental environmental impact. The conclusions outlined present positive steps needed to develop an effective Texas coastal management program. Many policy decisions which will affect coastal zone activities must be made within the near future with inadequate quantitative, economic, social, and environmental criteria. Each coastal environmental unit was evaluated in terms of its natural capability to sustain human use that affects its physical, hydrological, geological, chemical, and biological properties, and is grouped in an appropriate resource capability class. 6A. Techniques of Planning

SIMULATING THE BEHAVIOR OF A MULTI-UNIT, MULTI-PURPOSE WATER-RESOURCE SYSTEM,
Harvard Univ., Cambridge, Mass.
M. M. Hufschmidt.
In: Symposium on Simulation Models: Methodology and Applications to the Behavioral Sciences, South-Western, Cincinnati, Ohio, 1963. A. C. Hoggatt and F. E. Balderston, editors. p 203-220, (1963) 2 fig, 1 tab.

Descriptors: *Water resources, *Methodology, *Simulation analysis, *Idaho, Cost-benefit analysis.
Identifiers: *Clearwater River (Idaho), Harvard Water Resources Program.

Results are summarized of simulation studies, under the Harvard Water Program, of a model river basin system consisting of 4 reservoirs, 2 hydro-power plants, an irrigation distribution system and a flood damage center, based on the Clearwater River Basin in Idaho. Components of the simulation problem included 12 decision variables, and functions for capital and annual operation, maintenance and replacement cost, benefits and losses related to the system units. Objective of the simulation was the maximization of the present value of the 50-year stream of gross annual irrigation, energy and flood control benefits less annual operation, maintenance and replacement costs, discounted at a selected interest rate, less capital costs. The constraints, operating procedure, and manner of determining the optimal system design, by examining the net-benefit response surface, are discussed in detail, as is the overall solution strategy. The most striking feature of the net-benefit response surface of the simulation was its complexity. Either random or uniform grid sampling may be used early in the analysis to indicate the general configuration of the response surface and to provide starting points for a more detailed examination of parts of the surface with high net benefits. Prior to this, major system variables should be identified, and discontinuities and constraints spotted. Once the general region (s) of high net benefits have been identified, systematic sampling should be used to find the peak (s). Changes and extensions of the model are suggested based on its use in the study. (Edwards-North Carolina)

REPORT OF ATTITUDES AND OPINIONS OF RECREATIONISTS TOWARDS WILD AND SCENIC RIVERS: A CASE STUDY OF THE ST. JOE RIVER,
Idaho Univ., Moscow. Water Resources Research Inst.
K. Christophersen.
Available from the National Technical Information Service as PB-225 166/8, $3.75 in paper copy, $1.45 in microfiche. Scenic Rivers Study Report No. 9, October 1973. 66 p, 1 fig, 21 tab. OWRR C-3342 (No 3718) (3).

Descriptors: *Attitudes, *Idaho, *Wild rivers, River basin development, Wild rivers act, *Recreation.
Identifiers: *National Wild and Scenic Rivers System, *St. Joe River (Idaho).

Information was obtained from recreationists interviewed along the St. Joe River, regarding their attitudes and opinions of the proposed inclusion of the river in the National Wild and Scenic Rivers System. A sample of 350 randomly selected recreationists were interviewed. They were stratified into resident and non-resident categories for analytical purposes. Results of the survey revealed that large majorities of both resident and non-resident respondents were strongly or mildly in favor of including the entire river in the Wild and Scenic Rivers System. Their inclusion preferences were largely consistent with responses indicating a general desire to leave the area essentially as it is with little or no further development. In ranking recreational participation activities and other recreational features, the 'scenic beauty' category received the most 'excellent' votes. Few respondents gave any of the categories a 'poor' rating. The majority of resident and non-resident recreationists indicated a willingness to pay entrance fees if the inclusion of the river in the National Wild and Scenic Rivers System necessitated the imposition of user charges.

ENGINEER'S REPORT FOR SOUTH VALLEY WATER SYSTEM.
Herkenhoff (Gordon) and Associates, Albuquerque, N. Mex.

Available from NTIS, Springfield, Va 22151 as COM 73-10354 Price $3.00 printed copy; $1.45 microfiche. Engineers Contract Report, Prepared for Four Corners Regional Commission and Bernallillo County Board at County Commissioners, March 1972. 71 p, 5 map, 25 tab.

Descriptors: *Water pollution control, *Urbanization, *Urban hydrology, *Water supply, *New Mexico, Hydrologic data, Water analysis, Reviews, Evaluation, Water pollution sources, Septic tanks, Planning, Hydraulic structures, Costs, Economics, Social aspects, Water supply, Projections, Water demand.
Identifiers: *Bernalillo County (N Mex), Water system plans.

The purpose is twofold: (1) to present a comprehensive Water System Master Plan for the South Valley area of Bernalillo County, New Mexico, together with the data and analyses from which that plan was derived; and (2) to define a portion of the system which is economically feasible to construct at this time, together with the data and analyses from which that definition was determined. The growing problem of domestic water supply for the South Valley area has been recognized for some years, particularly by those public health agencies concerned with contamination of water supplies. The potential for bacterial contamination of the shallow groundwater is increasing as urbanization progresses. This has led to more stringent regulations governing well construction and the location and design of septic tanks. Based on the analyses it was deemed feasible to construct a water system which is an expansion of the existing city of Albuquerque system to serve that area of the southwest valley north of Rio Bravo Blvd. and south of the existing city limits. The system would also serve the existing Adobe Acres area south of Rio Bravo on Isleta Blvd. (Woodard-USGS)

THE ROLE OF UNIVERSITIES IN WATER RESOURCES EDUCATION: THE SOCIAL SCIENCES,
North Carolina Univ., Chapel Hill.
M. M. Hufschmidt.
Water Resources Research, Vol 3, No 1, p 3-9, First Quarter 1967.

Descriptors: *Water resources, *Water management, Economics, Education.
Identifiers: *Social sciences, *Interdisciplinary approach, *Multidisciplinary.

The specialist education is examined of graduates who will be involved in the water resources field with respect to the future role of the social sciences. Education for water resources is an area of specialization which imposes rigorous constraints on education possibilities. Participation of university social science departments in such education is comparatively small. This involvement is reviewed, particularly with reference to economics, law, geography, political science and public administration. Unexploited opportunities in the application of the insights and methods of these fields exist, including multidisciplinary involvement through water resources topics for theses, service courses in social sciences for natural science and engineering students, and social science participation in seminars oriented toward water resources. A more complex form of organizing such involvement would be the studies program approach, consisting of a group of courses from numerous disciplines with a common theme or focus. An alternative would entail the long-term interdisciplinary collaboration of social and natural scientists and engineers in a integrated series of graduate courses and research seminars. These would deal with water resources problems, issues, and policies. Relevant areas and course topics within the social sciences are proposed. (Edwards-North Carolina)

RIVER BASIN PLANNING IN THE UNITED STATES,
Office of the Chief of Engineers (Army), Washington, D.C. Civil Works Planning Div.
E. W. Weber, and M. M. Hufschmidt.
In: Natural Resources: Energy, Water and River Basin Development; U. S. Papers Prepared for the UN Conference on the Application of Science and Technology for the Benefit of the Less Developed Areas. February, 1963. Geneva, Switzerland. Vol 1, p 299-312, (1963) 26 ref.

Descriptors: *Water resources, *Planning, *Methodology, Benefit-cost analysis, History, *River basin development, United States.
Identifiers: *Developing nations.

The basic concept of integrated river-basin planning and an idealized methodology for such planning, the U. S. experience in planning during the past 30 years, and some important implications for the developing areas of the world are presented. Methodologically, river basin planning consists of: (a) setting broad objectives for development, (b) establishing criteria for formulation of specific plans, (c) formulating the optimal river-basin plan and development schedule and (d) reviewing proposed river basin plan or alternatives. Step C breaks down into: (1) identifiying and measuring the physical, economic, social problems, and requirements of the region; (2) identifying and measuring various opportunities for control and development of water and related land resources; and (3) formulating an optimal water development plan, including a development schedule. Benefit-cost analysis has been highly developed for these purposes. The U. S. experience is reviewed. Some conclusions are: (a) goals and objectives for river basin development should be clearly stated by top policy-makers at the outset of planning; (b) regional or local projections of economic activity or targets for economic development should be derived from established national ones; (c) successful planning hinges on the manner in which the task is set up; (d) benefit-cost analysis is useful in formulating and evaluating economically optimal plans; (e) river basin development planning should be considered in the context of total investment planning; (f) coordinating arrangements with other government units will be needed; (g) a broad, interdisciplinary-team approach is essential; and (h) programs for systematic and sustained collection and analysis of basic data are essential. IMPACT OF IRRIGATION INVESTMENTS ON REGIONAL AND URBAN DEVELOPMENT,
Resources for the Future, Inc., Washington, D.C.
P. R. Crosson.
Paper presented at Internation Symposium on Water Resources Planning, Mexico City, December 1972. 63 p, 1 fig, 4 tab, 44 ref.

Descriptors: *Irrigation design, *Economic impact, *Urbanization, *Regional economics, *Irrigation programs, Management, Investment, Return (Monetary), Economics, Community development, Land use, *Mexico.
Identifiers: *Sonora (Mexico).

Planning of irrigation projects usually stops with the calculation of direct benefits and costs, and the ranking of projects according to cost-benefit ratios. Irrigation investments, however, may have repercussions of major importance that go far beyond the direct increase in agricultural production resulting from them. By improving the productivity of resources employed in agriculture, irrigation investments can trigger fundamental changes in the economic structure of the region in which they are placed. The increase in agricultural productivity improves the region's competitive position in national and international markets, thereby attracting new resources into the region's agricultural sector to take advantage of expanding economic opportunities. The increased quantity and productivity of agricultural resources in turn generates rising demands for urban supplied goods and services, thus stimulating urban growth in the region. Investment in irrigation thus can be viewed as an instrument of regional and urban development policy. The theoretical basis for this argument is developed and applied to the analysis of an arid location in Sonora, Mexico. (Muller-Arizona)

EDUCATIONAL PROGRAMS FOR LAND AND WATER RESOURCES DEVELOPMENT AND MANAGEMENT,
Arizona Univ., Tucson.
D. D. Evans.
Paper presented at International Symposium of Water Resources Planning, Mexico City, December 1972, 18 p.

Descriptors: *Schools (Education), *Training, *Education, Professional personnel, Colleges, *Universities, Technology, Information exchange, Social participation, Scientific personnel, Management.

Land and water are basic resources in every country. Wise management of these resources, whether for urban, agricultural, recreational, or other uses, may be the critical factor in determining the level of prosperity attained and maintained by the citizenry. This is especially true for countries which have large demands placed upon limited resources, such as arid lands in relation to water. Educational programs must be considered for all levels. Precollege students should acquire an appreciation for these critical resources. Undergraduate and graduate programs should be designed to meet the diverse demand for required expertise. Continuing education programs are needed for professionals and nonprofessionals who have responsibilities for guarding and managing these resources. With the rapid development of technology and methodologies, the half-life of acquired knowledge is now only a few years, so educational programs must be continually updated. The University of Arizona, in Tuson, is used as an example of how one educational institution deals with resource development and management education. (Muller-Arizona)

WATER RESOURCES PLANNING MOZAMBIQUE (LA PLANIFICATION DES RESOURCES EN EAU AU MOZAMIQUE),
Servicos Hidraulicos, Lourenco Marques (Mozambique).
C. D. de Ataide Fonseca.
Paper presented at International Symposium on Water Resources Planning, Mexico City, December 1972, 25 p, 4 fig.

Descriptors: Water resources, *Water allocation (Policy), *Planning, *Management, *Africa, Water resources development, Water requirements, Water demand, Water policy, Water supply development, Administration, Priorities, Regional development, Allotments.
Identifiers: *Mozambique.

Mozambique is characterized as an area of hot, oceanic temperature regime, with temperate plateau lands, predominantly dry and semiarid, with moderately humid coastlands. Precipitation ranges between 90 and 3,600 millimeters per year, with an average of about 968 mm. The annual average of 8 x 10 to the 10th power cubic meters of surface water, flowing principally in the Zambeze and Limpopo Rivers, is primarily utilized on site, rather than through a system of diversions. Although capabilities for hydroelectric power generation have reached 2.5 x 10 to the 8th power kwh in 1970, and some diversion projects exist, water distribution and optimum utilization remain a principal planning concern for this growing country. Mozambuque has reached a phase in development where the current and historic lack of water resource management is no longer acceptable, and definite planning measures must now be initiated which develop and allocate water resources in a manner that recognizes future expansion. Principal planning problems facing water administrators in Mozambique today are (1) determination of socio-economic water usage priorities, (2) uniform development of water resources throughout the country, and (3) harmonious management of international rivers. (Muller-Arizona)

VALUATION OF VISUAL-CULTURAL BENEFITS FROM FRESHWATER WETLANDS IN MASSACHUSETTS,
Massachusetts Univ., Amherst. Dept. of Agricultural and Food Economics.
T. R. Gupta, and J. H. Foster.
Journal of the Northeastern Agricultural Economics Council, Vol. 2, No. 1, p 262-263, Summer, 1973. 3 tab, 20 ref. OWRR B-023-MASS (5). 14-31-0001-3596.

Descriptors: *Wetlands, *Economics, Aesthetics, Northeast United States, *Massachusetts, *Recreation demand, Evaluation, Land use, *Social values, Attitudes.
Identifiers: Open spaces, *Visual cultural values.

The study has suggested an alternative to the 'willingness to pay' approaches to measuring the social value of natural open space and recreational resources. The method combines determination and measurement of the physical qualities of the resource by landscape architects with the measurement of value as expressed by the political system. It is illustrated by application to freshwater wetlands in Massachusetts. Wetlands with the highest visual-cultural values have a value, for this public purpose alone, of about $5,000 per acre. Based on a rating system developed by landscape architects, other wetlands will have a lower value for this purpose. Although this approach has certain weaknesses, it seems to produce valid dollar figures on which public purchase or other preservation decisions can be based. (Larson-Massachusetts)

CONCEPT-SCALE INTERACTION WITH THE SEMANTIC DIFFERENTIAL TECHNIQUE,
Virginia Polytechnic Inst. and State Univ, Blacksburg. Dept. of Sociology.
D. L. Klemmack, and J. A. Ballweg.
Journal of Psychology Vol 84, p 345-352, 1973. 1 table. OWRR A-038-VA (3).

Descriptors: *Recreation facilities, *Electric power, Water resources, *Attitudes, Social aspects, Psychological aspects, *Land use, Evaluation, *Social values.
Identifiers: Semantic differential technique, Concept-scale interaction.

The semantic differential technique is designed to serve as a method for measuring 'meaning.' It is a multidimensional rating scale based upon the assumption that words represent things. Basically, the semantic differential technique can be considered as a combination of scaling procedures and controlled associations. The subject is provided with a concept to be differentiated as well as a set of adjectival scales with which to do it. The respondent is asked to select a number from one to seven that most closely describes his interpretation of the association between the concept and the adjectival pair. In this study, adult respondents in an interview setting were asked to evaluate two concepts--use of a lake (a) as a source of electric power and (b) as a recreation area--by means of eight seven--point scales. Results indicate considerable concept-scale interaction, suggesting that Osgood's interpretation of the semantic differential may be restricted by both technique of data collection and subpopulation. Respondent hostility might be an intervening variable. The semantic differential technique appeared to yield a preliminary evaluation of the two concepts, suggesting its use as an indicator of orientation.

6D. Water Demand

AGRICULTURAL WATER DEMAND IN NORTH CAROLINA: PHASES I AND II,
North Carolina State Univ., Raleigh. Dept. of Biological and Agricultural Engineering.
R. E. Sneed, and R. S. Sowell.
Available from the National Technical Information Service as PB-225 130/4, $4.75 in paper copy, $1.45 in microfiche. Water Resources Research Inst. of the University of North Carolina. Rept. No. 83, September 1973. 142 p, 3 fig, 33 tab, 45 ref, 2 append. OWRR A-057-NC (1) 14-31-0001-3833.

Descriptors: *Water demand, Water management (Applied), Rate of application, Crop production, *Irrigation efficiency, *Water requirements, Irrigation practices, *North Carolina, *Computer models, *Water utilization.
Identifiers: Pitt County (NC).

A computerized water use model is developed and tested which determines the total water requirements for a given level of agricultural activity. A separable component of the model calculates both the aggregate water demands and the net economic return for alternative irrigation policies and crop-soil combinations. Input data include soils types and characteristics taken from soil surveys; crop acreage, timing, rooting depths, water requirements, and responses (yield) to irrigation; daily rainfall records; selling prices of crops; and irrigation costs. Output includes per acre and aggregate irrigation water requirements for each crop-soil combination for each time period; production levels, value of the production, cost of irrigation, and the net return to irrigation; and output data for alternative irrigation policies. J. E. Gaumnitz, R. L. Swinth, and J. O. Tollefson.
Land Economics, Vol 49, No 3, p 269-277, August, 1973.

Descriptors: *Recreation demand, Water allocation (Policy), Recreation facilities, Demand

schedule (Recreation), Use rates, *Decision making.
Identifiers: *Water-based recreation selection process, *Discrimination nets.

The aim was to demonstrate the feasibility and merit of identifying the discrimination net by which an individual processes information on facility attributes when he makes a decision on water recreation usage. Individual discrimination nets were constructed by a process of trial, modification, and verification of a stable decision process involved with selecting 10 water recreation sites (sample size±17). Four primal conditions for usage were identified: (1) it must be a nice day; (2) the lake must be within 40 miles; (3) cost of entry cannot exceed $2.50; and (4) there must be picnic facilities. From the initial study, it was concluded that individuals can articulate their discrimination nets, discrimination nets are stable over time (initial check back period was 1 month), and that it would be feasible to obtain discrimination nets from large numbers of people, in terms of the time necessary for an interview and the necessary amount of training for an interviewer. Potentially, discrimination nets are a tool for analyzing the choices and preferences of a population to provide the planner with projections of usage rates and better explanations of the relationships between configuration of water recreation facilities and usage. UTILITY PROVISIONS ANALYSIS FOR EAST CENTRAL FLORIDA.
Reynolds, Smith and Hills, Jacksonville, Fla.

Final report prepared for East Central Florida Regional Planning Council, Tallahassee. September, 1965. 126 p, 9 fig, 29 tab, 2 append.

Descriptors: *Planning, *Water supply, *Sewerage, *Florida, Water quality control, Urbanization, Administration, Financing, Institutions, Costs, Eutrophication, Groundwater, Water demand, Legislation, *Utilities, *Treatment facilities.
Identifiers: Utility expansion, Utility districts, Cape Kennedy (Fla).

A general, planning study is presented of problems and possible solutions related to water supply and sewerage systems for East Central Florida. The region includes the Cape Kennedy space center and is in a period of rapid urban development. The report focuses on the current status of water and sewerage systems in the area plus the water quality of lakes and streams, future water supply and sewerage needs, and the administration and financing of the expansion of these systems. Water supplies in coastal areas of the region are generally not sufficient to meet future needs and water will have to be imported from inland sources. Desalinization is not considered to be economically feasible. Water quality and fertilization of local lakes and streams are significant problems due to a lack of public treatment plants and a great number of small, inefficient private wastewater disposal systems. Wastewater systems must be expanded and consolidated and 90% removal of BOD required. However, utility systems expansion is severely constrained by organizational structure and financing problems. Florida law should be modified to allow countywide utility districts and intercounty utility functions; service rates should be raised to help finance system extensions. (Elfers-North Carolina)
W74-01480

AVAILABILITY OF FRESH WATER IN THE EAST CENTRAL FLORIDA PLANNING REGION.
Aase (George) and Associates, Inc., Tallahassee, Fla.

Final Report prepared for East Central Florida Regional Planning Council, Tallahassee, April 1965. 162 p, 4 append, 22 fig, 18 tab, 113 ref.

Descriptors: *Water supply, *Regional analysis, *Florida, *Data collections, Water resources development, Water sources, Water quality, Groundwater, Water storage, *Water demand, Urbanization, Artesian wells.
Identifiers: *St. Johns River Basin (Fla), *Cape Kennedy (Fla), Brevard County, Four River Basins Project.

A summary is presented of available water resource data including the total available fresh water in the region, which includes Cape Kennedy, the quality of the water resources, locations of potential future water supplies, water problems in the region, and possible solutions to the problems through 1980 with a projected population of approximately 1.6 million. The two main river basins in the region are the St. Johns and the Kissimmee. Much of the region is dotted with lakes, swamps, and marshes and has adequate water supply resources; however, the coastal areas, particularly Brevard County which is experiencing the most rapid urbanization, have limited fresh water supplies. Some of the possibilities for additional water supplies include the increased use of surface water in the St. Johns basin via several proposed storage reservoirs, the increased use of artesian water based on the Four River Basins Project which would provide reservoirs and other control works to create and enhance large groundwater recharge areas, salt water conversion, reuse of wastewater, and the suppression of evaporation. Recommendations include development of a water management plan with development of a broad regional plan for overall water management practices and procedures; consideration of development of a regional or multi-county system of water supply and distribution; evaluation of use of saline irrigation water; adoption of a well drilling code; expansion of treatment facilities to control pollution; possible construction of salt water barriers in coastal canals; careful regulation of existing artesian water supplies; and use of drainage and land use controls to protect water supplies. Methodology and data limitations are explained in Appendix I. (Elfers-North Carolina)

INVENTORY AND EVALUATION OF INFORMATION ON DELAWARE BAY, VOLUME 2.
Natural and Historic Resource Associates, Philadelphia, Pa.

Available from NTIS, Springfield, Va 22151, COM73-10520 Price $3.00 printed copy; $1.45 microfiche. Delaware College of Marine Studies, Sea Grant report, November 1972. 236 p, 12 tab, 199 ref. Sea Grant No 1-35377.

Descriptors: *Delaware River, *Delaware River Basin Commission, *Bays, *Land use, *Regulation, Legal aspects, Management, History, Human population, Reviews, Evaluation, Dredging, Water pollution control, Water supply, Recreation, Hydroelectric power, Commercial fishing, Wetlands, Conservation, Harbors, Estuaries.
Identifiers: *Delaware Bay area.

This study describes the history, land use, and legal mechanisms which operate in the tideland region of the lower Delaware Bay. It traces the development of important legal precedents which involve the possession and use of property along the Bay, and examines existing and proposed ownership and land use patterns. The land area under scrutiny includes the tidelands, from Lewes north to the border of Kent and New Castle Counties in Delaware, and Cape May and Cumberland Counties in New Jersey. The most important laws and regulations which affect the Bay and its borders are summarized. In addition to considering Federal, interstate, state, county or municipality regulations, the willingness of the various authorities to use the legal means available to them to regulate changes in the Bay environment is discussed. IN RE SPRING VALLEY DEVELOPMENT (CHALLENGE TO ORDER OF ENVIRONMENTAL IMPROVEMENT COMMISSION DENYING DEVELOPMENT ALONG SIDE OF POND).

300 A.2d 736-755 (Maine 1973).

Descriptors: *Maine, *Judicial decisions, *Environmental effects, *Legal aspects, Public health, Comprehensive planning, Land use, Statutes, Regulation, Project planning, Water law, Legislation.

Action was brought by plaintiff subdivider challenging the State Environmental Improvement Commission's order denying the subdivider the right to proceed with its development of a 92-acre tract along one side of a pond until such time as the subdivider had made proper application to the Commission and had received the Commission's approval. The subdivider appealed on the grounds the statute involved was unconstitutionally vague and a violation of the equal protection clause. The appeals court held for the Commission, stating that the notice requirement of the statute involved is a reasonable exercise of the police power, is not unconstitutionally vague, and does not deny the equal protection of the law. Moreover, the court emphasized that the use of the word 'commercial' in the statute was intended to describe the motivation for the development and not the type of activity to be performed on the property after it is developed. (Mockler-Florida)
W74-01454

OPERATION OF WATERCRAFT.
Ind. Admin. Rules and Reg. Ann. secs (68-865)-5 thru (68-865)-7 (Supp. 1970).

Descriptors: *Indiana, *Legal aspects, *Boating regulations, Boats, Recreation, Bodies of water, Reservoirs, Aquatic environment, Regulation, Local governments, Wildlife development, Aquatic habitats, Hazards.
Identifiers: Administrative regulations.

Indiana annotated rules and regulations governing the operation of watercraft in the Salamonie Reservoir, the Mississinewa Reservoir, and the Huntington Reservoir are presented. Since there is great likelihood that intensive use will be made of these bodies of public water and the physical characteristics of the water and the uses made of portions thereof will create unusual hazards for life and property, there should be restrictions on the use of watercraft at these reservoirs for the purposes of safety and fish and wildlife management. Accordingly, regulatory markers should be placed by the department of natural resources on the reservoirs for the purpose of regulating watercraft activities thereon, so as to best protect life and property and to protect the fish and wildlife. Moreover, the bodies of water are to be divided into specific speed zones, as determined by the risk or hazard sought to be avoided. (Mockler-Florida)
W74-01455

SIERRA CLUB V. MASON (ACTION TO ENJOIN DREDGING OF NEW HAVEN HARBOR).

351 F. Supp. 419-429 (D. Conn. 1972).

Descriptors: *Judicial decisions, *Environmental effects, *Dredging, *Harbors, *Connecticut, Channel improvement, Legal aspects, Injunctive relief, Excavation, Water pollution control, Project planning, Water law.
Identifiers: *National Environmental Policy Act, *Injunctive relief.

The action was brought by plaintiff nonprofit environmentalist group against defendant U.S. Corps of Engineers to enjoin the dredging of New Haven, Connecticut, harbor and the depositing of dredging materials into Long Island Sound. Injunctive relief was granted by the court, notwithstanding defendant's allegations that an injunction would result in economic loss to the oil companies which used the harbor, that shoaling in the harbor had created a safety hazard, and that any delay would result in increased costs to the government. The court held that in view of the fact that the proposed dredging of the harbor, and in particular the proposed offshore dumping of polluted spoil, involved substantial likelihood of environmental damage, the failure to prepare an environmental impact statement warranted an injunction prohibiting the U.S. Army Corps of Engineers and other federal officials from proceeding with the proposed dredging and dumping until all alternatives could be fully considered. (Mockler-Florida)
W74-01456

A BILL TO ESTABLISH THE CANAVERAL NATIONAL SEASHORE IN THE STATE OF FLORIDA.

House Bill 137, 93rd Cong, 1st Sess, 1973. 5 p.

Descriptors: *Florida, *Legislation, *National seashores, *United States, Coasts, Recreation, Wildlife habitat, Water quality standards, Water pollution control, Governments, Comprehensive planning, Beaches.

This bill seeks to provide for public outdoor recreation use and enjoyment of certain significant shoreline lands and waters of the United States, and to preserve related scenic, scientific, and historic locations at Cape Canaveral, Florida. Within the boundaries of the seashore, the Secretary of the Interior may acquire lands, waters, and land interests by donation, purchase with donated or appropriated funds, exchange or transfer from any other federal agency. Property owned by the State of Florida or any political subdivision may be acquired only by the consent of the state or political subdivision. Moreover, the Secretary shall permit hunting, fishing, and trapping on lands and waters under his jurisdiction within the boundaries of the seashore in accordance with the appropriate laws of Florida and the United States to the extent applicable, except that he may designate zones where no hunting, fishing or trapping shall be permitted for reasons of public safety, administration, fish or wildlife management, or public use and enjoyment. The bill also authorizes appropriation of adequate money for the project. (Mockler-Florida)
W74-01457

A BILL TO ESTABLISH IN THE STATE OF CALIFORNIA THE SANTA MONICA MOUNTAIN AND SEASHORE NATIONAL URBAN PARK.
Senate Bill 1270, 93rd Cong, 1st Sess, 1973. 13 p.

Descriptors: *Legislation, *National parks, *United States, *Recreation, Scenery, Conservation, Wildlife habitat, Shore protection, Natural resources, Reasonable use, Land use, Land resources, Forests, Parks.

Special priority shall be given by the Secretary of the Interior (Secretary) to acquisition of lands which are of particular scenic, recreational, and open space value. These and other lands shall be administered by the Secretary through the National Park Service in cooperation with the California State Department of Parks and Recreation. The Secretary is empowered to: explore the possibility of obtaining grants and funds from appropriate government agencies to further land acquisition for the park; construct the necessary facilities to protect the values for which the park was established; and extend the benefits of the recreation and open space resource of the Santa Monica Mountain and seashore to the greater Los Angeles region. The legislation creates a commission to administer this program, the members of which shall serve for three years without compensation. The duties of this commission are listed and include advising the Secretary on proposed land uses and holding hearings on proposals for the acquisition of land. (Mockler-Florida)
W74-01458

MURFEE V. PHILLIPS PETROLEUM COMPANY (ACTION BY PROPERTY OWNERS AGAINST OIL AND GAS LESSEES FOR DIMINUTION OF MARKET VALUE OF LAND DUE TO POLLUTION OF UNDERGROUND FRESH WATER SUPPLY).
492 S.W. 2d 667-680 (Ct. Civ. App. Tex. 1973).

Descriptors: *Groundwater resources, *Texas, *Saline water intrusion, *Brines, *Subsurface drainage, Oil drilling, Geologic formations, Judicial decisions, Negligence, Water pollution, Limestone, Water pollution sources, Groundwater barriers, Water supply.
Identifiers: Proximate causation.

Plaintiff, the surface owner, brought suit against the oil lessees of his property, maintaining that the land's value had decreased due to the defendant's negligent disposal of brine water produced in thirty-five oil wells on the land. Plaintiff alleged that the defendants were negligent per se in that by pumping the brine water into open pits they had violated a railroad regulation providing that fresh water was to be protected from salt water produced in oil wells. Defendants maintained that the contamination had occurred due to the plaintiff's failure to case test holes drilled by him so that his contributory negligency barred his recovery. As to damages before the drilling of the test wells, the court found that the 100 foot limestone formation between the surface and the fresh water zones was a better barrier than anything the defendants could have constructed so that the plaintiff had failed his burden of showing the defendants' negligence. As to damages after the drilling of the test well, the court found that the invading salt water had entered through the test wells so that the plaintiff's contributory negligence precluded his recovery. CITY OF MONMOUTH V. ENVIRONMENTAL PROTECTION AGENCY (EPA SUED THE CITY TO PROHIBIT THE CITY FROM CONTINUING TO MAINTAIN A SEWAGE LAGOON SYSTEM WHICH WAS EMITTING NOXIOUS ODORS).

295 N.E. 2d 136-140 (3rd D.C.A. Ill 1973).

Descriptors: *Illinois, *Judicial decisions, *Environmental effects, Legal aspects, Public health, Air quality standards, Constitutional law, Air, Smog, Air pollution, Smoke, Environmental sanitation, Odor.
Identifiers: *National Environmental Policy Act, *Injunctive relief.

Action was brought by the Environmental Protection Agency against a city for the levey of a fine and an injunction to prohibit the city from continuing to maintain a sewage lagoon system which was emitting noxious odors. The Pollution Control Board fined the city $2,000 and required the city to cease the emission of odors within six months. On appeal, the court held the Environmental Protection Act does not require the Board to adopt standards establishing hydrogen sulfide levels or regulation the operation of open lagoon facilities and that the act itself establishes sufficient standards to define proscribed conduct and the scope of the authority. Moreover, in the case at bar, the Board's action had not been based on evidence of record, the techological practicability of abatement had not been investigated and the Board's findings were vague, inconsistent and ambiguous. As a result, the appeals court vacated the order and remanded the cause to the lower court for further proceedings. (Mockler-Florida)

AND NOT A DROP TO DRINK: WATER RESOURCES PLANNING AND ADMINISTRATION,
Harvard Univ., Cambridge, Mass.
M. M. Hufschmidt.
Public Administration Review, Vol 21, No 2, p 81-89, Spring, 1961.

Descriptors: *Water resources, *Administration, *Administrative agencies, *Governmental interrelations, *River basins, Arkansas, New York, Delaware, Coordination, Consolidation.
Identifiers: Decentralization, Arkansas-White-Red Basins, Delaware River, Inter-Agency Basin.

Dispersion of organization and administration responsibility among numerous federal and state agencies appears to characterize the water resource activities of government. Political strength in Congress of established agencies and strong preference for the status quo by affected interest groups contribute to this situation. Proponents of change have not clearly conceptualized their objectives, or explained them in terms that would command support beyond the argument that the comprehensive, multiple-purpose nature of the problem requires coordinated administration of water resource activities. Suggested approaches for reform are coordination of planning activities of existing agencies at the river basin level, combining of research, planning, development, and operation into unified management of a river basin by a single agency endowed with broad powers, and unifying planning and development procedures and policies on a national basis. Studies of the Arkansas-White-Red Basins Inter-agency Committee, the Delaware River Basin, and of the water resources of New York State are examined. Foremost among conclusions of this review of that two organizational approaches remain to be tried: (1) a consolidation of federal water-resource functions at the top, and their administrative decentralization to major regions or river basins, and (2) the establishment of regional water resource agencies, either Federal, or by interstate compacts in which the Federal Government plays a strong role. ALLUVION, ISLANDS, AND SAND BARS,
K. Massari.
Tulane Law Review, Vol 47, p 367-380, 1973. 63 ref.

Descriptors: *Louisiana, *Legislation, *Alluvium, *Islands, *Sand bars, Judicial decisions, Coasts, Sands, Water pollution sources, Riparian rights, Legal aspects, Natural flow doctrine, Alteration of flow.

A comprehensive analysis is presented of alluvion, islands, and sand bars as defined and applied by the legislative scheme in Louisiana. Because the movement of a river or stream may either create, alter or destroy riparian property, the rich alluvial deposits that are formed by these bodies of water have created numerous title disputes in Louisiana and have given rise to an extensive body of creative jurisprudence. The legislative scheme incorporated in the Louisiana Civil Code articles 509 through 518 treats the five basic situations in which river forces change the ownership of riparian property. The laws of alluvion and dereliction are not applicable to lakes in Louisiana. (Mockler-Florida)

A BILL TO BE KNOWN AS THE 'RIVER BASIN WASTE TREATMENT AUTHORITY ACT OF 1973'.

Senate Bill 1877, 93rd Cong, 1st Sess, 1973. 12 p.

Descriptors: *River basin commissions, *Waste treatment, *Waste water (Pollution), *Legislation, *United States, Water resources development, Governmental interrelations, Water quality, Water pollution control, Federal government.
Identifiers: River Basin Waste Treatment Authority Act of 1973.

The continued deterioration of the nation's water supply threatens the integrity of the national environment. Improvement in the cleanliness of the nation's waters is essential to the survival of the citizens and of the system, yet after two decades of experience with water pollution control efforts, the purity of water is no more assured todaay than it was when federal efforts first began. Thus, the federal government must act by creating river basin waste treatment authorities that will assume control over, plan, build, operate, and maintain waste treatment facilities sufficient to control and abate water pollution in entire river basin drainage systems. The Administrator of the Environmental Protection Agency, after consultation with the Secretary of the Army and the Secretary of the Interior shall designate river basin regions which together will encompass the entire United States. The area of each such region shall be determined on the basis of physical, hydrologic or other relationships which will enable the provision of the most systematic and economical waste treatment for the area. Each authority shall, within its region, operate all public waste treatment facilities. (McKnight-Florida)

A BILL TO AID THE CONSERVATION OF NATURAL WATER RESOURCES.

House Bill 823, 93rd Cong, 1st Sess, 1973. 1 p.

Descriptors: *Legislation, *Federal government, *North Carolina, *Virginia, Federal Power Act, Political restraints, Rivers, Conservation, Water resources, Scenery, Reservoir construction, Dams, Headwaters.
Identifiers: *New River (N.C.).

This bill is meant to aid the conservation of natural water resources and protect the scenic New River. To this end, notwithstanding any other provision of law, no federal agency or entity shall license or otherwise give permission either under the Federal Power Act or any other act of Congress, for the construction of any dam or reservoir on or directly affecting the New River from the tidewaters of its south and north forks to the town of Fries, Virginia. (Napolitano-Florida)
W74-01616

A BILL TO PROVIDE FOR THE ESTABLISHMENT OF THE GUANA RIVER NATIONAL PARK IN THE STATE OF FLORIDA.

House Bill 383, 93rd Cong, 1st Sess, 1973. 2 p.

Descriptors: *Legislation, *National parks, *Water conservation, *Florida, Parks, Wildlife conservation, Preservation, Scenery, Beach erosion, Beaches, Lakes, Ponds, Planning, Land, Conservation.

The bill provides for the establishment of the Guana River National Park in St. Johns County, Florida, on lands designated for that purpose by the Secretary of the Interior. The means by which these lands may be acquired are specified and include donation, purchase and exchange. Such funds are appropriated, as may be necessary to carry out the purposes of the proposed act. (Reed-Florida)
W74-01617

A BILL AUTHORIZING THE STATE OF ILLINOIS AND THE METROPOLITAN SANITARY DISTRICT OF GREATER CHICAGO TO INCREASE THE DIVERSION OF WATER FROM LAKE MICHIGAN INTO THE ILLINOIS WATERWAY.
House Bill 5542, 93rd Cong, 1st Sess, 1973. 3 p.

Descriptors: *Illinois, *Legislation, *Water quality, Lake Michigan, *United States, Water quality control, Channels, Erosion control, Conservation, Erosion, Water control, Shore protection, Shores, Legal aspects, Regulation, Administration, Water law.
Identifiers: *Water diversion.

The proposed bill authorizes Illinois and the Metropolitan Sanitary District of Greater Chicago, under the direction of the Secretary of the Army, to increase the diversion of water from Lake Michigan into the Illinois Waterway in order to control and eliminate water erosion on the shoreline of Lake Michigan and to improve the quality of the water in the Illinois Waterway. The Secretary may not allow any water in excess of a specified annual average discharge rate to be diverted from Lake Michigan at Chicago except as may be consistent with orders of approval issued by the International Joint Commission pursuant to the Boundary Water Treaty of 1909 or with any exchange of notes between the United States and Canada. No diversion is to be allowed when the

level of Lake Michigan is less than a specified average monthly level or when such diversion would interfere with the operation of the flood control system for the Illinois River and its tributaries. (Reed-Florida)
W74-01618

DESIGNATING A SEGMENT OF THE ST. CROIX AS PART OF WILD AND SCENIC RIVERS SYSTEM.

1972 Hearing--Subcomm. on Public Lands--Comm. on Interior and Insular Affairs, United States Senate, 92nd Cong, 1st and 2d Sess, October 23, 1971, April 14, 1972. 180 p, 1 plate.

Descriptors: *Legislation, *Wild River Act, *Rivers systems, Recreation, Legal aspects, Scenery, Water policy, Water quality control, Running waters, Federal government, Governmental interrelations, *Minnesota, *Wisconsin.
Identifiers: *St. Croix River (Minn and Wis).

A bill is presented to amend the Wild and Scenic Rivers Act by designating a segment of the St. Croix River in Minnesota and Wisconsin as a component of the national wild and scenic rivers system. A study of the lower St. Croix by the Department of Interior concludes that the lower St. Croix merits inclusion in the national rivers system. The legislation should, ideally, be passed soon in order to preclude destruction of the scenic beauty of the lower St. Croix by intrusions of construction within the line of slight from the river. Statements from representatives of various state and federal agencies indicate that the lower St. Croix and its immediate environment possess outstandingly remarkable scenic and aesthetic, recreational, and geologic values, and that the river should be protected for the benefit and enjoyment of present and future generations. It has been recommended that a master plan for the protection and management of the riverway should be developed and used by all management entities. (Mockler-Florida)

ARCTIC DATA BUOYS AND AIDJEX,
Washington Univ., Seattle.
P. Martin.
In: Arctic Data Buoys; AIDJEX (Arctic Ice Dynamics Joint Experiment) Bulletin No 22, p 1-7, August 1973. 3 fig, 5 ref.

Descriptors: *Data collections, *Arctic Ocean, *Buoys, Water temperature, Currents (Water), Ocean currents, Ocean circulation, Meteorological data, Hydrologic data, Instrumentation, Telemetry.

Drifting stations have been used since 1893 to collect data in the Arctic Ocean. Conditions in the Arctic present special challenges to the operation of both manned and unmanned drifting stations. Modern technology has made possible unmanned data buoys which can greatly improve data coverage. AIDJEX is participating in the development and use of sea-ice data buoys which will also be required by future polar scientific programs. The Soviets were the first to develop a data buoy specifically for arctic conditions. Called the DARMS (Drifting Automatic Rdio-Meteorological Station), these buoys monitor ice and weather conditions along the Northern Sea Route. Several hundred of them have been deployed since 1956. New arctic data buoys incorporate recent technological advances. Solid-state electrical components and the utilization of satellites for positioning and data relay have already been demonstrated. (Knapp-USGS)

THE ARCTIC DATA BUOY, A SYSTEM FOR ENVIRONMENTAL MONITORING IN THE ARCTIC,
Washington Univ., Seattle. Applied Physics Lab.
D. P. Haugen, and E. G. Kerut.
In: Arctic Data Buoys; AIDJEX (Arctic Ice Dynamics Joint Experimnt) Bulletin No 22, p 37-53, August 1973. 5 fig, 3 tab, 12 ref. NASA NAS-8-26886.

Descriptors: *Data collections, *Arctic Ocean, *Buoys, Water temperature, Currents (Water), Ocean currents, Ocean circulation, Meteorological data, Hydrologic data, Instrumentation, Telemetry.

An automated data buoy system was developed for environmental monitoring in ice-covered oceans. The buoy operates for a minimum of one year, providing position and environmental data through polar-orbiting satellite telecommunications. It can be deployed by a two- or three-man crew using a small aircraft. It is capable of operating in both free-floating and frozen-in situations. An experimental unit successfully completed a 5-month test at Fletcher's Ice Island (T-3) during the winter of 1971-72, and six units were deployed in the Arctic during the spring of 1972. Four of these units have been in operation for more than 1 year. Results to date demonstrate the utility of the basic design, the effectiveness of the satellite communications, and the feasibility of deploying and operating a large array of such buoy systems in the Arctic Ocean. (Knapp-USGS)

BAROMETRIC PRESSURE MEASUREMENTS FROM BUOYS DURING AIDJEX 1972,
Washington Univ., Seattle.
P. Martin.
In: Arctic Data Buoys; AIDJEX (Arctic Ice Dynamics Joint Experiment) Bulletin No 22 p 89-111, August 1973. 11 fig, 2 tab, 2 ref. NSF Contract C-625.

Descriptors: *Data collections, *Arctic Ocean, *Buoys, *Atmospheric pressure, Water temperature, Currents (Water), Ocean currents, Ocean circulation, Meteorological data, Hydrologic data, Instrumentation, Telemetry.

Two types of buoys were deployed in an array around the main camp during AIDJEX 1972 to obtain barometric pressure measurements. Comparison of portable standards and the mercury barometer revealed significant errors in the mercury barometer readings caused by temperature flucutations, and a calibration drift in one of the portable standards: The calibrations are probably accurate to a few tenths of a millibar. Relative precision is about 0.1 mb, which is better than the relative precision of the standards. An observation of an unusual pressure feature was confirmed by duplicate buoys at one site. (Knapp-USGS)

A RESONANT CAPSULE PRESSURE TRANSDUCER FOR DATA BUOYS,
Kollsman Instrument Corp., Syosset, N.Y.
E. H. Kahn.
In: Arctic Data Buoys; AIDJEX (Arctic Ice Dynamics Joint Experiment) Bulletin No 22 p 113-137, August 1973. 11 fig, 2 tab.

Descriptors: *Data collections, *Arctic Ocean, *Buoys, *Atmospheric pressure, Water tempera-

ture, Currents (Water), Ocean currents, Ocean circulation, Meteorological data, Hydrologic data, Instrumentation, Telemetry.

Recent advances in avionics pressure instrumentation resulted in the ability to measure atmospheric pressure with a high degree of accuracy. The fundamental technique is based on the resonant frequency of an aneroid capsule whose frequency varies with pressure. A new RCPT magnetic drive system features low-power operation and low-production cost. The state of the art is summarized and a low-power demonstration transducer being built for evaluation by the NOAA Data Buoy Office for use by AIDJEX and other members of the oceanographic community is described. Descriptors: *Remote sensing, *Satellites (Artificial), *Oceanography, Data collections, Sea ice, Turbidity, Sounding, Surveys, Tracers, Ocean circulation.
Identifiers: *ERTS.

A synopsis is given of the significant results achieved within the Marine Resources and Ocean Surveys discipline of the overall ERTS program. Suspended sediment proved to be the most clearly visible feature in the nearshore water, allowing limited correlation between the actual sediment load and photographic film density. Sediment acts as a tracer, allowing nearshore circulation (current) patterns, direction of net water transport, and boundaries between different water masses to be discerned. In clear water, the use of contrast enhancement as well as optical and digital density slicing can be used to infer relative depths in 2-, 5-, and 10-meter steps from the surface down to about 20 meters. An analytic technique calculates absolute depth values based upon the ratios of adjacent MSS channels where some knowledge of bottom reflectivity is available. Sea ice is detectable in all of the ERTS MSS spectral bands and can be distinguished from clouds through a number of interpretive keys. MSS Bands 4 and 7 can be combined to infer the presence of meltwater on the ice and to map snowlines on glaciers. ERTS provides the data for the development of satellite techniques to measure water color, infer circulation and upwelling, and possibly infer temperature and salinity regions by correlation with other surface-acquired data. The measurement of water color may further be related to chlorophyll and turbidity. (See also W74-01163) (Knapp-USGS)

INTERPRETATION TECHNIQUES DEVELOPMENT,
National Aeronautics and Space Administration, Greenbelt, Md. Goddard Space Flight Center.
W. L. Alford.
In: Symposium on Significant Results Obtained from Earth Resources Technology Satellite-1, Vol III, Discipline Summary Reports; Greenbelt, Md, March 5-9, 1973: NASA, Goddard Space Flight Center Publication X-650-73-155, p 83-94, May 1973. 2 append.

Descriptors: *Remote sensing, *Satellites (Artificial), *Data processing, Data collections, Photogrametry.
Identifiers: *ERTS.

Both optical and digital methods of spatial information extraction can provide valuable sources of data information from the ERTS system. Current emphasis is being placed on machine-aided photoanalysis, image correction and enhancement, and automated data processing. The techniques available, even for a limited number of bands (4) and limited resolution (80-meters IFOV) can be effectively used to extract much of the information required by resource managers. Descriptors: *Remote sensing, *Satellites (Artificial), Surveys, Resources, *Land use, Geologic mapping, Water pollution, Data collections, Data processing.
Identifiers: *ERTS.

The usefulness of ERTS MSS black-and-white and false-color imagery in the 0.5- to 0.8-micron region is clearly demonstrated for land-use classification at regional, county, and city levels. ERTS MSS imagery yields enhanced geologic interpretation. Spatial filtering, as an image enhancement technique for lineament directional filtering, appears particularly promising for additional refinement at the user technology level. Black-and-white and false-color imagery in the 0.5- to 1.1-micron region in useful for resource surveys. MSS Band 5 (0.6 to 0.7 micron) coupled with the synoptic view afforded by ERTS shows sediment stream loading, lake sedimentation, and offshore efflux, and is also effective in monitoring smoke plumes on a repetitive basis. Available from NTIS, Springfield, Va., 22151, AD-759 668, Price $3.00 printed copy; $1.45 microfiche. Final Report prepared for NOAA, National Environmental Satellite Service, Washington, D.C., April 1973. 17 p, 6 fig, 4 tab, 5 ref. NAVOCEANO N62306-71-C-0108.

Descriptors: *Remote sensing, *Suspended solids, *Surface waters, *Light intensity, *Aquatic environment, Light penetration, Aerial photography, Analytical techniques, Lakes, Turbidity, Sediment transport.
Identifiers: *Multispectral scanner imagery, Scattering models, Water particle concentrations.

The usefulness of multispectral remoate sensing techniques was investigated in determining the concentration of suspended solids in aquatic environments. Aerial photography and multispectral scanner imagery are used to record the upwelling radiation at various locations on the surface of the water. Procedures for determining the concentration of suspended solids are explored. Two techniques are discussed: the first applies to bodies of water that are shallow and fairly clear; the second applies to bodies of water that are deep or very turbid. The first technique is a direct outgrowth of earlier water-depth studies and, when the necessary ground-truth data are available, can also be used to determine water depth or the scattering and adsorption coefficients of the lake. The second has the advantage of requiring less ground-truth data for interpretation of the remote measurements. Both techniques are feasible within certain operational constraints. Both give values of the concentration of suspended solids, relative to the concentration at a fixed point, for every location in a body of water for which multispectral data are available. The absolute values of the concentration at all points can be determined, however, if the absolute concentration is known at a single point. (Woodard-USGS)

SMALL-VOLUME SOLID-ELECTRODE FLOW--THROUGH ELECTROCHEMICAL CELLS. PRELIMINARY EVALUATION USING PULSE POLAROGRAPHIC TECHNIQUES,
Hoffmann-La Roche, Inc., Nutley, N.J. Animal Health Research.
A. MacDonald, and P. D. Duke.
Journal of Chromatography, Vol 83, p 331-342, August 29, 1973. 9 fig, 33 ref.

Descriptors: *Instrumentation, *Equipment, Electrochemistry, Automatic control, Flow rates, Measurement, Polarographic analysis, Evaluation, Stability, Methodology.
Identifiers: *Performance evaluation, *Electrochemical cells, *Pulse polarography, *Solid electrodes, Detectors, Liquid chromatography, Sensitivity, p-Aminophenol.

A preliminary evaluation is given of the use of potentiostatic pulse polarographic techniques for solid-electrode flow-through electrochemical cells as detectors for use in both automated analysis and liquid chromatography. The following advantages are noted over previously reported constant-applied-potential techniques: increased sensitivity, minimal effect of flow-rate on current measurement and a vast increase in electrode stability for the short-term sampling period and for extended routine operation. (Holoman-Battelle)

ESTIMATION OF DOMAIN MEANS USING TWO-PHASE SAMPLING,
Central Bureau of Statistics, Accra (Ghana).
K. T. deGraft-Johnson, and J. Sedransk.
Biometrika, Vol 60, No 2, p 387-393, August 1973. 2 ref.

Descriptors: *Estimating, Statistical methods, Sampling.
Identifiers: *Two-phase sampling, *Domain means, Sample size.

To estimate means of subpopulations or 'domains of study' where there is no list of units comprising each domain, a two-phase sampling procedure may be employed. One possibility is to select a simple random sample of size n prime with the domain to which each unit belongs being determined. Then a simple random subsample of size n sub j is selected from the n prime sub j units found in the first phase sample to be members of the jth domain. Given the values of the n prime sub j it is desired to allocate a fixed total second phase sample size, n, to the domains in an optimal manner. Then one may determine the optimal choices for n prime and n. Alternatively, one may use a stratified random sample of size n prime with n prime sub h units being selected from the hth stratum. Given that the first phase sample yields n prime sub hj units in the hth stratum, jth domain, the number of units, n sub hj to be subsampled by simple random sampling is to be determined to maximize a measure of precision. (Little-Battelle)

Descriptors: *Design criteria, *Flowmeters, Equations, Mathematical studies, Flow rates, Mechanical equipment.
Identifiers: *Rotameters.

Rotameters are of four general types: purge meters, glass-tube general-purpose meters, armored meters, and special-purpose meters. The meters can be adapted for use at low or high fluid pressures, and to monitor flow of caustic or corrosive as well as bland fluids. Although the units are frequently inexpensive they are accurate and reliable. A list of commercially available units with descriptive information and prices is given along with the derivation of the basic rotameter flow equation. (Little-Battelle)

ENGINEERING CHARACTERISTICS OF OVERBURDEN IN KNOX COUNTY, TENNESSEE,
Geological Survey, Washington, D.C.
L. D. Harris, and J. M. Kellberg.
Available from USGS, Washington, D.C. 20402 Price $0.75. Miscellaneous Geologic Investigations Maps I-767 K, 1972. 1 sheet, 1 map, 1 tab.

Descriptors: *Overburden, *Earth materials, *Geologic mapping, *Tennesses, Sediments, Soils, Rocks, Engineering structures, Design criteria, Particle size, Clays, Sands, Silts, Gravels, Gemorphology, Weathering, Erosion, Geological surveys.
Identifiers: *Knox County (Tenn).

This one-sheet geologic atlas describes engineering characteristics of overburden in Knox County, Tenn. Most manmade small- and medium-sized structures in the county are founded on unconsolidated material. Because engineers are primarily concerned with the physical properties of unconsolidated materials that directly affect engineering design and construction, they prefer to use the Unified Soil Classification System (included in this report) which stresses the engineering characteristics of unconsolidated materials. Soil or overburden as defined by engineers includes the soil and weathered rock down to bedrock. Subdivisions of the Unified Soil Classification System are based on the size of particles and their proportions, physical behavior, and the amount of organic material. The map, although generalized, is intended as a guide in the early planning stage of an engineering project. (Woodard-USGS)
W74-01143

OVERBURDEN RELATED TO TYPE OF BEDROCK AND ENGINEERING CHARACTERISTICS OF THE BEDROCK, KNOX COUNTY, TENNESSEE,
Geological Survey, Washington, D.C.
L. D. Harris, and J. M. Kellberg.
For sale by USGS, Washington, D.C. 20242 Price $0.75 per set. Miscellaneous Geologic Investigations Map I-767 J, 2 sheets, 1972. 1 map, 1 tab, 9 ref.

Descriptors: *Overburden, *Earth materials, *Bedrock, *Geologic mapping, *Tennessee, Sediments, Soils, Rocks, Geologic formations, Geological surveys, Engineering, Weathering, Erosion, Geomorphology, Chemical reations.
Identifiers: *Knox County (Tenn.).

This 2-sheet map folio describes unconsolidated earth materials and bedrock in Knox County, Tenn. In this report, the term overburden includes all unconsolidated material and weathered rock

down to hard bedrock. The thickness of the overburden is a function of the climate, the resistance of minerals in the bedrock to weathering, the abundance of fractures or cracks in the rock, the attitude of bedding, the volume of insoluble material (residue) remaining after weathering, and the rate of erosion. The depth of weathering is nearly proportional to the amount of carbonate minerals orginally present in the bedrock. Drill records of approximately 300 wells indicate that rocks with few or no carbonate minerals (such as shale with subordinate limestone and siltstone, sandstone, and shale) may weather to depths of as much as 25 feet; rocks which contain as much as 45% carbonate as cement (such as calcareous sandstone with subordinate shale, calcareous siltstone with subordinate limestone and shale) may locally weather to depths in excess of 100 feet. (Woodard-USGS)
W74-01144

CATEGORIES OF RELATIVE FEASIBILITY FOR SEPTIC-TANK FILTER FIELDS IN KNOX COUNTY, TENNESSEE,
Geological Survey, Washington, D.C.
L. D. Harris.
For sale by USGS, Washington, D.C. 20402 Price $0.75. Miscellaneous Geologic Investigations Map I-767 L, 1 sheet, 1972. 1 map, 7 ref.

Descriptors: *Geologic mapping, *Septic tanks, *Soil disposal fields, *Tennessee, *Soil filters, Waste disposal, Sewage, Water pollution sources, Water pollution control, Geomorphology, Soil types, Geological surveys.
Identifiers: *Knox County (Tenn.).

This map (scale 1:250,000) classifies land in Knox County, Tennessee, according to its natural physical capabilities to support the installation of septic-tank fields. Although the map indicates to planners the general suitability of a large area, sufficient data are not shown to predict the absolute suitability of a single small building site. Onsite evaluation of individual building sites is recommended. Factors limiting the usefulness of septic-tank filter systems as suggested in U.S. Public Health Service (1969) and Bender (1961) are: percolation rate, groundwater level, soil drainage on shale, depth to bedrock, slope of the ground, proximinty to other bodies of water, and flood hazard. (Woodard-USGS)
W74-01145

SOIL ASSOCIATION MAP OF KNOX COUNTY, TENNESSEE.
Geological Survey, Washington, D.C.

For sale by USGS, Washington, D.C. 20242 Price $0.75. Miscellaneous Geologic Investigations Map I-767 H, 1 sheet, 1972. 1 map, 1 tab.

Descriptors: *Soil classification, *Soil types, *Geologic mapping, *Tennessee, *Soil formation, Soil groups, Soil chemical properties, Earth materials, Soil analysis, Weathering, Geomorphology, Erosion, Geological surveys.
Identifiers: *Knox County (Tenn.).

This map, scale 1:125,000, and related information describe the soil association in Knox County, Tenn. Parent materials of soils in the county are of two broad classes: (1) material derived from weathering of sedimentary rocks in place (residuum), and (2) materials transported by gravity (colluvium) or by streams (alluvium). Distribution of soils derived from residuum is closely controled by the distribution of different sedimentary rocks. Weathering of these rocks has resulted in the development of residual soils arranged in a northeast-trending pattern nearly paralleling the pattern formed by sedimentary rocks. Slow gravity movement of soils down slopes has modified the original distribution of residual soils by shifing their boundaries toward the valleys. The alluvial soils are relatively small deposits along streams and show little relation to the trend of sedimentary rocks. (Woodard-USGS)
W74-01146

GROUND-WATER YIELD POTENTIAL IN KNOX COUNTY, TENNESSEE,
Geological Survey, Washington, D.C.
W. M. McMaster.
Available from USGS, Washington, D.C. 20242 Price $0.75. Miscellaneous Geoligic Investigations Map I-767 E, 1 sheet, 1973. 1 map, 3 ref.

Descriptors: *Groundwater resources, *Hydrogeology, *Aquifer characteristics, *Mapping, *Tennessee, Water wells, Water yield, Geology, Drilling, Test wells, Geological surveys, Evaluation.
Identifiers: *Knox County (Tenn.).

This one-sheet map folio describes conditions that affect groundwater availability in Knox County, Tennessee. The county is underlain by a variety of consolidated sedimentary rocks, including dolomite, limestone, shale, and sandstone. These rocks are not permeable enough to allow water to move freely through them or porous enough to allow water to be retained within them. There is no direct way to identify the presence of large water-bearing openings other than by drilling, but knowledge of the geology and water-bearing characteristics, probable thickness of saturated weathered material, and topography can be used to delineate areas potentially favorable for large-yield wells. On this basis, and using available well records, this generalized map showing groundwater yield potential for Knox County was prepared. Water-bearing openings are common to depths of 250 feet, less common at depths of 250 to 350 feet, and rare below 350 feet. Although sizable openings have been penetrated by wells at depths of 600 feet or more, few wells obtain significant amounts of water below 350 feet. (Woodard-USGS)

THE SOVIET DARMS PROGRAM--TWENTY YEARS OF DEVELOPMENT, DEPLOYMENT, AND DATA,
National Science Foundation, Washington, D.C. Office of Polar Programs.
S. M. Olenicoff.
In: Arctic Data Buoys; AIDJEX (Arctic Ice Dynamics Joint Experiment) Bulletin No 22, p 8-34, August 1973. 5 fig, 5 tab, 15 ref.

Descriptors: *Data collections, *Arctic Ocean, *Buoys, Water temperature, Currents (Water), Ocean currents, Ocean circulation, Meteorological data, Hydrologic data, Instrumentation, Telemetry.

Since 1953, the Soviet Arctic and Antarctic Research Institute has been deploying two types of automatic stations on the pack ice of the Arctic Basin: the Alekseyev radio-beacon (for position data only) and the DARMS (Drifting Automatic Radio-Meteorological Station). In recent years, the Soviets have developed and are starting to deploy a more advanced automatic station which will collect hydrological as well as meteorological data. During the past 20 years, approximately 440 automatic stations have been deployed, and they have relayed over 40,000 coordinate determinations and about 150,000 meteorological measurements. These data have been regularly processed, distributed, and utilized to improve weather and ice forecasts for the Arctic regions, particularly during the navigation period along the Northern Sea Route. SYMPOSIUM ON SIGNIFICANT RESULTS OBTAINED FROM EARTH RESOURCES TECHNOLOGY SATELLITE-1, MARCH 5-9, 1973: VOLUME III--DISCIPLINE SUMMARY REPORTS.

Available from the National Technical Information Service as N73-28405, $8.25 in paper copy, $1.45 in microfiche. National Aeronautics and Space Administration, Goddard Space Flight Center Publication X-650-73-155. S. C. Freden, and E. P. Mercanti, editors, May 1973. 118 p.

Descriptors: *Remote sensing, *Satellites (Artificial), *Data collections, *Data processing, Land use, Surveys, Mapping, Geology, Resources, Water pollution, Air pollution, Oceanography.
Identifiers: *ERTS.

The first Earth Resources Technology Satellite (ERTS-1) was launched on July 23, 1972. In the 7 months since it was activated, over 34,000 scenes of the earth have been obtained, covering all major land masses and about 75% of the world's land area. Some areas, such as the United States, have been imaged at least 12 times. The purpose of the ERTS program is to provide an assessment of remote sensing from a satellite as a technique for inventorying and monitoring the earth's resources to provide for better management of these resources. This symposium provided the first open forum where the users of the ERTS data had the opportunity to present the significant accomplishments from their investigations. It also provided the first opportunity for representatives of federal, state, and local organizations to present their views on how ERTS data are being used and will be used for solving operational resources management problems. The reports of the Working Groups which were convened to summarize and critique the ERTS results in the various disciplines are presented. Descriptors: *Geologic mapping, *Remote sensing, *Satellites (Artificial), Mapping, Data collections, Surveys, Geomorphology, Mining, Exploration, Structural geology, Faults (Geologic), Folds (Geologic), Joints (Geologic), Fractures (Geologic).
Identifiers: *ERTS.

In regions where rock exposures are good because of low vegetation cover, major geologic features such as folds, fault offsets, intrusion outlines, volcanic flows, contacts between rock units, and many landforms can be effectively mapped from ERTS images with details comparable to mapping by conventional methods. Folds and similar structural features are detectable. Success in detection depends on lithologic types and sequence (contrast effects), width of exposed units, topographic expression, size of structure, structural setting, degree of exposure, extent of ground cover, and sun angle. ERTS is effective in bringing to light previously unrecognized circular structures. The most frequently reported achievement from ERTS of direct concern to geology is its ability to detect linear features on the earth's surface. Some of these features are nongeological, such as powerlines, roads, and animal migration routes. Geological linear features include contacts, metamorphic grain, fractures, joints, faults, and lineaments, which can include any of the foregoing structural elements as well as other tectonic features of an indefinite nature. These linar features vary in scale and length from a few kilometers to regional or subcontinental dimensions. In some instances, mines or quarries that were not associated with known structural controls appear to fall on or close to individual linears or intersection points. (See also W74-01163) (Knapp-USGS)

Descriptors: *Remote sensing, *Satellites (Artificial), *Water resources, Land use, Snow cover, Glaciers, Data collections, Lakes, Wetlands, Mapping, Water quality, Water pollution, Soil water.
Identifiers: *ERTS.

Various land uses related to water resources management can easily be identified and mapped using ERTS-1 data at a scale of 1:250,000. The sources of water pollution, sediment load sources, and changing water yield can be delineated. ERTS-1 detection of geologic fracture zones and especially intersections of fractures has potential for the development of groundwater resources. Areas inundated by flooding can be mapped at scales of 1:250,000 or larger. The elevations of the snowline can be estimated to the nearest 60 meters. The multispectral repetitive coverage permits observations of medial moraines, unusual glacier surges or movements, snowlines, and other features. Surging glaciers can be distinguished from nonsurging glaciers by their folded moraines. The Data Collection System on ERTS-1 is a reliable and rapid means of collecting and relaying hydrologic data so that they can be used in management situations requiring nearly real-time data. Surface-water bodies as small as 1 hectare in size can be located and rivers as narrow as 70 meters can be easily followed. Reflectance variations are readily observable in water bodies from ERTS-1. These reflectance variations are due largely to variations in depth, suspended sediments, concentrations and pollutants, and biological activity. (See also W74-01163) (Knapp-USGS)

AREAS OF POSSIBLE FLOODING IN KNOX COUNTY, TENNESSEE,
Geological Survey, Washington, D.C.
L. D. Harris.
For sale by USGS, Washington, DC 20402 - Price $0.75. Miscellaneous Geologic Investigations Map I-767 M, 1 sheet, 1973. 1 map, 5 ref.

Descriptors: *Flood plains, *Regional flood, *Mapping, *Tennessee, Geomorphology, Sinks, Karst, Geological surveys, Flood forecasting, Flood protection, Construction, Design criteria, Flood plain zoning.
Identifiers: *Knox County (Tenn).

Major flooding of the Tennessee, Holston, and French Broad Rivers in Knox County, Tennessee, has not taken place since the construction in 1941 and 1943 of both upstream and downstream reservoirs that regulate the discharge of these rivers. Although frequency and size of floods is now lessened, studies by the Tennessee Valley Authority (1958; 1965) indicate that even with regulation great floods are possible. Because the potential to flood still exists in Knox County, the Tennessee Valley Authority prepared a series of maps, from which this map (scale: 1:125,000) was compiled, delineating the maximum areas that could reasonably be expected to be flooded as a result of a great regional storm. Areas with abundant sinkholes are also shown on the map because they are natural depressions where the potential to flood is great. (See also W74-01270) (Woodard-USGS)

AREAS WITH ABUNDANT SINKHOLES IN KNOX COUNTY, TENNESSEE,
Geological Survey, Washington, D.C.
L. D. Harris.
For sale by USGS, Washington, DC 20402 - Price $0.75. Miscellaneous Geologic Investigations Map I-767 F, 1 sheet, 1973. 4 fig, 1 map, 7 ref.

Descriptors: *Sinks, *Karst, *Geologic mapping, *Tennessee, Geological surveys, Geology, Geomorphology, Topography, Caves, Land subsidence, Groundwater movement, Karst hydrology, Land use, Evaluation.
Identifiers: *Knox County (Tenn).

This one-sheet map folio describes the origin of sinkholes and depicts the location of sinkholes in Knox County, Tenn. In these karst areas, the abundance of sinkholes with no external drainage, the probable presence of subsurface cavities with no expression on the surface, and the movement of groundwater controlled by an interconnected system of solution cavities, all combine to form natural conditions that should influence the use of these areas. Common problems characteristically associated with karst areas include differential subsidence, collapse, temporary or permanent flooding in sinkholes, and contamination of groundwater resources. Thus, a knowledge of the potential problems as well as careful planning are required to achieve a balance between land use and the natural drainage systems of the area. PROCESSING AND STORAGE OF HYDROMETEOROLOGICAL DATA IN THE ATMOSPHERIC ENVIRONMENT SERVICE,
Atmospheric Environment Service, Toronto (Ontario).
J. Rogalsky, and H. L. Ferguson.
In: Computer Storing and Processing of Hydrological Data; Proceedings of Workshop Seminar, 1971, Ottawa, Canada: Canadian National Committee for the International Hydrological Decade, p 1-7, 1971. 2 fig, 1 tab, 5 ref.

Descriptors: *Data collections, *Meteorological data, *Canada, *Data processing, *Data storage and retrieval, Hydrologic data, Flood forecasting, Precipitation (Atmospheric), Streamflow forecasting, International Hydrological Decade.

The Atmospheric Environment Service has collected, processed, and preserved Canadian climatic data for more than 100 years. Since 1950 many of the data files have been transcribed to

machine-sensible media. This period has seen a very rapid development of electronic data processing equipment and techniques and this evolution is expected to continue. The AES has accordingly developed adaptable and versatile procedures to keep pace with the changing technology. Data are continually being reexamined for accuracy and subjected to stringent quality controls. The processing system has been designed to provide the optimum service to a wide variety of users of climatological information. Specialized analyses are carried out for particular applications. This paper describes current AES data processing techniques involving climatological variables of particular interest to hydrologists. A summary of AES hydrometeorological data available in published form and various other media is also provided. (Knapp-USGS)

STORAGE AND RETRIEVAL OF GROUNDWATER DATA,
Department of the Environment, Ottawa (Ontario). Inland Waters Branch.
G. Grove, and R. L. Herr.
In: Computer Storing and Processing of Hydrological Data; Proceedings of Workshop Seminar, 1971, Ottawa, Canada: Canadian National Committee for the International Hydrological Decade, p 21-25, 1971. 2 fig, 4 ref.

Descriptors: *Hydrologic data, *Data processing, *Data storage and retieval, *Canada, Groundwater, Aquifer characteristics, International Hydrological Decade.

The automated general purpose groundwater data processing system of the Groundwater Subdivision, Inland Waters Branch, Canada, consists of three operational files. The well data file contains data on the construction and instrumentation of the well and data on the hydrogeological properties of the aquifers penetrated by the well. The lithological log for the well is stored on the well log file. The catalog file provides an index of the data contained on the other files. Programming of a hydrograph file is nearing completion. Data from such diverse sources as federal research projects and provincial water well driller's reports are stored using parameter and mnemonic codes. A maximum of 999 mathematical, statistical, and map subroutines can be used by the retrieval system for processing and displaying data. (Knapp-USGS)
W74-01291

ACQUISITION, STORAGE AND PROCESSING OF GLACIER INVENTORY DATA,
Department of the Environment, Ottawa (Ontario). Inland Waters Branch.
C. S. L. Ommanney.
In: Computer Storing and Processing of Hydrological Data; Proceedings of Workshop Seminar, 1971, Ottawa, Canada: Canadian National Committee for the International Hydrological Decade, p 27-29, 1971. 4 ref.

Descriptors: *Data collections, *Data processing, *Data storage and retrieval, *Glaciers, *Canada, Mapping, Surveys, International Hydrological Decade.

A proposal to inventory all the glaciers in Canada was included in the Canadian Program for the International Hydrological Decade. Formal guidelines specify the type of data to be collected and the required format. These form the basis of the Canadian glacier inventory program. All the information required for each glacier is coded on one standard data sheet. The basic data is listed in a standard format for keypunching onto four cards. Based on interpretation of aerial photographs the map outlines of each glacier are checked and the constituent parts (accumulation, ablation areas) are color coded. Once the data cards have been verified and a visual check of the data printouts completed, the data is transferred to magnetic tape for storage, analysis, and retrieval. It is estimated that there may be between 70,000 and 100,000 glaciers in Canada covering over 200,000 sq km. (Knapp-USGS)
W74-01292

STORAGE AND PROCESSING OF WATER QUALITY DATA,
Department of the Environment, Ottawa (Ontario). Inland Waters Branch.
R. H. Peters, and A. Demayo.
In: Computer Storing and Processing of Hydrological Data; Proceedings of Workshop Seminar, 1971, Ottawa, Canada: Canadian National Committee for the International Hydrological Decade, p 31-45, 1971. 12 fig, 2 tab, 3 ref.

Descriptors: *Hydrologic data, *Data processing, *Canada, *Data storage and retrieval, Data collections, Water quality, Statistics, Water chemistry, Water pollution, International Hydrological Decade.

The storage and processing system for water quality data developed by the Water Quality Division, Department of the Environment, Canada, has been operational for 2 years. It is designed to accept chemical, physical, bacteriological, biological, and hydrometric data relevant to water quality for surface waters, groundwaters, wastewaters, and sediments. The free format input and a station numbering system that is designed to uniquely locate any sampling site make input and retrieval from the system specific and flexible. Data input to the system may be made from precoded laboratory forms, standard 80 character coding sheets, or coded magnetic tape from automated field or laboratory instruments. Data reports may be obtained as lists or statistical summaries. The system is being used by four federal and provincial agencies. (Knapp-USGS)

COMPUTER UTILIZATION OF HYDROLOGICAL DATA FOR NORTH NASHWAAKSIS REPRESENTATIVE BASIN,
New Brunswick Univ., Fredericton. Dept. of Civil Engineering.
K. S. Davar, and J. C. Li.
In: Computer Storing and Processing of Hydrological Data; Proceedings of Workshop Seminar, 1971, Ottawa, Canada: Canadian National Committee for the International Hydrological Decade, p 53-70, 1971. 17 fig.

Descriptors: *Data processing, *Hydrologic data, *Forecasting, Small watersheds, *Canada, Statistics, Mathematical models, Demonstration watersheds, International Hydrological Decade.
Identifiers: *North Nashwaaksis representative basin (Canada).

In planning computer utilization of hydrological data, the choice of methodology must be governed by the objectives, scale, and constraints of the project. Data routing in the study of the North Nashwaaksis Representative Basin, Canada, which has a drainage area of 10.4 square miles is described. The two principal program objectives for this project are: (1) research relating to the hydrological regime in the basin, and (2) data inventory for the representative basin. Experience on this project leads to the clear conclusion that such programs necessitate the employment of trained semipermanent staff as important links in the chain of operations. A major objective of data acquisition in this program is to derive from the long-term accumulative data log an estimate of hydrology on the continental scale. (Knapp-USGS)

DATA ACQUISITION AND STORAGE FOR RESEARCH WATERSHEDS,
Guelph Univ. (Ontario). School of Engineering.
W. T. Dickinson, and G. J. Molnar.
In: Computer Storing and Processing of Hydrological Data; Proceedings of Workshop Seminar, 1971, Ottawa, Canada: Canadian National Committee for the International Hydrological Decade, p 71-76, 1971. 4 fig, 5 tab.

Descriptors: *Data processing, *Data storage and retrieval, Canada, Small watersheds, Data collections, Rainfall-runoff relationships, Water yield, Runoff forecasting, International Hydrological Decade.

In watershed research, there is a need for a system of acquiring data and transforming them to a stored form suitable for analyses compatible with the research objectives and for reference for other purposes. Factors to be considered in satisfying this need are outlined, and candidate acquisition systems are considered, including both direct and indirect approaches. Comparisons are made between the systems with regard to time, cost, and other factors. Particular attention is given to the recent optical character recognition indirect acquisition methodology. PLANNED DATA STORAGE METHODS FOR THE INTERNATIONAL FIELD YEAR FOR THE GREAT LAKES,
McMaster Univ., Hamilton (Ontario). Center for Applied Research and Engineering Design.
B. H. Nodwell, and J. MacDowall.
In: Computer Storing and Processing of Hydrological Data; Proceedings of Workshop Seminar, 1971, Ottawa, Canada: Canadian National Committee for the International Hydrological Decade, p 81-92, 1971. 8 fig, 1 tab, 2 ref. CARED Contract.

Descriptors: *Data storage and retrieval, *Data processing, *Great Lakes, International Hydrological Decade, Canada, Data collections, Hydrologic data.

A method of storing the data collected during the IFYGL is proposed. The Data Bank consists of a three-level system, the first level being a catalogue; the second, a summarized form of data stored on magnetic tape, hard copy, and microfilm for easy use, access, storage, and transport; the third, detailed unsummarized observations stored on magnetic tape. These data are to be both compact and scientifically useful. Summarization methods and formats that meet these conditions are described for a number of sensor packages, and methods of storage are discussed. Size and cost of the final summarized data bank are estimated along with distribution costs of this level of data. (Knapp-USGS)

CLIMATOLOGICAL STATIONS IN CALIFORNIA, 1971,
California State Dept. of Water Resources, Sacramento.
J. D. Goodridge.
Available from State of Calif, Documents Section, P. O. Box 20191, Sacramento, Calif 95820 Price $2.50. California Department of Water Resources Bulletin No 165, July 1971. 114 p, 3 plate.

Descriptors: *Climatic data, *Meteorological data, *Rain gages, *California, Measurement, Data collections, Rainfall, Sites, Temperature, Evaporation, Networks, Indexing, Oregon, Nevada, Arizona, Mexico.

This issue of the 'Index of Climatological Stations in California' is a compilation of 6,352 weather stations in California in 1971 engaged chiefly in measuring rainfall. It also includes some stations situated in Oregon, Nevada, and Arizona, and in the states of Baja California and Sonora in Mexico. Some of these stations also report other types of data, such as temperature and evaporation. The information presented in the index results from the cooperative effort of 90 agencies whose records are listed. (Woodard-USGS)

DON'T FORGET D/A CONVERTER TEMPCO,
Burr-Brown Research Corp., Tucson, Ariz.
C. R. Teeple.
Electronic Design, Vol 21, No 9, p 130-132, April 26, 1973. 4 fig.

Descriptors: Temperature, Electronic equipment.
Identifiers: *Accuracy, *Errors, *Digital to analog converters, *Analog to digital converters.

Accuracy drift of digital to analog and analog to digital converters occurs when temperature fluctuates and results from offset drift, gain drift, and linearity error. To assure system accuracy, the converter must function in a satisfactory temperature range. If converter resolution is known, the temperature range to confine errors to plus or minus 1 LSB can be obtained from an included graph. The graph can also be used to determine converter drift. (Little-Battelle)

USING COMPUTERS TO ANALYZE CONTINUOUS DATA,
National Aeronautics and Space Administration, Langley Station, Va. Langley Research Center.
J. J. Catherines, S. A. Clevenson, and H. F. Scholl.
Instruments and Control Systems, Vol 46, No 9, p 83-85, September 1973. 7 fig, 2 ref.

Descriptors: *Data processing, *Computer programs, Statistical methods, Data storage and retrieval, Computers, Electronic equipment.
Identifiers: *Data acquisition, *Recorders, Data interpretation.

Continuous data on vertical, longitudinal, and lateral accelerations of railroad cars and vibrations of STOC aircraft were recorded by one of two systems. In the first, transducer outputs were applied to voltage-controlled oscillators to produce frequencies corresponding to IRIG standards. These outputs were multiplexed with a 12.5 kHz reference and recorded on one track of a stereo tape recorder. In the second system, transducer outputs were recorded on a 7-channel FM recorder. The data were re-recorded in the laboratory in wide-band FM form with 6.75 kHz carrier frequency and continuous time code. A general-purpose time series analysis program was used to process and analyze the data by computer and provide autocorrelations, cross correlations, power spectral densities, histograms, standard deviations, mean values, maximum magnitudes, rms levels, and transfer functions. An exceedance program computed the number of times and period during which the signal exceeded a specified level. Power spectral density curves identified dominant frequencies. (Little-Battelle)

HYDROLOGICAL INFORMATION FOR THE PLANNING OF WATER RESOURCES IN DEVELOPING COUNTRIES (L'INFORMATION HYDROLOGIQUE POUR LA PLANIFICATION DES RESOURCES HYDRAULIQUES DANS LES PAYS EN VOIE DE DEVELOPPEMENT),
Office de la Recherche Scientifique et Technique OUtre-Mer, Paris (France).
J. A. Rodier.
Paper presented at International Symposium on Water Resources Planning, Mexico City, December 1972, 16 p.

Descriptors: *Data collections, *Basic data collections, *Hydrologic data, Investigations, Sampling, Groundwater resources, Groundwater availability, Surface waters, Surface water availability, Appraisals, Resources, Water resources, Groundwater resources, Water quality, Pollutants.
Identifiers: *Developing countries (West Africa), *Africa.

Twenty-five years of hydrologic investigative experience acquired by the French Hydrologic Service in what was once all French colonial Africa is used to demonstrate the requirements of data collection for planning in developing countries which are short of water. Studies were conducted with emphasis on sourface water resources, groundwater resources, and waters threatened by pollution, overusage, or other imposed stresses. Hydrologic data collection programs must be designed with definite planning data uses defined, either for present or future development considerations. If such uses are not considered, insufficient and unplanned data will force regions into slow realization of development. Initially a program should be designed to offer short term data to answer immediate questions concerning water resources problems. As the country develops, schemes to acquire data for long range planning objectives can be incorporated into large scale regional planning objective analysis. (Muller-Arizona)

SOUTH AMERICAN MARINE ENERGY,
Louisiana State Univ., Baton Rouge. Coastal Studies Inst.
R. J. Russell.
Available from NTIS as AD-700 259, $6.00 in paper copy, $1.45 in microfiche. Technical Report No 73, December 1, 1969. 40 p, 2 fig, 31 tab. ONR Nonr-1575 (03).

Descriptors: *Coastal engineering, Geomorphology, Topography, Tides, Energy, *Waves (Water), *Engineering structures, Sea level, South America.
Identifiers: Sea state, Swell.

The report summarizes information needed by geomorphologists concerned with explaining coastal features or by engineers designing structures exposed to physical attack by the sea. Summaries of tidal ranges, state of the sea, swell characteristics, and comments on wave energy are based on tables prepared by the Coast and Geodetic Survey (ESSA), the Navy Hydrographic Office, and Army Engineering Research and Development Laboratories. Suggestions are included designating parts of the coast where effects of sea and swell may be differentiated, but no morphological forms are discussed. The active physical processes involved in changing coasts tabulated here are to be used along with knowledge of passive factors, such as lithology and topography, for explaining coastal forms or for purposes of engineering design. TRI-AGENCIES PIPELINE: ENGINEERING REPORT.
San Diego County Water Authority, Calif.

February, 1972. 13p, 5 fig, 2 tab, 6 ref, 3 append.

Descriptors: *Pipelines, *Water supply, *Water distribution (Applied), Aqueducts, *California, Water districts, Inter-agency cooperation.
Identifiers: *San Diego County (Calif), Hydraulic gradient, Back-feeding.

Three public agencies in San Diego County, California, the City of Oceanside, Carlsbad Municipal Water District, and the Vista Irrigation District, proposed a single pipeline to convey water to themselves from the Second San Diego Aqueducts. A County Water Authority study concluded that substantial savings totaling $1,088,000 would be realized if the three agencies cooperated in construction of the single pipeline, rather than building separate lines. Additionally, maintenance costs and environmental damage would be less. Also future water needs of the participating agencies would be sufficient to require additional aqueduct service connection capacity for each agency within 3 to 5 years. Four routes were developed for the pipeline, only one of which was selected for presentation herein. The proposed pipeline would be provided at a hydraulic gradient considerably above the elevation of that required within the service area. It will allow the present Vista and Oceanside water systems to be backfed, which means that those existing supply networks will be adequate for much longer periods. Much of the added demand for water in all three agencies' service districts has occurred at high elevations at extreme ends of those systems, making maintenance of heads difficult. The pipeline will facilitate storage of water in reservoirs along

its route for later use at peak demand periods. Pumping does not appear necessary except when water is being placed in higher reservoirs. Diameters of the pipeline will range from 42 to 18 inches. Appendices include recommended design criteria and standards for the pipeline, engineering maps and diagrams of the pipeline, and a proposed form of a "joint powers" agreement between the three agencies. (Stein-North Carolina)

OBSERVATIONS AND EXPERIMENTS ON SOLITARY WAVE DEFORMATION,
Stanford Univ., Calif. Dept. of Civil Engineering.
R. L. Street, and F. E. Camfield.
Available from NTIS as AD-645 086, Paper copy $6.00, Microfiche $1.45. Technical Note No. 85 (1)-66, December 1966. 25 p, 7 fig, 18 ref. Nonr 225 (85), NR089-041.

Descriptors: *Coasts, *Beaches, *Waves (Water), deformation, Shallow water, Slopes, Sea walls, Engineering structures.
Identifiers: Solitary waves, *Shoaling.

A series of experiments were run in a two-dimensional wave channel to study solitary wave deformation on plane slopes ranging from horizontal to vertical. The test objectives included verification of deformation theories, delination of the shoaling processes associated with various slopes, and examination of the limit-height-wave concept. The results showed that the deformation process can be classified as a function of the ratio of initial wave height to water depth and beach slopes. The deformation theory for reflection from a vertical wall was verified, but the theory for low slopes was found to be only qualitatively accurate. Finally, a redefinition of the limit-height wave on sloping beaches is suggested. (Sinha-OEIS)

FLOW VISUALIZATION IN FREE SHEAR LAYERS,
Hong Kong Univ. Dept. of Mechanical Engineering.
J. A. Clark, and E. Markland.
ASCE Proceedings, Journal of the Hydraulics Division, Vol 99, No HY11, Paper 10119, p 1897-1913, November 1973. 7 fig, 2 tab, 19 ref, append.

Descriptors: *Turbulent flow, *Vortices, *Jets, *Turbulent boundary layers, Turbulence, Boundary layers, Transition flow, Hydraulics, Hydrodynamics.

The laminar-turbulent transition of the free shear layer in two-dimensional wall jets was studied. Detailed information on vortex formation was provided by visualization in water using the hydrogen bubble technique. The observed vortex structures in the shear layer during transition are dominated by transverse elements which grow exponentially as they travel downstream. Longitudinal parts are also apparent giving rise to three-dimensional flow in the shear layer. Further downstream the vortices break down three-dimensionally, creating the onset of turbulence. NUMERICAL SOLUTION OF MULTIPHASE WELL FLOW,
New Mexico Inst. of Mining and Technology, Socorro. Dept. of Ground-Water Hydrology.
W. Brutsaert.
ASCE Proceedings, Journal of the Hydraulics Division, Vol 99, No HY11, Paper 10162, p 1981-2001, November 1973. 4 fig, 16 ref, append.

Descriptors: *Groundwater movement, *Water wells, *Drawdown, *Oil wells, Mathematical models, Finite element analysis, Simulation analysis, Porous media, Oil-Water interfaces.
Identifiers: *Multiphase flow.

A method is presented for numerically solving immiscible multiphase well flow considering three compressible fluids, two liquids, and one gas, and assuming isothermal conditions. Capillary and dissolution of gas in liquid are considered in the proposed mathematical model. Numerical difficulties arising from the nonlinearity of the equations and from the finite differencing in cylindrical coordinates are easily dealt with by using a modified Newton method to solve the fully implicit finite difference equations. Coning problems in the petroleum industry and unconfined flow problems in hydrology are typical applications. (Knapp-USGS)
W74-01275

BOUNDARY CONTRACTIONS AS CONTROLS IN TWO-LAYER FLOWS,
California Univ., Los Angeles. School of Engineering and Applied Science.
S. C. Mehrotra.
ASCE Proceedings, Journal of the Hydraulics Division, Vol 99, No HY11, Paper 10160, p 2003-2012, November 1973. 2 fig, 8 ref, append. NSF Grant GA-31247.

Descriptors: *Stratified flow, *Flow control, Flow characteristics, Hydraulics, Flow around objects, Open channel flow.
Identifiers: *Flow contractions.

Two-layer flows past contractions may be calculated using a vector-matrix equation. The steady problem can be reduced to a set of two equations, a detailed study of which reveals the correspondence and noncorrespondence between the two types of contractions. For two-layer flows with bounded upper layer, only the section where the contraction is the severest can act as a control. When the upper layer is free, this is true only with regard to vertical obstructions. Two-layer flows past horizontal contractions with free upper layer can be controlled at two sections--one at the throat and the other away from it. However, when the flow throughout is subcritical with respect to the free surface wave mode (a common situation), vertical and horizontal contractions are equivalent, the only control being at the severest section. (Knapp-USGS)
W74-01276

LINEAR PROGRAMMING AND CHANNEL FLOW IDENTIFICATION,
California Univ., Los Angeles. Dept. of Engineering Systems.
W. W.-G. Yeh, and L. Becker.
ASCE Proceedings, Journal of the Hydraulics Division, Vol 99, No HY11, Paper 10177, p 2013-2021, November 1973. 1 fig, 2 tab, 12 ref, append.

Descriptors: *Open channel flow, *Linear programming, Mathematical models, Hydraulics, Optimization, Parametric hydrology, Unsteady flow.

A method was developed for the optimal identification of parameters in unsteady open channel flow. The parameters chosen for identification are two constants embedded in the generalized friction slope expression which encompasses both the Manning and Chezy equations. A minimax error criterion was formulated and solutions are obtained by the use of the influence coefficient algorithm and linear programming. The required information is a set of concurrent input and output measurements and appropriate initial and boundary conditions of the system. Numerical results demonstrate the efficiency of the formulation and the rapidity of the rate of convergence. (Knapp-USGS)

OXNARD BASIN EXPERIMENTAL EXTRACTION-TYPE BARRIER,
California State Dept. of Water Resources, Sacramento.
G. Torres, Jr., and P. J. Yates.
Available from Office of Procurement, Documents Section, P. O. Box 20191, Sacramento, Calif., 95820 Price $3.00. Bulletin No 147-6, September 1970. 157 p, 12 fig, 3 tab, 6 ref, 12 append.

Descriptors: *Water pollution control, *Saline water intrusion, *Sea water, *Aquifers, *California, Water wells, Pumping, Groundwater recharge, Rainfall, Water quality control, Water resources development, Groundwater barriers, Groundwater movement.
Identifiers: *Ventura County (Calif), Extraction-type barrier.

An experimental extraction-type barrier was constructed along approximately 2,600 feet of coastline near the city of Port Hueneme in Ventura County, California, to determine the hydraulic feasibility of creating a pressure trough in a confined aquifer by means of extraction wells, and the effectiveness of such a trough in preventing seawater intrusion. Five extraction wells, each with a pumping capacity of 1,100 gpm, and a discharge pipeline were installed by the Department of Water Resources and operated for 2 years by the United Water Conservation District. During the field test, 9,000 acre-feet of degraded water was extracted. This extraction, combined with 2 years of above normal rainfall, reduced the areal extent affected by intruded water from 6,100 to 4,800 acres. Operation of the experimental barrier section demonstrated the hydraulic feasibility of this method of controlling seawater intrusion. Approximate costs per mile of barrier and needed well spacing and capacity for a full-scale barrier were developed; however, additional information on the extent and transmissibility of the aquifers to be protected would be required to permit final selection of the spacing and capacity of extraction wells. The use of noncorrosive materials, rather than a cathodic protection system, was also found advisable. (Woodard-USGS)

Descriptors: *Fluid mechanics, *Rotational flow, *Pumps, *Fluid friction, *Turbulent boundary layers, Model studies, Methodology, Numerical analysis, Correlation analysis, Reynolds number, Turbulent flow, Hydraulic equipment, Viscosity.
Identifiers: Rotating disk.

The incompressible flow field between two infinite parallel disks, one of them rotating and the other stationary, is analyzed and solved for situations where the radial Reynolds number Re±wr square/v (w)disk angular speed; r±radius from axia to rotation and v±kinematic viscosity of the fluid) is large enough to produce turbulent flow. An effective viscosity method is used, the effective viscosity being regarded as a scalar. Hence the stresses for both the laminar and turbulent regimes are in the direction of the local velocity gradient. The validity of such an approach is demonstrated for the case of boundary layer development on a rotating disk in an infinite fluid otherwise at rest. An implicit finite-difference method is used to obtain a numerical solution of the boundary layer flow from the axis out to a radius corresponding to Re±10 to the 7th power. For an assumed transition from laminar to turbulent flow at the experimentally observed value of Re±3x100,000, the resulting skewed velocity profiles and disk friction drag agree well with measurements. Also solved by the same numerical technique is the case of the surrounding fluid rotating at one-half the disk speed. (Woodard-USGS).

GREATER ADAPTABILITY OF FRESHWATER MUSSELS TO NATURAL RATHER THAN TO ARTIFICIAL DISPLACEMENT,
Bureau of Sport Fisheries and Wildlife, Washington, D.C. Office of Endangered Species.
M. J. Imlay.
Nautilus. Vol 86, No 2-4, p 76-79. 1972.
Identifiers: Adaptability, *Artifical displacement, Fishery, *Mussels (Fresh water).

Artificial displacement of freshwater mussels in the stream bottom (substrate smothering, commercial harvesting, or removal and replacement) was determined to harm mussels more often than was natural displacement (natural sand formation, storm disturbance, etc.). A biological explanation is presented that contributes to understanding why water projects (dredging, channelization, impoundments, quarry washing) are so devastating to freshwater mussels.--Copyright 1973, Biological Abstracts, Inc.

MONITORING CHANNEL CATFISH USE OF A DEMAND FEEDER,
Bureau of Sport Fisheries and Wildlife, Stuttgart, Ark. Fish Farming Experiment Station.
W. H. Hastings, B. Hinson, D. Tackett, and B. Simco.
Prog Fish-Cult. Vol 34, No 4, p 204-206. 1972. Illus.
Identifiers: *Channel catfish, *Monitoring, Demand feeders (Fish), *Fish food.

A mechanism is described that permits the continuous monitoring of time intervals that feed leaves a demand feeder. Data collected from the use of this mechanism suggest that catfish fingerlings feed more frequently during the afternoon hours of the summer months and at a daily rate of about 4% of their body weight. Winter feeding with large catfish occurs at fairly regular intervals throughout the day and at a daily rate of about 1-1/4% of their body weight.--Copyright 1973, Biological Abstracts, Inc.

W74-01533 5D

AERATION
Mobile Oxygen Dispersion Craft,
W74-01232 5G

Soil Aeration Response to Draining Intensity in Basin Peat,
W74-01255 2G

Swedish Lake Restoration Program Gets Results,
W74-01262 5G

Report on Laurel Creek Channel Improvements, Waterloo and Bridgeport, Ontario.
W74-01482 4A

AERIAL PHOTOGRAPHY
Tidewater Shorelines in Broward and Palm Beach Counties, Florida: An Analysis of Characteristics and Changes Interpreted from Color, Color Infrared and Thermal Aerial Imagery,
W74-01220 2L

AEROBIC BACTERIA
The Role of Micro-Organisms in Waste Tip-Lagoon Systems Purifying Coke-Oven Effluents,
W74-01647 5D

AEROBIC CONDITIONS
Degradative Versatility of Corynebacterium pseudodiphtheriticum NCIB 10803 which uses Amides as Carbon Source,
W74-01536 5B

AEROSPACE TECHNOLOGY
Study of Water Recovery and Solid Waste Processing for Aerospace and Domestic Applications: Volume 1 - Final Report Summary,
W74-01280 5D

AFLATOXIN M1
Criteria for Mycotoxin Standards,
W74-01414 5A

AFRICA
Hydrological Information for the Planning of Water Resources in Developing Countries (L-'Information Hydrologique Pour La Planification des Resources Hydrauliques Dans Les Pays en Voie de Developpement),
W74-01623 7C

Water Resources Planning Mozambique (La Planification Des Resources en Eau au Mozamique),
W74-01629 6B

AGE
Temperature Selection by Juvenile and Adult Yellow Perch (Perca Flavescens) Acclimated to 24 C,
W74-01353 5A

AGRONOMY
Soil and Water Conservation on Arable Lands,
W74-01633 3F

AGRYPNETES-CRASSICORNIS
Factors Affecting the Distribution of Some Phryganeaeid (Trichoptera) in Malham Tarn, Yorkshire,
W74-01586 2I

AIR
Supersaturation of Nitrogen in Water During Passage Through Hydroelectric Turbines at Mactaquac Dam,
W74-01432 5C

AIR POLLUTION
The Determination of Cadmium by Atomic Absorption in Air, Water, Sea Water and Urine with a R.F. Carbon Bed Atomizer,
W74-01441 5A

ALABAMA
The Impact of Water Pollution Abatement on Competition and Pricing in the Alabama Textile Industry,
W74-01101 5G

Sketch Development Plan, Chambers County, Alabama.
W74-01485 5D

ALASKA
Shoreline Processes Near Barrow, Alaska: A Comparison of the Normal and the Catastrophic,
W74-01193 2L

Seasonal Variation of Chemical Parameters in Alaskan Tundra Lakes,
W74-01347 5B

Seismic Evidence for Glacier Motion,
W74-01378 2C

On the Formation of Small Marginal Lakes on the Juneau Icefield, South-Eastern Alaska, U.S.A.,
W74-01379 2C

Pathways of Trace Elements in Arctic Lake Ecosystems,
W74-01401 5B

ALCOHOLS
Practical Methods for Derivatizing and Analyzing Bacterial Metabolites with a Modified Automatic Injector and Gas Chromatograph,
W74-01336 5A

ALDRIN
The Effect of Aldrin on Water Balance in the Freshwater Pulmonate Gastropod (Biomphalaria glabrata),
W74-01525 5C

ALFLATOXIN B1
Evaluation of the Response of Dugesia Tigrina to Aflatoxin B1,
W74-01404 5C

ALGAE
Recreational Reuse of Municipal Wastewater,
W74-01103 5D

An Improved Method of Cell Enumeration for Filamentous Algae and Bacteria,
W74-01421 5A

Some Thoughts on Nutrient Limitation in Algae,
W74-01428 5C

Algal Excretion of C-14-Labeled Compounds and Microbial Interactions in Cyanidium caldarium Mats,
W74-01510 5C

Hydrobiological Studies on the Lednicke Rybniky Ponds: Species Composition and Seasonal

ALGAE

Variation in the Abundance of Plankton (In Czech),
W74-01567 5C

Selected Species of Algae Found in Carp Ponds of the Laskowa Complex Near Zator,
W74-01607 2I

ALGAL GROWTH
The Relations of Periphytic and Planktonic Algal Growth in an Estuary to Hydrographic Factors,
W74-01571 5C

ALIPHATIC AMINES
Precolumn Inlet System for the Gas Chromatographic Analysis of Trace Quantities of Short-Chain Aliphatic Amines,
W74-01357 5A

ALIPHATIC HYDROCARBONS
Gas-Solid Chromatography on Macroreticular Cation Exchange Resins,
W74-01495 5A

ALKALI METALS
Distribution Studies of Radium and Other Metallic Elements Between Thenoyltrifluoroacetone in Methyl Isobutyl Ketone and Aqueous Solutions,
W74-01494 5A

ALKALINE EARTH METALS
Distribution Studies of Radium and Other Metallic Elements Between Thenoyltrifluoroacetone in Methyl Isobutyl Ketone and Aqueous Solutions,
W74-01494 5A

ALLUVIAL CHANNELS
Analysis of Sediment Sorting in Alluvial Channels,
W74-01274 2J

ALLUVIUM
Alluvion, Islands, and Sand Bars,
W74-01612 6E

ALONA GUTTATA SARS
The Distribution, Composition and Biomass of the Crustacean Zooplankton Population in Western Lake Superior,
W74-01109 5C

ALPINE LAKES
Notes on the Dynamics of the Reproductive Activity of Arctodiaptomus Bacillifer in High Altitude Alpine Lakes,
W74-01209 2H

ALUMINUM
Soluble Aluminum in Marine and Fresh Water by Gas-Liquid Chromatography,
W74-01446 5A

AMIDES
Degradative Versatility of Corynebacterium pseudodiphtheriticum NCIB 10803 which uses Amides as Carbon Source,
W74-01536 5B

AMINES
Atomic Absorption Method for Determining Micromolar Quantities of Aliphatic Secondary Amines,
W74-01492 5A

Substantiation of the Maximum Permissible Concentration of ANP-2 Compound in Water Bodies, (In Russian),
W74-01581 5G

AMINO ACIDS
Role of Silt in Microcystis Aeruginosa Development, (In Russian),
W74-01368 5C

AMMONIA
Reliability of an Ammonia Probe for Electrometric Determination of Total Ammonia Nitrogen in Fish Tanks,
W74-01433 5A

AMMONIACAL NITROGEN DECAY
Application of Mathematical Modelling to Water Quality Management,
W74-01486 5B

ANACYSTIS
Loss of Photosynthetic Activity in Two Blue-Green Algae as a Result of Osmotic Stress,
W74-01302 5B

ANAEROBIC BACTERIA
Pankhurst Tubes Modified to Indicate Anaerobiosis,
W74-01545 5A

ANAEROBIC CONDITIONS
Pankhurst Tubes Modified to Indicate Anaerobiosis,
W74-01545 5A

ANALOG TO DIGITAL CONVERTERS
Don't Forget D/A Converter Tempco,
W74-01507 7C

ANALYTICAL STANDARDS
Criteria for Mycotoxin Standards,
W74-01414 5A

ANALYTICAL TECHNIQUES
Simple Inexpensive Freeze-Drying Procedure,
W74-01339 7B

Simple Direct Combination of Gas Chromatography and Vapor Phase Infrared Spectrometry,
W74-01355 5A

Use of Isotopic Methods to Determine Present Rates of Snow Accumulation in Antarctica (Ispol'zovaniye izotopnykh metodov dlya opredeleniya sovremennoy skorsti nakopleniya snega v Antarktide),
W74-01393 2C

State of Rare Earth Elements in Surface Waters (O sostoyanii redkozemel'nykh elementov v poverkhnostnykh vodakh),
W74-01395 2K

Analytical Applications of Pulsed Voltammetric Stripping at Thin Film Mercury Electrodes,
W74-01514 5A

ANIMAL METABOLISM
Dieldrin. Effects of Chronic Sublethal Exposure on Adaptation to Thermal Stress in Freshwater Fish,
W74-01408 5C

Metabolism and Biliary Excretion of Sulfobromophthalein by Rainbow Trout (Salmo Gairdneri),
W74-01411 5C

ANIMAL MIGRATION
Spring Flooding and Fauna (In Russian),
W74-01261 2I

ANIMAL TISSUES
Determination of Mercury After Room Temperature Digestion by Flameless Atomic Absorption,
W74-01315 5A

Modified Delves Cup Atomic Absorption Determination of Lead in Blood,
W74-01415 5A

Emission Spectrometric Determination of Trace Metals in Biological Tissues,
W74-01546 5A

ANIONS
Anion Responses and Potential Functions for Neutral Carrier Membrane Electrodes,
W74-01334 2K

New Detector for Ion-Exchange Chromatography,
W74-01343 5A

ANNUAL
Division of the United States into Regions According to Cophasal Fluctuations of Annual Runoff (Rayonirovaniye territorii SShA po sinfaznosti kolebaniy godovogo stoka rek),
W74-01140 2E

ANNUAL CYCLES
Microfauna of Activated Sludge. Part III. The Effect of Physico-Chemical Factors on the Occurrence of Microfauna in the Annual Cycle,
W74-01542 5C

ANODIC STRIPPING VOLTAMMETRY
Chemical Constants of Metal Complexes from a Complexometric Titration Followed with Anodic Stripping Voltammetry,
W74-01332 5A

ANODONTA-GRANDIS
Distribution and Morphological Variation of Lampsilis radiata (Pelecypoda, Unionidae) in Some Central Canadian Lakes: A Multivariate Statistical Approach,
W74-01608 2H

ANP-2 COMPOUND
Substantiation of the Maximum Permissible Concentration of ANP-2 Compound in Water Bodies, (In Russian),
W74-01581 5G

ANTARCTIC
Use of Isotopic Methods to Determine Present Rates of Snow Accumulation in Antarctica (Ispol'zovaniye izotopnykh metodov dlya opredeleniya sovremennoy skorsti nakopleniya snega v Antarktide),
W74-01393 2C

ANTIBIOTICS (PESTICIDES)
Computer Identification of Bacteria on the Basis of Their Antibiotic Susceptibility Patterns,
W74-01443 5A

ANTIMONY
Concentrations of Some Trace Metals in Pelagic Organisms and of Mercury in Northeast Atlantic Ocean Water,
W74-01523 5C

ANTITRANSPIRANTS
Potential Usefulness of Antitranspirants for Solution of Some Water Supply, Plant Growth, and Environmental Problems,
W74-01105 3B

AQUATIC ALGAE
The Ecology of the Diatoms of the Klip River, Southern Transvaal,
W74-01313 5C

Growth and Buoyancy of Microcystis aeruginosa Kutz. Emend. Elenkin in a Shallow Eutrophic Lake,
W74-01518 5C

The Chemical Oxygen Demand of Waters and Biological Materials from Ponds,
W74-01543 5C

AQUATIC ANIMALS
Removal of Phosphate and Secondary B.O.D. from Tertiary treated Wastewater by Aquatic Animals,
W74-01124 5D

Food Consumption of the Free-Living Aquatic Nematode Pelodera Chitwoodi,
W74-01225 5A

Effects of Paraquat on Invertebrates in a Cantebury Stream, New Zealand,
W74-01298 5C

The Structure of an Acid Moorland Pond Community,
W74-01508 5C

AQUATIC BACTERIA
Effects of Protozoa on the Fate of Particulate Carbon,
W74-01117 5C

Acridine Orange-Epifluorescence Technique for Counting Bacteria in Natural Waters,
W74-01534 5A

AQUATIC ENVIRONMENT
Techniques for Measuring Light Absorption Scattering, and Particle Concentrations in Water,
W74-01283 7B

AQUATIC FUNGI
Two New Chytrids from the Appalachian Highlands,
W74-01305 5A

AQUATIC INSECTS
Assessment of Two Mesh Sizes for Interpreting Life Cycles, Standing Crop, and Percentage Composition of Stream Insects,
W74-01601 2I

An Automatic Separator for the Removal of Aquatic Insects from Detritus,
W74-01624 7B

AQUATIC MICROBIOLOGY
Effects of Protozoa on the Fate of Particulate Carbon,
W74-01117 5C

AQUATIC PLANTS
The Structure of an Acid Moorland Pond Community,
W74-01508 5C

The Effect of China-Clay Wastes on Stream Invertebrates,
W74-01527 5C

AQUEOUS SOLUTIONS
Critical Study of the APCD-MIBK Extraction System for Atomic Absorption,
W74-01329 5A

Investigation of Spectral Overlap of the Neon 359.352-nm and Chromium 359.349-nm Spectral Lines in Atomic Absorption and Atomic Fluorescence Spectrometry of Chromium,
W74-01337 2K

Solvent Extraction of Metal 1,10-Phenanthroline Complexes and Concentration of Trace Amounts of Metal Ions Prior to Spectrophotometric or Flame Photometric Determination,
W74-01354 5A

Precolumn Inlet System for the Gas Chromatographic Analysis of Trace Quantities of Short-Chain Aliphatic Amines,
W74-01357 5A

The Determination of Lead and Nickel by Atomic-Absorption Spectrometry with a Flameless Wire Loop Atomizer,
W74-01363 5A

Ligand Photooxidation in Copper (II) Complexes of Nitrilotriacetic Acid. Implications for Natural Waters,
W74-01400 5B

Quantitative Analysis of Aqueous Nitrite/Nitrate Solutions by Infrared Internal Reflectance Spectrometry,
W74-01402 2K

Atomic Absorption Method for Determining Micromolar Quantities of Aliphatic Secondary Amines,
W74-01492 5A

Distribution Studies of Radium and Other Metallic Elements Between Thenoyltrifluoroacetone in Methyl Isobutyl Ketone and Aqueous Solutions,
W74-01494 5A

Ion-Electrode Based Automatic Glucose Analysis System,
W74-01513 5A

AQUIFER CHARACTERISTICS
Hydrogeologic Characteristics of the Valley-Fill Aquifer in the Weldona Reach of the South Platte River Valley, Colorado,
W74-01142 4B

Ground-Water Yield Potential in Knox County, Tennessee,
W74-01147 7C

AQUIFER TESTING
Calculation of Permeability of Cretaceous Sandstones from Pumping and Static Level Data in Selected Areas of Western South Dakota,
W74-01113 2F

AQUIFERS
Oxnard Basin Experimental Extraction-Type Barrier,
W74-01289 8B

ARCTIC OCEAN
Arctic Data Buoys and Aidjex,
W74-01156 7B

The Soviet Darms Program--Twenty Years of Development, Deployment, and Data,
W74-01157 7C

The Arctic Data Buoy, A System for Environmental Monitoring in the Arctic,
W74-01158 7B

Barometric Pressure Measurements from Buoys During AIDJEX 1972,
W74-01159 7B

A Resonant Capsule Pressure Transducer For Data Buoys,
W74-01160 7B

The Mass Balance of the Sea Ice of the Arctic Ocean,
W74-01374 2C

ARCTODIAPTOMUS-BACILLIFER
Notes on the Dynamics of the Reproductive Activity of Arctodiaptomus Bacillifer in High Altitude Alpine Lakes,
W74-01209 2H

ARGON
Nitrogen/Argon Ratios by Difference Thermal Conductivity,
W74-01522 5A

ARID CLIMATES
Soil and Water Conservation on Arable Lands,
W74-01633 3F

Brush Eradicating, Basin Pitting, and Seeding Machine for Arid to Semiarid Rangeland,
W74-01637 4A

ARIDITY
Profile of the Vegetation of the Elburs Mountain Range (Northern Iran), (In German),
W74-01385 2I

ARIZONA
A Stochastic Model of Streamflow Based on the Theory of Functions of Markov Processes,
W74-01123 2E

Development of a Time-Space Prediction Technique to Evaluate Snowpacks in and Adjacent to Forest Openings,
W74-01231 3B

Arizona's Coming Dilemma: Water Supply and Population Growth,
W74-01452 4A

A Cost-Effectiveness Study and Analysis of Municipal Refuse Disposal Systems,
W74-01631 5E

AROMATIC AMINES
Atomic Absorption Method for Determining Micromolar Quantities of Aliphatic Secondary Amines,
W74-01492 5A

AROMATIC HYDROCARBONS
Gas-Solid Chromatography on Macroreticular Cation Exchange Resins,
W74-01495 5A

ARSENIC
Collaborative Study of a Colorimetric Method for Determining Arsenic Residues in Red Meat and Poultry,
W74-01403 5A

Concentrations of Some Trace Metals in Pelagic Organisms and of Mercury in Northeast Atlantic Ocean Water,
W74-01523 5C

ARTESIAN AQUIFERS
Balance Estimate of Groundwater Resources on the Northwestern Slope of the Caucasus (Balansovaya otsenka resursov podzemnykh vod severo-zapadnogo sklona Bol'shogo Kavkaza),
W74-01136 4B

ARTESIAN AQUIFERS

Problems in Regional Dynamics of Artesian Water (Problemy regional'noy dinamiki artezianskikh vod),
W74-01141 2F

ARTHROBACTER
2,4-dichlorophenoxyacetate metabolism by Arthrobacter sp.: Accumulation of a Chlorobutenolide,
W74-01550 5B

ARTHROPODS
Distribution Patterns and Population Dyanmics of the Micro-Arthropods of a Desert Soil in Southern California,
W74-01635 2I

ARTIFICAL DISPLACEMENT
Greater Adaptability of Freshwater Mussels to Natural Rather Than to Artificial Displacement,
W74-01235 8I

ARTIFICIAL RECHARGE
Underground Storage of Texas Playa Lake Waters by Injection Into the Ogallala Formation Under Moderate Pump Pressure,
W74-01627 4B

ARTIFICIAL REEFS
Algal Succession on Artificial Reefs in a Marine Lagoon Environment in Guam,
W74-01429 5C

ASSAY
Versatile Computer Generated Variable Accelerating Voltage Circuit for Magnetically Scanned Mass Spectrometers. Use for Assays in the Picogram Range and for Assays of Stable Isotope Tracers,
W74-01335 2K

2,4-dichlorophenoxyacetate metabolism by Arthrobacter sp.: Accumulation of a Chlorobutenolide,
W74-01550 5B

ATLANTIC OCEAN
Concentrations of Dissolved Forms of Fe, Mn, and Cu in Marine Pore Waters of the Atlantic Basin (Kontsentratsii rastvorennykh form Fe, Mn, i Cu v morskikh, porovykh vodakh basseyna Atlanticheskogo okeana),
W74-01392 2K

ATMOSPHERIC PRESSURE
Barometric Pressure Measurements from Buoys During AIDJEX 1972,
W74-01159 7B

A Resonant Capsule Pressure Transducer For Data Buoys,
W74-01160 7B

ATOMIC ABSORPTION SPECTROPHOTOMETRY
The Determination of Thallium in Urine and Plasma by Delves Cup Atomic Absorption,
W74-01314 5A

Evaluation of the Use of the Heated Graphite Atomizer for the Routine Determination of Trace Metals in Water,
W74-01316 5A

A Comparison of Fast Destruction Methods for the Determination of Trace Metals in Biological Materials,
W74-01317 5A

Heavy Metals in Wastewater and Treatment Plant Effluents,
W74-01319 5A

Critical Study of the APCD-MIBK Extraction System for Atomic Absorption,
W74-01329 5A

Investigation of Spectral Overlap of the Neon 359.352-nm and Chromium 359.349-nm Spectral Lines in Atomic Absorption and Atomic Fluorescence Spectrometry of Chromium,
W74-01337 2K

Determination of Low Concentrations of Cobalt in Plant Material by Atomic Absorption Spectrophotometry,
W74-01356 2K

The Determination of Lead and Nickel by Atomic-Absorption Spectrometry with a Flameless Wire Loop Atomizer,
W74-01363 5A

Modified Delves Cup Atomic Absorption Determination of Lead in Blood,
W74-01415 5A

The Determination of Cadmium by Atomic Absorption in Air, Water, Sea Water and Urine with a R.F. Carbon Bed Atomizer,
W74-01441 5A

Atomic Absorption Method for Determining Micromolar Quantities of Aliphatic Secondary Amines,
W74-01492 5A

ATOMIC EMISSION SPECTROPHOTOMETRY
Critical Study of the APCD-MIBK Extraction System for Atomic Absorption,
W74-01329 5A

ATOMIC FLUORESCENCE SPECTROSCOPY
Investigation of Spectral Overlap of the Neon 359.352-nm and Chromium 359.349-nm Spectral Lines in Atomic Absorption and Atomic Fluorescence Spectrometry of Chromium,
W74-01337 2K

ATRIPLEX-POLYCARPA
Autecology of Atriplex polycarpa from California,
W74-01259 2I

ATTITUDES
Report of Attitudes and Opinions of Recreationists Towards Wild and Scenic Rivers: A Case Study of the St. Joe River,
W74-01102 6B

Concept-Scale Interaction with the Semantic Differential Technique,
W74-01644 6B

AUSTRALIA
Water Use by Perennial Evergreen Plant Communities in Australia and Papua New Guinea,
W74-01634 2D

AUSTRALIA (VICTORIA)
Die-Back in the Mixed Hardwood Forests of Eastern Victoria: A Preliminary Report,
W74-01251 4A

AUTOECOLOGY
Autecology of Atriplex polycarpa from California,
W74-01259 2I

AUTOMATIC CONTROL
Automated Rapid Scan Instrument for Spectroelectrochemistry in the Visible Region,
W74-01331 2K

Ion-Electrode Based Automatic Glucose Analysis System,
W74-01513 5A

AUTOMATIC SAMPLERS
Automatic Samplers for Sewage and Effluents,
W74-01306 5A

AUTOMATIC SEPARATION
An Automatic Separator for the Removal of Aquatic Insects from Detritus,
W74-01624 7B

AVALANCHES
Comparison of the Snow Resistograph with the Ram Penetrometer,
W74-01381 2C

BACKWATER
Stability and Reach Length in Water Surface Profile Determination,
W74-01152 2E

BACTERIA
Investigations on the Influence of Tides on Salinity, Content of Suspended Matter, Sedimentation and Bacteria Counts in the Elbe Estuary, (Untersuchungen Uber Die Einwirkung Der Tide Auf Salzgehalt, Schwebstoffgehalt, Sedimentation Und Bakteriengehalt in Der unterelbe),
W74-01175 2L

Survival of Coliform Bacteria in Natural Waters: Field and Laboratory Studies with Membrane-Filter Chambers,
W74-01250 5B

Adsorption of Colloidal Iron by Bacteria,
W74-01253 5B

A Diseased Trout: Microbiological Study of Its Principal Organs and Its Environment,
W74-01267 5C

Microbial Culture Media Preparation,
W74-01505 5A

Algal Excretion of C-14-Labeled Compounds and Microbial Interactions in Cyanidium caldarium Mats,
W74-01510 5C

Viability of Lyophilized Microorganisms after Storage,
W74-01538 5C

Sensitivity of Three Selected Bacterial Species to Ozone,
W74-01553 5F

Biodegradation of Phenylmercuric Acetate by Mercury-Resistant Bacteria,
W74-01555 5B

BACTERIA COUNTING
Acridine Orange-Epifluorescence Technique for Counting Bacteria in Natural Waters,
W74-01534 5A

BACTERIAL PHYSIOLOGY
Studies on Methanol-Oxidizing Bacteria. I. Isolation and Growth Studies,
W74-01535 5C

Degradative Versatility of Corynebacterium pseudodiphtheriticum NCIB 10803 which uses Amides as Carbon Source,
W74-01536 5B

Bacteriology of Activated Sludge, in Particular the Filamentous Bacteria,
W74-01540 5B

BACTERIAL POPULATIONS
Some Observations on Bacterial Populations in Wilgreen Lake, Madison, KY.,
W74-01242 5B

BACTERICIDES
Biodegradation of O-Benzyl-P-Chlorophenol,
W74-01552 5B

BACTERIOLOGY
Water. Examination. Assessment. Conditioning. Chemistry. Bacteriology. Biology,
W74-01236 5F

BALTIMORE HARBOR (MD)
Estuarine Circulation Induced by Diffusion,
W74-01222 2L

BANGLADESH
A Hybrid Model for Irrigation Planning Using Chance Constrained Programming and Hydrologic Simulation,
W74-01488 4B

BARRIER ISLANDS
Observations of Net Shoreline Positions and Approximations of Barrier Island Sediment Budgets,
W74-01372 2L

BASIC DATA COLLECTIONS
Hydrological Information for the Planning of Water Resources in Developing Countries (L-'Information Hydrologique Pour La Planification des Resources Hydrauliques Dans Les Pays en Voie de Developpement),
W74-01623 7C

BATRACHOSPERMUM-VAGUM
Batrachospermum Vagum Ag. in the Szczecin Pomerania, A Locality New to Poland, (In Polish),

Sand Movement Along Equilibrium Beaches North of San Francisco,
W74-01213 2J

Observations and Experiments on Solitary Wave Deformation,
W74-01215 8B

Edge Waves Over a Sloping Beach in a Rotating Two-Layered System,
W74-01218 2E

Experimental Study of Wave Reflection by a Sloping Beach,
W74-01223 2E

Longshore Current Generation by Obliquely Incident Internal Waves,
W74-01650 2E

BEANS
The Carbohydrate and Water Balance of Beans (Vicia faba) Attacked by Broomrape (Orobanche crenata),
W74-01575 3F

BED LOAD
A Role of Sediment Transport in Alluvial Channels,
W74-01272 2J

Sediment Transport: New Approach and Analysis,
W74-01279 2J

BEDROCK
Overburden Related to Type of Bedrock and Engineering Characteristics of the Bedrock, Knox County, Tennessee,
W74-01144 7C

BELGIUM (OSTENDE HARBOR)
Contribution to Biological and Chemical Study of the Port of Ostende, (In French),
W74-01384 5B

BENOMYL
Thermal and Base-Catalyzed Hydrolysis Products of the Systemic Fungicide, Benomyl,
W74-01504 5B

BENTHIC FAUNA
Effect of Spoil Disposal on Benthic Invertebrates,
W74-01420 5C

Benthic Macroinvertebrates as Indexes of Water Quality in Whetstone Creek, Morrow County, Ohio (Scioto River Basin),
W74-01517 5B

Bottom Fauna as an Indicator of Water Quality in Sweden's Large Lakes (Lakes Malaren, Vattern and Vanern),
W74-01531 5B

BENTHIC FLORA
Sublittoral Benthic Marine Algae of Southern Cape Cod and Adjacent Islands: Pseudolithoderma Paradoxum Sp. Nov. (Ralfsiaceae, Ectocarpales),
W74-01350 5A

BENTHOS BIOMASS
Zoobenthos of the Azov Sea After the Control of THE Don River, (In Russian),
W74-01257 2L

BERNALILLO COUNTY (N MEX)
Engineer's Report for South Valley Water System.
W74-01382 6B

BIBLIOGRAPHIES
Literature on Mercury: Availability of English Translations,
W74-01323 5A

BICARBONATES
Algal Excretion of C-14-Labeled Compounds and Microbial Interactions in Cyanidium caldarium Mats,
W74-01510 5C

BIG SIOUX RIVER (SDAK)
Nutrient Sources and Transport in the Upper and Central Regions of the Big Sioux River,
W74-01115 5B

BILE
Metabolism and Biliary Excretion of Sulfobromophthalein by Rainbow Trout (Salmo Gairdneri),
W74-01411 5C

BIO-DISC TREATMENT
Evaluation of the Bio-Disc Treatment Process for Summer Camp Application,
W74-01118 5D

BIOACCUMULATION
Uptake of Methyl Mercuric Chloride and Mercuric Chloride by Trout: A Study of Uptake Pathways into the Whole Animal and Uptake by Erythrocytes in Vitro,
W74-01412 5C

Mechanism of NTA Degradation By a Bacterial Mutant,
W74-01515 5B

BIOASSAY
Nutrient Removal Using Lemna Minor,
W74-01321 5C

Thermophilic Ostracod: Aquatic Metazoan with the Highest Known Temperature Tolerance,
W74-01327 5C

Temperature Selection by Juvenile and Adult Yellow Perch (Perca Flavescens) Acclimated to 24 C,
W74-01353 5A

BIOASSAY

Copper Micronutrient Requirement for Algae,
W74-01398 5C

Evaluation of the Response of Dugesia Tigrina to Aflatoxin B1,
W74-01404 5C

Dieldrin. Effects of Chronic Sublethal Exposure on Adaptation to Thermal Stress in Freshwater Fish,
W74-01408 5C

Distribution of Alkyl Arsenicals in Model Ecosystem,
W74-01409 5C

Metabolism and Biliary Excretion of Sulfobromophthalein by Rainbow Trout (Salmo Gairdneri),
W74-01411 5C

Uptake of Methyl Mercuric Chloride and Mercuric Chloride by Trout: A Study of Uptake Pathways into the Whole Animal and Uptake by Erythrocytes in Vitro,
W74-01412 5C

Salinity Adaptation by Dunaliella Tertiolecta. I. Increases in Carbonic Anhydrase Activity and Evidence for a Light-Dependent Na (Plus)/H (Plus) Exchange,
W74-01427 5C

Kinetics of Silicon-Limited Growth in the Marine Diatom Thalassiosira pseudonana Hasle and Heimdal (Equals Cyclotella Nana Hustedt),
W74-01431 5C

Behavioral Responses to Changes in Hydrostatic Pressure and Light During Larval Development of the Lobster Homarus Gammarus,
W74-01436 5C

Algal Excretion of C-14-Labeled Compounds and Microbial Interactions in Cyanidium caldarium Mats,
W74-01510 5C

The Effect of Aldrin on Water Balance in the Freshwater Pulmonate Gastropod (Biomphalaria glabrata),
W74-01525 5C

Growth Rates of Sediment-Living Marine Protozoan as a Toxicity Indicator for Heavy Metals,
W74-01529 5A

Distribution of (C-14) PCBs in Carp,
W74-01530 5C

BIOCHEMICAL CHARACTERISTICS

Electrophoretic and Immunological Analyses of Seven Chlorosarcinacean Algae,
W74-01426 5A

BIOCHEMICAL OXYGEN DEMAND

Removal of Phosphate and Secondary B.O.D. from Tertiary treated Wastewater by Aquatic Animals,
W74-01124 5D

BIOCONTROL

Effect of Flooding on the Twospotted Spider Mite and its predators on Strawberry in Southern California,
W74-01243 3F

BIODEGRADATION

Biodegradation of O-Benzyl-P-Chlorophenol,
W74-01552 5B

Biodegradation of Phenylmercuric Acetate by Mercury-Resistant Bacteria,
W74-01555 5B

BIOINDICATORS

Evaluation of the Response of Dugesia Tigrina to Aflatoxin B1,
W74-01404 5C

Diatom Associations in Yaquina Estuary, Oregon : A Multivariate Analysis,
W74-01430 5B

Benthic Macroinvertebrates as Indexes of Water Quality in Whetstone Creek, Morrow County, Ohio (Scioto River Basin),
W74-01517 5B

Element Constitution of Selected Aquatic Vascular Plants from Pennsylvania: Submersed and Floating Leaved Species and Rooted Emergent Species,
W74-01526 5A

Growth Rates of Sediment-Living Marine Protozoan as a Toxicity Indicator for Heavy Metals,
W74-01529 5A

Bottom Fauna as an Indicator of Water Quality in Sweden's Large Lakes (Lakes Malaren, Vattern and Vanern),
W74-01531 5B

Relationships of Indicator and Pathogenic Bacteria in Stream Waters,
W74-01645 5B

BIOLOGICAL COMMUNITIES

The Ecology of the Diatoms of the Klip River, Southern Transvaal,
W74-01313 5C

Observations on the Ecology of Laminaria Sinclairii on Three Northern Oregon Beaches,
W74-01423 5C

Stream Community Response to Nutrient Enrichment,
W74-01499 5C

The Structure of an Acid Moorland Pond Community,
W74-01508 5C

BIOLOGICAL PROPERTIES

Electrophoretic and Immunological Analyses of Seven Chlorosarcinacean Algae,
W74-01426 5A

BIOLOGICAL SAMPLES

Fluorometric Quantitation of Gallium in Biological Materials at Nanogram Levels,
W74-01344 2K

Simplified Spectrophotometric Analysis of Plants for Selenium,
W74-01406 2K

BIOLOGICAL STUDIES

Contribution to Biological and Chemical Study of the Port of Ostende, (In French),
W74-01384 5B

BIOLOGICAL TREATMENT

Evaluation of the Bio-Disc Treatment Process for Summer Camp Application,
W74-01118 5D

BIOMASS

The Distribution, Composition and Biomass of the Crustacean Zooplankton Population in Western Lake Superior,
W74-01109 5C

Population Biomass, Number of Individuals, Average Individual Weight, and the Linear Surplus Production Model,
W74-01593 2I

BIOMPHALARIA GLABRATA

The Effect of Aldrin on Water Balance in the Freshwater Pulmonate Gastropod (Biomphalaria glabrata),
W74-01525 5C

BIONDICATORS

Growth Rates of Intertidal Molluscs as Indicators of Effects of Unexpected Incidents of Pollution,
W74-01434 5C

BIOTRANSFORMATION

Isotope Fractionation of N-15 and N-14 in Microbiological Nitrogen Transformations: A Theoretical Model,
W74-01541 5B

BLOOD

Modified Delves Cup Atomic Absorption Determination of Lead in Blood,
W74-01415 5A

Determination of Chlorinated Pesticides in Whole Blood,
W74-01417 5A

BLOWOUTS

On the Formation of Small Marginal Lakes on the Juneau Icefield, South-Eastern Alaska, U.S.A.,
W74-01379 2C

BLUEFISH

Relation Between Total Body Weight and Concentrations of Manganese, Iron, Copper, Zinc, and Mercury in White Muscle of Bluefish (Pomatomus saltatrix) and A Bathyl-Dimersal Fish Antimora Rostrata,
W74-01413 5B

BLUEGILL

Population Biomass, Number of Individuals, Average Individual Weight, and the Linear Surplus Production Model,
W74-01593 2I

BLUEGILLS

Swimming Endurance and Resistance to Copper and Malathion of Bluegills Treated by Long-Term Exposure to Sublethal Levels of Hydrogen Sulfide,
W74-01579 5C

BOATING REGULATIONS

Operation of Watercraft.
W74-01455 6E

BODIE ISLAND (NC)

Beach Changes on the Outer Banks of North Carolina,
W74-01179 2E

BODIES OF WATER

A Study of the Exchange of Dissolved Solids Between Bottom Sediments and Water of Different Water Bodies (Izucheniye obmena rastvorennymi veshchestvami mezhdu donnymi otlozheniyami i vodoy razlichnykh vodoyemov),
W74-01389 2J

BOECKELLA TANEA
A New Species of Boeckella (Copepoda: Calanoida) from Northland, New Zealand,
W74-01309 5A

BONDING
Thermodynamics of Acid-Base Equilibria. II. Ionization of m- and p-Hydroxybenzotrifluoride and the Concept of Fluorine Double Bond-No Bond Resonance,
W74-01226 2K

BOREHOLE GEOPHYSICS
Prediction of Well Development Possibilities in Delaware by means of Calibrated Gamma-Ray Logs,
W74-01106 4B

BOTTOM FAUNA
The Bottom Macrofauna of the Oligotrophic Lake Konnevesi, Finland,
W74-01287 5C

BOTTOM SEDIMENTS
Mathematical Modeling of Nutrient - Transport,
W74-01121 5B

C 18-Isoprenoid Ketone in Recent Marine Sediment,
W74-01301 5A

A Study of the Exchange of Dissolved Solids Between Bottom Sediments and Water of Different Water Bodies (Izucheniye obmena rastvorennymi veshchestvami mezhdu donnymi otlozheniyami i vodoy razlichnykh vodoyemov),
W74-01389 2J

Microbial Flora and Level of Vibrio Parahaemolyticus of Oysters (Crassostrea Virginica), Water and Sediment from Galveston Bay,
W74-01548 5C

Occurrence and Cumulation of Microcomponents in Bottom Sediments of Dam Reservoirs of Southern Poland,
W74-01565 5B

BOUNDARY PROCESSES
Effects of Friction and Surface Tide Angle of Incidence on the Coastal Generation of Internal Tides,
W74-01190 2E

The Transverse Circulation Near a Coast,
W74-01206 2E

BRACKISH WATER
Regional Estimate of Brackish- and Saline-Groundwater Yield (Regional'naya otsenka ekspluatatsionnykh resursov solonovatykh i solenykh podzemnykh vod),
W74-01137 4B

Relationships Between Turbidity and Hydrographical Factors in Fresh and Brackish Water Region of the Elbe Estuary, (In German),
W74-01260 5B

Metabolic Effects of Drinking Brackish Water,
W74-01632 5C

BREAKER ZONE
Longshore Current Generation by Obliquely Incident Internal Waves,
W74-01650 2E

BREVIBACTERIUM
Inhibition by Fatty Acids of the Biodegradation of Petroleum,
W74-01537 5B

BRINES
Murfee v. Phillips Petroleum Company (Action by Property Owners Against Oil and Gas Lessees for Diminution of Market Value of Land Due to Pollution of Underground Fresh Water Supply).
W74-01459 6E

BRITISH GUIANA (GEORGETOWN)
Erosion of Tidal Flats Near Georgetown, British Guiana,
W74-01216 2J

BROOK STICKLEBACK
Unusual Occurrence of the Brook Stickleback (Culaea inconstans) in the Mackenzie River, Northwest Territories,
W74-01589 2I

BROOK TROUT
Persistence of Headwater Check Dams in a Trout Stream,
W74-01566 2I

BROOMRAPE
The Carbohydrate and Water Balance of Beans (Vicia faba) Attacked by Broomrape (Orobanche crenata),
W74-01575 3F

BRYOCENOLOGICAL STUDIES
Bryocenological Research in Some Areas of the Iron Gate of the Danube, (In Rumanian),
W74-01453 2I

BUOYANCY
Growth and Buoyancy of Microcystis aeruginosa Kutz. Emend. Elenkin in a Shallow Eutrophic Lake,
W74-01518 5C

BUOYS
Arctic Data Buoys and Aidjex,
W74-01156 7B

The Soviet Darms Program--Twenty Years of Development, Deployment, and Data,
W74-01157 7C

The Arctic Data Buoy, A System for Environmental Monitoring in the Arctic,
W74-01158 7B

Barometric Pressure Measurements from Buoys During AIDJEX 1972,
W74-01159 7B

A Resonant Capsule Pressure Transducer For Data Buoys,
W74-01160 7B

CACODYLIC ACID
Distribution of Alkyl Arsenicals in Model Ecosystem,
W74-01409 5C

CADMIUM
Ion Selective Sensors,
W74-01506 5A

Analytical Applications of Pulsed Voltammetric Stripping at Thin Film Mercury Electrodes,
W74-01514 5A

Concentrations of Some Trace Metals in Pelagic Organisms and of Mercury in Northeast Atlantic Ocean Water,
W74-01523 5C

CADMIUM. AIR
The Determination of Cadmium by Atomic Absorption in Air, Water, Sea Water and Urine with a R.F. Carbon Bed Atomizer,
W74-01441 5A

CALCULUS OF VARIATIONS
On the Optimal Operation of Groundwater Basins: A Calculus of Variations Approach,
W74-01489 4B

CALIBRATIONS
Reliability of an Ammonia Probe for Electrometric Determination of Total Ammonia Nitrogen in Fish Tanks,
W74-01433 5A

CALIFORNIA
Computer Simulation of Estuarial Networks,
W74-01197 2L

Littoral Processes and the Development of Shorelines,
W74-01212 2J

Sand Movement Along Equilibrium Beaches North of San Francisco,
W74-01213 2J

Effect of Flooding on the Twospotted Spider Mite and its predators on Strawberry in Southern California,
W74-01243 3F

Geothermal Resource Investigations,
W74-01273 4B

Oxnard Basin Experimental Extraction-Type Barrier,
W74-01289 8B

C 18-Isoprenoid Ketone in Recent Marine Sediment,
W74-01301 5A

Characterization and Treatability of Pomace Stillage,
W74-01325 5A

Climatological Stations in California, 1971,
W74-01383 7C

The Porter-Cologne Water Quality Control Act, and Related Water Code Sections (Containing the 1971 Amendments).
W74-01461 5G

Tri-Agencies Pipeline: Engineering Report.
W74-01477 8A

Distribution Patterns and Population Dyanmics of the Micro-Arthropods of a Desert Soil in Southern California,
W74-01635 2I

CALIFORNIA (SAGEHEN CREEK)
Persistence of Headwater Check Dams in a Trout Stream,
W74-01566 2I

CALVING (ICEBERGS)
Ice Calving into the Proglacial Generator Lake, Baffin Island, N.W.T., Canada,
W74-01376 2C

CANADA
Single-Velocity Method in Measuring Discharge,
W74-01161 2C

International Field Year for the Great Lakes.
W74-01162 2H

CANADA

On Structure, Entrainment, and Transport in Estuarine Embayments,
W74-01178 2L

Processing and Storage of Hydrometeorological Data in the Atmospheric Environment Service,
W74-01290 7C

Storage and Retrieval of Groundwater Data,
W74-01291 7C

Acquisition, Storage and Processing of Glacier Inventory Data,
W74-01292 7C

Storage and Processing of Water Quality Data,
W74-01293 7C

Computer Utilization of Hydrological Data for North Nashwaaksis Representative Basin,
W74-01294 7C

Diatom Flora of the Grand River, Ontario, Canada,
W74-01311 5A

Emergence, Reproduction, and Growth of Setipalpian Plecoptera in Southern Ontario,
W74-01359 5A

Ice Calving into the Proglacial Generator Lake, Baffin Island, N.W.T., Canada,
W74-01376 2C

Supersaturation of Nitrogen in Water During Passage Through Hydroelectric Turbines at Mactaquac Dam,
W74-01432 5C

Growth Rates of Intertidal Molluscs as Indicators of Effects of Unexpected Incidents of Pollution,
W74-01434 5C

The Shipowner and Oil Pollution Liability,
W74-01447 5G

Review of Planning for the Grand River Watershed.
W74-01478 5D

Report on Laurel Creek Channel Improvements, Waterloo and Bridgeport, Ontario.
W74-01482 4A

Distribution and Morphological Variation of Lampsilis radiata (Pelecypoda, Unionidae) in Some Central Canadian Lakes: A Multivariate Statistical Approach,
W74-01608 2H

CANADA (BLACK LAKE-SASK.)
Limnology and Fishery Biology of Black Lake, Northern Saskatchewan,
W74-01234 2H

CANADA (GRAND RIVER WATERSHED)
Physical System Modelling as a Tool in Water Resource Planning,
W74-01487 2A

CANADA (LAKE BEDARD)
The Planktonic Association (Cladocera and Copepoda) of a Dimictic Lake of the Laurentides Park, Quebec, (In French),
W74-01558 2H

CANADA (MACKENZIE RIVER-N.W.T.)
Unusual Occurrence of the Brook Stickleback (Culaea inconstans) in the Mackenzie River, Northwest Territories,
W74-01589 2I

CANADA MOHAWK LAKE (ONT)
Mohawk Lake Study, Brantford, Ontario.
W74-01476 2J

CANADA (NOVA SCOTIA COAST)
Phytoplankton Nutrients and Flushing of Inlets on the Coast of Nova Scotia,
W74-01471 5B

CANALS
Thermal Stratification in Industrial Canals,
W74-01594 2E

CANNERY WASTES
Wastewater Characterization of Sweet Potato Processing,
W74-01324 5A

CAPE KENNEDY (FLA)
Availability of Fresh Water in the East Central Florida Planning Region.
W74-01481 6D

CARBARYL
The Effect of Aldrin on Water Balance in the Freshwater Pulmonate Gastropod (Biomphalaria glabrata),
W74-01525 5C

CARBODITHIOATES
Critical Study of the APCD-MIBK Extraction System for Atomic Absorption,
W74-01329 5A

CARBOFURAN
Separation and Identification of Carbofuran, Its Metabolites, and Conjugates Found in Fish Exposed to Ring C-14-Labeled Carbofuran Using ITLC Silica Gel Strips,
W74-01577 5A

CARBOHYDRATES
The Carbohydrate and Water Balance of Beans (Vicia faba) Attacked by Broomrape (Orobanche crenata),
W74-01575 3F

CARBON
Modifications in Filtration Methods for the Measurement of Inorganic C-14 Uptake by Photosynthesizing Algae,
W74-01425 5A

Coupling Carbon Flow Through Some Pelagic and Benthic Communities,
W74-01437 5B

CARBON-14 METHOD
Some Sources of Error in the 14C Method for Estimating Primary Productivity and Their Relationship to Light Intensity During Incubation,
W74-01217 2H

CARBON CYCLE
Effects of Protozoa on the Fate of Particulate Carbon,
W74-01117 5C

CARBON DIOXIDE
A New Type of Climatized Gas Exchange Chamber for Net Photosynthesis and Transpiration Measurements in the Field,
W74-01568 2I

Carbon Dioxide Exchange by Several Stream-Side and Scrub Oak Community Species of Red Butte Canyon, Utah,
W74-01590 2I

CARBON SOURCES
Degradative Versatility of Corynebacterium pseudodiphtheriticum NCIB 10803 which uses Amides as Carbon Source,
W74-01536 5B

CARBON TRANSFORMATION
Effects of Protozoa on the Fate of Particulate Carbon,
W74-01117 5C

CARCINOGENS
N-Nitrosation by Nitrite Ion in Neutral and Basic Medium,
W74-01328 5B

CARP
Distribution of (C-14) PCBs in Carp,
W74-01530 5C

Increase of Resistance of Carp to Dropsy by Means of Breeding. II. Course of Selection and Evaluation of the Breed Groups, (In Russian),
W74-01560 5C

CARP PONDS
Selected Species of Algae Found in Carp Ponds of the Laskowa Complex Near Zator,
W74-01607 2I

CASCADES
Report on Laurel Creek Channel Improvements, Waterloo and Bridgeport, Ontario.
W74-01482 4A

CATION CONCENTRATION (SOIL)
Desorption and Dissolution of Salts from Soils as a Function of Soil Water Ratio,
W74-01604 2G

CATION EXCHANGE
Gas-Solid Chromatography on Macroreticular Cation Exchange Resins,
W74-01495 5A

CATIONS
New Detector for Ion-Exchange Chromatography,
W74-01343 5A

CATTLE FEED
Nutrient Removal Using Lemna Minor,
W74-01321 5C

CAUSATIVE FACTORS
Probable Causes for the 1972 Red Tide in the Cape Ann Region of the Gulf of Maine,
W74-01435 5C

CELL COUNTS
An Improved Method of Cell Enumeration for Filamentous Algae and Bacteria,
W74-01421 5A

CELL DIVISION
Sensitivity of Cell Division and Cell Elongation to Low Water Potentials in Soybean Hypocotyls,
W74-01249 3F

CELL ELONGATION
Sensitivity of Cell Division and Cell Elongation to Low Water Potentials in Soybean Hypocotyls,
W74-01249 3F

CELL MORPHOLOGY
Bacteriology of Activated Sludge, in Particular the Filamentous Bacteria,
W74-01540 5B

CEMENT (PORTLAND)
Effect of Portland Cement on Soil Aggregation and Hydraulic Properties,
W74-01576 2G

CEREAL CROPS
Two Harvest of Cereal Crops per Year with Irrigation, (In Russian),
W74-01202 3F

Productivity of Cereal Crops on Eroded Chernozems Against Both Non-Fertilized and Fertilized Backgrounds, (In Russian),
W74-01557 3F

CERIUM
State of Rare Earth Elements in Surface Waters (O sostoyanii redkozemel'nykh elementov v poverkhnostnykh vodakh),
W74-01395 2K

CHANNEL CATFISH
Monitoring Channel Catfish Use of a Demand Feeder,
W74-01237 8I

CHANNEL IMPROVEMENT
Report on Laurel Creek Channel Improvements, Waterloo and Bridgeport, Ontario.
W74-01482 4A

CHATTAHOOCHEE RIVER (ALA)
Sketch Development Plan, Chambers County, Alabama.
W74-01485 5D

CHELATING AGENTS
The Importance of Chelating Agents in Natural Waters and Wastewaters,
W74-01326 5B

CHELATION
The Importance of Chelating Agents in Natural Waters and Wastewaters,
W74-01326 5B

Copper Micronutrient Requirement for Algae,
W74-01398 5C

CHEMICAL ANALYSIS
Quality of Surface Waters of the United States, 1968: Parts 4 and 5. St Lawrence River Basin and Hudson Bay and Upper Mississippi River Basins.
W74-01268 2K

Application of Infrared Fourier Transform Spectroscopy to Analysis of Micro Samples,
W74-01303 2K

Determination of Mercury After Room Temperature Digestion by Flameless Atomic Absorption,
W74-01315 5A

A Modified Filtration Method for the Analysis of Wastewater Suspended Solids,
W74-01318 5A

Heavy Metals in Wastewater and Treatment Plant Effluents,
W74-01319 5A

Improved Distillation Method for Volatile Acids Analysis,
W74-01322 5A

Literature on Mercury: Availability of English Translations,
W74-01323 5A

Wastewater Characterization of Sweet Potato Processing,
W74-01324 5A

Chemical Constants of Metal Complexes from a Complexometric Titration Followed with Anodic Stripping Voltammetry,
W74-01332 5A

Versatile Computer Generated Variable Accelerating Voltage Circuit for Magnetically Scanned Mass Spectrometers. Use for Assays in the Picogram Range and for Assays of Stable Isotope Tracers,
W74-01335 2K

Lateral Diffusion Interferences in Flame Atomic Absorption and Emission Spectrometry,
W74-01342 2K

Determination of Low Concentrations of Cobalt in Plant Material by Atomic Absorption Spectrophotometry,
W74-01356 2K

Precolumn Inlet System for the Gas Chromatographic Analysis of Trace Quantities of Short-Chain Aliphatic Amines,
W74-01357 5A

Simultaneous Determination of Manganese, Copper, Arsenic, Cadmium, Antimony and Mercury in Glacial Ice by Radioactivation,
W74-01361 5A

Collaborative Study of a Colorimetric Method for Determining Arsenic Residues in Red Meat and Poultry,
W74-01403 5A

Rapid Gas Chromatographic Method for Determination of Residual Methanol in Sewage,
W74-01410 5A

Modified Delves Cup Atomic Absorption Determination of Lead in Blood,
W74-01415 5A

Determination of Meleic Hydrazide Residues in Tobacco and Vegetables,
W74-01418 5A

Electrophoretic and Immunological Analyses of Seven Chlorosarcinacean Algae,
W74-01426 5A

The Determination of Organo-Sulfur Compounds by Thin-Layer Chromatography Via a Ligand-Exchange Precess,
W74-01439 5A

The Determination of Cadmium by Atomic Absorption in Air, Water, Sea Water and Urine with a R.F. Carbon Bed Atomizer,
W74-01441 5A

Ion-Electrode Based Automatic Glucose Analysis System,
W74-01513 5A

Emission Spectrometric Determination of Trace Metals in Biological Tissues,
W74-01546 5A

CHEMICAL CONTAMINATION
Barrier Role of Water Works Installations in Respect to Chemical Contaminations Classified According to Organoleptic Properties of Hazards, (In Russian),
W74-01584 5D

CHEMICAL DEGRADATION
Determination of Mercury After Room Temperature Digestion by Flameless Atomic Absorption,
W74-01315 5A

A Comparison of Fast Destruction Methods for the Determination of Trace Metals in Biological Materials,
W74-01317 5A

Thermal and Base-Catalyzed Hydrolysis Products of the Systemic Fungicide, Benomyl,
W74-01504 5B

CHEMICAL INTERFERENCE
Prevention of Selenium Interference with Measurement of Phosphate as its Molybdenum (V-VI) Complex,
W74-01345 5A

CHEMICAL OXYGEN DEMAND
The Chemical Oxygen Demand of Waters and Biological Materials from Ponds,
W74-01543 5C

CHEMICAL REACTIONS
N-Nitrosation by Nitrite Ion in Neutral and Basic Medium,
W74-01328 5B

Automated Rapid Scan Instrument for Spectroelectrochemistry in the Visible Region,
W74-01331 2K

Double Pulse Coulostatics,
W74-01511 2K

CHEMICAL STUDIES
Contribution to Biological and Chemical Study of the Port of Ostende, (In French),
W74-01384 5B

CHEMOTAXONOMY
Electrophoretic and Immunological Analyses of Seven Chlorosarcinacean Algae,
W74-01426 5A

CHERNOZEMS
Productivity of Cereal Crops on Eroded Chernozems Against Both Non-Fertilized and Fertilized Backgrounds, (In Russian),
W74-01557 3F

CHESAPEAKE BAY
Biochemistry of Estuarine Ecosystem with Emphasis on Heavy Metals and Shellfish,
W74-01108 5C

Estuarine Circulation Induced by Diffusion,
W74-01222 2L

CHINA CLAY WASTES
The Effect of China-Clay Wastes on Stream Invertebrates,
W74-01527 5C

CHIRONOMIDAE
Number and Size of Drifting Nymphs of Ephemeroptera, Chironomidae, and Simulidae by Day and Night in the River Stranda, Western Norway,
W74-01230 2I

CHIRONOMIDS
The Bottom Macrofauna of the Oligotrophic Lake Konnevesi, Finland,
W74-01287 5C

CHLORELLA VULGARIS
Copper Micronutrient Requirement for Algae,
W74-01398 5C

CHLORINATED HYDROCARBON PESTICIDES
Variation of Organochlorine Residue Levels with Age in Gulf of St. Lawrence Harp Seals (Pagophilus Groenlandicus),
W74-01300 5A

Microdetermination of Chloro-S-Triazines in Soil by Gas-Liquid Chromatography with Nickel Electron Capture or Electrolytic Conductivity Detection,
W74-01304 5A

Herbicide Analysis: Relationship Between Molecular Structure and Retention Index,
W74-01416 5A

Determination of Chlorinated Pesticides in Whole Blood,
W74-01417 5A

Analytical Methodology for Bioactive Compounds. Photochemically Assisted Analysis of Chlorinated Hydrocarbon Pesticides in the Presence of Polychlorinated Biphenyls,
W74-01493 5A

CHLORINATED HYDROCARBONS
Infrared Studies of Chlorinated Dibenzo-p-Dioxins and Structurally Related Compounds,
W74-01509 5A

CHLOROBUTENOLIDES
2,4-dichlorophenoxyacetate metabolism by Arthrobacter sp.: Accumulation of a Chlorobutenolide,
W74-01550 5B

CHLORODIBENZO-P-DIOXINS
Infrared Studies of Chlorinated Dibenzo-p-Dioxins and Structurally Related Compounds,
W74-01509 5A

CHLOROPHOSPHANZO-III
Extraction-Photometric Determination of Uranium (IV) with Chlorophosphonazo-III,
W74-01364 5A

CHLOROPHYTA
Distribution of Alkyl Arsenicals in Model Ecosystem,
W74-01409 5C

Electrophoretic and Immunological Analyses of Seven Chlorosarcinacean Algae,
W74-01426 5A

Algal Succession on Artificial Reefs in a Marine Lagoon Environment in Guam,
W74-01429 5C

CHLORPYRIPHOS
Gas-Liquid Chromatographic Determination of Chlorpyriphos in Dursban Insecticide Formulations,
W74-01405 5A

CHROMIUM
Investigation of Spectral Overlap of the Neon 359.352-nm and Chromium 359.349-nm Spectral Lines in Atomic Absorption and Atomic Fluorescence Spectrometry of Chromium,
W74-01337 2K

CHYTRIDIUM OTTARIENSIS
Two New Chytrids from the Appalachian Highlands,
W74-01305 5A

CIRCULATION
Littoral Processes and the Development of Shorelines,
W74-01212 2J

Study of the Speed of Water Circulation in a Water-Bearing Limestone Deposit by Tracing Tests (La Serriere River Basin/NE),
W74-01563 2F

CLADOCERA
The Planktonic Association (Cladocera and Copepoda) of a Dimictic Lake of the Laurentides Park, Quebec, (In French),
W74-01558 2H

CLADOCERAN
Oxbow Cut-Off Bog Lake Zooplankton of the Kolyma Basin (In Russian),
W74-01265 2H

CLEARWATER RIVER (IDAHO)
Simulating the Behavior of a Multi-Unit, Multi-Purpose Water-Resource System,
W74-01468 6A

CLIMATIC CONDITIONS
The Influence of Some Climatic Factors on the Productivity of Red Clover Seed, (In Serbo-Croatian),
W74-01556 3F

CLIMATIC DATA
Climatological Stations in California, 1971,
W74-01383 7C

CLIMATOLOGY
Soil and Water Conservation on Arable Lands,
W74-01633 3F

CLOSTRIDIUM
Practical Methods for Derivatizing and Analyzing Bacterial Metabolites with a Modified Automatic Injector and Gas Chromatograph,
W74-01336 5A

CLOVER SEED (RED)
The Influence of Some Climatic Factors on the Productivity of Red Clover Seed, (In Serbo-Croatian),
W74-01556 3F

CLUSTER ANALYSIS
Diatom Associations in Yaquina Estuary, Oregon : A Multivariate Analysis,
W74-01430 5B

COASTAL AREAS
The Management of Bay and Estuarine Systems in the Texas Coastal Zone, Phase II.
W74-01620 5G

COASTAL ENGINEERING
South American Marine Energy,
W74-01181 8A

COASTAL PLAINS
Stratigraphy and Economic Geology of the Coastal Plain of the Central Savannah River Area, Georgia,
W74-01122 2J

COASTAL ZONE MANAGEMENT
The Management of Bay and Estuarine Systems in the Texas Coastal Zone, Phase II.
W74-01620 5G

COASTS
The Breaking of Waves on a Sloping Beach,
W74-01176 2E

Sedimentation in a Meandering Estuary,
W74-01177 2L

On Structure, Entrainment, and Transport in Estuarine Embayments,

Beach Cusps,
W74-01180 2J

Effects of Reefs and Bottom Slopes on Wind Set-Up in Shallow Water,
W74-01182 2J

A Profile of the Four Moment Measures Perpendicular to a Shore Line, South Haven, Michigan,
W74-01184 2H

On the Small-Scale Horizontal Diffusion Near the Coast,
W74-01186 5B

Longshore Current Velocity: A Review of Theory and Data,
W74-01187 2E

Tidal Period Oscillations of an Isohaline Surface Off the Mouth of the Columbia River,
W74-01188 2L

Note on the Equations of Long Waves Over an Uneven Bottom,
W74-01189 2E

Shifting Offshore Bars and Harbor Shoaling,
W74-01191 2J

Littoral Zone Tidal-Cycle Sedimentation,
W74-01192 2J

Shoreline Processes Near Barrow, Alaska: A Comparison of the Normal and the Catastrophic,
W74-01193 2L

Tidal Cycle of Changes in an Equilibrium Beach, Sandy Hook, New Jersey,
W74-01198 2L

Experiments and Hydrographic Surveys Off Sandy Hook, New Jersey (1963),
W74-01199 2L

Beach Equilibrium and Second-Order Wave Theory,
W74-01201 2E

Long Surf,
W74-01203 2E

The Influence of Topography and Pressure Gradients on Shoaling in a Tidal Estuary,
W74-01204 2L

The Transverse Circulation Near a Coast,
W74-01206 2E

The Circulation of Surface Waters in Raleigh Bay, North Carolina,
W74-01210 2L

Sand Movement Along Equilibrium Beaches North of San Francisco,
W74-01213 2J

Observations and Experiments on Solitary Wave Deformation,
W74-01215 8B

Erosion of Tidal Flats Near Georgetown, British Guiana,
W74-01216 2J

Experimental Study of Wave Reflection by a Sloping Beach,
W74-01223 2E

Observations of Net Shoreline Positions and Approximations of Barrier Island Sediment Budgets,
W74-01372 2L

Oscillations of Tide and Surge in an Estuary of Finite Length,
W74-01649 2L

Longshore Current Generation by Obliquely Incident Internal Waves,
W74-01650 2E

COBALT
Determination of Low Concentrations of Cobalt in Plant Material by Atomic Absorption Spectrophotometry,
W74-01356 2K

COBALT RADIOISOTOPES
Concentrations of Plutonium, Cobalt, and Silver Radionuclides in Selected Pacific Seaweeds,
W74-01297

COCCOCHLORIS
Loss of Photosynthetic Activity in Two Blue-Green Algae as a Result of Osmotic Stress,
W74-01302 5B

COKE-OVEN EFFLUENTS
The Role of Micro-Organisms in Waste Tip-Lagoon Systems Purifying Coke-Oven Effluents,
W74-01647 5D

COLD REGIONS
Single-Velocity Method in Measuring Discharge,
W74-01161 2C

COLIFORM
Survival of Coliform Bacteria in Natural Waters: Field and Laboratory Studies with Membrane-Filter Chambers,
W74-01250 5B

COLLEGE FIORD (ALAS)
Seismic Evidence for Glacier Motion,
W74-01378 2C

COLOMBIA (PASTO HIGHLANDS)
Physical Properties of Some Volcanic-Ash Derived Soils of the Highlands of Pasto, Narino, Colombia, (In Spanish),
W74-01228 2G

COLORADO
Hydrogeologic Characteristics of the Valley-Fill Aquifer in the Weldona Reach of the South Platte River Valley, Colorado,
W74-01142 4B

Storm Drainage and Flood Control for Metropolitan Denver.
W74-01475 4A

COLORIMETRY
Collaborative Study of a Colorimetric Method for Determining Arsenic Residues in Red Meat and Poultry,
W74-01403 5A

An Automated Method for the Dertemination of Trace Amounts of Metal Ions by Ion-Exchange Chromatography. Determination of zinc (II) in Waters,
W74-01438 5A

COLUMBIA RIVER
The Union of the Columbia River and the Pacific Ocean -- General Features,
W74-01183 2L

Tidal Period Oscillations of an Isohaline Surface Off the Mouth of the Columbia River,
W74-01188 2L

COMMUNITY DEVELOPMENT
Arizona's Coming Dilemma: Water Supply and Population Growth,
W74-01452 4A

COMPETITIVE PRICES
The Impact of Water Pollution Abatement on Competition and Pricing in the Alabama Textile Industry,
W74-01101 5G

COMPREHENSIVE PLANNING
Comprehensive Water and Sewer Plan, Randolph County, Illinois.
W74-01474 5D

A Growing Community: 1973 Update, (Lexington, Kentucky).
W74-01484 5D

Physical System Modelling as a Tool in Water Resource Planning,
W74-01487 2A

COMPUTER MODELS
Agricultural Water Demand in North Carolina: Phases I and II,
W74-01112 6D

Sensitivity of Groundwater flow Models to Vertical Variability of Aquifer Constants,
W74-01151 4B

Review of Planning for the Grand River Watershed.
W74-01478 5D

COMPUTER PROGRAMS
Computer Identification of Bacteria on the Basis of Their Antibiotic Susceptibility Patterns,
W74-01443 5A

Using Computers to Analyze Continuous Data,
W74-01520 7C

Hydrologic Engineering Methods for Water Resources Development. Volume 2. Hydrologic Data Management,
W74-01642 2E

COMPUTERS
Evaluation of the Accuracy of Gran Plots by Means of Computer Calculations. Application to the Potentiometric Titration of the Total Alkalinity and Carbonate Content in Sea Water,
W74-01365 2K

Computer Identification of Yeasts of the Genus Saccharomyces,
W74-01646 5A

CONFERENCES
Problems in Regional Dynamics of Artesian Water (Problemy regional'noy dinamiki artezianskikh vod),
W74-01141 2F

CONFINED WATER
Balance Estimate of Groundwater Resources on the Northwestern Slope of the Caucasus (Balansovaya otsenka resursov podzemnykh vod severo-zapadnogo sklona Bol'shogo Kavkaza),
W74-01136 4B

Problems in Regional Dynamics of Artesian Water (Problemy regional'noy dinamiki artezianskikh vod),
W74-01141 2F

CONNATE WATER
Sand Beach Bacteria: Enumeration and Characterization,
W74-01444 5A

CONNECTICUT
Sierra Club v. Mason (Action to Enjoin Dredging of New Haven Harbor).
W74-01456 6E

CONSERVATION OF MASS
Longshore Current Velocity: A Review of Theory and Data,
W74-01187 2E

CONTINUOUS FLOW SYSTEM
Ion-Electrode Based Automatic Glucose Analysis System,
W74-01513 5A

COPEPOD
Oxbow Cut-Off Bog Lake Zooplankton of the Kolyma Basin (In Russian),
W74-01265 2H

COPEPODA
Zooplankton in Kolyma-Indigirka Lakes (In Russian),
W74-01341 2H

The Planktonic Association (Cladocera and Copepoda) of a Dimictic Lake of the Laurentides Park, Quebec, (In French),
W74-01558 2H

COPEPODS
Revision of Family and Some Generic Definitions in the Phaennidae and Scolecithricidae (Copepoda: Calanoida),
W74-01308 5A

A New Species of Boeckella (Copepoda: Calanoida) from Northland, New Zealand,
W74-01309 5A

COPPER
Biochemistry of Estuarine Ecosystem with Emphasis on Heavy Metals and Shellfish,
W74-01108 5C

A Comparison of Fast Destruction Methods for the Determination of Trace Metals in Biological Materials,
W74-01317 5A

Concentrations of Dissolved Forms of Fe, Mn, and Cu in Marine Pore Waters of the Atlantic Basin (Kontsentratsii rastvorennykh form Fe, Mn, i Cu v morskikh, porovykh vodakh basseyna Atlanticheskogo okeana),
W74-01392 2K

Copper Micronutrient Requirement for Algae,
W74-01398 5C

Ligand Photooxidation in Copper (II) Complexes of Nitrilotriacetic Acid. Implications for Natural Waters,
W74-01400 5B

Ion Selective Sensors,
W74-01506 5A

COPPER

Particulate Metals in Waters of Sorfjord West Norway,
W74-01528 5B

Swimming Endurance and Resistance to Copper and Malathion of Bluegills Treated by Long-Term Exposure to Sublethal Levels of Hydrogen Sulfide,
W74-01579 5C

CORYNEBACTERIUM
The Effects of Bacteria on the Growth and Reproduction of Oedogonium Cardiacum,
W74-01422 5C

CORYNEBACTERIUM PSEUDODIPHTHERITICUM
Degradative Versatility of Corynebacterium pseudodiphtheriticum NCIB 10803 which uses Amides as Carbon Source,
W74-01536 5B

COST ANALYSIS
A Cost-Effectiveness Study and Analysis of Municipal Refuse Disposal Systems,
W74-01631 5E

COST MINIMIZATION
A Hybrid Model for Irrigation Planning Using Chance Constrained Programming and Hydrologic Simulation,
W74-01488 4B

COTTON
Water Requirements of Wheat and Cotton on a High Water Table Soil Under Arid Conditions,
W74-01595 3F

COULOSTATIC ANALYSIS
Double Pulse Coulostatics,
W74-01511 2K

CREOSOTEBUSH
Brush Eradicating, Basin Pitting, and Seeding Machine for Arid to Semiarid Rangeland,
W74-01637 4A

CRETACEOUS SANDSTONES
Calculation of Permeability of Cretaceous Sandstones from Pumping and Static Level Data in Selected Areas of Western South Dakota,
W74-01113 2F

CRISTIGERA SPP
Growth Rates of Sediment-Living Marine Protozoan as a Toxicity Indicator for Heavy Metals,
W74-01529 5A

CROP ROTATION
Crop Rotation Schemes for Optimal Utilization of Agricultural Land,
W74-01596 3F

CROP YIELD
Diurnal Changes in Transpiration and Daily Photosynthetic Rater of Several Crop Plants,
W74-01597 2D

Effect of Moisture Stress on Soybean (Glycine max (L.) Merr.),
W74-01599 3F

CRUDE OIL
Inhibition by Fatty Acids of the Biodegradation of Petroleum,
W74-01537 5B

CRUSTACEAN ZOOPLANKTON
Production of Crustacean Zooplankton in Moty Bay, Lake Jeziorak: The method of Production Estimation,
W74-01172 2H

Production of Crustacean Zooplankton in Moty Bay, Lake Jeziorak: II. Estimation of Production of the Predominating Species,
W74-01173 2H

CRUSTACEANS
The Distribution, Composition and Biomass of the Crustacean Zooplankton Population in Western Lake Superior,
W74-01109 5C

CULICIDAE
Some Influences of Aquatic Vegetation on the Species and Number of Culicidae (Diptera) in Small Pools of Water,
W74-01609 2I

CULTURE MEDIA
Microbial Culture Media Preparation,
W74-01505 5A

Silica Gel Medium for Enumeration of Petroleumlytic Microorganisms in the Marine Environment,
W74-01532 5A

CULTURES
Loss of Photosynthetic Activity in Two Blue-Green Algae as a Result of Osmotic Stress,
W74-01302 5B

Studies of Rapid NTA-Utilizing Bacterial Mutant,
W74-01348 5B

The Effects of Bacteria on the Growth and Reproduction of Oedogonium Cardiacum,
W74-01422 5C

Some Thoughts on Nutrient Limitation in Algae,
W74-01428 5C

Sand Beach Bacteria: Enumeration and Characterization,
W74-01444 5A

The Sensitivity of Suppressed and Unsuppressed Lon Strains of Escherichia coli to Chemical Agents with Induce Filamentation,
W74-01524 5C

Fisheries and Fish Culture in Israel in 1971,
W74-01570 6B

Relationships of Indicator and Pathogenic Bacteria in Stream Waters,
W74-01645 5B

CULTURING VESSELS
Pankhurst Tubes Modified to Indicate Anaerobiosis,
W74-01545 5A

CURRENTS (WATER)
Longshore Current Velocity: A Review of Theory and Data,
W74-01187 2E

Shifting Offshore Bars and Harbor Shoaling,
W74-01191 2J

On the Vertical Structure of Tidal Flow in River Estuaries,
W74-01205 2L

The Generation of Longshore Currents on a Plane Beach,
W74-01208 2L

Currents at Toledo Harbor,
W74-01214 2H

CYANIDIUM CALDARIUM
Algal Excretion of C-14-Labeled Compounds and Microbial Interactions in Cyanidium caldarium Mats,
W74-01510 5C

CYANOPHYTA
Chemical Relationships Between Surface Water and the Ground in South Florida,
W74-01153 2K

Loss of Photosynthetic Activity in Two Blue-Green Algae as a Result of Osmotic Stress,
W74-01302 5B

Algal Succession on Artificial Reefs in a Marine Lagoon Environment in Guam,
W74-01429 5C

Growth and Buoyancy of Microcystis aeruginosa Kutz. Emend. Elenkin in a Shallow Eutrophic Lake,
W74-01518 5C

Hydrobiological Studies on the Lednicke Rybniky Ponds: Species Composition and Seasonal Variation in the Abundance of Plankton (In Czech),
W74-01567 5C

CYCLING NUTRIENTS
Hydrologic Nutrient Cycle Interactions in Undisturbed and Manipulated Ecosystems (Watersheds),
W74-01110 4C

Effects of Protozoa on the Fate of Particulate Carbon,
W74-01117 5C

CYMBELLA CAESPITOSA
Diatom Flora of the Grand River, Ontario, Canada,
W74-01311 5A

CYTOLOGICAL STUDIES
Indirect Coulometric Titration of Biological Electron Transport Components,
W74-01338 2K

Sublittoral Benthic Marine Algae of Southern Cape Cod and Adjacent Islands: Pseudolithoderma Paradoxum Sp. Nov. (Ralfsiaceae, Ectocarpales),
W74-01350 5A

Salinity Adaptation by Dunaliella Tertiolecta. I. Increases in Carbonic Anhydrase Activity and Evidence for a Light-Dependent Na (Plus)/H (Plus) Exchange,
W74-01427 5C

Bacteriology of Activated Sludge, in Particular the Filamentous Bacteria,
W74-01540 5B

Rhodopseudomonas Sulfidophila, Nov. Spec., A New Species of the Purple Nonsulfur Bacteria,
W74-01544 5B

CZECHOSLOVAKIA (DANUBE RIVER)
Phytoplankton of the Czechoslovak Sector of the Danube and of the Estuaries of the Prin-

cipal Tributaries on Czechoslovak Territory, (In Czect.),
W74-01371 2I

CZECHOSLOVAKIA (LEDNICKE-RYBNIKY PONDS)
Hydrobiological Studies on the Lednicke Rybniky Ponds: Species Composition and Seasonal Variation in the Abundance of Plankton (In Czech),
W74-01567 5C

DARTERS
Dieldrin. Effects of Chronic Sublethal Exposure on Adaptation to Thermal Stress in Freshwater Fish,
W74-01408 5C

DATA ACQUISITION
Novel Method of Raman Data Acquisition,
W74-01330 2K

Using Computers to Analyze Continuous Data,
W74-01520 7C

DIGESTION
Nutrient Removal Using Lemna Minor,
W74-01321 5C

DIGITAL TO ANALOG CONVERTERS
Don't Forget D/A Converter Tempco,
W74-01507 7C

DIMETHYLARSINE
Distribution of Alkyl Arsenicals in Model Ecosystem,
W74-01409 5C

DIMICTIC LAKE
The Planktonic Association (Cladocera and Copepoda) of a Dimictic Lake of the Laurentides Park, Quebec, (In French),
W74-01558 2H

DINOFLAGELLATES
Probable Causes for the 1972 Red Tide in the Cape Ann Region of the Gulf of Maine,
W74-01435 5C

DIPTERA
Some Influences of Aquatic Vegetation on the Species and Number of Culicidae (Diptera) in Small Pools of Water,
W74-01609 2I

DISCRIMINANT ANALYSIS
Objective Regionalization of Peak Flow Rates,
W74-01174 4D

DISCRIMINATION NETS
Simulation of Water Recreation Users' Decisions,
W74-01464 6D

DISPERSION
A Study of Tidal Dispersion in the Potomac River,
W74-01196 5B

DISSOLVED SOLIDS
A Study of the Exchange of Dissolved Solids Between Bottom Sediments and Water of Different Water Bodies (Izucheniye obmena rastvorennymi veshchestvami mezhdu donnymi otlozheniyami i vodoy razlichnykh vodoyemov),
W74-01389 2J

Concentrations of Dissolved Forms of Fe, Mn, and Cu in Marine Pore Waters of the Atlantic Basin (Kontsentratsii rastvorennykh form Fe, Mn, i Cu v morskikh, porovykh vodakh basseyna Atlanticheskogo okeana),
W74-01392 2K

A Mathematical Model of Primary Productivity and Limnological Patterns in Lake Mead,
W74-01630 5C

DISTILLATION
Improved Distillation Method for Volatile Acids Analysis,
W74-01322 5A

DISTRIBUTION PATTERNS
Chlorinated Hydrocarbon Insecticides in Sediments of Southern Lake Michigan,
W74-01397 5B

Probable Causes for the 1972 Red Tide in the Cape Ann Region of the Gulf of Maine,
W74-01435 5C

Particulate Metals in Waters of Sorfjord West Norway,
W74-01528 5B

Distribution of (C-14) PCBs in Carp,
W74-01530 5C

Distribution Patterns and Population Dyanmics of the Micro-Arthropods of a Desert Soil in Southern California,
W74-01635 2I

DIURNAL CHANGES
Diurnal Changes in Transpiration and Daily Photosynthetic Rater of Several Crop Plants,
W74-01597 2D

DOMAIN MEANS
Estimation of Domain Means Using Two-Phase Sampling,
W74-01498 7B

DOMESTIC WASTES
Pressurized Sewer Collection Systems,
W74-01286 5D

DOUBLE PULSE COULOSTATICS
Double Pulse Coulostatics,
W74-01511 2K

DRAWDOWN
Sensitivity of Groundwater flow Models to Vertical Variability of Aquifer Constants,
W74-01151 4B

Drawdown at Time-Dependent Flowrate,
W74-01155 2F

Numerical Solution of Multiphase Well Flow,
W74-01275 8B

DREDGING
Effect of Spoil Disposal on Benthic Invertebrates,
W74-01420 5C

Sierra Club v. Mason (Action to Enjoin Dredging of New Haven Harbor).
W74-01456 6E

DROPSY
Increase of Resistance of Carp to Dropsy by Means of Breeding. II. Course of Selection and Evaluation of the Breed Groups, (In Russian),
W74-01560 5C

DROUGHT TOLERANCE
Water Use by Perennial Evergreen Plant Communities in Australia and Papua New Guinea,
W74-01634 2D

DUGESIA TIGRINA
Evaluation of the Response of Dugesia Tigrina to Aflatoxin B1,
W74-01404 5C

DUNALIELLA TERTIOLECTA
Salinity Adaptation by Dunaliella Tertiolecta. I. Increases in Carbonic Anhydrase Activity and Evidence for a Light-Dependent Na (Plus)/H (Plus) Exchange,
W74-01427 5C

DURSBAN
Gas-Liquid Chromatographic Determination of Chlorpyriphos in Dursban Insecticide Formulations,
W74-01405 5A

DYE CONCENTRATIONS
Experiments and Hydrographic Surveys Off Sandy Hook, New Jersey (1963),
W74-01199 2L

DYSTROPHY
Batrachospermum Vagum Ag. in the Szczecin Pomerania, A Locality New to Poland, (In Polish),
W74-01219 2H

E. COLI
The Sensitivity of Suppressed and Unsuppressed Lon Strains of Escherichia coli to Chemical Agents with Induce Filamentation,
W74-01524 5C

Sensitivity of Three Selected Bacterial Species to Ozone,
W74-01553 5F

Comparison of Gelman and Millipore Membrane Filters for Enumerating Fecal Coliform Bacteria,
W74-01554 5A

EARTH MATERIALS
Engineering Characteristics of Overburden in Knox County, Tennessee,
W74-01143 7C

Overburden Related to Type of Bedrock and Engineering Characteristics of the Bedrock, Knox County, Tennessee,
W74-01144 7C

ECOLOGICAL DISTRIBUTION
Stream Community Response to Nutrient Enrichment,
W74-01499 5C

Acridine Orange-Epifluorescence Technique for Counting Bacteria in Natural Waters,
W74-01534 5A

ECOLOGICAL IMPACT
Ecological Impact of Pesticides,
W74-01573 5C

ECOLOGY
The Ecology of the Diatoms of the Klip River, Southern Transvaal,
W74-01313 5C

Observations on the Ecology of Laminaria Sinclairii on Three Northern Oregon Beaches,
W74-01423 5C

Freshwater Mussel Ecology, Kentucky Lake, Tennessee, May 1, 1969-June 15, 1972,
W74-01641 5C

ECONOMIC EFFICIENCY
Relationship of Pumping Lift to Economic Use of Groundwater for Irrigation,
W74-01120 4B

On the Optimal Operation of Groundwater Basins: A Calculus of Variations Approach,
W74-01489 4B

Economics of Resource Use on Sample Farms of Central Gujarat,
W74-01491 3F

ECONOMIC IMPACT
The Impact of Water Pollution Abatement on Competition and Pricing in the Alabama Textile Industry,
W74-01101 5G

Impact of Irrigation Investments on Regional and Urban Development,
W74-01625 6B

ECONOMICS
Stratigraphy and Economic Geology of the Coastal Plain of the Central Savannah River Area, Georgia,
W74-01122 2J

Valuation of Visual-Cultural Benefits from Freshwater Wetlands in Massachusetts,
W74-01643 6B

EDAPHOLOGY
Physical Edaphology. The Physics of Irrigated and Nonirrigated Soils,
W74-01572 2G

EDGE WAVES
A Note on Edge Waves in a Stratified Fluid,
W74-01194 2E

EDUCATION
Graduate Courses Related to Water Resources.
W74-01119 9A

Educational Programs for Land and Water Resources Development and Management,
W74-01628 6B

ELBE ESTUARY (GERMANY)
Investigations on the Influence of Tides on Salinity, Content of Suspended Matter, Sedimentation and Bacteria Counts in the Elbe Estuary, (Untersuchungen Uber Die Einwirkung Der Tide Auf Salzgehalt, Schwebstoffgehalt, Sedimentation Und Bakteriengehalt in Der unterelbe),
W74-01175 2L

ELECTRIC POWER
Concept-Scale Interaction with the Semantic Differential Technique,
W74-01644 6B

ELECTRICAL CONDUCTIVITY
Effect of the Quality of Well Waters on Soils in Gurgaon District,
W74-01252 2G

ELECTRICAL PROPERTIES
Glass-Metal Composite Electrodes,
W74-01512 2K

ELECTROCHEMICAL CELLS
Small-Volume Solid-Electrode Flow-Through Electrochemical Cells. Preliminary Evaluation Using Pulse Polarographic Techniques,
W74-01445 7B

ELECTROCHEMISTRY
Semiintegral Electroanalysis: Shapes of Neopolarograms,
W74-01333 5A

Anion Responses and Potential Functions for Neutral Carrier Membrane Electrodes,
W74-01334 2K

Indirect Coulometric Titration of Biological Electron Transport Components,
W74-01338 2K

ELECTRODES
Semiintegral Electroanalysis: Shapes of Neopolarograms,
W74-01333 5A

Anion Responses and Potential Functions for Neutral Carrier Membrane Electrodes,
W74-01334 2K

The Potentiometric Titration of Potassium in Sea Water with a Valinomycin Electrode,
W74-01442 5A

Ion Selective Sensors,
W74-01506 5A

Glass-Metal Composite Electrodes,
W74-01512 2K

Ion-Electrode Based Automatic Glucose Analysis System,
W74-01513 5A

Analytical Applications of Pulsed Voltammetric Stripping at Thin Film Mercury Electrodes,
W74-01514 5A

ELECTROLYTES
Anion Responses and Potential Functions for Neutral Carrier Membrane Electrodes,
W74-01334 2K

ELECTRON CAPTURE GAS CHROMATOGRAPHY
Analytical Methodology for Bioactive Compounds. Photochemically Assisted Analysis of Chlorinated Hydrocarbon Pesticides in the Presence of Polychlorinated Biphenyls,
W74-01493 5A

ELECTRON TRANSPORT
Indirect Coulometric Titration of Biological Electron Transport Components,
W74-01338 2K

ELECTROPHORESIS
Electrophoretic and Immunological Analyses of Seven Chlorosarcinacean Algae,
W74-01426 5A

ELEMENTS
The Effect of Substrate Humidity on the Supply of Macroelements to Plants, (In Latvian),
W74-01241 3F

ELIMINATION
Metabolism and Biliary Excretion of Sulfobromophthalein by Rainbow Trout (Salmo Gairdneri),
W74-01411 5C

EMISSION SPECTOSCOPY
Emission Spectrometric Determination of Trace Metals in Biological Tissues,
W74-01546 5A

ENERGY
A Profile of the Four Moment Measures Perpendicular to a Shore Line, South Haven, Michigan,
W74-01184 2H

ENERGY TRANSFER
Indirect Coulometric Titration of Biological Electron Transport Components,
W74-01338 2K

ENGINEERING STRUCTURES
South American Marine Energy,
W74-01181 8A

ENGLAND (RIVER CAMEL)
The Effect of Sand Deposition Upon the Macro-Invertebrate Fauna of the River Camel, Cornwall,
W74-01244 2I

ENTERIC BACTERIA
Computer Identification of Bacteria on the Basis of Their Antibiotic Susceptibility Patterns,
W74-01443 5A

Microbial Flora and Level of Vibrio Parahaemolyticus of Oysters (Crassostrea Virginica), Water and Sediment from Galveston Bay,
W74-01548 5C

Comparison of Gelman and Millipore Membrane Filters for Enumerating Fecal Coliform Bacteria,
W74-01554 5A

ENTEROCOCCI
Litmus Milk Reaction as a Distinguishing Feature Between Streptococcus Faecalis of Human and Non-Human Origins,
W74-01549 5A

ENUMERATION
Silica Gel Medium for Enumeration of Petroleumlytic Microorganisms in the Marine Environment,
W74-01532 5A

Comparison of Gelman and Millipore Membrane Filters for Enumerating Fecal Coliform Bacteria,
W74-01554 5A

ENVIRONMENTAL EFFECTS
In Re Spring Valley Development (Challenge to Order of Environmental Improvement Commission Denying Development Along Side of Pond).
W74-01454 6E

Sierra Club v. Mason (Action to Enjoin Dredging of New Haven Harbor).
W74-01456 6E

City of Monmouth V. Environmental Protection Agency (EPA Sued the City to Prohibit the City from Continuing to Maintain a Sewage Lagoon System Which was Emitting Noxious Odors).
W74-01462 6E

Promoting Environmental Quality Through Urban Planning and Controls,
W74-01470 5D

Microfauna of Activated Sludge. Part III. The Effect of Physico-Chemical Factors on the Occurrence of Microfauna in the Annual Cycle,
W74-01542 5C

Ecological Impact of Pesticides,
W74-01573 5C

Tallahala Creek Lake, Pascagoula River Basin. Mississippi (Final Environmental Impact Statement).
W74-01610 4A

Tallulah Creek Watershed (Long Creed Portion) Graham County, North Carolina (Final Environmental Impact Statement).
W74-01621 4D

ENVIRONMENTAL IMPACT STATEMENT
Tallulah Creek Watershed (Long Creed Portion) Graham County, North Carolina (Final Environmental Impact Statement).
W74-01621 4D

ENVIRONMENTAL IMPACT STATEMENTS
Tallahala Creek Lake, Pascagoula River Basin. Mississippi (Final Environmental Impact Statement).
W74-01610 4A

ENVIRONMENTAL QUALITY
Physical System Modelling as a Tool in Water Resource Planning,
W74-01487 2A

ENVIRONMENTAL SANITATION
Improved Waste Disposal Unit,
W74-01284 5D

ENZYMES
Biochemistry of Estuarine Ecosystem with Emphasis on Heavy Metals and Shellfish,
W74-01108 5C

Salinity Adaptation by Dunaliella Tertiolecta. I. Increases in Carbonic Anhydrase Activity and Evidence for a Light-Dependent Na (Plus)/H (Plus) Exchange,
W74-01427 5C

EPHEMEROPTERA
Number and Size of Drifting Nymphs of Ephemeroptera, Chironomidae, and Simulidae by Day and Night in the River Stranda, Western Norway,
W74-01230 2I

Assessment of Two Mesh Sizes for Interpreting Life Cycles, Standing Crop, and Percentage Composition of Stream Insects,
W74-01601 2I

EQUILIBRIUM
The Equilibrium Beach,
W74-01195 2J

EQUIPMENT
Small-Volume Solid-Electrode Flow-Through Electrochemical Cells. Preliminary Evaluation Using Pulse Polarographic Techniques,
W74-01445 7B

ERODED SOIL
Productivity of Cereal Crops on Eroded Chernozems Against Both Non-Fertilized and Fertilized Backgrounds, (In Russian),
W74-01557 3F

EROSION
Erosion of Tidal Flats Near Georgetown, British Guiana,
W74-01216 2J

ERROR
Some Sources of Error in the 14C Method for Estimating Primary Productivity and Their Relationship to Light Intensity During Incubation,
W74-01217 2H

ERRORS
Extended Tables for Kendall's Tau,
W74-01497 7C

Don't Forget D/A Converter Tempco,
W74-01507 7C

ERTS
Symposium on Significant Results Obtained from Earth Resources Technology Satellite-1, March 5-9, 1973: Volume III--Discipline Summary Reports.
W74-01163 7C

Agriculture, Forestry, Range Resources,
W74-01164 3F

Land Use and Mapping,
W74-01165 4A

Mineral Resources, Geological Structure and Landform Surveys,
W74-01166 7C

Environment Surveys,
W74-01167 5A

Water Resources,
W74-01168 7C

Marine Resources and Ocean Surveys,
W74-01169 7B

Interpretation Techniques Development,
W74-01170 7B

Multidisciplinary/Regional Resource Surveys,
W74-01171 7B

ESTERS
Herbicide Analysis: Relationship Between Molecular Structure and Retention Index,
W74-01416 5A

ESTIMATING
Regional Estimate of Brackish- and Saline-Groundwater Yield (Regional'naya otsenka ekspluatatsionnykh resursov solonovatykh i solenykh podzemnykh vod),
W74-01137 4B

A Procedure for the Estimation of Microgram Quantities of Triton X-100,
W74-01360 5A

Estimation of Domain Means Using Two-Phase Sampling,
W74-01498 7B

ESTUARIES
Investigations on the Influence of Tides on Salinity, Content of Suspended Matter, Sedimentation and Bacteria Counts in the Elbe Estuary, (Untersuchungen Uber Die Einwirkung Der Tide Auf Salzgehalt, Schwebstoff-

gehalt, Sedimentation Und Bakteriengehalt in Der unterelbe),
W74-01175 2L

Sedimentation in a Meandering Estuary,
W74-01177 2L

On Structure, Entrainment, and Transport in Estuarine Embayments,
W74-01178 2L

The Union of the Columbia River and the Pacific Ocean -- General Features,
W74-01183 2L

Sediment Transport in a Coastal Plain Estuary,
W74-01185 2L

Tidal Period Oscillations of an Isohaline Surface Off the Mouth of the Columbia River,
W74-01188 2L

A Study of Tidal Dispersion in the Potomac River,
W74-01196 5B

Computer Simulation of Estuarial Networks,
W74-01197 2L

Harbor Analog System, Part I - Waves,
W74-01200 2L

The Influence of Topography and Pressure Gradients on Shoaling in a Tidal Estuary,
W74-01204 2L

On the Vertical Structure of Tidal Flow in River Estuaries,
W74-01205 2L

The Equations of Continuity for Seawater and River Water in Estuaries,
W74-01207 2L

Estuarine Circulation Induced by Diffusion,
W74-01222 2L

Ocean Utilization and Coastal Zone Development.
W74-01281 2L

Some Consequences of an Inertia of Turbulence in a Tidal Estuary,
W74-01648 2L

Oscillations of Tide and Surge in an Estuary of Finite Length,
W74-01649 2L

ESTUARINE ENVIRONMENT
The Management of Bay and Estuarine Systems in the Texas Coastal Zone, Phase II.
W74-01620 5G

ETHYLENETHIOUREA
Ethylenethiourea Degradation,
W74-01340 5B

EUCALYPTUS
Die-Back in the Mixed Hardwood Forests of Eastern Victoria: A Preliminary Report,
W74-01251 4A

EUGENE-SPRINGFIELD (ORE)
Water Master Plan. Eugene-Springfield Urbanizing Area.
W74-01479 3D

EUGLENA-RUBRA
A First Record of Red-Water Phenomenon in Kashmir, India,
W74-01564 5C

EUTROPHICATION
Recreational Reuse of Municipal Wastewater,
W74-01103 5D

Growth and Buoyancy of Microcystis aeruginosa Kutz. Emend. Elenkin in a Shallow Eutrophic Lake,
W74-01518 5C

EVALUATION
Evaluation of the Accuracy of Gran Plots by Means of Computer Calculations. Application to the Potentiometric Titration of the Total Alkalinity and Carbonate Content in Sea Water,
W74-01365 2K

EVAPOTRANSPIRATION
Soil Salinization Under Irrigated Cultivation,
W74-01238 3F

EVAPOTRANSPIRATION CONTROL
Potential Usefulness of Antitranspirants for Solution of Some Water Supply, Plant Growth, and Environmental Problems,
W74-01105 3B

EVERGREENS (PERENNIAL)
Water Use by Perennial Evergreen Plant Communities in Australia and Papua New Guinea,
W74-01634 2D

FABRICATION
Glass-Metal Composite Electrodes,
W74-01512 2K

FATE OF POLLUTANTS
Fate of Lignin in Kraft Effluent Treatment,
W74-01320 5B

Ethylenethiourea Degradation,
W74-01340 5B

Ligand Photooxidation in Copper (II) Complexes of Nitrilotriacetic Acid. Implications for Natural Waters,
W74-01400 5B

Biodegradation of Phenylmercuric Acetate by Mercury-Resistant Bacteria,
W74-01555 5B

FATTY ACIDS
Inhibition by Fatty Acids of the Biodegradation of Petroleum,
W74-01537 5B

FAUNA
Limnology and Fishery Biology of Black Lake, Northern Saskatchewan,
W74-01234 2H

FAUNA (INVERTEBRATES)
The Effect of Sand Deposition Upon the Macro-Invertebrate Fauna of the River Camel, Cornwall,
W74-01244 2I

FECAL COLIFORMS
Some Observations on Bacterial Populations in Wilgreen Lake, Madison, KY.,
W74-01242 5B

Comparison of Gelman and Millipore Membrane Filters for Enumerating Fecal Coliform Bacteria,
W74-01554 5A

Relationships of Indicator and Pathogenic Bacteria in Stream Waters,
W74-01645 5B

FECAL STREPTOCOCCI
Relationships of Indicator and Pathogenic Bacteria in Stream Waters,
W74-01645 5B

FEDERAL GOVERNMENT
A Bill to Aid the Conservation of Natural Water Resources.
W74-01616 6E

FERTILIZATION
Role of Silt in Microcystis Aeruginosa Development, (In Russian),
W74-01368 5C

The Action of Mineral Fertilization on Pasture Herbage, Irrigated with Sewage, (In Russian),
W74-01559 5D

FERTILIZED CROPS
Nitrates in Soil and Ground Water Beneath Irrigated and Fertilized Crops,
W74-01245 3F

FERTILIZERS
Experimental Establishment of Forest Plantations on Sands, in Accordance with the Idea of G. N. Vysotskii (In Russian),
W74-01569 2I

FIBERS (PLANT)
Fate of Lignin in Kraft Effluent Treatment,
W74-01320 5B

FILAMENTOUS ALGAE
An Improved Method of Cell Enumeration for Filamentous Algae and Bacteria,
W74-01421 5A

FILAMENTOUS BACTERIA
An Improved Method of Cell Enumeration for Filamentous Algae and Bacteria,
W74-01421 5A

Bacteriology of Activated Sludge, in Particular the Filamentous Bacteria,
W74-01540 5B

FILTRATION
A Modified Filtration Method for the Analysis of Wastewater Suspended Solids,
W74-01318 5A

Modifications in Filtration Methods for the Measurement of Inorganic C-14 Uptake by Photosynthesizing Algae,
W74-01425 5A

Some Effects of Filtration on the Determination of Nutrients in Fresh and Salt Water,
W74-01521 7B

Virus Concentration from Sewage,
W74-01533 5D

FINITE ELEMENT ANALYSIS
Transient Movement of Water and Solutes in Unsaturated Soil Systems,
W74-01104 2G

FINLAND (LAKE KONNEVESI)
The Bottom Macrofauna of the Oligotrophic Lake Konnevesi, Finland,
W74-01287 5C

FISH
Separation and Identification of Carbofuran, Its Metabolites, and Conjugates Found in Fish Exposed to Ring C-14-Labeled Carbofuran Using ITLC Silica Gel Strips,
W74-01577 5A

FISH FOOD
Monitoring Channel Catfish Use of a Demand Feeder,
W74-01237 8I

FISH HABITATS
Longitudinal Distribution and Habitat of the Fishes of Mason Creek, an Upper Roanoke River Drainage Tributary, Virginia,
W74-01592 2I

FISH PREDATION
Further Studies of Fish Predation on Salmon Stocked in Maine Lakes,
W74-01603 2H

FISHERIES
Fisheries and Fish Culture in Israel in 1971,
W74-01570 6B

FISHERY
Limnology and Fishery Biology of Black Lake, Northern Saskatchewan,
W74-01234 2H

FISHES
The Amount of Space Available for Marine and Freshwater Fishes,
W74-01561 2I

FISHKILL
Supersaturation of Nitrogen in Water During Passage Through Hydroelectric Turbines at Mactaquac Dam,
W74-01432 5C

FLAME ABSORPTION
Lateral Diffusion Interferences in Flame Atomic Absorption and Emission Spectrometry,
W74-01342 2K

FLAME EMISSION
Lateral Diffusion Interferences in Flame Atomic Absorption and Emission Spectrometry,
W74-01342 2K

FLAME EMISSION SPECTROMETRY
Evaluation of Flame Emission Determination of Phosphorus in Water,
W74-01116 5A

FLAME PHOTOMETRY
Evaluation of Flame Emission Determination of Phosphorus in Water,
W74-01116 5A

FLAMELESS ATOMIC ABSORPTION SPECTROPHOTOMETRY
Determination of Mercury After Room Temperature Digestion by Flameless Atomic Absorption,
W74-01315 5A

FLAVOBACTERIUM
Inhibition by Fatty Acids of the Biodegradation of Petroleum,
W74-01537 5B

FLOATING PLANTS
Element Constitution of Selected Aquatic Vascular Plants from Pennsylvania: Submersed and Floating Leaved Species and Rooted Emergent Species,
W74-01526 5A

FLOOD CONTROL
Storm Drainage and Flood Control for Metropolitan Denver.
W74-01475 4A

Tallahala Creek Lake, Pascagoula River Basin. Mississippi (Final Environmental Impact Statement).
W74-01610 4A

FLOOD FORECASTING
Hydrograph Simulation Models of the Hillsborough and Alafia Rivers, Florida: A Preliminary Report,
W74-01611 4A

FLOOD PLAINS
Areas of Possible Flooding in Knox County, Tennessee,
W74-01269 7C

Promoting Environmental Quality Through Urban Planning and Controls,
W74-01470 5D

A Linear Programming Approach to Floodplain Land Use Planning in Urban Areas,
W74-01490 3D

FLOOD PROTECTION
Report on Laurel Creek Channel Improvements, Waterloo and Bridgeport, Ontario.
W74-01482 4A

Floodland and Shoreland Development Guide.
W74-01483 4A

FLOODING
Spring Flooding and Fauna (In Russian),
W74-01261 2I

FLOODPLAIN MANAGEMENT
Floodland and Shoreland Development Guide.
W74-01483 4A

FLOODS
Objective Regionalization of Peak Flow Rates,
W74-01174 4D

Effect of the Desna River Flood on Development of Vegetation and Flora of the Oster Outskirts (Ukranian)
W74-01362 2I

FLORA
Effect of the Desna River Flood on Development of Vegetation and Flora of the Oster Outskirts (Ukranian)
W74-01362 2I

FLORIDA
Comparison of Gage and Radar Methods of Convective Precipitation Measurement,
W74-01149 2B

Chemical Relationships Between Surface Water and the Ground in South Florida,
W74-01153 2K

Tidewater Shorelines in Broward and Palm Beach Counties, Florida: An Analysis of Characteristics and Changes Interpreted from Color, Color Infrared and Thermal Aerial Imagery,
W74-01220 2L

A Bill to Establish the Canaveral National Seashore in the State of Florida.
W74-01457 6E

Utility Provisions Analysis for East Central Florida.
W74-01480 6D

Availability of Fresh Water in the East Central Florida Planning Region.
W74-01481 6D

Changes in Species Composition of Phytoplankton Due to Enrichment by N, P, and Si of Water From a North Florida Lake,
W74-01503 5C

Hydrograph Simulation Models of the Hillsborough and Alafia Rivers, Florida: A Preliminary Report,
W74-01611 4A

A Bill to Provide for the Establishment of the Guana River National Park in the State of Florida.
W74-01617 6E

FLORIDA (APALACHICOLA RIVER)
Biology of the Alabama Shad in Northwest Florida,
W74-01248 2I

FLOW
Experimental Investigation of the Effect of Saltating Sediments on Kinematics of Flow (Eksperimental'noye issledovaniye vliyaniya sal'tiruyushchikh nanosov na kinematiku potoka),
W74-01134 2J

A Method of Forecasting the Building of a River Bar (Metod prognoza pereformirovaniy rechnogo bara),
W74-01388 2J

FLOW CONTRACTIONS
Boundary Contractions as Controls in Two-Layer Flows,
W74-01276 8B

FLOW CONTROL
Boundary Contractions as Controls in Two-Layer Flows,
W74-01276 8B

FLOW MEASUREMENT
Single-Velocity Method in Measuring Discharge,
W74-01161 2C

FLOW PROFILES
Stability and Reach Length in Water Surface Profile Determination,
W74-01152 2E

FLOW RATES
Single-Velocity Method in Measuring Discharge,
W74-01161 2C

FLOWMETERS
Rotameter.
W74-01500 7B

FLUCTUATIONS
Division of the United States into Regions According to Cophasal Fluctuations of Annual Runoff (Rayonirovaniye territorii SShA po sinfaznosti kolebaniy godovogo stoka rek),
W74-01140 2E

FLUID FRICTION
Turbulent Fluid Friction of Rotating Disks,
W74-01640 8C

FLUID MECHANICS
Turbulent Fluid Friction of Rotating Disks,
W74-01640 8C

FLUORINE
Thermodynamics of Acid-Base Equilibria. II. Ionization of m- and p-Hydroxybenzotrifluoride and the Concept of Fluorine Double Bond-No Bond Resonance,
W74-01226 2K

FLUOROMETRY
Fluorometric Quantitation of Gallium in Biological Materials at Nanogram Levels,
W74-01344 2K

Fluorometric Determination of Selenium in Water with 2,3-Diaminonaphthalene,
W74-01399 5A

FLUOROSIS
Effect of Partial Defluoridation of a Water Supply on Dental Fluorosis: Final Results in Bartlett, Texas, After 17 Years,
W74-01578 5F

FLUSHING
Phytoplankton Nutrients and Flushing of Inlets on the Coast of Nova Scotia,
W74-01471 5B

FOOD HABITS
Food Consumption of the Free-Living Aquatic Nematode Pelodera Chitwoodi,
W74-01225 5A

FOOD PROCESSING INDUSTRY
Wastewater Characterization of Sweet Potato Processing,
W74-01324 5A

FORECASTING
Longshore Current Velocity: A Review of Theory and Data,
W74-01187 2E

Computer Utilization of Hydrological Data for North Nashwaaksis Representative Basin,
W74-01294 7C

A Method of Forecasting the Building of a River Bar (Metod prognoza pereformirovaniy rechnogo bara),
W74-01388 2J

FOREIGN COUNTRIES
International Scientific and Technical Cooperation in the Field of Water Problems (Mezhdunarodnoye nauchno-tekhnicheskoye sotrudnichestvo v oblasti vodnykh problem),
W74-01138 6E

FOREIGN PROJECTS
International Scientific and Technical Cooperation in the Field of Water Problems (Mezhdunarodnoye nauchno-tekhnicheskoye sotrudnichestvo v oblasti vodnykh problem),
W74-01138 6E

FOREIGN RESEARCH
Literature on Mercury: Availability of English Translations,
W74-01323 5A

FOREST
Protective Function of the Forest in Areas of Waterwork Reservoirs, (In Czech),
W74-01582 4A

FOREST MANAGEMENT GUIDELINES
Development of a Time-Space Prediction Technique to Evaluate Snowpacks in and Adjacent to Forest Openings,
W74-01231 3B

FOREST OPENINGS
Development of a Time-Space Prediction Technique to Evaluate Snowpacks in and Adjacent to Forest Openings,
W74-01231 3B

FOREST ZONES
Profile of the Vegetation of the Elburs Mountain Range (Northern Iran), (In German),
W74-01385 2I

FORESTS
Experimental Establishment of Forest Plantations on Sands, in Accordance with the Idea of G. N. Vysotskii (In Russian),
W74-01569 2I

FRANCE (GAPEAU RIVER BASIN)
Contribution to Physicochemical Study of Some Springs of the Gapeau River Basin (Var),
W74-01288 2K

FRANCE (HAUTE-SAVOIE)
A Diseased Trout: Microbiological Study of Its Principal Organs and Its Environment,
W74-01267 5C

FREEZE DRYING
Simple Inexpensive Freeze-Drying Procedure,
W74-01339 7B

FRESHWATER
Soluble Aluminum in Marine and Fresh Water by Gas-Liquid Chromatography,
W74-01446 5A

FRESHWATER FISH
The Chemical Oxygen Demand of Waters and Biological Materials from Ponds,
W74-01543 5C

FRICTION
Effects of Friction and Surface Tide Angle of Incidence on the Coastal Generation of Internal Tides,
W74-01190 2E

Flow of a Valley Glacier with a Solid Friction Law,
W74-01377 2C

FROST
A Reliable and Inexpensive Soil Frost Gage,
W74-01574 2G

FUNGAL METABOLITES
Determination of Griseofulvin by Time-Resolved Phosphorimetry,
W74-01224 5A

FUNGI
Determination of Griseofulvin by Time-Resolved Phosphorimetry,
W74-01224 5A

Algal Excretion of C-14-Labeled Compounds and Microbial Interactions in Cyanidium caldarium Mats,
W74-01510 5C

Viability of Lyophilized Microorganisms after Storage,
W74-01538 5C

FUNGICIDES
Ethylenethiourea Degradation,
W74-01340 5B

FUSARIUM-SPP
The Relationship Between Maple Canker Incidence and Precipitation,
W74-01602 2I

GAGES
A Reliable and Inexpensive Soil Frost Gage,
W74-01574 2G

GALLIUM
Fluorometric Quantitation of Gallium in Biological Materials at Nanogram Levels,
W74-01344 2K

GALVESTON BAY
Microbial Flora and Level of Vibrio Parahaemolyticus of Oysters (Crassostrea Virginica), Water and Sediment from Galveston Bay,
W74-01548 5C

GAS CHROMATOGRAPHY
Variation of Organochlorine Residue Levels with Age in Gulf of St. Lawrence Harp Seals (Pagophilus Groenlandicus),
W74-01300 5A

Microdetermination of Chloro-S-Triazines in Soil by Gas-Liquid Chromatography with Nickel Electron Capture or Electrolytic Conductivity Detection,
W74-01304 5A

Practical Methods for Derivatizing and Analyzing Bacterial Metabolites with a Modified Automatic Injector and Gas Chromatograph,
W74-01336 5A

Simple Direct Combination of Gas Chromatography and Vapor Phase Infrared Spectrometry,
W74-01355 5A

Precolumn Inlet System for the Gas Chromatographic Analysis of Trace Quantities of Short-Chain Aliphatic Amines,
W74-01357 5A

Chlorinated Hydrocarbon Insecticides in Sediments of Southern Lake Michigan,
W74-01397 5B

Rapid Gas Chromatographic Method for Determination of Residual Methanol in Sewage,
W74-01410 5A

Determination of Chlorinated Pesticides in Whole Blood,
W74-01417 5A

Analytical Methodology for Bioactive Compounds. Photochemically Assisted Analysis of Chlorinated Hydrocarbon Pesticides in the Presence of Polychlorinated Biphenyls,
W74-01493 5A

GAS EXCHANGE CHAMBER
A New Type of Climatized Gas Exchange Chamber for Net Photosynthesis and Transpiration Measurements in the Field,
W74-01568 2I

GAS LIQUID CHROMATOGRAPHY
Gas-Liquid Chromatographic Determination of Chlorpyriphos in Dursban Insecticide Formulations,
W74-01405 5A

Herbicide Analysis: Relationship Between Molecular Structure and Retention Index,
W74-01416 5A

Soluble Aluminum in Marine and Fresh Water by Gas-Liquid Chromatography,
W74-01446 5A

GAS-MEMBRANE ELECTRODES
Reliability of an Ammonia Probe for Electrometric Determination of Total Ammonia Nitrogen in Fish Tanks,
W74-01433 5A

GAS SOLID CHROMATOGRAPHY
Gas-Solid Chromatography on Macroreticular Cation Exchange Resins,
W74-01495 5A

GELIDIELLA ACEROSA
Physiological Ecology of Gelidiella Acerosa (Forsskal) Feldmann et Hamel,
W74-01424 5C

GEOCHEMISTRY
State of Rare Earth Elements in Surface Waters (O sostoyanii redkozemel'nykh elementov v poverkhnostnykh vodakh),
W74-01395 2K

Isotopic Composition of Helium in Thermal Springs of Iceland (Izotopnyy sostav geliya termal'nykh istochnikov Islandii),
W74-01396 2K

GEOLOGIC MAPPING
Engineering Characteristics of Overburden in Knox County, Tennessee,
W74-01143 7C

Overburden Related to Type of Bedrock and Engineering Characteristics of the Bedrock, Knox County, Tennessee,
W74-01144 7C

Categories of Relative Feasibility for Septic-Tank Filter Fields in Knox County, Tennessee,
W74-01145 7C

Soil Association Map of Knox County, Tennessee.
W74-01146 7C

Mineral Resources, Geological Structure and Landform Surveys,
W74-01166 7C

Areas with Abundant Sinkholes in Knox County, Tennessee,
W74-01270 7C

GEOLOGY
Stratigraphy and Economic Geology of the Coastal Plain of the Central Savannah River Area, Georgia,
W74-01122 2J

GEORGIA
Stratigraphy and Economic Geology of the Coastal Plain of the Central Savannah River Area, Georgia,
W74-01122 2J

Sedimentation in a Meandering Estuary,
W74-01177 2L

Observations of Net Shoreline Positions and Approximations of Barrier Island Sediment Budgets,
W74-01372 2L

GEOTHERMAL STUDIES
Geothermal Resource Investigations,
W74-01273 4B

GERMANY (ELBE ESTUARY)
Relationships Between Turbidity and Hydrographical Factors in Fresh and Brackish Water Region of the Elbe Estuary, (In German),
W74-01260 5B

GERMINATION
Germination Responses of a Texas Population of Ocotillo (Fouquieria splendens Engelm.) To Constant Temperature, Water Stress, pH and Salinity,
W74-01591 2I

GLACIAL ICE
Simultaneous Determination of Manganese, Copper, Arsenic, Cadmium, Antimony and Mercury in Glacial Ice by Radioactivation,
W74-01361 5A

GLACIERS
Problems in Hydrology of Glaciers and Glacierized Areas (Problemy gidrologii lednikov i lednikovykh rayonov),
W74-01132 2C

Acquisition, Storage and Processing of Glacier Inventory Data,
W74-01292 7C

Ice Calving into the Proglacial Generator Lake, Baffin Island, N.W.T., Canada,
W74-01376 2C

Flow of a Valley Glacier with a Solid Friction Law,
W74-01377 2C

Seismic Evidence for Glacier Motion,
W74-01378 2C

On the Formation of Small Marginal Lakes on the Juneau Icefield, South-Eastern Alaska, U.S.A.,
W74-01379 2C

Short-Term Snow Melt and Ablation Derived from Heat- and Mass-Balance Measurements,
W74-01380 2C

Geophysical Measurements of the Thickness of the Malyy Azau Glacier (Geofizicheskiye opredeleniya moshchnosti lednika Malyy Azau),
W74-01390 2C

GLACIOHYDROLOGY
Problems in Hydrology of Glaciers and Glacierized Areas (Problemy gidrologii lednikov i lednikovykh rayonov),
W74-01132 2C

GLUCOSE
Ion-Electrode Based Automatic Glucose Analysis System,
W74-01513 5A

GONYAULAX POLYEDRA
Modifications in Filtration Methods for the Measurement of Inorganic C-14 Uptake by Photosynthesizing Algae,
W74-01425 5A

GONYAULAX TAMARENSIS
Probable Causes for the 1972 Red Tide in the Cape Ann Region of the Gulf of Maine,
W74-01435 5C

GOVERNMENTAL INTERRELATIONS
And Not a Drop to Drink: Water Resources Planning and Administration,
W74-01465 6E

GRADUATE COURSES
Graduate Courses Related to Water Resources.
W74-01119 9A

GRAN PLOTS
Evaluation of the Accuracy of Gran Plots by Means of Computer Calculations. Application to the Potentiometric Titration of the Total Alkalinity and Carbonate Content in Sea Water,
W74-01365 2K

GRAND RIVER (CANADA)
Diatom Flora of the Grand River, Ontario, Canada,
W74-01311 5A

GRAND RIVER (ONT)
Review of Planning for the Grand River Watershed.
W74-01478 5D

GRANTS
Ocean Utilization and Coastal Zone Development.
W74-01281 2L

GRAVIMETRIC ANALYSIS
Geophysical Measurements of the Thickness of the Malyy Azau Glacier (Geofizicheskiye opredeleniya moshchnosti lednika Malyy Azau),
W74-01390 2C

GRAVIMETRY
Geophysical Measurements of the Thickness of the Malyy Azau Glacier (Geofizicheskiye opredeleniya moshchnosti lednika Malyy Azau),
W74-01390 2C

GREAT LAKES
Coastal Processes and Beach Dynamics at Sheboygan, Wisconsin, July, 1972,
W74-01130 2H

International Field Year for the Great Lakes.
W74-01162 2H

Planned Data Storage Methods for the International Field Year for the Great Lakes,
W74-01296 7C

GREAT LAKES REGION
1968 Inventory of Municipal Waste Facilities, A Cooperative State Report: Region 5, Illinois, Indiana, Michigan, Minnesota, Ohio, Wisconsin.
W74-01282 5D

GRISEOFULVIN
Determination of Griseofulvin by Time-Resolved Phosphorimetry,
W74-01224 5A

GROUNDWATER
Recreational Reuse of Municipal Wastewater,
W74-01103 5D

Relationship of Pumping Lift to Economic Use of Groundwater for Irrigation,
W74-01120 4B

Regional Estimate of Brackish- and Saline-Groundwater Yield (Regional'naya otsenka ekspluatatsionnykh resursov solonovatykh i solenykh podzemnykh vod),
W74-01137 4B

A Hybrid Model for Irrigation Planning Using Chance Constrained Programming and Hydrologic Simulation,
W74-01488 4B

Regional Water Resources Studies -- A Spanish Experience,
W74-01622 4B

GROUNDWATER ALLOCATION
On the Optimal Operation of Groundwater Basins: A Calculus of Variations Approach,
W74-01489 4B

GROUNDWATER BASINS
Balance Estimate of Groundwater Resources on the Northwestern Slope of the Caucasus (Balansovaya otsenka resursov podzemnykh vod severo-zapadnogo sklona Bol'shogo Kavkaza),
W74-01136 4B

On the Optimal Operation of Groundwater Basins: A Calculus of Variations Approach,
W74-01489 4B

GROUNDWATER MINING
On the Optimal Operation of Groundwater Basins: A Calculus of Variations Approach,
W74-01489 4B

GROUNDWATER MOVEMENT
Reservoir Mechanism in an Aquifer of Arbitrary Boundary Shape,
W74-01129 2F

Drawdown at Time-Dependent Flowrate,
W74-01155 2F

A Distributed Hydrological Model Based on the Concept of Groundwater Recharge, Transmission, and Discharge,
W74-01233 2F

Numerical Solution of Multiphase Well Flow,
W74-01275 8B

GROUNDWATER RECHARGE
A Distributed Hydrological Model Based on the Concept of Groundwater Recharge, Transmission, and Discharge,
W74-01233 2F

GROUNDWATER RESOURCES
Balance Estimate of Groundwater Resources on the Northwestern Slope of the Caucasus (Balansovaya otsenka resursov podzemnykh vod severo-zapadnogo sklona Bol'shogo Kavkaza),
W74-01136 4B

Ground-Water Yield Potential in Knox County, Tennessee,
W74-01147 7C

Murfee v. Phillips Petroleum Company (Action by Property Owners Against Oil and Gas Lessees for Diminution of Market Value of Land Due to Pollution of Underground Fresh Water Supply).
W74-01459 6E

GROWTH RATES
The Effects of Bacteria on the Growth and Reproduction of Oedogonium Cardiacum,
W74-01422 5C

Some Thoughts on Nutrient Limitation in Algae,
W74-01428 5C

Kinetics of Silicon-Limited Growth in the Marine Diatom Thalassiosira pseudonana Hasle and Heimdal (Equals Cyclotella Nana Hustedt),
W74-01431 5C

Growth Rates of Intertidal Molluscs as Indicators of Effects of Unexpected Incidents of Pollution,
W74-01434 5C

Growth Rates of Sediment-Living Marine Protozoan as a Toxicity Indicator for Heavy Metals,
W74-01529 5A

GROWTH STAGES
Emergence, Reproduction, and Growth of Setipalpian Plecoptera in Southern Ontario,
W74-01359 5A

GROWTH STUDIES
Studies on Methanol-Oxidizing Bacteria. I. Isolation and Growth Studies,
W74-01535 5C

GUAM
Algal Succession on Artificial Reefs in a Marine Lagoon Environment in Guam,
W74-01429 5C

GULF OF MAINE
Probable Causes for the 1972 Red Tide in the Cape Ann Region of the Gulf of Maine,
W74-01435 5C

GULF OF ST. LAWRENCE
Variation of Organochlorine Residue Levels with Age in Gulf of St. Lawrence Harp Seals (Pagophilus Groenlandicus),
W74-01300 5A

HALISCOMENOBACTER HYDROSSIS
Investigations on the Sheathed Bacterium Haliscomenobacter hydrossis Gen.n., Sp.n., Isolated from Activated Sludge,
W74-01539 5B

HALOCINE
On Structure, Entrainment, and Transport in Estuarine Embayments,
W74-01178 2L

HARBORS
Harbor Analog System, Part I - Waves,
W74-01200 2L

Ocean Utilization and Coastal Zone Development.
W74-01281 2L

Sierra Club v. Mason (Action to Enjoin Dredging of New Haven Harbor).
W74-01456 6E

HARDWOOD FORESTS
Die-Back in the Mixed Hardwood Forests of Eastern Victoria: A Preliminary Report,
W74-01251 4A

HARP SEALS
Variation of Organochlorine Residue Levels with Age in Gulf of St. Lawrence Harp Seals (Pagophilus Groenlandicus),
W74-01300 5A

HARVESTS
Two Harvest of Cereal Crops per Year with Irrigation, (In Russian),
W74-01202 3F

HAWAII
New Records of Sargassum Hawaiiensis Doty and Newhouse (Sargassaceae, Phaeophyta), a Deep Water Species,
W74-01349 2I

HEAT BALANCE
Short-Term Snow Melt and Ablation Derived from Heat- and Mass-Balance Measurements,
W74-01380 2C

HEAT RESISTANCE
Thermophilic Ostracod: Aquatic Metazoan with the Highest Known Temperature Tolerance,
W74-01327 5C

HEATED GRAPHITE ATOMIZER
Evaluation of the Use of the Heated Graphite Atomizer for the Routine Determination of Trace Metals in Water,
W74-01316 5A

HEATED WATER
Field and Experimental Studies on the Effects of a Power Station Effluent on Tubificidae (Oligochaeta, Annelida),
W74-01312 5C

HEAVY METALS
Holbrook Cove Survey--A 1972 Student Summer Ocean Engineering Laboratory Research Project.
W74-01131 5B

Investigations on the Changes in the Content of Heavy Metals in Lake Waters of the Masurian Lake District,
W74-01221 5B

Evaluation of the Use of the Heated Graphite Atomizer for the Routine Determination of Trace Metals in Water,
W74-01316 5A

Heavy Metals in Wastewater and Treatment Plant Effluents,
W74-01319 5A

The Importance of Chelating Agents in Natural Waters and Wastewaters,
W74-01326 5B

Critical Study of the APCD-MIBK Extraction System for Atomic Absorption,
W74-01329 5A

New Detector for Ion-Exchange Chromatography,
W74-01343 5A

Simultaneous Determination of Manganese, Copper, Arsenic, Cadmium, Antimony and Mercury in Glacial Ice by Radioactivation,
W74-01361 5A

Uptake of Methyl Mercuric Chloride and Mercuric Chloride by Trout: A Study of Uptake Pathways into the Whole Animal and Uptake by Erythrocytes in Vitro,
W74-01412 5C

Relation Between Total Body Weight and Concentrations of Manganese, Iron, Copper, Zinc, and Mercury in White Muscle of Bluefish (Pomatomus saltatrix) and A Bathyl-Dimersal Fish Antimora Rostrata,
W74-01413 5B

Growth Rates of Sediment-Living Marine Protozoan as a Toxicity Indicator for Heavy Metals,
W74-01529 5A

HELIUM
Isotopic Composition of Helium in Thermal Springs of Iceland (Izotopnyy sostav geliya termal'nykh istochnikov Islandii),
W74-01396 2K

HERBICDIES
Effects of Paraquat on Invertebrates in a Cantebury Stream, New Zealand,
W74-01298 5C

HETEROTROPHIC BACTERIA
Silica Gel Medium for Enumeration of Petroleumlytic Microorganisms in the Marine Environment,
W74-01532 5A

HOGS
Collaborative Study of a Colorimetric Method for Determining Arsenic Residues in Red Meat and Poultry,
W74-01403 5A

HOLBROOK COVE (ME)
Holbrook Cove Survey--A 1972 Student Summer Ocean Engineering Laboratory Research Project.
W74-01131 5B

HOLOPEDIUM GIBBERUM ZADDACH
The Distribution, Composition and Biomass of the Crustacean Zooplankton Population in Western Lake Superior,
W74-01109 5C

HUDSON BAY BASIN
Quality of Surface Waters of the United States, 1968: Parts 4 and 5. St Lawrence River Basin and Hudson Bay and Upper Mississippi River Basins.
W74-01268 2K

HUMAN DISEASES
Metabolic Effects of Drinking Brackish Water,
W74-01632 5C

HUMAN POPULATION
Surface-Water Resources of the USSR and Their Change Resulting from Human Economic Activity (Resursy poverkhnostnykh vod SSSR i ikh izmeneniye pod vliyaniyem khozyaystvennoy deyatel'nosti),
W74-01133 4A

HUMIC COMPOUNDS
Molecule-Size Distribution of Soluble Humic Compounds From Different Natural Waters,
W74-01351 2H

HUMIDITY
The Effect of Substrate Humidity on the Supply of Macroelements to Plants, (In Latvian),
W74-01241 3F

HYDRAULIC PROPERTIES
Effect of Portland Cement on Soil Aggregation and Hydraulic Properties,
W74-01576 2G

HYDROBIOLOGICAL STUDIES
Hydrobiological Studies on the Lednicke Rybniky Ponds: Species Composition and Seasonal Variation in the Abundance of Plankton (In Czech),
W74-01567 5C

HYDROELECTRIC PLANTS
Supersaturation of Nitrogen in Water During Passage Through Hydroelectric Turbines at Mactaquac Dam,
W74-01432 5C

HYDROGEN ION CONCENTRATION
Protozoa from Blue Lake, Raoul Island,
W74-01310 5C

Diatom Flora of the Grand River, Ontario, Canada,
W74-01311 5A

Physiological Ecology of Gelidiella Acerosa (Forsskal) Feldmann et Hamel,
W74-01424 5C

HYDROGEN SULFIDE
Swimming Endurance and Resistance to Copper and Malathion of Bluegills Treated by Long-Term Exposure to Sublethal Levels of Hydrogen Sulfide,
W74-01579 5C

HYDROGEOLOGY
Hydrogeologic Characteristics of the Valley-Fill Aquifer in the Weldona Reach of the South Platte River Valley, Colorado,
W74-01142 4B

Ground-Water Yield Potential in Knox County, Tennessee,
W74-01147 7C

Sensitivity of Groundwater flow Models to Vertical Variability of Aquifer Constants,
W74-01151 4B

HYDROGRAPH ANALYSIS
Hydrograph Simulation Models of the Hillsborough and Alafia Rivers, Florida: A Preliminary Report,
W74-01611 4A

HYDROGRAPHY
Experiments and Hydrographic Surveys Off Sandy Hook, New Jersey (1963),
W74-01199 2L

HYDROLOGIC DATA
Near Real Time Water Resources Data for River Basin Management,
W74-01150 4A

International Field Year for the Great Lakes.
W74-01162 2H

Storage and Retrieval of Groundwater Data,
W74-01291 7C

Storage and Processing of Water Quality Data,
W74-01293 7C

Computer Utilization of Hydrological Data for North Nashwaaksis Representative Basin,
W74-01294 7C

Hydrological Information for the Planning of Water Resources in Developing Countries (L-'Information Hydrologique Pour La Planification des Resources Hydrauliques Dans Les Pays en Voie de Developpement),
W74-01623 7C

Hydrologic Engineering Methods for Water Resources Development. Volume 2. Hydrologic Data Management,
W74-01642 2E

HYDROLOGICAL MODELS
A Distributed Hydrological Model Based on the Concept of Groundwater Recharge, Transmission, and Discharge,
W74-01233 2F

HYDROLYSIS
Ethylenethiourea Degradation,
W74-01340 5B

Thermal and Base-Catalyzed Hydrolysis Products of the Systemic Fungicide, Benomyl,
W74-01504 5B

HYDROSTATIC PRESSURE
Behavioral Responses to Changes in Hydrostatic Pressure and Light During Larval Development of the Lobster Homarus Gammarus,
W74-01436 5C

HYDROXYBENZOTRIFLUORIDE
Thermodynamics of Acid-Base Equilibria. II. Ionization of m- and p-Hydroxybenzotrifluoride and the Concept of Fluorine Double Bond-No Bond Resonance,
W74-01226 2K

ICE COVER
Seasonal Variation of Chemical Parameters in Alaskan Tundra Lakes,
W74-01347 5B

ICEBERGS
Icebergs as a Fresh-Water Source: An Appraisal,
W74-01375 2C

Ice Calving into the Proglacial Generator Lake, Baffin Island, N.W.T., Canada,
W74-01376 2C

ICELAND
Reservoir Mechanism in an Aquifer of Arbitrary Boundary Shape,
W74-01129 2F

Isotopic Composition of Helium in Thermal Springs of Iceland (Izotopnyy sostav geliya termal'nykh istochnikov Islandii),
W74-01396 2K

IDAHO
Report of Attitudes and Opinions of Recreationists Towards Wild and Scenic Rivers: A Case Study of the St. Joe River,
W74-01102 6B

Relationship of Pumping Lift to Economic Use of Groundwater for Irrigation,
W74-01120 4B

Simulating the Behavior of a Multi-Unit, Multi-Purpose Water-Resource System,
W74-01468 6A

ILLINOIS
Water Quality Evaluation of Regionalized Wastewater Systems,
W74-01107 5D

City of Monmouth V. Environmental Protection Agency (EPA Sued the City to Prohibit the City from Continuing to Maintain a Sewage Lagoon System Which was Emitting Noxious Odors).
W74-01462 6E

Comprehensive Water and Sewer Plan, Randolph County, Illinois.
W74-01474 5D

Early Thoughts on Prosecuting Polluters,
W74-01613 5G

A Bill Authorizing the State of Illinois and the Metropolitan Sanitary District of Greater Chicago to Increase the Diversion of Water from Lake Michigan into the Illinois Waterway.
W74-01618 6E

IMPERIAL VALLEY (CALIF)
Geothermal Resource Investigations,
W74-01273 4B

INDIA (GUJARAT)
Economics of Resource Use on Sample Farms of Central Gujarat,
W74-01491 3F

INDIA (GURGAON DISTRICT)
Effect of the Quality of Well Waters on Soils in Gurgaon District,
W74-01252 2G

INDIA (KASHMIR)
A First Record of Red-Water Phenomenon in Kashmir, India,
W74-01564 5C

INDIA (KORBA-M.P.)
The Characteristics of the Raw Waters of Hasdeo River and Dhengur Nala at Korba (M. P.),
W74-01240 5A

INDIANA
Operation of Watercraft.
W74-01455 6E

INDUCED OXYGENATION
Mobile Oxygen Dispersion Craft,
W74-01232 5G

INDUSTRIAL WASTES
The Impact of Water Pollution Abatement on Competition and Pricing in the Alabama Textile Industry,
W74-01101 5G

INFRARED SPECTOPHOTOMETRY
Infrared Studies of Chlorinated Dibenzo-p-Dioxins and Structurally Related Compounds,
W74-01509 5A

INFRARED SPECTRA
Simple Direct Combination of Gas Chromatography and Vapor Phase Infrared Spectrometry,
W74-01355 5A

Infrared Studies of Chlorinated Dibenzo-p-Dioxins and Structurally Related Compounds,
W74-01509 5A

INFRARED SPECTROMETRY
Quantitative Analysis of Aqueous Nitrite/Nitrate Solutions by Infrared Internal Reflectance Spectrometry,
W74-01402 2K

INFRARED SPECTROSCOPY
Application of Infrared Fourier Transform Spectroscopy to Analysis of Micro Samples,
W74-01303 2K

INHIBITION
Inhibition by Fatty Acids of the Biodegradation of Petroleum,
W74-01537 5B

INJECTION
Underground Storage of Texas Playa Lake Waters by Injection Into the Ogallala Formation Under Moderate Pump Pressure,
W74-01627 4B

INJUNCTIVE RELIEF
Sierra Club v. Mason (Action to Enjoin Dredging of New Haven Harbor).
W74-01456 6E

City of Monmouth V. Environmental Protection Agency (EPA Sued the City to Prohibit the City from Continuing to Maintain a Sewage Lagoon System Which was Emitting Noxious Odors).
W74-01462 6E

INSECTICIDES
Gas-Liquid Chromatographic Determination of Chlorpyriphos in Dursban Insecticide Formulations,
W74-01405 5A

INSTITUTIONAL CONSTRAINTS
Consolidation of Irrigation Systems: Phase 1, Engineering, Legal, and Sociological Constraints and/or Facilitators,
W74-01367 3F

Physical System Modelling as a Tool in Water Resource Planning,
W74-01487 2A

INSTREAM AERATION
Mobile Oxygen Dispersion Craft,
W74-01232 5G

INSTRUMENTATION
Comparison of the Snow Resistograph with the Ram Penetrometer,
W74-01381 2C

Small-Volume Solid-Electrode Flow-Through Electrochemical Cells. Preliminary Evaluation Using Pulse Polarographic Techniques,
W74-01445 7B

INTERDISCIPLINARY APPROACH
The Role of Universities in Water Resources Education: The Social Sciences,
W74-01467 6B

INTERNAL GRAVITY WAVES
Longshore Current Generation by Obliquely Incident Internal Waves,
W74-01650 2E

INTERNAL WAVES
Effects of Friction and Surface Tide Angle of Incidence on the Coastal Generation of Internal Tides,
W74-01190 2E

Longshore Current Generation by Obliquely Incident Internal Waves,
W74-01650 2E

INTERNATIONAL WATERS
International Field Year for the Great Lakes.
W74-01162 2H

INTERSTATE COMPACTS
The Interstate Water Pollution Compact--Paper Tiger or Effective Regulatory Device,
W74-01450 5G

INTERTIDAL AREAS
Erosion of Tidal Flats Near Georgetown, British Guiana,
W74-01216 2J

INTERTIDAL SEDIMENTS
The Effect of Microbial Activity Upon the Sedimentary Sulphur Cycle,
W74-01239 5B

INVASION
Effects of Leaf-Footed Bugs on Mesquite Reproduction,
W74-01638 4A

INVERTEBRATE FAUNA
Invertebrate Fauna of Waters of the Station 'Agapa' (Western Taimyr), (In Russian),
W74-01264 2I

INVERTEBRATES
Effects of Paraquat on Invertebrates in a Canterbury Stream, New Zealand,
W74-01298 5C

The Effect of China-Clay Wastes on Stream Invertebrates,
W74-01527 5C

ION EXCHANGE
Salinity Adaptation by Dunaliella Tertiolecta. I. Increases in Carbonic Anhydrase Activity and Evidence for a Light-Dependent Na (Plus)/H (Plus) Exchange,
W74-01427 5C

ION EXCHANGE CHROMATOGRAPHY
New Detector for Ion-Exchange Chromatography,
W74-01343 5A

Fluorometric Quantitation of Gallium in Biological Materials at Nanogram Levels,
W74-01344 2K

An Automated Method for the Dertemination of Trace Amounts of Metal Ions by Ion-Exchange Chromatography. Determination of zinc (II) in Waters,
W74-01438 5A

ION PAIR PARTITION CHROMATOGRAPHY
Ion Pair Partition Chromatography of Organic Ammonium Compounds,
W74-01496 5A

ION SELECTIVE ELECTRODES
Ion Selective Sensors,
W74-01506 5A

IONIZATION
Thermodynamics of Acid-Base Equilibria. II. Ionization of m- and p-Hydroxybenzotrifluoride and the Concept of Fluorine Double Bond-No Bond Resonance,
W74-01226 2K

IONS
Solvent Extraction of Metal 1,10-Phenanthroline Complexes and Concentration of Trace Amounts of Metal Ions Prior to Spectrophotometric or Flame Photometric Determination,
W74-01354 5A

Prediction of the Variation in the Chemistry of a Lake Resulting from an Increase in Soluble Deposits: Application: The Sodium in Lake Neuchatel,
W74-01562 2H

IRAN
Soil and Water Conservation on Arable Lands,
W74-01633 3F

IRAN (ELBURS MT. RANGE)
Profile of the Vegetation of the Elburs Mountain Range (Northern Iran), (In German),
W74-01385 2I

IRON
Adsorption of Colloidal Iron by Bacteria,
W74-01253 5B

Concentrations of Dissolved Forms of Fe, Mn, and Cu in Marine Pore Waters of the Atlantic Basin (Kontsentratsii rastvorennykh form Fe, Mn, i Cu v morskikh, porovykh vodakh basseyna Atlanticheskogo okeana),
W74-01392 2K

Study of Chelated Mixtures of Ferric Ions with Nitrilotriacetic, Sulfo-5-Salicylic and Pyrocatechol-3,5-Disulfonic Acids, (In French),
W74-01440 5A

Metalimnic Layer in Lake Kinneret, Israel,
W74-01598 5C

IRRIGATED CROPS
Nitrates in Soil and Ground Water Beneath Irrigated and Fertilized Crops,
W74-01245 3F

IRRIGATED SOILS
Physical Edaphology. The Physics of Irrigated and Nonirrigated Soils,
W74-01572 2G

System of Treating Irrigated Soil which is Sown with Sugar Beets, (In Russian),
W74-01606 3F

IRRIGATION
Relationship of Pumping Lift to Economic Use of Groundwater for Irrigation,
W74-01120 4B

Economics of Resource Use on Sample Farms of Central Gujarat,
W74-01491 3F

IRRIGATION COST
Crop Rotation Schemes for Optimal Utilization of Agricultural Land,
W74-01596 3F

IRRIGATION DESIGN
Impact of Irrigation Investments on Regional and Urban Development,
W74-01625 6B

IRRIGATION DISTRICTS
Consolidation of Irrigation Systems: Phase 1, Engineering, Legal, and Sociological Constraints and/or Facilitators,
W74-01367 3F

IRRIGATION EFFICIENCY
Agricultural Water Demand in North Carolina: Phases I and II,
W74-01112 6D

IRRIGATION PROGRAMS
Impact of Irrigation Investments on Regional and Urban Development,
W74-01625 6B

IRRIGATION SYSTEMS
Consolidation of Irrigation Systems: Phase 1, Engineering, Legal, and Sociological Constraints and/or Facilitators,
W74-01367 3F

A Hybrid Model for Irrigation Planning Using Chance Constrained Programming and Hydrologic Simulation,
W74-01488 4B

IRRIGATION WATER
Irrigation Waters of the Indus Plains and Their Salt Load,
W74-01639 3C

ISLANDS
Alluvion, Islands, and Sand Bars,
W74-01612 6E

ISOHALINE SURFACES
Tidal Period Oscillations of an Isohaline Surface Off the Mouth of the Columbia River,
W74-01188 2L

ISOLATION
Studies on Methanol-Oxidizing Bacteria. I. Isolation and Growth Studies,
W74-01535 5C

Investigations on the Sheathed Bacterium Haliscomenobacter hydrossis Gen.n., Sp.n., Isolated from Activated Sludge,
W74-01539 5B

Bacteriology of Activated Sludge, in Particular the Filamentous Bacteria,
W74-01540 5B

Rhodopseudomonas Sulfidophila, Nov. Spec., A New Species of the Purple Nonsulfur Bacteria,
W74-01544 5B

Shigella Sonnei Isolated from Well Water,
W74-01551 5A

ISOPRENOIDS
C 18-Isoprenoid Ketone in Recent Marine Sediment,
W74-01301 5A

ISOTOPE FRACTIONATION
Isotope Fractionation of N-15 and N-14 in Microbiological Nitrogen Transformations: A Theoretical Model,
W74-01541 5B

ISOTOPE STUDIES
Use of Isotopic Methods to Determine Present Rates of Snow Accumulation in Antarctica (Ispol'zovaniye izotopnykh metodov dlya opredeleniya sovremennoy skorsti nakopleniya snega v Antarktide),
W74-01393 2C

Isotopic Composition of Oxygen and Hydrogen in Sulfide Waters of the Sochi-Adler Artesian Basin (Izotopnyy sostav kisloroda i vodorada sul'fidnykh vod Sochi-Adlerskogo artezianskogo basseyna),
W74-01394 2K

Isotopic Composition of Helium in Thermal Springs of Iceland (Izotopnyy sostav geliya termal'nykh istochnikov Islandii),
W74-01396 2K

ISRAEL
Fisheries and Fish Culture in Israel in 1971,
W74-01570 6B

ISRAEL (ARAVA RIFT VALLEY)
Metabolic Effects of Drinking Brackish Water,
W74-01632 5C

ISRAEL (LAKE KINNERET)
Metalimnic Layer in Lake Kinneret, Israel,
W74-01598 5C

ITALY (BOGNANCO VALLEY)
Notes on the Dynamics of the Reproductive Activity of Arctodiaptomus Bacillifer in High Altitude Alpine Lakes,
W74-01209 2H

JAPAN
Quaternary Shorelines of the Seas of Okhotsk and Japan (Chetvertichnyye beregovyye linii Okhotskogo i Yaponskogo morey),
W74-01391 2J

JAPAN (LAKE BIWA)
Some Sources of Error in the 14C Method for Estimating Primary Productivity and Their Relationship to Light Intensity During Incubation,
W74-01217 2H

JAPAN (TOKYO BAY)
Silica Gel Medium for Enumeration of Petroleumlytic Microorganisms in the Marine Environment,
W74-01532 5A

JETS
Flow Visualization in Free Shear Layers,
W74-01271 8B

JUDICIAL DECISIONS
In Re Spring Valley Development (Challenge to Order of Environmental Improvement Commission Denying Development Along Side of Pond).
W74-01454 6E

Sierra Club v. Mason (Action to Enjoin Dredging of New Haven Harbor).
W74-01456 6E

Florida Pollution Statute Infringes Upon Exclusive Federal Maritime Legislative Domain, The American Waterways Operators, Inc. v. Askew, 335 F. Supp. 1241 (M.D. Fla).
W74-01460 5G

City of Monmouth V. Environmental Protection Agency (EPA Sued the City to Prohibit the City from Continuing to Maintain a Sewage Lagoon System Which was Emitting Noxious Odors).
W74-01462 6E

JUNEAU ICEFIELD (ALAS)
On the Formation of Small Marginal Lakes on the Juneau Icefield, South-Eastern Alaska, U.S.A.,
W74-01379 2C

JURISDICTION
Florida Pollution Statute Infringes Upon Exclusive Federal Maritime Legislative Domain, The American Waterways Operators, Inc. v. Askew, 335 F. Supp. 1241 (M.D. Fla).
W74-01460 5G

KANSAS
Population Dynamics of Pond Zooplankton, I. Diaptomus pallidus Herrick,
W74-01502 5C

KARST
Areas with Abundant Sinkholes in Knox County, Tennessee,
W74-01270 7C

KENDALL'S TAU
Extended Tables for Kendall's Tau,
W74-01497 7C

KENT COUNTY (TEX)
Recognition of Natural Brine by Electrical Soundings Near the Salt Fork of the Brazos River, Kent and Stonewall Counties, Texas,
W74-01370 2F

KENTUCKY
A Growing Community: 1973 Update, (Lexington, Kentucky).
W74-01484 5D

KENTUCKY (WILGREEN LAKE)
Some Observations on Bacterial Populations in Wilgreen Lake, Madison, KY.,
W74-01242 5B

KETONES
C 18-Isoprenoid Ketone in Recent Marine Sediment,
W74-01301 5A

Critical Study of the APCD-MIBK Extraction System for Atomic Absorption,
W74-01329 5A

Distribution Studies of Radium and Other Metallic Elements Between Thenoyltrifluoroacetone in Methyl Isobutyl Ketone and Aqueous Solutions,
W74-01494 5A

KINEMATICS (SEDIMENT TRANSPORT)
Experimental Investigation of the Effect of Saltating Sediments on Kinematics of Flow (Eksperimental'noye issledovaniye vliyaniya sal'tiruyushchikh nanosov na kinematiku potoka),
W74-01134 2J

KINETICS
Mechanism of NTA Degradation By a Bacterial Mutant,
W74-01515 5B

KNOX COUNTY (TENN)
Engineering Characteristics of Overburden in Knox County, Tennessee,
W74-01143 7C

Overburden Related to Type of Bedrock and Engineering Characteristics of the Bedrock, Knox County, Tennessee,
W74-01144 7C

Categories of Relative Feasibility for Septic-Tank Filter Fields in Knox County, Tennessee,
W74-01145 7C

Soil Association Map of Knox County, Tennessee.
W74-01146 7C

Ground-Water Yield Potential in Knox County, Tennessee,
W74-01147 7C

Areas of Possible Flooding in Knox County, Tennessee,
W74-01269 7C

Areas with Abundant Sinkholes in Knox County, Tennessee,
W74-01270 7C

LABORATORY EQUIPMENT
Simple Direct Combination of Gas Chromatography and Vapor Phase Infrared Spectrometry,
W74-01355 5A

LAGOONS
The Role of Micro-Organisms in Waste Tip-Lagoon Systems Purifying Coke-Oven Effluents,
W74-01647 5D

LAKE ERIE
Currents at Toledo Harbor,
W74-01214 2H

LAKE ICE
Ice Calving into the Proglacial Generator Lake, Baffin Island, N.W.T., Canada,
W74-01376 2C

LAKE JACKSON (FLA)
Changes in Species Composition of Phytoplankton Due to Enrichment by N, P, and Si of Water From a North Florida Lake,
W74-01503 5C

LAKE MEAD
A Mathematical Model of Primary Productivity and Limnological Patterns in Lake Mead,
W74-01630 5C

LAKE MICHIGAN
Coastal Processes and Beach Dynamics at Sheboygan, Wisconsin, July, 1972,
W74-01130 2H

A Profile of the Four Moment Measures Perpendicular to a Shore Line, South Haven, Michigan,
W74-01184 2H

Chlorinated Hydrocarbon Insecticides in Sediments of Southern Lake Michigan,
W74-01397 5B

LAKE RESTORATION
Swedish Lake Restoration Program Gets Results,
W74-01262 5G

LAKE SEDIMENTS
The Oxygen Status of Lake Sediments,
W74-01266 2J

Chlorinated Hydrocarbon Insecticides in Sediments of Southern Lake Michigan,
W74-01397 5B

LAKE STAGES
A Mathematical Model of Primary Productivity and Limnological Patterns in Lake Mead,
W74-01630 5C

LAKE SUPERIOR
The Distribution, Composition and Biomass of the Crustacean Zooplankton Population in Western Lake Superior,
W74-01109 5C

Shifting Offshore Bars and Harbor Shoaling,
W74-01191 2J

LAKES
On the Formation of Small Marginal Lakes on the Juneau Icefield, South-Eastern Alaska, U.S.A.,
W74-01379 2C

Mohawk Lake Study, Brantford, Ontario.
W74-01476 2J

Growth and Buoyancy of Microcystis aeruginosa Kutz. Emend. Elenkin in a Shallow Eutrophic Lake,
W74-01518 5C

LAMINARIA SINCLAIRII
Observations on the Ecology of Laminaria Sinclairii on Three Northern Oregon Beaches,
W74-01423 5C

LAMPSILIS-RADIATA
Distribution and Morphological Variation of Lampsilis radiata (Pelecypoda, Unionidae) in Some Central Canadian Lakes: A Multivariate Statistical Approach,
W74-01608 2H

LAND USE
Land Use and Mapping,
W74-01165 4A

Multidisciplinary/Regional Resource Surveys,
W74-01171 7B

Inventory and Evaluation of Information on Delaware Bay, Volume 2.
W74-01369 6E

A Linear Programming Approach to Floodplain Land Use Planning in Urban Areas,
W74-01490 3D

Concept-Scale Interaction with the Semantic Differential Technique,
W74-01644 6B

LAND USE PLANNING
Floodland and Shoreland Development Guide.
W74-01483 4A

LAND USE/WATER
Relating Comprehensive Sewer and Water Plans to the County Land Use Plan. Goals, Policies and Standards.
W74-01473 5D

LANDFILLS
A Cost-Effectiveness Study and Analysis of Municipal Refuse Disposal Systems,
W74-01631 5E

LARVAE
Behavioral Responses to Changes in Hydrostatic Pressure and Light During Larval Development of the Lobster Homarus Gammarus,
W74-01436 5C

LAUDERIA
Modifications in Filtration Methods for the Measurement of Inorganic C-14 Uptake by Photosynthesizing Algae,
W74-01425 5A

LEAD
The Determination of Lead and Nickel by Atomic-Absorption Spectrometry with a Flameless Wire Loop Atomizer,
W74-01363 5A

Modified Delves Cup Atomic Absorption Determination of Lead in Blood,
W74-01415 5A

Ion Selective Sensors,
W74-01506 5A

Analytical Applications of Pulsed Voltammetric Stripping at Thin Film Mercury Electrodes,
W74-01514 5A

Particulate Metals in Waters of Sorfjord West Norway,
W74-01528 5B

LEAF TEMPERATURE
Leaf Temperatures, Diffusion Resistances, and Transpiration,
W74-01254 2D

LEAVES
Leaves as Source of Phosphorus,
W74-01407 5B

LEBANON (SINBAD BEACH)
Sand Beach Bacteria: Enumeration and Characterization,
W74-01444 5A

LEGAL ASPECTS
Consolidation of Irrigation Systems: Phase 1, Engineering, Legal, and Sociological Constraints and/or Facilitators,
W74-01367 3F

Marine Pollution: A Critique of Present and Proposed International Agreements and Institutions--A Suggested Global Oceans' Environmental Regime,
W74-01449 5G

In Re Spring Valley Development (Challenge to Order of Environmental Improvement Commission Denying Development Along Side of Pond).
W74-01454 6E

Operation of Watercraft.
W74-01455 6E

Early Thoughts on Prosecuting Polluters,
W74-01613 5G

LEGISLATION
The Shipowner and Oil Pollution Liability,
W74-01447 5G

Virginia Natural Resources Law and the New Virginia Wetlands Act,
W74-01448 2L

Water Pollution in Louisiana: An Attempt at Control,
W74-01451 5G

A Bill to Establish the Canaveral National Seashore in the State of Florida.
W74-01457 6E

A Bill to Establish in the State of California the Santa Monica Mountain and Seashore National Urban Park.
W74-01458 6E

The Porter-Cologne Water Quality Control Act, and Related Water Code Sections (Containing the 1971 Amendments).
W74-01461 5G

Alluvion, Islands, and Sand Bars,
W74-01612 6E

A Bill to be Known as the 'River Basin Waste Treatment Authority Act of 1973'.
W74-01614 6E

Federal Water Pollution Control Act Amendments of 1972.
W74-01615 5G

A Bill to Aid the Conservation of Natural Water Resources.
W74-01616 6E

A Bill to Provide for the Establishment of the Guana River National Park in the State of Florida.
W74-01617 6E

A Bill Authorizing the State of Illinois and the Metropolitan Sanitary District of Greater Chicago to Increase the Diversion of Water from Lake Michigan into the Illinois Waterway.
W74-01618 6E

Designating a Segment of the St. Croix as Part of Wild and Scenic Rivers System.
W74-01619 6E

LEMNA MINOR
Nutrient Removal Using Lemna Minor,
W74-01321 5C

LETHAL LIMIT
Sensitivity of Three Selected Bacterial Species to Ozone,
W74-01553 5F

LETHAL TEMPERATURE
Thermophilic Ostracod: Aquatic Metazoan with the Highest Known Temperature Tolerance,
W74-01327 5C

LETTUCE
The Effect of Substrate Humidity on the Supply of Macroelements to Plants, (In Latvian),
W74-01241 3F

LEXINGTON (KY)
A Growing Community: 1973 Update, (Lexington, Kentucky).
W74-01484 5D

LIFE CYCLES
Emergence, Reproduction, and Growth of Setipalpian Plecoptera in Southern Ontario,
W74-01359 5A

LIFE HISTORY STUDIES
Emergence, Reproduction, and Growth of Setipalpian Plecoptera in Southern Ontario,
W74-01359 5A

LIGAND EXCHANGE METHOD
The Determination of Organo-Sulfur Compounds by Thin-Layer Chromatography Via a Ligand-Exchange Precess,
W74-01439 5A

LIGANDS
Chemical Constants of Metal Complexes from a Complexometric Titration Followed with Anodic Stripping Voltammetry,
W74-01332 5A

LIGHT INTENSITY
Techniques for Measuring Light Absorption Scattering, and Particle Concentrations in Water,
W74-01283 7B

LIGNIN
Fate of Lignin in Kraft Effluent Treatment,
W74-01320 5B

LIMESTONE DEPOSITS
Study of the Speed of Water Circulation in a Water-Bearing Limestone Deposit by Tracing Tests (La Serriere River Basin/NE),
W74-01563 2F

LIMESTONES
Chemical Relationships Between Surface Water and the Ground in South Florida,
W74-01153 2K

LIMITING FACTORS
Some Thoughts on Nutrient Limitation in Algae,
W74-01428 5C

LINDANE
Determination of Chlorinated Pesticides in Whole Blood,
W74-01417 5A

LINEAR PROGRAMMING
Linear Programming and Channel Flow Identification,
W74-01277 8B

A Hybrid Model for Irrigation Planning Using Chance Constrained Programming and Hydrologic Simulation,
W74-01488 4B

A Linear Programming Approach to Floodplain Land Use Planning in Urban Areas,
W74-01490 3D

LINEAR SURPLUS-PRODUCTION
Population Biomass, Number of Individuals, Average Individual Weight, and the Linear Surplus Production Model,
W74-01593 2I

LIQUID-DRESSED PLANTS
Effect of an Increased Water Rate in Liquid Dressing on Sugar Beet Yield, (In Russian),
W74-01211 3F

LITMUS MILK REACTION
Litmus Milk Reaction as a Distinguishing Feature Between Streptococcus Faecalis of Human and Non-Human Origins,
W74-01549 5A

LITTORAL DRIFT
Shifting Offshore Bars and Harbor Shoaling,
W74-01191 2J

LOBSTERS
Behavioral Responses to Changes in Hydrostatic Pressure and Light During Larval Development of the Lobster Homarus Gammarus,
W74-01436 5C

LOGGING (RECORDING)
Prediction of Well Development Possibilities in Delaware by means of Calibrated Gamma-Ray Logs,
W74-01106 4B

LONG HARBOUR (NEWFOUNDLAND)
Growth Rates of Intertidal Molluscs as Indicators of Effects of Unexpected Incidents of Pollution,
W74-01434 5C

LONG WAVES
Note on the Equations of Long Waves Over an Uneven Bottom,
W74-01189 2E

LONGITUDINAL DISTRIBUTION
Longitudinal Distribution and Habitat of the Fishes of Mason Creek, an Upper Roanoke River Drainage Tributary, Virginia,
W74-01592 2I

LONGSHORE CURRENTS
Longshore Current Velocity: A Review of Theory and Data,
W74-01187 2E

The Generation of Longshore Currents on a Plane Beach,
W74-01208 2L

LOUISIANA
Water Pollution in Louisiana: An Attempt at Control,
W74-01451 5G

Alluvion, Islands, and Sand Bars,
W74-01612 6E

LOW-FLOW AUGMENTATION
Review of Planning for the Grand River Watershed.
W74-01478 5D

LUBBOCK (TEX)
Recreational Reuse of Municipal Wastewater,
W74-01103 5D

LYOPHILIZATION
Viability of Lyophilized Microorganisms after Storage,
W74-01538 5C

MACROINVERTEBRATES
Effect of Spoil Disposal on Benthic Invertebrates,
W74-01420 5C

Benthic Macroinvertebrates as Indexes of Water Quality in Whetstone Creek, Morrow County, Ohio (Scioto River Basin),
W74-01517 5B

MACROPHYTES
Growth Rate and Development of the Root/Shoot Ratio in Reedswamp Macrophytes Grown in Winter Hydroponic Cultures,
W74-01346 2I

MACRORETICULAR CATION EXCHANGE RESINS
Gas-Solid Chromatography on Macroreticular Cation Exchange Resins,
W74-01495 5A

MACTAQUAC DAM (N.B.)
Supersaturation of Nitrogen in Water During Passage Through Hydroelectric Turbines at Mactaquac Dam,
W74-01432 5C

MAINE
Holbrook Cove Survey--A 1972 Student Summer Ocean Engineering Laboratory Research Project.
W74-01131 5B

In Re Spring Valley Development (Challenge to Order of Environmental Improvement Commission Denying Development Along Side of Pond).
W74-01454 6E

Further Studies of Fish Predation on Salmon Stocked in Maine Lakes,
W74-01603 2H

MALATHION
The Effect of Aldrin on Water Balance in the Freshwater Pulmonate Gastropod (Biomphalaria glabrata),
W74-01525 5C

Swimming Endurance and Resistance to Copper and Malathion of Bluegills Treated by Long-Term Exposure to Sublethal Levels of Hydrogen Sulfide,
W74-01579 5C

MALAYSIA (MALACCA RIVER)
A Chemical Survey of the Malacca River,
W74-01600 2K

MALEIC HYDRAZIDE
Determination of Meleic Hydrazide Residues in Tobacco and Vegetables,
W74-01418 5A

MANAGEMENT
Application of Mathematical Modelling to Water Quality Management,
W74-01486 5B

A Linear Programming Approach to Floodplain Land Use Planning in Urban Areas,
W74-01490 3D

Water Resources Planning Mozambique (La Planification Des Resources en Eau au Mozamique),
W74-01629 6B

MANGANESE
Concentrations of Dissolved Forms of Fe, Mn, and Cu in Marine Pore Waters of the Atlantic Basin (Kontsentratsii rastvorennykh form Fe, Mn, i Cu v morskikh, porovykh vodakh basseyna Atlanticheskogo okeana),
W74-01392 2K

MANGANESE SULFUR BACTERIA
Metalimnic Layer in Lake Kinneret, Israel,
W74-01598 5C

MANITOBA (CANADA)
Single-Velocity Method in Measuring Discharge,
W74-01161 2C

MAPLE CANKER
The Relationship Between Maple Canker Incidence and Precipitation,
W74-01602 2I

MAPPING
Ground-Water Yield Potential in Knox County, Tennessee,
W74-01147 7C

Agriculture, Forestry, Range Resources,
W74-01164 3F

Land Use and Mapping,
W74-01165 4A

Areas of Possible Flooding in Knox County, Tennessee,
W74-01269 7C

MARINE ALGAE
Concentrations of Plutonium, Cobalt, and Silver Radionuclides in Selected Pacific Seaweeds,
W74-01297
New Records of Sargassum Hawaiiensis Doty and Newhouse (Sargassaceae, Phaeophyta), a Deep Water Species,
W74-01349 2I

Sublittoral Benthic Marine Algae of Southern Cape Cod and Adjacent Islands: Pseudolithoderma Paradoxum Sp. Nov. (Ralfsiaceae, Ectocarpales),
W74-01350 5A

Observations on the Ecology of Laminaria Sinclairii on Three Northern Oregon Beaches,
W74-01423 5C

Physiological Ecology of Gelidiella Acerosa (Forsskal) Feldmann et Hamel,
W74-01424 5C

MARINE FISH
The Amount of Space Available for Marine and Freshwater Fishes,
W74-01561 2I

MARKOV PROCESSES
A Stochastic Model of Streamflow Based on the Theory of Functions of Markov Processes,
W74-01123 2E

MARYLAND
Estuarine Circulation Induced by Diffusion,
W74-01222 2L

MASS SPECTROMETRY
Versatile Computer Generated Variable Accelerating Voltage Circuit for Magnetically Scanned Mass Spectrometers. Use for Assays in the Picogram Range and for Assays of Stable Isotope Tracers,
W74-01335 2K

MASSACHUSETTS
Graduate Courses Related to Water Resources.
W74-01119 9A

Valuation of Visual-Cultural Benefits from Freshwater Wetlands in Massachusetts,
W74-01643 6B

MATHEMATICAL MODELS
Mathematical Modeling of Nutrient - Transport,
W74-01121 5B

Reservoir Mechanism in an Aquifer of Arbitrary Boundary Shape,
W74-01129 2F

Sensitivity of Groundwater flow Models to Vertical Variability of Aquifer Constants,
W74-01151 4B

Computer Simulation of Estuarial Networks,
W74-01197 2L

Hydrodynamic Modeling of Two-Dimensional Watershed Flow,
W74-01278 2A

Some Thoughts on Nutrient Limitation in Algae,
W74-01428 5C

Computer Identification of Bacteria on the Basis of Their Antibiotic Susceptibility Patterns,
W74-01443 5A

Application of Mathematical Modelling to Water Quality Management,
W74-01486 5B

A Mathematical Model of Primary Productivity and Limnological Patterns in Lake Mead,
W74-01630 5C

MATRIX EFFECTS
Emission Spectrometric Determination of Trace Metals in Biological Tissues,
W74-01546 5A

MAXIMUM PERMISSIBLE CONCENTRATION
Substantiation of the Maximum Permissible Concentration of ANP-2 Compound in Water Bodies, (In Russian),
W74-01581 5G

MEASUREMENT
Geophysical Measurements of the Thickness of the Malyy Azau Glacier (Geofizicheskiye opredeleniya moshchnosti lednika Malyy Azau),
W74-01390 2C

MECHANICAL EQUIPMENT
Automatic Samplers for Sewage and Effluents,
W74-01306 5A

MEMBRANE ELECTRODES
An Oxygen Electrode Microrespirometer,
W74-01419 5A

MEMBRANE FILTER CHAMBERS
Survival of Coliform Bacteria in Natural Waters: Field and Laboratory Studies with Membrane-Filter Chambers,
W74-01250 5B

MEMBRANE FILTERS
Comparison of Gelman and Millipore Membrane Filters for Enumerating Fecal Coliform Bacteria,
W74-01554 5A

MENYANTHES-TRIFOLIATA
Batrachospermum Vagum Ag. in the Szczecin Pomerania, A Locality New to Poland, (In Polish),
W74-01219 2H

MERCURY
Natural Dispersion of Mercury from Puhipuhi, Northland, New Zealand,
W74-01307 5B

Determination of Mercury After Room Temperature Digestion by Flameless Atomic Absorption,
W74-01315 5A

Literature on Mercury: Availability of English Translations,
W74-01323 5A

Mercury in the Environment--A Global Review Including Recent Studies in the Delaware Bay Region,
W74-01373 5B

Concentrations of Some Trace Metals in Pelagic Organisms and of Mercury in Northeast Atlantic Ocean Water,
W74-01523 5C

MERCURY COMPOUNDS
Uptake of Methyl Mercuric Chloride and Mercuric Chloride by Trout: A Study of Uptake Pathways into the Whole Animal and Uptake by Erythrocytes in Vitro,
W74-01412 5C

MESH SIZES
Assessment of Two Mesh Sizes for Interpreting Life Cycles, Standing Crop, and Percentage Composition of Stream Insects,
W74-01601 2I

MESIC HABITAT
Seasonal Water Potential Patterns in the Mountain Brush Zone, Utah,
W74-01588 2I

MESQUITE
Effects of Leaf-Footed Bugs on Mesquite Reproduction,
W74-01638 4A

METABOLIC PATHWAYS
Uptake of Methyl Mercuric Chloride and Mercuric Chloride by Trout: A Study of Uptake Pathways into the Whole Animal and Uptake by Erythrocytes in Vitro,
W74-01412 5C

METABOLISM
2,4-dichlorophenoxyacetate metabolism by Arthrobacter sp.: Accumulation of a Chlorobutenolide,
W74-01550 5B

Biodegradation of Phenylmercuric Acetate by Mercury-Resistant Bacteria,
W74-01555 5B

METABOLITES
Mechanism of NTA Degradation By a Bacterial Mutant,
W74-01515 5B

Separation and Identification of Carbofuran, Its Metabolites, and Conjugates Found in Fish Exposed to Ring C-14-Labeled Carbofuran Using ITLC Silica Gel Strips,

METALIMNIC LAYER
Metalimnic Layer in Lake Kinneret, Israel,
W74-01598 5C

METALS
Evaluation of the Use of the Heated Graphite Atomizer for the Routine Determination of Trace Metals in Water,
W74-01316 5A

A Comparison of Fast Destruction Methods for the Determination of Trace Metals in Biological Materials,
W74-01317 5A

Semiintegral Electroanalysis: Shapes of Neopolarograms,
W74-01333 5A

Investigation of Spectral Overlap of the Neon 359.352-nm and Chromium 359.349-nm Spectral Lines in Atomic Absorption and Atomic Fluorescence Spectrometry of Chromium,
W74-01337 2K

Lateral Diffusion Interferences in Flame Atomic Absorption and Emission Spectrometry,
W74-01342 2K

Concentrations of Dissolved Forms of Fe, Mn, and Cu in Marine Pore Waters of the Atlantic Basin (Kontsentratsii rastvorennykh form Fe, Mn, i Cu v morskikh, porovykh vodakh basseyna Atlanticheskogo okeana),
W74-01392 2K

Element Constitution of Selected Aquatic Vascular Plants from Pennsylvania: Submersed and Floating Leaved Species and Rooted Emergent Species,
W74-01526 5A

METALS COMPLEXES
Pathways of Trace Elements in Arctic Lake Ecosystems,
W74-01401 5B

METEOROLOGICAL DATA
Processing and Storage of Hydrometeorological Data in the Atmospheric Environment Service,
W74-01290 7C

Climatological Stations in California, 1971,
W74-01383 7C

Probable Causes for the 1972 Red Tide in the Cape Ann Region of the Gulf of Maine,
W74-01435 5C

METHANE BACTERIA
Studies on Methanol-Oxidizing Bacteria. I. Isolation and Growth Studies,
W74-01535 5C

METHANOL
Rapid Gas Chromatographic Method for Determination of Residual Methanol in Sewage,
W74-01410 5A

Studies on Methanol-Oxidizing Bacteria. I. Isolation and Growth Studies,
W74-01535 5C

METHEMOGLOBIN
Epidemiological and Toxicological Aspects of Nitrates and Nitrites in the Environment,
W74-01386 5C

METHODOLOGY
Novel Method of Raman Data Acquisition,
W74-01330 2K

Simple Inexpensive Freeze-Drying Procedure,
W74-01339 7B

Determination of Low Concentrations of Cobalt in Plant Material by Atomic Absorption Spectrophotometry,
W74-01356 2K

A Procedure for the Estimation of Microgram Quantities of Triton X-100,
W74-01360 5A

Simulating the Behavior of a Multi-Unit, Multi-Purpose Water-Resource System,
W74-01468 6A

River Basin Planning in the United States,
W74-01472 6B

Double Pulse Coulostatics,
W74-01511 2K

Comparison of Gelman and Millipore Membrane Filters for Enumerating Fecal Coliform Bacteria,
W74-01554 5A

MEXICO
Impact of Irrigation Investments on Regional and Urban Development,
W74-01625 6B

MICROANALYSIS
Application of Infrared Fourier Transform Spectroscopy to Analysis of Micro Samples,
W74-01303 2K

MICROBIAL ACTIVITY
The Effect of Microbial Activity Upon the Sedimentary Sulphur Cycle,
W74-01239 5B

MICROBIAL DEGRADATION
Studies of Rapid NTA-Utilizing Bacterial Mutant,
W74-01348 5B

Mechanism of NTA Degradation By a Bacterial Mutant,
W74-01515 5B

Degradative Versatility of Corynebacterium pseudodiphtheriticum NCIB 10803 which uses Amides as Carbon Source,
W74-01536 5B

Inhibition by Fatty Acids of the Biodegradation of Petroleum,
W74-01537 5B

Isotope Fractionation of N-15 and N-14 in Microbiological Nitrogen Transformations: A Theoretical Model,
W74-01541 5B

2,4-dichlorophenoxyacetate metabolism by Arthrobacter sp.: Accumulation of a Chlorobutenolide,
W74-01550 5B

Biodegradation of Phenylmercuric Acetate by Mercury-Resistant Bacteria,
W74-01555 5B

The Role of Micro-Organisms in Waste Tip-Lagoon Systems Purifying Coke-Oven Effluents,
W74-01647 5D

MICROCYSTIS-AERUGINOSA

Role of Silt in Microcystis Aeruginosa Development, (In Russian),
W74-01368 5C

Growth and Buoyancy of Microcystis aeruginosa Kutz. Emend. Elenkin in a Shallow Eutrophic Lake,
W74-01518 5C

MIDGES

Bottom Fauna as an Indicator of Water Quality in Sweden's Large Lakes (Lakes Malaren, Vattern and Vanern),
W74-01531 5B

MINE WASTES

Holbrook Cove Survey--A 1972 Student Summer Ocean Engineering Laboratory Research Project.
W74-01131 5B

MINERAL CYCLING

Hydrologic Nutrient Cycle Interactions in Undisturbed and Manipulated Ecosystems (Watersheds),
W74-01110 4C

MINERALS

The Characteristics of the Raw Waters of Hasdeo River and Dhengur Nala at Korba (M. P.),
W74-01240 5A

The Action of Mineral Fertilization on Pasture Herbage, Irrigated with Sewage, (In Russian),
W74-01559 5D

MINNESOTA

Designating a Segment of the St. Croix as Part of Wild and Scenic Rivers System.
W74-01619 6E

MISSISSIPPI

Nitrate Reduction in Soils: Effect of Soil Moisture Tension,
W74-01583 2G

Tallahala Creek Lake, Pascagoula River Basin. Mississippi (Final Environmental Impact Statement).
W74-01610 4A

MISSISSIPPI RIVER BASIN

Quality of Surface Waters of the United States, 1968: Parts 4 and 5. St Lawrence River Basin and Hudson Bay and Upper Mississippi River Basins.
W74-01268 2K

MIXING

The Equations of Continuity for Seawater and River Water in Estuaries,
W74-01207 2L

MIXTURES

Quantitative Analysis of Aqueous Nitrite/Nitrate Solutions by Infrared Internal Reflectance Spectrometry,
W74-01402 2K

MODEL STUDIES

Mathematical Modeling of Nutrient - Transport,
W74-01121 5B

The Generation of Longshore Currents on a Plane Beach,
W74-01208 2L

Wave-Induced Water Particle Motion Measurements,
W74-01285 2E

Isotope Fractionation of N-15 and N-14 in Microbiological Nitrogen Transformations: A Theoretical Model,
W74-01541 5B

Population Biomass, Number of Individuals, Average Individual Weight, and the Linear Surplus Production Model,
W74-01593 2I

MOISTURE STRESS

Effect of Moisture Stress on Soybean (Glycine max (L.) Merr.),
W74-01599 3F

MOLECULE-SIZE DISTRIBUTION

Molecule-Size Distribution of Soluble Humic Compounds From Different Natural Waters,
W74-01351 2H

MONITORING

Environment Surveys,
W74-01167 5A

Monitoring Channel Catfish Use of a Demand Feeder,
W74-01237 8I

Automated Rapid Scan Instrument for Spectroelectrochemistry in the Visible Region,
W74-01331 2K

Application of Mathematical Modelling to Water Quality Management,
W74-01486 5B

Sr-87/Sr-86 Ratios and Total Strontium Concentrations in Surface Waters of the Scioto River Drainage Basin, Ohio,
W74-01516 5B

MONTANA (MIDDLE CREEK)

Survival of Coliform Bacteria in Natural Waters: Field and Laboratory Studies with Membrane-Filter Chambers,
W74-01250 5B

MORIDS

Relation Between Total Body Weight and Concentrations of Manganese, Iron, Copper, Zinc, and Mercury in White Muscle of Bluefish (Pomatomus saltatrix) and A Bathyl-Dimersal Fish Antimora Rostrata,
W74-01413 5B

MORPHOLOGICAL VARIATION

Distribution and Morphological Variation of Lampsilis radiata (Pelecypoda, Unionidae) in Some Central Canadian Lakes: A Multivariate Statistical Approach,
W74-01608 2H

MOSQUITO POPULATION

Some Influences of Aquatic Vegetation on the Species and Number of Culicidae (Diptera) in Small Pools of Water,
W74-01609 2I

MOSQUITOFISH

Distribution of Alkyl Arsenicals in Model Ecosystem,
W74-01409 5C

MOUNTAIN BRUSH ZONE

Seasonal Water Potential Patterns in the Mountain Brush Zone, Utah,
W74-01588 2I

MOVEMENT

Wave-Induced Water Particle Motion Measurements,
W74-01285 2E

Seismic Evidence for Glacier Motion,
W74-01378 2C

MOZAMBIQUE

Water Resources Planning Mozambique (La Planification Des Resources en Eau au Mozamique),
W74-01629 6B

MULTIDISCIPLINARY

The Role of Universities in Water Resources Education: The Social Sciences,
W74-01467 6B

MULTIELEMENTAL ANALYSIS

Simultaneous Determination of Manganese, Copper, Arsenic, Cadmium, Antimony and Mercury in Glacial Ice by Radioactivation,
W74-01361 5A

MULTIPHASE FLOW

Numerical Solution of Multiphase Well Flow,
W74-01275 8B

MULTIPLE-PURPOSE PROJECTS

Physical System Modelling as a Tool in Water Resource Planning,
W74-01487 2A

MULTISPECTRAL SCANNER IMAGERY

Techniques for Measuring Light Absorption Scattering, and Particle Concentrations in Water,
W74-01283 7B

MULTIVARIATE ANALYSIS

Diatom Associations in Yaquina Estuary, Oregon : A Multivariate Analysis,
W74-01430 5B

MULTIVARIATE STATISTICS

Objective Regionalization of Peak Flow Rates,
W74-01174 4D

MUNICIPAL WASTE WATER

Recreational Reuse of Municipal Wastewater,
W74-01103 5D

MUNICIPAL WASTES

Removal of Phosphate and Secondary B.O.D. from Tertiary treated Wastewater by Aquatic Animals,
W74-01124 5D

MUNICIPAL WASTES

1968 Inventory of Municipal Waste Facilities, A Cooperative State Report: Region 5, Illinois, Indiana, Michigan, Minnesota, Ohio, Wisconsin.
W74-01282 5D

MUSCLE
Relation Between Total Body Weight and Concentrations of Manganese, Iron, Copper, Zinc, and Mercury in White Muscle of Bluefish (Pomatomus saltatrix) and A Bathyl-Dimersal Fish Antimora Rostrata,
W74-01413 5B

MUSSELS
Growth Rates of Intertidal Molluscs as Indicators of Effects of Unexpected Incidents of Pollution,
W74-01434 5C

Freshwater Mussel Ecology, Kentucky Lake, Tennessee, May 1, 1969-June 15, 1972,
W74-01641 5C

MUSSELS (FRESH WATER)
Greater Adaptability of Freshwater Mussels to Natural Rather Than to Artificial Displacement,
W74-01235 8I

MYCETOMA
A Waterborne Actinomycete Resembling Strains Causing Mycetoma,
W74-01256 5B

MYCOTOXIN STANDARDS
Criteria for Mycotoxin Standards,
W74-01414 5A

NATIONAL ENVIRONMENTAL POLICY ACT
Sierra Club v. Mason (Action to Enjoin Dredging of New Haven Harbor).
W74-01456 6E

City of Monmouth V. Environmental Protection Agency (EPA Sued the City to Prohibit the City from Continuing to Maintain a Sewage Lagoon System Which was Emitting Noxious Odors).
W74-01462 6E

NATIONAL PARKS
A Bill to Establish in the State of California the Santa Monica Mountain and Seashore National Urban Park.
W74-01458 6E

A Bill to Provide for the Establishment of the Guana River National Park in the State of Florida.
W74-01617 6E

NATIONAL SEASHORES
A Bill to Establish the Canaveral National Seashore in the State of Florida.
W74-01457 6E

NATIONAL WILD AND SCENIC RIVERS SYSTEM
Report of Attitudes and Opinions of Recreationists Towards Wild and Scenic Rivers: A Case Study of the St. Joe River,
W74-01102 6B

NATURAL STREAMS
The Effect of China-Clay Wastes on Stream Invertebrates,
W74-01527 5C

NEMATODES
Food Consumption of the Free-Living Aquatic Nematode Pelodera Chitwoodi,
W74-01225 5A

An Oxygen Electrode Microrespirometer,
W74-01419 5A

NEOPOLAROGRAMS
Semiintegral Electroanalysis: Shapes of Neopolarograms,
W74-01333 5A

NEPHELOMETERS
A Simple Portable Field Nephelometer,
W74-01247 7B

NEUTRON ACTIVATION ANALYSIS
Simultaneous Determination of Manganese, Copper, Arsenic, Cadmium, Antimony and Mercury in Glacial Ice by Radioactivation,
W74-01361 5A

Concentrations of Some Trace Metals in Pelagic Organisms and of Mercury in Northeast Atlantic Ocean Water,
W74-01523 5C

NEW JERSEY
Tidal Cycle of Changes in an Equilibrium Beach, Sandy Hook, New Jersey,
W74-01198 2L

Experiments and Hydrographic Surveys Off Sandy Hook, New Jersey (1963),
W74-01199 2L

NEW MEXICO
Hydrologic Nutrient Cycle Interactions in Undisturbed and Manipulated Ecosystems (Watersheds),
W74-01110 4C

Engineer's Report for South Valley Water System.
W74-01382 6B

Brush Eradicating, Basin Pitting, and Seeding Machine for Arid to Semiarid Rangeland,
W74-01637 4A

NEW RIVER (N.C.)
A Bill to Aid the Conservation of Natural Water Resources.
W74-01616 6E

NEW YORK
Relating Comprehensive Sewer and Water Plans to the County Land Use Plan. Goals, Policies and Standards.
W74-01473 5D

NEW ZEALAND
A New Species of Boeckella (Copepoda: Calanoida) from Northland, New Zealand,
W74-01309 5A

NEW ZEALAND (BLUE LAKE)
Protozoa from Blue Lake, Raoul Island,
W74-01310 5C

NEW ZEALAND (WAIMAKARIRI RIVER)
Effects of Paraquat on Invertebrates in a Canterbury Stream, New Zealand,
W74-01298 5C

NEW ZEALAND (WAIRUA RIVER)
Natural Dispersion of Mercury from Puhipuhi, Northland, New Zealand,
W74-01307 5B

NICKEL
The Determination of Lead and Nickel by Atomic-Absorption Spectrometry with a Flameless Wire Loop Atomizer,
W74-01363 5A

NITRATE REDUCTION
Nitrate Reduction in Soils: Effect of Soil Moisture Tension,
W74-01583 2G

NITRATES
Hydrologic Nutrient Cycle Interactions in Undisturbed and Manipulated Ecosystems (Watersheds),
W74-01110 4C

Nitrates in Soil and Ground Water Beneath Irrigated and Fertilized Crops,
W74-01245 3F

Epidemiological and Toxicological Aspects of Nitrates and Nitrites in the Environment,
W74-01386 5C

Quantitative Analysis of Aqueous Nitrite/Nitrate Solutions by Infrared Internal Reflectance Spectrometry,
W74-01402 2K

NITRILOTRIACETIC ACID
Studies of Rapid NTA-Utilizing Bacterial Mutant,
W74-01348 5B

Ligand Photooxidation in Copper (II) Complexes of Nitrilotriacetic Acid. Implications for Natural Waters,
W74-01400 5B

Study of Chelated Mixtures of Ferric Ions with Nitrilotriacetic, Sulfo-5-Salicylic and Pyrocatechol-3,5-Disulfonic Acids, (In French),
W74-01440 5A

Mechanism of NTA Degradation By a Bacterial Mutant,
W74-01515 5B

NITRITES
Epidemiological and Toxicological Aspects of Nitrates and Nitrites in the Environment,
W74-01386 5C

Quantitative Analysis of Aqueous Nitrite/Nitrate Solutions by Infrared Internal Reflectance Spectrometry,
W74-01402 2K

NITROBENZENE
Solvent Extraction of Metal 1,10-Phenanthroline Complexes and Concentration of Trace Amounts of Metal Ions Prior to Spectrophotometric or Flame Photometric Determination,
W74-01354 5A

NITROGEN
Evaluation of the Bio-Disc Treatment Process for Summer Camp Application,
W74-01118 5D

Supersaturation of Nitrogen in Water During Passage Through Hydroelectric Turbines at Mactaquac Dam,
W74-01432 5C

Changes in Species Composition of Phytoplankton Due to Enrichment by N, P, and Si of Water From a North Florida Lake,
W74-01503 5C

Nitrogen/Argon Ratios by Difference Thermal Conductivity,
W74-01522 5A

Isotope Fractionation of N-15 and N-14 in Microbiological Nitrogen Transformations: A Theoretical Model,
W74-01541 5B

NITROSAMINES
N-Nitrosation by Nitrite Ion in Neutral and Basic Medium,
W74-01328 5B

NITROSATION
N-Nitrosation by Nitrite Ion in Neutral and Basic Medium,
W74-01328 5B

NONIRRIGATED SOILS
Physical Edaphology. The Physics of Irrigated and Nonirrigated Soils,
W74-01572 2G

NORMAL APPROXIMATION
Extended Tables for Kendall's Tau,
W74-01497 7C

NORTH CAROLINA
Precipitation Variability Over North Carolina,
W74-01111 2B

Agricultural Water Demand in North Carolina: Phases I and II,
W74-01112 6D

Beach Changes on the Outer Banks of North Carolina,
W74-01179 2E

The Circulation of Surface Waters in Raleigh Bay, North Carolina,
W74-01210 2L

Wastewater Characterization of Sweet Potato Processing,
W74-01324 5A

Functional Water and Sewerage Plan and Program.
W74-01469 5D

A Bill to Aid the Conservation of Natural Water Resources.
W74-01616 6E

Tallulah Creek Watershed (Long Creed Portion) Graham County, North Carolina (Final Environmental Impact Statement).
W74-01621 4D

NORTH NASHWAAKSIS REPRESENTATIVE BASIN (CANADA)
Computer Utilization of Hydrological Data for North Nashwaaksis Representative Basin,
W74-01294 7C

NORTHWEST TERRITORIES (CANADA)
Single-Velocity Method in Measuring Discharge,
W74-01161 2C

NORWAY (RIVER STRANDA)
Number and Size of Drifting Nymphs of Ephemeroptera, Chironomidae, and Simulidae by Day and Night in the River Stranda, Western Norway,
W74-01230 2I

NORWAY (RORHOLTFJORDEN)
'Trapped Sea-Water' in Rorholtfjorden,
W74-01263 2K

NORWAY (SORFJORD)
Particulate Metals in Waters of Sorfjord West Norway,
W74-01528 5B

NUMERICAL ANALYSIS
Computer Identification of Yeasts of the Genus Saccharomyces,
W74-01646 5A

NUMERICAL TAXONOMY
Computer Identification of Yeasts of the Genus Saccharomyces,
W74-01646 5A

NUTRIENT ENRICHMENT
Stream Community Response to Nutrient Enrichment,
W74-01499 5C

Changes in Species Composition of Phytoplankton Due to Enrichment by N, P, and Si of Water From a North Florida Lake,
W74-01503 5C

NUTRIENT REMOVAL
Evaluation of the Bio-Disc Treatment Process for Summer Camp Application,
W74-01118 5D

Nutrient Removal Using Lemna Minor,
W74-01321 5C

NUTRIENT REQUIREMENTS
Copper Micronutrient Requirement for Algae,
W74-01398 5C

Rhodopseudomonas Sulfidophila, Nov. Spec., A New Species of the Purple Nonsulfur Bacteria,
W74-01544 5B

NUTRIENT TRANSPORT
Mathematical Modeling of Nutrient - Transport,
W74-01121 5B

NUTRIENTS
Nutrient Sources and Transport in the Upper and Central Regions of the Big Sioux River,
W74-01115 5B

Mathematical Modeling of Nutrient - Transport,
W74-01121 5B

Nutrient Removal Using Lemna Minor,
W74-01321 5C

Physiological Ecology of Gelidiella Acerosa (Forsskal) Feldmann et Hamel,
W74-01424 5C

Some Thoughts on Nutrient Limitation in Algae,
W74-01428 5C

Phytoplankton Nutrients and Flushing of Inlets on the Coast of Nova Scotia,
W74-01471 5B

Some Effects of Filtration on the Determination of Nutrients in Fresh and Salt Water,
W74-01521 7B

Element Constitution of Selected Aquatic Vascular Plants from Pennsylvania: Submersed and Floating Leaved Species and Rooted Emergent Species,
W74-01526 5A

NYMPHS
Number and Size of Drifting Nymphs of Ephemeroptera, Chironomidae, and Simulidae by Day and Night in the River Stranda, Western Norway,
W74-01230 2I

OAK
Carbon Dioxide Exchange by Several Stream-Side and Scrub Oak Community Species of Red Butte Canyon, Utah,
W74-01590 2I

OAK TREES
Leaves as Source of Phosphorus,
W74-01407 5B

OCEAN WAVES
Wave-Induced Water Particle Motion Measurements,
W74-01285 2E

OCEANOGRAPHY
Marine Resources and Ocean Surveys,
W74-01169 7B

Ocean Utilization and Coastal Zone Development.
W74-01281 2L

OCEANS
Quaternary Shorelines of the Seas of Okhotsk and Japan (Chetvertichnyye beregovyye linii Okhotskogo i Yaponskogo morey),
W74-01391 2J

Marine Pollution: A Critique of Present and Proposed International Agreements and Institutions--A Suggested Global Oceans' Environmental Regime,
W74-01449 5G

OCOTILLO
Germination Responses of a Texas Population of Ocotillo (Fouquieria splendens Engelm.) To Constant Temperature, Water Stress, pH and Salinity,
W74-01591 2I

OEDOGONIUM CARDIACUM
The Effects of Bacteria on the Growth and Reproduction of Oedogonium Cardiacum,
W74-01422 5C

OFFSHORE BARS
Shifting Offshore Bars and Harbor Shoaling,
W74-01191 2J

OGALLALA AQUIFER (OKLA)
Sensitivity of Groundwater flow Models to Vertical Variability of Aquifer Constants,
W74-01151 4B

OGALLALA FORMATION (WEST TEXAS)
Underground Storage of Texas Playa Lake Waters by Injection Into the Ogallala Formation Under Moderate Pump Pressure,
W74-01627 4B

OHIO
Currents at Toledo Harbor,
W74-01214 2H

Sr-87/Sr-86 Ratios and Total Strontium Concentrations in Surface Waters of the Scioto River Drainage Basin, Ohio,
W74-01516 5B

Benthic Macroinvertebrates as Indexes of Water Quality in Whetstone Creek, Morrow County, Ohio (Scioto River Basin),
W74-01517 5B

OIL WASTES
Comparative Evaluation of the Efficacy of Ozonization and Other Means of Treating Water Contaiminated With Oil Products (In Russian),
W74-01580 5F

OIL WELLS
Numerical Solution of Multiphase Well Flow,
W74-01275 8B

OILY WATER
Vortex Concept for Separating Oil from Water,
W74-01148 5G

OKLAHOMA
Sensitivity of Groundwater flow Models to Vertical Variability of Aquifer Constants,
W74-01151 4B

Objective Regionalization of Peak Flow Rates,
W74-01174 4D

OLIGOTROPHIC LAKES
The Bottom Macrofauna of the Oligotrophic Lake Konnevesi, Finland,
W74-01287 5C

OOCYSTIS MARSSONII
Copper Micronutrient Requirement for Algae,
W74-01398 5C

OPEN CHANNEL FLOW
Linear Programming and Channel Flow Identification,
W74-01277 8B

OPTIMAL UTILIZATION
Crop Rotation Schemes for Optimal Utilization of Agricultural Land,
W74-01596 3F

ORB SNAILS
The Effect of Aldrin on Water Balance in the Freshwater Pulmonate Gastropod (Biomphalaria glabrata),
W74-01525 5C

OREGON
Observations on the Ecology of Laminaria Sinclairii on Three Northern Oregon Beaches,
W74-01423 5C

Diatom Associations in Yaquina Estuary, Oregon : A Multivariate Analysis,
W74-01430 5B

Water Master Plan. Eugene-Springfield Urbanizing Area.
W74-01479 3D

ORGANIC ACIDS
Improved Distillation Method for Volatile Acids Analysis,
W74-01322 5A

Practical Methods for Derivatizing and Analyzing Bacterial Metabolites with a Modified Automatic Injector and Gas Chromatograph,
W74-01336 5A

Study of Chelated Mixtures of Ferric Ions with Nitrilotriacetic, Sulfo-5-Salicylic and Pyrocatechol-3,5-Disulfonic Acids, (In French),
W74-01440 5A

ORGANIC COMPOUNDS
C 18-Isoprenoid Ketone in Recent Marine Sediment,
W74-01301 5A

Novel Method of Raman Data Acquisition,
W74-01330 2K

Versatile Computer Generated Variable Accelerating Voltage Circuit for Magnetically Scanned Mass Spectrometers. Use for Assays in the Picogram Range and for Assays of Stable Isotope Tracers,
W74-01335 2K

Simple Direct Combination of Gas Chromatography and Vapor Phase Infrared Spectrometry,
W74-01355 5A

Degradative Versatility of Corynebacterium pseudodiphtheriticum NCIB 10803 which uses Amides as Carbon Source,
W74-01536 5B

ORGANIC MATTER
Chlorinated Hydrocarbon Insecticides in Sediments of Southern Lake Michigan,
W74-01397 5B

The Chemical Oxygen Demand of Waters and Biological Materials from Ponds,
W74-01543 5C

ORGANIC PESTICIDES
The Sensitivity of Suppressed and Unsuppressed Lon Strains of Escherichia coli to Chemical Agents with Induce Filamentation,
W74-01524 5C

ORGANOAMMONIUM COMPOUNDS
Ion Pair Partition Chromatography of Organic Ammonium Compounds,
W74-01496 5A

ORGANOLEPTIC PROPERTIES
Barrier Role of Water Works Installations in Respect to Chemical Contaminations Classified According to Organoleptic Properties of Hazards, (In Russian),
W74-01584 5D

ORGANONITROGEN COMPOUNDS
Atomic Absorption Method for Determining Micromolar Quantities of Aliphatic Secondary Amines,
W74-01492 5A

ORGANOSULFUR COMPOUNDS
The Determination of Organo-Sulfur Compounds by Thin-Layer Chromatography Via a Ligand-Exchange Precess,
W74-01439 5A

OUTFALL SEWERS
A Study of Tidal Dispersion in the Potomac River,
W74-01196 5B

OVERBURDEN
Engineering Characteristics of Overburden in Knox County, Tennessee,
W74-01143 7C

Overburden Related to Type of Bedrock and Engineering Characteristics of the Bedrock, Knox County, Tennessee,
W74-01144 7C

OXIDATION
Studies on Methanol-Oxidizing Bacteria. I. Isolation and Growth Studies,
W74-01535 5C

OXYGEN
'Trapped Sea-Water' in Rorholtfjorden,
W74-01263 2K

The Oxygen Status of Lake Sediments,
W74-01266 2J

OXYGEN CONSUMPTION
The Chemical Oxygen Demand of Waters and Biological Materials from Ponds,
W74-01543 5C

OXYGEN DEMAND
Coupling Carbon Flow Through Some Pelagic and Benthic Communities,
W74-01437 5B

OXYGEN DIFFUSION
Soil Aeration Response to Draining Intensity in Basin Peat,
W74-01255 2G

OXYGEN ISOTOPES
Isotopic Composition of Oxygen and Hydrogen in Sulfide Waters of the Sochi-Adler Artesian Basin (Izotopnyy sostav kisloroda i vodorada sul'fidnykh vod Sochi-Adlerskogo artezianskogo basseyna),
W74-01394 2K

OXYGEN REQUIREMENTS
An Oxygen Electrode Microrespirometer,
W74-01419 5A

OXYGENATION
Mobile Oxygen Dispersion Craft,
W74-01232 5G

OYSTERS
Biochemistry of Estuarine Ecosystem with Emphasis on Heavy Metals and Shellfish,
W74-01108 5C

Microbial Flora and Level of Vibrio Parahaemolyticus of Oysters (Crassostrea Virginica), Water and Sediment from Galveston Bay,
W74-01548 5C

OZONE
Sensitivity of Three Selected Bacterial Species to Ozone,
W74-01553 5F

OZONIZATION
Comparative Evaluation of the Efficacy of Ozonization and Other Means of Treating Water Contaiminated With Oil Products (In Russian),
W74-01580 5F

PACIFIC OCEAN
The Union of the Columbia River and the Pacific Ocean -- General Features,
W74-01183 2L

PAKISTAN
Water Requirements of Wheat and Cotton on a High Water Table Soil Under Arid Conditions,
W74-01595 3F

PANKHURST TUBES
Pankhurst Tubes Modified to Indicate Anaerobiosis,
W74-01545 5A

PAPER CHROMATOGRAPHY
Separation of Polyphosphates by Paper Chromatography with a New Solvent,
W74-01366 5A

PAPUA NEW GUINEA
Water Use by Perennial Evergreen Plant Communities in Australia and Papua New Guinea,
W74-01634 2D

PARAQUAT
Effects of Paraquat on Invertebrates in a Cantebury Stream, New Zealand,
W74-01298 5C

PARTICLE SHAPE
Cohesionless, Fine Graded, Flaked Sediment Transport by Water,
W74-01125 2J

PATH OF POLLUTANTS
Nutrient Sources and Transport in the Upper and Central Regions of the Big Sioux River,
W74-01115 5B

Mathematical Modeling of Nutrient - Transport,
W74-01121 5B

On the Small-Scale Horizontal Diffusion Near the Coast,
W74-01186 5B

A Study of Tidal Dispersion in the Potomac River,
W74-01196 5B

Natural Dispersion of Mercury from Puhipuhi, Northland, New Zealand,
W74-01307 5B

N-Nitrosation by Nitrite Ion in Neutral and Basic Medium,
W74-01328 5B

Pathways of Trace Elements in Arctic Lake Ecosystems,
W74-01401 5B

Particulate Metals in Waters of Sorfjord West Norway,
W74-01528 5B

PATHOGENIC BACTERIA
Practical Methods for Derivatizing and Analyzing Bacterial Metabolites with a Modified Automatic Injector and Gas Chromatograph,
W74-01336 5A

Computer Identification of Bacteria on the Basis of Their Antibiotic Susceptibility Patterns,
W74-01443 5A

Microbial Flora and Level of Vibrio Parahaemolyticus of Oysters (Crassostrea Virginica), Water and Sediment from Galveston Bay,
W74-01548 5C

Shigella Sonnei Isolated from Well Water,
W74-01551 5A

Relationships of Indicator and Pathogenic Bacteria in Stream Waters,
W74-01645 5B

PEAK DISCHARGE
Objective Regionalization of Peak Flow Rates,
W74-01174 4D

PEAT
Peat Floating in the Reservoir of the Kiev Hydroelectric Station and its Role in Water Contamination, (in Russian),
W74-01352 5B

PELODERA CHITWOODI
Food Consumption of the Free-Living Aquatic Nematode Pelodera Chitwoodi,
W74-01225 5A

PENICILLIN
The Sensitivity of Suppressed and Unsuppressed Lon Strains of Escherichia coli to Chemical Agents with Induce Filamentation,
W74-01524 5C

PENNSYLVANIA
Stream Community Response to Nutrient Enrichment,
W74-01499 5C

Element Constitution of Selected Aquatic Vascular Plants from Pennsylvania: Submersed and Floating Leaved Species and Rooted Emergent Species,
W74-01526 5A

The Relationship Between Maple Canker Incidence and Precipitation,
W74-01602 2I

PERCHES
Temperature Selection by Juvenile and Adult Yellow Perch (Perca Flavescens) Acclimated to 24 C,
W74-01353 5A

PERFORMANCE EVALUATION
Small-Volume Solid-Electrode Flow-Through Electrochemical Cells. Preliminary Evaluation Using Pulse Polarographic Techniques,
W74-01445 7B

PERIPHYTIC ALGAE
The Relations of Periphytic and Planktonic Algal Growth in an Estuary to Hydrographic Factors,
W74-01571 5C

PERIWINKLES
Growth Rates of Intertidal Molluscs as Indicators of Effects of Unexpected Incidents of Pollution,
W74-01434 5C

PERMEABILITY
Calculation of Permeability of Cretaceous Sandstones from Pumping and Static Level Data in Selected Areas of Western South Dakota,
W74-01113 2F

PESTICIDE RESIDUES
Variation of Organochlorine Residue Levels with Age in Gulf of St. Lawrence Harp Seals (Pagophilus Groenlandicus),
W74-01300 5A

PESTICIDES
Ecological Impact of Pesticides,
W74-01573 5C

PETROLEUMLYTIC MICROORGANISMS
Silica Gel Medium for Enumeration of Petroleumlytic Microorganisms in the Marine Environment,
W74-01532 5A

PHAENNA
Revision of Family and Some Generic Definitions in the Phaennidae and Scolecithricidae (Copepoda: Calanoida),
W74-01308 5A

PHAEOPHYTA
New Records of Sargassum Hawaiiensis Doty and Newhouse (Sargassaceae, Phaeophyta), a Deep Water Species,
W74-01349 2I

Sublittoral Benthic Marine Algae of Southern Cape Cod and Adjacent Islands: Pseudolithoderma Paradoxum Sp. Nov. (Ralfsiaceae, Ectocarpales),
W74-01350 5A

Observations on the Ecology of Laminaria Sinclairii on Three Northern Oregon Beaches,
W74-01423 5C

Algal Succession on Artificial Reefs in a Marine Lagoon Environment in Guam,
W74-01429 5C

PHENANTHROLINE
Solvent Extraction of Metal 1,10-Phenanthroline Complexes and Concentration of Trace Amounts of Metal Ions Prior to Spectrophotometric or Flame Photometric Determination,
W74-01354 5A

PHENOLS
The Role of Micro-Organisms in Waste Tip-Lagoon Systems Purifying Coke-Oven Effluents,
W74-01647 5D

PHENYLMERCURIC ACETATE
Biodegradation of Phenylmercuric Acetate by Mercury-Resistant Bacteria,
W74-01555 5B

PHOSPHATE REMOVAL
Removal of Phosphate and Secondary B.O.D. from Tertiary treated Wastewater by Aquatic Animals,
W74-01124 5D

PHOSPHATES
Evaluation of Flame Emission Determination of Phosphorus in Water,
W74-01116 5A

Prevention of Selenium Interference with Measurement of Phosphate as its Molybdenum (V-VI) Complex,
W74-01345 5A

Separation of Polyphosphates by Paper Chromatography with a New Solvent,
W74-01366 5A

PHOSPHOMOLYBDATES
Prevention of Selenium Interference with Measurement of Phosphate as its Molybdenum (V-VI) Complex,
W74-01345 5A

PHOSPHORIMETRY
Determination of Griseofulvin by Time-Resolved Phosphorimetry,
W74-01224 5A

PHOSPHORUS
Evaluation of Flame Emission Determination of Phosphorus in Water,
W74-01116 5A

Evaluation of the Bio-Disc Treatment Process for Summer Camp Application,
W74-01118 5D

Leaves as Source of Phosphorus,
W74-01407 5B

Growth Rates of Intertidal Molluscs as Indicators of Effects of Unexpected Incidents of Pollution,
W74-01434 5C

Changes in Species Composition of Phytoplankton Due to Enrichment by N, P, and Si of Water From a North Florida Lake,
W74-01503 5C

PHOSPHORUS FERTILIZERS
Water Regime of Sunflower Under Different Conditions of Phosphorus Nutrition, (In Russian),
W74-01227 3F

PHOTODECOMPOSITION
Ligand Photooxidation in Copper (II) Complexes of Nitrilotriacetic Acid. Implications for Natural Waters,
W74-01400 5B

PHOTODEGRADATION
Analytical Methodology for Bioactive Compounds. Photochemically Assisted Analysis of Chlorinated Hydrocarbon Pesticides in the Presence of Polychlorinated Biphenyls,
W74-01493 5A

PHOTOLYSIS
Ethylenethiourea Degradation,
W74-01340 5B

PHOTOSYNTHESIS
Potential Usefulness of Antitranspirants for Solution of Some Water Supply, Plant Growth, and Environmental Problems,
W74-01105 3B

Loss of Photosynthetic Activity in Two Blue-Green Algae as a Result of Osmotic Stress,
W74-01302 5B

Modifications in Filtration Methods for the Measurement of Inorganic C-14 Uptake by Photosynthesizing Algae,
W74-01425 5A

Coupling Carbon Flow Through Some Pelagic and Benthic Communities,
W74-01437 5B

A New Type of Climatized Gas Exchange Chamber for Net Photosynthesis and Transpiration Measurements in the Field,
W74-01568 2I

Diurnal Changes in Transpiration and Daily Photosynthetic Rater of Several Crop Plants,
W74-01597 2D

PHOTOSYNTHETIC BACTERIA
Rhodopseudomonas Sulfidophila, Nov. Spec., A New Species of the Purple Nonsulfur Bacteria,
W74-01544 5B

PHREATOPHYTES
Potential Usefulness of Antitranspirants for Solution of Some Water Supply, Plant Growth, and Environmental Problems,
W74-01105 3B

PHRYGANEA-OBSOLETA
Factors Affecting the Distribution of Some Phryganeaeid (Trichoptera) in Malham Tarn, Yorkshire,
W74-01586 2I

PHYLCTOCHYTRIUM POWHATANESIS
Two New Chytrids from the Appalachian Highlands,
W74-01305 5A

PHYSICOCHEMICAL PROPERTIES
Microfauna of Activated Sludge. Part III. The Effect of Physico-Chemical Factors on the Occurrence of Microfauna in the Annual Cycle,
W74-01542 5C

PHYSICOCHEMICAL STUDIES
Contribution to Physicochemical Study of Some Springs of the Gapeau River Basin (Var),
W74-01288 2K

PHYTOPLANKTON
Phytoplankton of the Czechoslovak Sector of the Danube and of the Estuaries of the Principal Tributaries on Czechoslovak Territory, (In Czect.),
W74-01371 2I

Pathways of Trace Elements in Arctic Lake Ecosystems,
W74-01401 5B

Modifications in Filtration Methods for the Measurement of Inorganic C-14 Uptake by Photosynthesizing Algae,
W74-01425 5A

Phytoplankton Nutrients and Flushing of Inlets on the Coast of Nova Scotia,
W74-01471 5B

Changes in Species Composition of Phytoplankton Due to Enrichment by N, P, and Si of Water From a North Florida Lake,
W74-01503 5C

A Mathematical Model of Primary Productivity and Limnological Patterns in Lake Mead,
W74-01630 5C

PIPELINES
Tri-Agencies Pipeline: Engineering Report.
W74-01477 8A

PLANARIANS
Evaluation of the Response of Dugesia Tigrina to Aflatoxin B1,
W74-01404 5C

PLANKTONIC ALGAE
The Relations of Periphytic and Planktonic Algal Growth in an Estuary to Hydrographic Factors,
W74-01571 5C

PLANNING
Prospects for the Use and Conservation of Water Resources in the USSR (Perspektivy ispol'zovaniya i okhrany vodnykh resursov SSSR),
W74-01387 6B

Functional Water and Sewerage Plan and Program.
W74-01469 5D

Promoting Environmental Quality Through Urban Planning and Controls,
W74-01470 5D

River Basin Planning in the United States,
W74-01472 6B

Relating Comprehensive Sewer and Water Plans to the County Land Use Plan. Goals, Policies and Standards.
W74-01473 5D

Comprehensive Water and Sewer Plan, Randolph County, Illinois.
W74-01474 5D

Water Master Plan. Eugene-Springfield Urbanizing Area.
W74-01479 3D

Utility Provisions Analysis for East Central Florida.
W74-01480 6D

Sketch Development Plan, Chambers County, Alabama.
W74-01485 5D

A Linear Programming Approach to Floodplain Land Use Planning in Urban Areas,
W74-01490 3D

Water Resources Planning Mozambique (La Planification Des Resources en Eau au Mozamique),
W74-01629 6B

PLANT GROWTH
Growth and Buoyancy of Microcystis aeruginosa Kutz. Emend. Elenkin in a Shallow Eutrophic Lake,
W74-01518 5C

PLANT GROWTH REGULATORS
Determination of Meleic Hydrazide Residues in Tobacco and Vegetables,
W74-01418 5A

PLANT PHYSIOLOGY
Physiological Ecology of Gelidiella Acerosa (Forsskal) Feldmann et Hamel,
W74-01424 5C

PLANT SPACING
Desert Dogma Reexamined: Root/Shoot Productivity and Plant Spacing,
W74-01585 2I

PLANT TISSUES
Determination of Mercury After Room Temperature Digestion by Flameless Atomic Absorption,
W74-01315 5A

Prevention of Selenium Interference with Measurement of Phosphate as its Molybdenum (V-VI) Complex,
W74-01345 5A

Determination of Low Concentrations of Cobalt in Plant Material by Atomic Absorption Spectrophotometry,
W74-01356 2K

Simplified Spectrophotometric Analysis of Plants for Selenium,
W74-01406 2K

PLASMA
The Determination of Thallium in Urine and Plasma by Delves Cup Atomic Absorption,
W74-01314 5A

PLASTICITY INDEX
Study of Soil Plasticity over a wide Range of Soil Moisture Contents,
W74-01636 2G

PLAYAS
Underground Storage of Texas Playa Lake Waters by Injection Into the Ogallala Formation Under Moderate Pump Pressure,
W74-01627 4B

PLECOPTERA
Assessment of Two Mesh Sizes for Interpreting Life Cycles, Standing Crop, and Percentage Composition of Stream Insects,
W74-01601 2I

PLUTONIUM RADIONUCLIDES
Concentrations of Plutonium, Cobalt, and Silver Radionuclides in Selected Pacific Seaweeds,
W74-01297

POINT BARROW (ALASKA)
Shoreline Processes Near Barrow, Alaska: A Comparison of the Normal and the Catastrophic,
W74-01193 2L

POLAND
Occurrence and Cumulation of Microcomponents in Bottom Sediments of Dam Reservoirs of Southern Poland,
W74-01565 5B

POLAND (CRACOW-CZESTOCHOWA UPLAND)
Diatoms of the Upper Course of the Stream Sanka (Cracow-Czestochowa Upland), (In Polish),
W74-01258 2I

POLAND (CZARCIE LAKE)
Batrachospermum Vagum Ag. in the Szczecin Pomerania, A Locality New to Poland, (In Polish),
W74-01219 2H

POLAND (LAKE JEZIORAK)
Production of Crustacean Zooplankton in Moty Bay, Lake Jeziorak: II. Estimation of Production of the Predominating Species,
W74-01173 2H

POLAND (LAKE JEZIORAKE)
Production of Crustacean Zooplankton in Moty Bay, Lake Jeziorak: The method of Production Estimation,
W74-01172 2H

POLAND (MASURIAN LAKE DIST.)
Investigations on the Changes in the Content of Heavy Metals in Lake Waters of the Masurian Lake District,
W74-01221 5B

POLAND (UPPER VISTULA RIVER)
Selected Species of Algae Found in Carp Ponds of the Laskowa Complex Near Zator,
W74-01607 2I

POLLUTANT IDENTIFICATION
Evaluation of Flame Emission Determination of Phosphorus in Water,
W74-01116 5A

Utilization of Remote Sensing in River Basin Studies,
W74-01154 5A

Determination of Griseofulvin by Time-Resolved Phosphorimetry,
W74-01224 5A

Application of Infrared Fourier Transform Spectroscopy to Analysis of Micro Samples,
W74-01303 2K

Microdetermination of Chloro-S-Triazines in Soil by Gas-Liquid Chromatography with Nickel Electron Capture or Electrolytic Conductivity Detection,
W74-01304 5A

Natural Dispersion of Mercury from Puhipuhi, Northland, New Zealand,
W74-01307 5B

The Determination of Thallium in Urine and Plasma by Delves Cup Atomic Absorption,
W74-01314 5A

Determination of Mercury After Room Temperature Digestion by Flameless Atomic Absorption,
W74-01315 5A

A Modified Filtration Method for the Analysis of Wastewater Suspended Solids,
W74-01318 5A

Heavy Metals in Wastewater and Treatment Plant Effluents,
W74-01319 5A

Improved Distillation Method for Volatile Acids Analysis,
W74-01322 5A

Literature on Mercury: Availability of English Translations,
W74-01323 5A

Wastewater Characterization of Sweet Potato Processing,
W74-01324 5A

The Importance of Chelating Agents in Natural Waters and Wastewaters,
W74-01326 5B

Chemical Constants of Metal Complexes from a Complexometric Titration Followed with Anodic Stripping Voltammetry,
W74-01332 5A

Solvent Extraction of Metal 1,10-Phenanthroline Complexes and Concentration of Trace Amounts of Metal Ions Prior to Spectrophotometric or Flame Photometric Determination,
W74-01354 5A

Determination of Low Concentrations of Cobalt in Plant Material by Atomic Absorption Spectrophotometry,
W74-01356 2K

Precolumn Inlet System for the Gas Chromatographic Analysis of Trace Quantities of Short-Chain Aliphatic Amines,
W74-01357 5A

A Systematic Study of the Variables Involved in the Reverse-Phase Thin-Layer Chromatography of Oxyethylated Alkyl Sulfate Surfactants,
W74-01358 5A

A Procedure for the Estimation of Microgram Quantities of Triton X-100,
W74-01360 5A

Simultaneous Determination of Manganese, Copper, Arsenic, Cadmium, Antimony and Mercury in Glacial Ice by Radioactivation,
W74-01361 5A

The Determination of Lead and Nickel by Atomic-Absorption Spectrometry with a Flameless Wire Loop Atomizer,
W74-01363 5A

Extraction-Photometric Determination of Uranium (IV) with Chlorophosphonazo-III,
W74-01364 5A

Separation of Polyphosphates by Paper Chromatography with a New Solvent,
W74-01366 5A

Collaborative Study of a Colorimetric Method for Determining Arsenic Residues in Red Meat and Poultry,
W74-01403 5A

Rapid Gas Chromatographic Method for Determination of Residual Methanol in Sewage,
W74-01410 5A

Modified Delves Cup Atomic Absorption Determination of Lead in Blood,
W74-01415 5A

Determination of Chlorinated Pesticides in Whole Blood,
W74-01417 5A

Determination of Meleic Hydrazide Residues in Tobacco and Vegetables,
W74-01418 5A

The Determination of Organo-Sulfur Compounds by Thin-Layer Chromatography Via a Ligand-Exchange Precess,
W74-01439 5A

Study of Chelated Mixtures of Ferric Ions with Nitrilotriacetic, Sulfo-5-Salicylic and Pyrocatechol-3,5-Disulfonic Acids, (In French),
W74-01440 5A

The Determination of Cadmium by Atomic Absorption in Air, Water, Sea Water and Urine with a R.F. Carbon Bed Atomizer,
W74-01441 5A

Computer Identification of Bacteria on the Basis of Their Antibiotic Susceptibility Patterns,
W74-01443 5A

Soluble Aluminum in Marine and Fresh Water by Gas-Liquid Chromatography,
W74-01446 5A

Atomic Absorption Method for Determining Micromolar Quantities of Aliphatic Secondary Amines,
W74-01492 5A

Analytical Methodology for Bioactive Compounds. Photochemically Assisted Analysis of Chlorinated Hydrocarbon Pesticides in the Presence of Polychlorinated Biphenyls,
W74-01493 5A

Gas-Solid Chromatography on Macroreticular Cation Exchange Resins,
W74-01495 5A

Ion Pair Partition Chromatography of Organic Ammonium Compounds,
W74-01496 5A

Infrared Studies of Chlorinated Dibenzo-p-Dioxins and Structurally Related Compounds,
W74-01509 5A

Acridine Orange-Epifluorescence Technique for Counting Bacteria in Natural Waters,
W74-01534 5A

Studies on Methanol-Oxidizing Bacteria. I. Isolation and Growth Studies,
W74-01535 5C

Investigations on the Sheathed Bacterium Haliscomenobacter hydrossis Gen.n., Sp.n., Isolated from Activated Sludge,
W74-01539 5B

Rhodopseudomonas Sulfidophila, Nov. Spec., A New Species of the Purple Nonsulfur Bacteria,
W74-01544 5B

Emission Spectrometric Determination of Trace Metals in Biological Tissues,
W74-01546 5A

Microbial Flora and Level of Vibrio Parahaemolyticus of Oysters (Crassostrea Virginica), Water and Sediment from Galveston Bay,
W74-01548 5C

Litmus Milk Reaction as a Distinguishing Feature Between Streptococcus Faecalis of Human and Non-Human Origins,
W74-01549 5A

Shigella Sonnei Isolated from Well Water,
W74-01551 5A

Computer Identification of Yeasts of the Genus Saccharomyces,
W74-01646 5A

POLLUTION
Florida Pollution Statute Infringes Upon Exclusive Federal Maritime Legislative Domain, The American Waterways Operators, Inc. v. Askew, 335 F. Supp. 1241 (M.D. Fla).
W74-01460 5G

POLLUTION ABATEMENT
The Impact of Water Pollution Abatement on Competition and Pricing in the Alabama Textile Industry,
W74-01101 5G

Floodland and Shoreland Development Guide.
W74-01483 4A

Application of Mathematical Modelling to Water Quality Management,
W74-01486 5B

POLYCHLORINATED BIPHENYLS
Variation of Organochlorine Residue Levels with Age in Gulf of St. Lawrence Harp Seals (Pagophilus Groenlandicus),
W74-01300 5A

Analytical Methodology for Bioactive Compounds. Photochemically Assisted Analysis of Chlorinated Hydrocarbon Pesticides in the Presence of Polychlorinated Biphenyls,
W74-01493 5A

Distribution of (C-14) PCBs in Carp,
W74-01530 5C

POMACE STILLAGE
Characterization and Treatability of Pomace Stillage,
W74-01325 5A

PONDS
The Chemical Oxygen Demand of Waters and Biological Materials from Ponds,
W74-01543 5C

POPLAR TREES
Leaves as Source of Phosphorus,
W74-01407 5B

POPULATION DYNAMICS
Population Dynamics of Pond Zooplankton, I. Diaptomus pallidus Herrick,
W74-01502 5C

PORE WATER
Concentrations of Dissolved Forms of Fe, Mn, and Cu in Marine Pore Waters of the Atlantic Basin (Kontsentratsii rastvorennykh form Fe, Mn, i Cu v morskikh, porovykh vodakh basseyna Atlanticheskogo okeana),
W74-01392 2K

POROSITY
Determination of the Total Storage Capacity of the Cretaceous Sandstone Aquifers in South Dakota,
W74-01114 2F

POTABLE WATER
Water. Examination. Assessment. Conditioning. Chemistry. Bacteriology. Biology,
W74-01236 5F

Fluorometric Determination of Selenium in Water with 2,3-Diaminonaphthalene,
W74-01399 5A

Drinking Water,
W74-01466 5F

Shigella Sonnei Isolated from Well Water,
W74-01551 5A

POTAMOCYPRIS
Thermophilic Ostracod: Aquatic Metazoan with the Highest Known Temperature Tolerance,
W74-01327 5C

POTASSIUM
The Potentiometric Titration of Potassium in Sea Water with a Valinomycin Electrode,
W74-01442 5A

POTENTIOMETRIC TITRATION
The Potentiometric Titration of Potassium in Sea Water with a Valinomycin Electrode,
W74-01442 5A

POTOMAC RIVER
A Study of Tidal Dispersion in the Potomac River,
W74-01196 5B

POULTRY
Collaborative Study of a Colorimetric Method for Determining Arsenic Residues in Red Meat and Poultry,
W74-01403 5A

POWER SUPPLIES
Choosing a Static Inverter System,
W74-01547 7B

POWERPLANTS
Field and Experimental Studies on the Effects of a Power Station Effluent on Tubificidae (Oligochaeta, Annelida),
W74-01312 5C

PRECIPITATION (ATMOSPHERIC)
The Union of the Columbia River and the Pacific Ocean -- General Features,
W74-01183 2L

PRECIPITATION VARIABILITY
Precipitation Variability Over North Carolina,
W74-01111 2B

PRESSURE GRADIENTS
The Influence of Topography and Pressure Gradients on Shoaling in a Tidal Estuary,
W74-01204 2L

PRESSURIZED SEWERS
Pressurized Sewer Collection Systems,
W74-01286 5D

PRETREATMENT
Dieldrin. Effects of Chronic Sublethal Exposure on Adaptation to Thermal Stress in Freshwater Fish,
W74-01408 5C

PREVENTIVE MASTER PLANNING
Storm Drainage and Flood Control for Metropolitan Denver.
W74-01475 4A

PRICES
The Impact of Water Pollution Abatement on Competition and Pricing in the Alabama Textile Industry,
W74-01101 5G

PRIMARY PRODUCTIVITY
Some Sources of Error in the 14C Method for Estimating Primary Productivity and Their Relationship to Light Intensity During Incubation,
W74-01217 2H

Modifications in Filtration Methods for the Measurement of Inorganic C-14 Uptake by Photosynthesizing Algae,
W74-01425 5A

Coupling Carbon Flow Through Some Pelagic and Benthic Communities,
W74-01437 5B

A Mathematical Model of Primary Productivity and Limnological Patterns in Lake Mead,
W74-01630 5C

PRODUCTION
Production of Crustacean Zooplankton in Moty Bay, Lake Jeziorak: The method of Production Estimation,
W74-01172 2H

Production of Crustacean Zooplankton in Moty Bay, Lake Jeziorak: II. Estimation of Production of the Predominating Species,
W74-01173 2H

PRODUCTION FUNCTIONS
Economics of Resource Use on Sample Farms of Central Gujarat,
W74-01491 3F

PRODUCTIVITY
The Distribution, Composition and Biomass of the Crustacean Zooplankton Population in Western Lake Superior,
W74-01109 5C

PROFILES
Stability and Reach Length in Water Surface Profile Determination,
W74-01152 2E

PROJECT PLANNING
A Hybrid Model for Irrigation Planning Using Chance Constrained Programming and Hydrologic Simulation,
W74-01488 4B

PROTOZOA
Effects of Protozoa on the Fate of Particulate Carbon,
W74-01117 5C

Protozoa from Blue Lake, Raoul Island,
W74-01310 5C

Growth Rates of Sediment-Living Marine Protozoan as a Toxicity Indicator for Heavy Metals,
W74-01529 5A

PSEUDOLITHODERMA PARADOXUM
Sublittoral Benthic Marine Algae of Southern Cape Cod and Adjacent Islands: Pseudolithoderma Paradoxum Sp. Nov. (Ralfsiaceae, Ectocarpales),
W74-01350 5A

PSEUDOMONAS
Studies of Rapid NTA-Utilizing Bacterial Mutant,
W74-01348 5B

PSEUDOMONAS PUTIDA
The Effects of Bacteria on the Growth and Reproduction of Oedogonium Cardiacum,
W74-01422 5C

PUBLIC HEALTH
Metabolic Effects of Drinking Brackish Water,
W74-01632 5C

PUDDLING
Effect of Puddling on Physical Properties of Rice Soil,
W74-01246 3F

PULP WASTES
Fate of Lignin in Kraft Effluent Treatment,
W74-01320 5B

PULSE POLAROGRAPHY
Small-Volume Solid-Electrode Flow-Through Electrochemical Cells. Preliminary Evaluation Using Pulse Polarographic Techniques,
W74-01445 7B

PUMPING
Relationship of Pumping Lift to Economic Use of Groundwater for Irrigation,
W74-01120 4B

PUMPS
Turbulent Fluid Friction of Rotating Disks,
W74-01640 8C

PURITY
Criteria for Mycotoxin Standards,
W74-01414 5A

QUANTITATIVE ANALYSIS
Ion Pair Partition Chromatography of Organic Ammonium Compounds,
W74-01496 5A

QUATERNARY ALKYLAMMONIUM IONS
Ion Pair Partition Chromatography of Organic Ammonium Compounds,
W74-01496 5A

QUATERNARY PERIOD
Quaternary Shorelines of the Seas of Okhotsk and Japan (Chetvertichnyye beregovyye linii Okhotskogo i Yaponskogo morey),
W74-01391 2J

QUNATITATIVE ANALYSIS
Quantitative Analysis of Aqueous Nitrite/Nitrate Solutions by Infrared Internal Reflectance Spectrometry,
W74-01402 2K

RADAR
Comparison of Gage and Radar Methods of Convective Precipitation Measurement,
W74-01149 2B

RADIOACTIVE WELL LOGGING
Prediction of Well Development Possibilities in Delaware by means of Calibrated Gamma-Ray Logs,
W74-01106 4B

RADIOACTIVITY TECHNIQUES
Simultaneous Determination of Manganese, Copper, Arsenic, Cadmium, Antimony and Mercury in Glacial Ice by Radioactivation,
W74-01361 5A

Distribution Studies of Radium and Other Metallic Elements Between Thenoyltrifluoroacetone in Methyl Isobutyl Ketone and Aqueous Solutions,
W74-01494 5A

RADIOCHEMICAL ANALYSIS
Distribution of (C-14) PCBs in Carp,
W74-01530 5C

RADIUM
Distribution Studies of Radium and Other Metallic Elements Between Thenoyltrifluoroacetone in Methyl Isobutyl Ketone and Aqueous Solutions,
W74-01494 5A

RAIN GAGES
Comparison of Gage and Radar Methods of Convective Precipitation Measurement,
W74-01149 2B

Climatological Stations in California, 1971,
W74-01383 7C

RAINBOW TROUT
Metabolism and Biliary Excretion of Sulfobromophthalein by Rainbow Trout (Salmo Gairdneri),
W74-01411 5C

Uptake of Methyl Mercuric Chloride and Mercuric Chloride by Trout: A Study of Uptake Pathways into the Whole Animal and Uptake by Erythrocytes in Vitro,
W74-01412 5C

RAINFALL
Precipitation Variability Over North Carolina,
W74-01111 2B

RAINFALL DISTRIBUTION PATTERNS
Precipitation Variability Over North Carolina,
W74-01111 2B

RAINFALL INTENSITY
Comparison of Gage and Radar Methods of Convective Precipitation Measurement,
W74-01149 2B

RAINFALL-RUNOFF RELATIONSHIPS
Numerical Simulation of the Rainfall-Runoff Process on a Daily Basis,
W74-01127 2A

Development of A Conceptual Deterministic Rainfall-Runoff Model,
W74-01128 2A

Hydrodynamic Modeling of Two-Dimensional Watershed Flow,
W74-01278 2A

RALEIGH BAY (N.C.)
The Circulation of Surface Waters in Raleigh Bay, North Carolina,
W74-01210 2L

RAMAN SPECTROSCOPY
Novel Method of Raman Data Acquisition,
W74-01330 2K

RANDOLPH COUNTY (ILL)
Comprehensive Water and Sewer Plan, Randolph County, Illinois.
W74-01474 5D

RANGE MANAGEMENT
Brush Eradicating, Basin Pitting, and Seeding Machine for Arid to Semiarid Rangeland,
W74-01637 4A

Effects of Leaf-Footed Bugs on Mesquite Reproduction,
W74-01638 4A

RAPPAHANNOCK ESTUARY (VA)
Sediment Transport in a Coastal Plain Estuary,
W74-01185 2L

RARE EARTH ELEMENTS
State of Rare Earth Elements in Surface Waters (O sostoyanii redkozemel'nykh elementov v poverkhnostnykh vodakh),
W74-01395 2K

REAL TIME DATA
Near Real Time Water Resources Data for River Basin Management,
W74-01150 4A

RECHARGE
Underground Storage of Texas Playa Lake Waters by Injection Into the Ogallala Formation Under Moderate Pump Pressure,
W74-01627 4B

RECHARGE WELLS
Underground Storage of Texas Playa Lake Waters by Injection Into the Ogallala Formation Under Moderate Pump Pressure,
W74-01627 4B

RECORDERS
Using Computers to Analyze Continuous Data,
W74-01520 7C

RECREATION
Report of Attitudes and Opinions of Recreationists Towards Wild and Scenic Rivers: A Case Study of the St. Joe River,
W74-01102 6B

Recreational Reuse of Municipal Wastewater,
W74-01103 5D

A Bill to Establish in the State of California the Santa Monica Mountain and Seashore National Urban Park.
W74-01458 6E

RECREATION DEMAND
Simulation of Water Recreation Users' Decisions,
W74-01464 6D

Valuation of Visual-Cultural Benefits from Freshwater Wetlands in Massachusetts,
W74-01643 6B

RECREATION FACILITIES
Concept-Scale Interaction with the Semantic Differential Technique,
W74-01644 6B

RED TIDE
Probable Causes for the 1972 Red Tide in the Cape Ann Region of the Gulf of Maine,
W74-01435 5C

RED WATER
A First Record of Red-Water Phenomenon in Kashmir, India,
W74-01564 5C

REED SWAMP PLANTS
Growth Rate and Development of the Root/Shoot Ratio in Reedswamp Macrophytes Grown in Winter Hydroponic Cultures,
W74-01346 2I

REEFS
Effects of Reefs and Bottom Slopes on Wind Set-Up in Shallow Water,
W74-01182 2J

REGIONAL ANALYSIS
Water Quality Evaluation of Regionalized Wastewater Systems,
W74-01107 5D

Objective Regionalization of Peak Flow Rates,
W74-01174 4D

Availability of Fresh Water in the East Central Florida Planning Region.
W74-01481 6D

Regional Water Resources Studies -- A Spanish Experience,
W74-01622 4B

REGIONAL DEVELOPMENT
International Scientific and Technical Cooperation in the Field of Water Problems (Mezhdunarodnoye nauchno-tekhnicheskoye sotrudnichestvo v oblasti vodnykh problem),
W74-01138 6E

Water Master Plan. Eugene-Springfield Urbanizing Area.
W74-01479 3D

REGIONAL ECONOMICS
Impact of Irrigation Investments on Regional and Urban Development,
W74-01625 6B

REGIONAL FLOOD
Areas of Possible Flooding in Knox County, Tennessee,
W74-01269 7C

REGIONAL PLANNING
Storm Drainage and Flood Control for Metropolitan Denver.
W74-01475 4A

REGIONAL WASTE WATER SYSTEMS
Water Quality Evaluation of Regionalized Wastewater Systems,
W74-01107 5D

REGRESSION ANALYSIS
Objective Regionalization of Peak Flow Rates,
W74-01174 4D

Coupling Carbon Flow Through Some Pelagic and Benthic Communities,
W74-01437 5B

Extended Tables for Kendall's Tau,
W74-01497 7C

REGULATION
Inventory and Evaluation of Information on Delaware Bay, Volume 2.
W74-01369 6E

REMOTE SENSING
Near Real Time Water Resources Data for River Basin Management,
W74-01150 4A

Utilization of Remote Sensing in River Basin Studies,
W74-01154 5A

Symposium on Significant Results Obtained from Earth Resources Technology Satellite-1, March 5-9, 1973: Volume III--Discipline Summary Reports.
W74-01163 7C

Agriculture, Forestry, Range Resources,

RIVER ITCHEN (HAMPSHIRE-ENGLAND)
Application of Mathematical Modelling to Water Quality Management,
W74-01486 5B

RIVERS
On the Vertical Structure of Tidal Flow in River Estuaries,
W74-01205 2L

RIVERS SYSTEMS
Designating a Segment of the St. Croix as Part of Wild and Scenic Rivers System.
W74-01619 6E

ROBBINSVILLE
Tallulah Creek Watershed (Long Creed Portion) Graham County, North Carolina (Final Environmental Impact Statement).
W74-01621 4D

ROLLING PLAINS (TEXAS)
Effects of Leaf-Footed Bugs on Mesquite Reproduction,
W74-01638 4A

ROMANIA (DANUBE RIVER)
Bryocenological Research in Some Areas of the Iron Gate of the Danube, (In Rumanian),
W74-01453 2I

ROOT/SHOOT PRODUCTIVITY
Desert Dogma Reexamined: Root/Shoot Productivity and Plant Spacing,
W74-01585 2I

ROOT/SHOOT RATIO
Growth Rate and Development of the Root/Shoot Ratio in Reedswanp Macrophytes Grown in Winter Hydroponic Cultures,
W74-01346 2I

ROOT ZONE
Soil Salinization Under Irrigated Cultivation,
W74-01238 3F

ROOTED EQUATIC PLANTS
Element Constitution of Selected Aquatic Vascular Plants from Pennsylvania: Submersed and Floating Leaved Species and Rooted Emergent Species,
W74-01526 5A

ROTAMETERS
Rotameter.
W74-01500 7B

ROTATIONAL FLOW
Turbulent Fluid Friction of Rotating Disks,
W74-01640 8C

ROTIFERS
Zooplankton in Kolyma-Indigirka Lakes (In Russian),
W74-01341 2H

RUNOFF
Division of the United States into Regions According to Cophasal Fluctuations of Annual Runoff (Rayonirovaniye territorii SShA po sinfaznosti kolebaniy godovogo stoka rek),
W74-01140 2E

SACCHAROMYCES SPP
Computer Identification of Yeasts of the Genus Saccharomyces,
W74-01646 5A

SACRAMENTO-SAN JOAQUIN RIVER (CALIF)
Computer Simulation of Estuarial Networks,
W74-01197 2L

SALINE SOILS
Irrigation Waters of the Indus Plains and Their Salt Load,
W74-01639 3C

SALINE WATER
Regional Estimate of Brackish- and Saline-Groundwater Yield (Regional'naya otsenka ekspluatatsionnykh resursov solonovatykh i solenykh podzemnykh vod),
W74-01137 4B

SALINE WATER-FRESHWATER INTERFACES
Recognition of Natural Brine by Electrical Soundings Near the Salt Fork of the Brazos River, Kent and Stonewall Counties, Texas,
W74-01370 2F

SALINE WATER INTRUSION
Oxnard Basin Experimental Extraction-Type Barrier,
W74-01289 8B

Murfee v. Phillips Petroleum Company (Action by Property Owners Against Oil and Gas Lessees for Diminution of Market Value of Land Due to Pollution of Underground Fresh Water Supply).
W74-01459 6E

SALINITY
Investigations on the Influence of Tides on Salinity, Content of Suspended Matter, Sedimentation and Bacteria Counts in the Elbe Estuary, (Untersuchungen Uber Die Einwirkung Der Tide Auf Salzgehalt, Schwebstoffgehalt, Sedimentation Und Bakteriengehalt in Der unterelbe),
W74-01175 2L

On Structure, Entrainment, and Transport in Estuarine Embayments,
W74-01178 2L

Tidal Period Oscillations of an Isohaline Surface Off the Mouth of the Columbia River,
W74-01188 2L

Computer Simulation of Estuarial Networks,
W74-01197 2L

Physiological Ecology of Gelidiella Acerosa (Forsskal) Feldmann et Hamel,
W74-01424 5C

Salinity Adaptation by Dunaliella Tertiolecta. I. Increases in Carbonic Anhydrase Activity and Evidence for a Light-Dependent Na (Plus)/H (Plus) Exchange,
W74-01427 5C

Irrigation Waters of the Indus Plains and Their Salt Load,
W74-01639 3C

SALMON STOCKING
Further Studies of Fish Predation on Salmon Stocked in Maine Lakes,
W74-01603 2H

SALMONELLA
Relationships of Indicator and Pathogenic Bacteria in Stream Waters,
W74-01645 5B

SALTATION
Experimental Investigation of the Effect of Saltating Sediments on Kinematics of Flow (Eksperimental'noye issledovaniye vliyaniya sal'tiruyushchikh nanosov na kinematiku potoka),
W74-01134 2J

SALTS
Transient Movement of Water and Solutes in Unsaturated Soil Systems,
W74-01104 2G

Desorption and Dissolution of Salts from Soils as a Function of Soil Water Ratio,
W74-01604 2G

Irrigation Waters of the Indus Plains and Their Salt Load,
W74-01639 3C

SAMPLE PREPARATION
Determination of Mercury After Room Temperature Digestion by Flameless Atomic Absorption,
W74-01315 5A

Fluorometric Quantitation of Gallium in Biological Materials at Nanogram Levels,
W74-01344 2K

Simplified Spectrophotometric Analysis of Plants for Selenium,
W74-01406 2K

Reliability of an Ammonia Probe for Electrometric Determination of Total Ammonia Nitrogen in Fish Tanks,
W74-01433 5A

Microbial Culture Media Preparation,
W74-01505 5A

SAMPLING
Application of Infrared Fourier Transform Spectroscopy to Analysis of Micro Samples,
W74-01303 2K

Automatic Samplers for Sewage and Effluents,
W74-01306 5A

Phytoplankton of the Czechoslovak Sector of the Danube and of the Estuaries of the Principal Tributaries on Czechoslovak Territory, (In Czect.),
W74-01371 2I

SAN DIEGO COUNTY (CALIF)
Tri-Agencies Pipeline: Engineering Report.
W74-01477 8A

SAND BARS
Alluvion, Islands, and Sand Bars,
W74-01612 6E

SAND DEPOSITS
The Effect of Sand Deposition Upon the Macro-Invertebrate Fauna of the River Camel, Cornwall,
W74-01244 2I

SANDS
Sand Beach Bacteria: Enumeration and Characterization,
W74-01444 5A

Experimental Establishment of Forest Plantations on Sands, in Accordance with the Idea of G. N. Vysotskii (In Russian),
W74-01569 2I

SANDSTONES
Determination of the Total Storage Capacity of the Cretaceous Sandstone Aquifers in South Dakota,
W74-01114 2F

SANDY HOOK (NJ)
Experiments and Hydrographic Surveys Off Sandy Hook, New Jersey (1963),
W74-01199 2L

SARGASSO SEA
Kinetics of Silicon-Limited Growth in the Marine Diatom Thalassiosira pseudonana Hasle and Heimdal (Equals Cyclotella Nana Hustedt),
W74-01431 5C

SARGASSUM HAWAIIENSIS
New Records of Sargassum Hawaiiensis Doty and Newhouse (Sargassaceae, Phaeophyta), a Deep Water Species,
W74-01349 2I

SATELLITES (ARTIFICIAL)
Symposium on Significant Results Obtained from Earth Resources Technology Satellite-1, March 5-9, 1973: Volume III--Discipline Summary Reports.
W74-01163 7C

Agriculture, Forestry, Range Resources,
W74-01164 3F

Land Use and Mapping,
W74-01165 4A

Mineral Resources, Geological Structure and Landform Surveys,
W74-01166 7C

Environment Surveys,
W74-01167 5A

Water Resources,
W74-01168 7C

Marine Resources and Ocean Surveys,
W74-01169 7B

Interpretation Techniques Development,
W74-01170 7B

Multidisciplinary/Regional Resource Surveys,
W74-01171 7B

SAVANNAH RIVER (GEO)
Stratigraphy and Economic Geology of the Coastal Plain of the Central Savannah River Area, Georgia,
W74-01122 2J

SCANNING SPECTROPHOTOMETER
Automated Rapid Scan Instrument for Spectroelectrochemistry in the Visible Region,
W74-01331 2K

SCHOOLS (EDUCATION)
Educational Programs for Land and Water Resources Development and Management,
W74-01628 6B

SCINTILLATION COUNTING
Distribution of (C-14) PCBs in Carp,
W74-01530 5C

SCIOTO RIVER (OHIO)
Sr-87/Sr-86 Ratios and Total Strontium Concentrations in Surface Waters of the Scioto River Drainage Basin, Ohio,
W74-01516 5B

SCOLECITHRICELLA
Revision of Family and Some Generic Definitions in the Phaennidae and Scolecithricidae (Copepoda: Calanoida),
W74-01308 5A

SCOTLAND (FLANDERS MOSS)
Soil Aeration Response to Draining Intensity in Basin Peat,
W74-01255 2G

SEA ICE
The Mass Balance of the Sea Ice of the Arctic Ocean,
W74-01374 2C

SEA NETTLES
Biochemistry of Estuarine Ecosystem with Emphasis on Heavy Metals and Shellfish,
W74-01108 5C

SEA OF JAPAN
Quaternary Shorelines of the Seas of Okhotsk and Japan (Chetvertichnyye beregovyye linii Okhotskogo i Yaponskogo morey),
W74-01391 2J

SEA OF OKHOTSK
Quaternary Shorelines of the Seas of Okhotsk and Japan (Chetvertichnyye beregovyye linii Okhotskogo i Yaponskogo morey),
W74-01391 2J

SEA WATER
Oxnard Basin Experimental Extraction-Type Barrier,
W74-01289 8B

The Potentiometric Titration of Potassium in Sea Water with a Valinomycin Electrode,
W74-01442 5A

Soluble Aluminum in Marine and Fresh Water by Gas-Liquid Chromatography,
W74-01446 5A

Marine Pollution: A Critique of Present and Proposed International Agreements and Institutions--A Suggested Global Oceans' Environmental Regime,
W74-01449 5G

Silica Gel Medium for Enumeration of Petroleumlytic Microorganisms in the Marine Environment,
W74-01532 5A

SEASONAL
The Union of the Columbia River and the Pacific Ocean -- General Features,
W74-01183 2L

SEASONAL VARIATION
Seasonal Variation of Chemical Parameters in Alaskan Tundra Lakes,
W74-01347 5B

Microfauna of Activated Sludge. Part III. The Effect of Physico-Chemical Factors on the Occurrence of Microfauna in the Annual Cycle,
W74-01542 5C

SEAWEEDS (PACIFIC OCEAN)
Concentrations of Plutonium, Cobalt, and Silver Radionuclides in Selected Pacific Seaweeds,
W74-01297

SEDIMENT DISCHARGE
A Method of Forecasting the Building of a River Bar (Metod prognoza pereformirovaniy rechnogo bara),
W74-01388 2J

SEDIMENT REMOVAL
Mohawk Lake Study, Brantford, Ontario.
W74-01476 2J

SEDIMENT SORTING
Analysis of Sediment Sorting in Alluvial Channels,
W74-01274 2J

SEDIMENT TRANSPORT
Cohesionless, Fine Graded, Flaked Sediment Transport by Water,
W74-01125 2J

Experimental Investigation of the Effect of Saltating Sediments on Kinematics of Flow (Eksperimental'noye issledovaniye vliyaniya sal'tiruyushchikh nanosov na kinematiku potoka),
W74-01134 2J

Investigations on the Influence of Tides on Salinity, Content of Suspended Matter, Sedimentation and Bacteria Counts in the Elbe Estuary, (Untersuchungen Uber Die Einwirkung Der Tide Auf Salzgehalt, Schwebstoffgehalt, Sedimentation Und Bakteriengehalt in Der unterelbe),
W74-01175 2L

A Profile of the Four Moment Measures Perpendicular to a Shore Line, South Haven, Michigan,
W74-01184 2H

Sediment Transport in a Coastal Plain Estuary,

Analysis of Sediment Sorting in Alluvial Channels,
W74-01274 2J

Sediment Transport: New Approach and Analysis,
W74-01279 2J

Observations of Net Shoreline Positions and Approximations of Barrier Island Sediment Budgets,
W74-01372 2L

A Method of Forecasting the Building of a River Bar (Metod prognoza pereformirovaniy rechnogo bara),
W74-01388 2J

SEDIMENT-WATER INTERFACES
A Study of the Exchange of Dissolved Solids Between Bottom Sediments and Water of Different Water Bodies (Izucheniye obmena rastvorennymi veshchestvami mezhdu donnymi otlozheniyami i vodoy razlichnykh vodoyemov),
W74-01389 2J

SEDIMENTATION
Sedimentation in a Meandering Estuary,
W74-01177 2L

Beach Cusps,
W74-01180 2J

Littoral Zone Tidal-Cycle Sedimentation,
W74-01192 2J

The Equilibrium Beach,
W74-01195 2J

Tidal Cycle of Changes in an Equilibrium Beach, Sandy Hook, New Jersey,
W74-01198 2L

Beach Equilibrium and Second-Order Wave Theory,
W74-01201 2E

The Influence of Topography and Pressure Gradients on Shoaling in a Tidal Estuary,
W74-01204 2L

SEDIMENTS
Mercury in the Environment--A Global Review Including Recent Studies in the Delaware Bay Region,
W74-01373 5B

Coupling Carbon Flow Through Some Pelagic and Benthic Communities,
W74-01437 5B

Occurrence and Cumulation of Microcomponents in Bottom Sediments of Dam Reservoirs of Southern Poland,
W74-01565 5B

SEICHES
Currents at Toledo Harbor,
W74-01214 2H

SEISMIC STUDIES
Seismic Evidence for Glacier Motion,
W74-01378 2C

SELENIUM
Prevention of Selenium Interference with Measurement of Phosphate as its Molybdenum (V-VI) Complex,
W74-01345 5A

Fluorometric Determination of Selenium in Water with 2,3-Diaminonaphthalene,
W74-01399 5A

Simplified Spectrophotometric Analysis of Plants for Selenium,
W74-01406 2K

SEMIARID CLIMATES
Brush Eradicating, Basin Pitting, and Seeding Machine for Arid to Semiarid Rangeland,
W74-01637 4A

SEMIINTEGRAL ELECTROANALYSIS
Semiintegral Electroanalysis: Shapes of Neopolarograms,
W74-01333 5A

SENSITIVITY
Sensitivity of Three Selected Bacterial Species to Ozone,
W74-01553 5F

SENSORS
Glass-Metal Composite Electrodes,
W74-01512 2K

SEPARATION TECHNIQUES
Vortex Concept for Separating Oil from Water,
W74-01148 5G

Solvent Extraction of Metal 1,10-Phenanthroline Complexes and Concentration of Trace Amounts of Metal Ions Prior to Spectrophotometric or Flame Photometric Determination,
W74-01354 5A

A Systematic Study of the Variables Involved in the Reverse-Phase Thin-Layer Chromatography of Oxyethylated Alkyl Sulfate Surfactants,
W74-01358 5A

Separation of Polyphosphates by Paper Chromatography with a New Solvent,
W74-01366 5A

Gas-Liquid Chromatographic Determination of Chlorpyriphos in Dursban Insecticide Formulations,
W74-01405 5A

The Determination of Organo-Sulfur Compounds by Thin-Layer Chromatography Via a Ligand-Exchange Precess,
W74-01439 5A

Sand Beach Bacteria: Enumeration and Characterization,
W74-01444 5A

Ion Pair Partition Chromatography of Organic Ammonium Compounds,
W74-01496 5A

Virus Concentration from Sewage,
W74-01533 5D

Litmus Milk Reaction as a Distinguishing Feature Between Streptococcus Faecalis of Human and Non-Human Origins,
W74-01549 5A

SEPTIC TANKS
Categories of Relative Feasibility for Septic-Tank Filter Fields in Knox County, Tennessee,
W74-01145 7C

Improved Waste Disposal Unit,
W74-01284 5D

SERUM
Simple Inexpensive Freeze-Drying Procedure,
W74-01339 7B

SEWAGE
Virus Concentration from Sewage,
W74-01533 5D

Biodegradation of O-Benzyl-P-Chlorophenol,
W74-01552 5B

The Action of Mineral Fertilization on Pasture Herbage, Irrigated with Sewage, (In Russian),
W74-01559 5D

SEWAGE BACTERIA
Investigations on the Sheathed Bacterium Haliscomenobacter hydrossis Gen.n., Sp.n., Isolated from Activated Sludge,
W74-01539 5B

Bacteriology of Activated Sludge, in Particular the Filamentous Bacteria,
W74-01540 5B

SEWAGE DISPOSAL
Improved Waste Disposal Unit,
W74-01284 5D

A Growing Community: 1973 Update, (Lexington, Kentucky).
W74-01484 5D

SEWAGE DISTRICTS
Sketch Development Plan, Chambers County, Alabama.
W74-01485 5D

SEWAGE EFFLUENTS
Automatic Samplers for Sewage and Effluents,
W74-01306 5A

Heavy Metals in Wastewater and Treatment Plant Effluents,
W74-01319 5A

Rapid Gas Chromatographic Method for Determination of Residual Methanol in Sewage,
W74-01410 5A

SEWAGE MICROORGANISMS
Microfauna of Activated Sludge. Part III. The Effect of Physico-Chemical Factors on the Occurrence of Microfauna in the Annual Cycle,
W74-01542 5C

SEWAGE TREATMENT
Pressurized Sewer Collection Systems,
W74-01286 5D

Fate of Lignin in Kraft Effluent Treatment,
W74-01320 5B

SEWERAGE
Pressurized Sewer Collection Systems,
W74-01286 5D

Functional Water and Sewerage Plan and Program.
W74-01469 5D

Relating Comprehensive Sewer and Water Plans to the County Land Use Plan. Goals, Policies and Standards.
W74-01473 5D

Comprehensive Water and Sewer Plan, Randolph County, Illinois.
W74-01474 5D

Utility Provisions Analysis for East Central Florida.
W74-01480 6D

SEWERS
Pressurized Sewer Collection Systems,
W74-01286 5D

SHAD (ALABAMA)
Biology of the Alabama Shad in Northwest Florida,
W74-01248 2I

SHADING
Effects of Shading and of Seasonal Differences in Weathering on the Growth, Sugar Content and Sugar Yield of Sugar Beet Crops,
W74-01229 3F

SHALLOW WATER
Note on the Equations of Long Waves Over an Uneven Bottom,
W74-01189 2E

Harbor Analog System, Part I - Waves,
W74-01200 2L

Edge Waves Over a Sloping Beach in a Rotating Two-Layered System,
W74-01218 2E

Longshore Current Generation by Obliquely Incident Internal Waves,
W74-01650 2E

SHIGELLA SONNEI
Shigella Sonnei Isolated from Well Water,
W74-01551 5A

SHIPS
Vortex Concept for Separating Oil from Water,
W74-01148 5G

SHOALING
Beach Changes on the Outer Banks of North Carolina,
W74-01179 2E

Note on the Equations of Long Waves Over an Uneven Bottom,
W74-01189 2E

SHOALING

The Influence of Topography and Pressure Gradients on Shoaling in a Tidal Estuary,
W74-01204 2L

Observations and Experiments on Solitary Wave Deformation,
W74-01215 8B

SHOALS
Sediment Transport in a Coastal Plain Estuary,
W74-01185 2L

SHORE PROTECTION
The Equilibrium Beach,
W74-01195 2J

SHORELAND MANAGEMENT
Floodland and Shoreland Development Guide.
W74-01483 4A

SHORES
Tidewater Shorelines in Broward and Palm Beach Counties, Florida: An Analysis of Characteristics and Changes Interpreted from Color, Color Infrared and Thermal Aerial Imagery,
W74-01220 2L

Quaternary Shorelines of the Seas of Okhotsk and Japan (Chetvertichnyye beregovyye linii Okhotskogo i Yaponskogo morey),
W74-01391 2J

SIEROZEMS
Distribution Patterns and Population Dyanmics of the Micro-Arthropods of a Desert Soil in Southern California,
W74-01635 2I

SILICA GEL MEDIUM
Silica Gel Medium for Enumeration of Petroleumlytic Microorganisms in the Marine Environment,
W74-01532 5A

SILICATES
Kinetics of Silicon-Limited Growth in the Marine Diatom Thalassiosira pseudonana Hasle and Heimdal (Equals Cyclotella Nana Hustedt),
W74-01431 5C

SILT
Role of Silt in Microcystis Aeruginosa Development, (In Russian),
W74-01368 5C

SILTING
Mohawk Lake Study, Brantford, Ontario.
W74-01476 2J

SILVER
Ion Selective Sensors,
W74-01506 5A

SILVER RADIONUCLIDES
Concentrations of Plutonium, Cobalt, and Silver Radionuclides in Selected Pacific Seaweeds,
W74-01297

SIMULATION ANALYSIS
Numerical Simulation of the Rainfall-Runoff Process on a Daily Basis,
W74-01127 2A

Hydrodynamic Modeling of Two-Dimensional Watershed Flow,
W74-01278 2A

Simulation Models for Water-Resource Systems: Their Utility in Measuring Physical and Economic Effects of Weather Forecasting and Weather Modification: Summary Report,
W74-01463 3B

Simulating the Behavior of a Multi-Unit, Multi-Purpose Water-Resource System,
W74-01468 6A

SIMULIIDAE
Number and Size of Drifting Nymphs of Ephemeroptera, Chironomidae, and Simulidae by Day and Night in the River Stranda, Western Norway,
W74-01230 2I

SINKS
Areas with Abundant Sinkholes in Knox County, Tennessee,
W74-01270 7C

SIZE
Relation Between Total Body Weight and Concentrations of Manganese, Iron, Copper, Zinc, and Mercury in White Muscle of Bluefish (Pomatomus saltatrix) and A Bathyl-Dimersal Fish Antimora Rostrata,
W74-01413 5B

SLOPES
Effects of Reefs and Bottom Slopes on Wind Set-Up in Shallow Water,
W74-01182 2J

Edge Waves Over a Sloping Beach in a Rotating Two-Layered System,
W74-01218 2E

SNAILS
Distribution of Alkyl Arsenicals in Model Ecosystem,
W74-01409 5C

SNOW
Use of Isotopic Methods to Determine Present Rates of Snow Accumulation in Antarctica (Ispol'zovaniye izotopnykh metodov dlya opredeleniya sovremennoy skorsti nakopleniya snega v Antarktide),
W74-01393 2C

SNOW COVER
Use of Isotopic Methods to Determine Present Rates of Snow Accumulation in Antarctica (Ispol'zovaniye izotopnykh metodov dlya opredeleniya sovremennoy skorsti nakopleniya snega v Antarktide),
W74-01393 2C

SNOW PACKS
Development of a Time-Space Prediction Technique to Evaluate Snowpacks in and Adjacent to Forest Openings,
W74-01231 3B

SNOW PENETROMETER
Comparison of the Snow Resistograph with the Ram Penetrometer,
W74-01381 2C

SNOW RESISTOGRAPH
Comparison of the Snow Resistograph with the Ram Penetrometer,
W74-01381 2C

SNOWFIELDS
Spectral Absorption of Solar Radiation in Alpine Snowfields,
W74-01626 2C

SNOWMELT
Development of a Time-Space Prediction Technique to Evaluate Snowpacks in and Adjacent to Forest Openings,
W74-01231 3B

Short-Term Snow Melt and Ablation Derived from Heat- and Mass-Balance Measurements,
W74-01380 2C

SNOWPACKS
Comparison of the Snow Resistograph with the Ram Penetrometer,
W74-01381 2C

SOCIAL ASPECTS
Consolidation of Irrigation Systems: Phase 1, Engineering, Legal, and Sociological Constraints and/or Facilitators,
W74-01367 3F

SOCIAL SCIENCES
The Role of Universities in Water Resources Education: The Social Sciences,
W74-01467 6B

SOCIAL VALUES
Valuation of Visual-Cultural Benefits from Freshwater Wetlands in Massachusetts,
W74-01643 6B

Concept-Scale Interaction with the Semantic Differential Technique,
W74-01644 6B

SODIUM
Salinity Adaptation by Dunaliella Tertiolecta. I. Increases in Carbonic Anhydrase Activity and Evidence for a Light-Dependent Na (Plus)/H (Plus) Exchange,
W74-01427 5C

SODIUM IONS
Prediction of the Variation in the Chemistry of a Lake Resulting from an Increase in Soluble Deposits: Application: The Sodium in Lake Neuchatel,
W74-01562 2H

SOIL AERATION
Soil Aeration Response to Draining Intensity in Basin Peat,
W74-01255 2G

Nitrate Reduction in Soils: Effect of Soil Moisture Tension,
W74-01583 2G

SOIL AGGREGATION
Effect of Portland Cement on Soil Aggregation and Hydraulic Properties,
W74-01576 2G

SOIL ANALYSIS
Microdetermination of Chloro-S-Triazines in Soil by Gas-Liquid Chromatography with Nickel Electron Capture or Electrolytic Conductivity Detection,
W74-01304 5A

SOIL CHEMICAL PROPERTIES
Effect of the Quality of Well Waters on Soils in Gurgaon District,
W74-01252 2G

SOIL CLASSIFICATION
Soil Association Map of Knox County, Tennessee.
W74-01146 7C

SOIL CONSERVATION
Soil and Water Conservation on Arable Lands,
W74-01633 3F

SOIL DISPOSAL FIELDS
Categories of Relative Feasibility for Septic-Tank Filter Fields in Knox County, Tennessee,
W74-01145 7C

SOIL FILTERS
Categories of Relative Feasibility for Septic-Tank Filter Fields in Knox County, Tennessee,
W74-01145 7C

SOIL FORMATION
Soil Association Map of Knox County, Tennessee.
W74-01146 7C

SOIL FROST GAGES
A Reliable and Inexpensive Soil Frost Gage,
W74-01574 2G

SOIL MECHANICS
Study of Soil Plasticity over a wide Range of Soil Moisture Contents,
W74-01636 2G

SOIL MOISTURE
Transient Movement of Water and Solutes in Unsaturated Soil Systems,
W74-01104 2G

Study of Soil Plasticity over a wide Range of Soil Moisture Contents,
W74-01636 2G

SOIL MOISTURE TENSION
Nitrate Reduction in Soils: Effect of Soil Moisture Tension,
W74-01583 2G

SOIL PHYSICAL PROPERTIES
Physical Properties of Some Volcanic-Ash Derived Soils of the Highlands of Pasto, Narino, Colombia, (In Spanish),
W74-01228 2G

Effect of Puddling on Physical Properties of Rice Soil,
W74-01246 3F

Physical Edaphology. The Physics of Irrigated and Nonirrigated Soils,
W74-01572 2G

SOIL PROPERTIES
Study of Soil Plasticity over a wide Range of Soil Moisture Contents,
W74-01636 2G

SOIL SALINIZATION
Soil Salinization Under Irrigated Cultivation,
W74-01238 3F

SOIL TREATMENT
System of Treating Irrigated Soil which is Sown with Sugar Beets, (In Russian),
W74-01606 3F

SOIL TYPES
Soil Association Map of Knox County, Tennessee.
W74-01146 7C

SOIL WATER
Nitrates in Soil and Ground Water Beneath Irrigated and Fertilized Crops,
W74-01245 3F

Study of Soil Plasticity over a wide Range of Soil Moisture Contents,
W74-01636 2G

SOIL WATER MOVEMENT
Transient Movement of Water and Solutes in Unsaturated Soil Systems,
W74-01104 2G

SOIL WATER RATIO
Desorption and Dissolution of Salts from Soils as a Function of Soil Water Ratio,
W74-01604 2G

SOILS
Water Requirements of Wheat and Cotton on a High Water Table Soil Under Arid Conditions,
W74-01595 3F

SOLAR RADIATION
Spectral Absorption of Solar Radiation in Alpine Snowfields,
W74-01626 2C

SOLID ELECTRODES
Small-Volume Solid-Electrode Flow-Through Electrochemical Cells. Preliminary Evaluation Using Pulse Polarographic Techniques,
W74-01445 7B

SOLID WASTES
Study of Water Recovery and Solid Waste Processing for Aerospace and Domestic Applications: Volume 1 - Final Report Summary,
W74-01280 5D

A Cost-Effectiveness Study and Analysis of Municipal Refuse Disposal Systems,
W74-01631 5E

SOLUTES
Transient Movement of Water and Solutes in Unsaturated Soil Systems,
W74-01104 2G

Lateral Diffusion Interferences in Flame Atomic Absorption and Emission Spectrometry,
W74-01342 2K

SOLVENT EXTRACTIONS
Extraction-Photometric Determination of Uranium (IV) with Chlorophosphonazo-III,
W74-01364 5A

SOLVENTS
Separation of Polyphosphates by Paper Chromatography with a New Solvent,
W74-01366 5A

SONORA (MEXICO)
Impact of Irrigation Investments on Regional and Urban Development,
W74-01625 6B

SORGHUM LEAVES
Stomatal-Diffusion Resistance and Water Potential of Soybean and Sorghum Leaves,
W74-01605 3F

SORPTION
Fate of Lignin in Kraft Effluent Treatment,
W74-01320 5B

SOUTH AFRICA
A Waterborne Actinomycete Resembling Strains Causing Mycetoma,
W74-01256 5B

SOUTH AFRICA (KLIP RIVER)
The Ecology of the Diatoms of the Klip River, Southern Transvaal,
W74-01313 5C

SOUTH DAKOTA
Calculation of Permeability of Cretaceous Sandstones from Pumping and Static Level Data in Selected Areas of Western South Dakota,
W74-01113 2F

Determination of the Total Storage Capacity of the Cretaceous Sandstone Aquifers in South Dakota,
W74-01114 2F

Nutrient Sources and Transport in the Upper and Central Regions of the Big Sioux River,
W74-01115 5B

SOUTH PLATTE RIVER VALLEY (COLO)
Hydrogeologic Characteristics of the Valley-Fill Aquifer in the Weldona Reach of the South Platte River Valley, Colorado,
W74-01142 4B

SOYBEAN HYPOCOTYLS
Sensitivity of Cell Division and Cell Elongation to Low Water Potentials in Soybean Hypocotyls,
W74-01249 3F

SOYBEAN LEAVES
Stomatal-Diffusion Resistance and Water Potential of Soybean and Sorghum Leaves,
W74-01605 3F

SOYBEANS
Effect of Moisture Stress on Soybean (Glycine max (L.) Merr.),
W74-01599 3F

SPAIN
Regional Water Resources Studies -- A Spanish Experience,
W74-01622 4B

SPATIAL DISTRIBUTION
The Structure of an Acid Moorland Pond Community,
W74-01508 5C

SPECIATION
Sublittoral Benthic Marine Algae of Southern Cape Cod and Adjacent Islands: Pseudolithoderma Paradoxum Sp. Nov. (Ralfsiaceae, Ectocarpales),
W74-01350 5A

Computer Identification of Yeasts of the Genus Saccharomyces,
W74-01646 5A

SPECIES DIVERSITY
Stream Community Response to Nutrient Enrichment,
W74-01499 5C

SPECTRAL ABSORPTION
Spectral Absorption of Solar Radiation in Alpine Snowfields,
W74-01626 2C

SPECTRAL ANALYSIS
Thermal and Base-Catalyzed Hydrolysis Products of the Systemic Fungicide, Benomyl,
W74-01504 5B

SPECTROPHOTOMETRY
Evaluation of Flame Emission Determination of Phosphorus in Water,
W74-01116 5A

Lateral Diffusion Interferences in Flame Atomic Absorption and Emission Spectrometry,
W74-01342 2K

A Procedure for the Estimation of Microgram Quantities of Triton X-100,
W74-01360 5A

Extraction-Photometric Determination of Uranium (IV) with Chlorophosphonazo-III,
W74-01364 5A

Simplified Spectrophotometric Analysis of Plants for Selenium,
W74-01406 2K

SPECTROSCOPY
Concentrations of Plutonium, Cobalt, and Silver Radionuclides in Selected Pacific Seaweeds,
W74-01297
Thermal and Base-Catalyzed Hydrolysis Products of the Systemic Fungicide, Benomyl,
W74-01504 5B

SPIDER MITES
Effect of Flooding on the Twospotted Spider Mite and its predators on Strawberry in Southern California,
W74-01243 3F

SPINACH
The Effect of Substrate Humidity on the Supply of Macroelements to Plants, (In Latvian),
W74-01241 3F

SPIRODELA-OLIGORRHIZA
Some Influences of Aquatic Vegetation on the Species and Number of Culicidae (Diptera) in Small Pools of Water,
W74-01609 2I

SPOIL DISPOSAL
Effect of Spoil Disposal on Benthic Invertebrates,
W74-01420 5C

SPRING CREEK (PENN)
Stream Community Response to Nutrient Enrichment,
W74-01499 5C

SPRINGS
Contribution to Physicochemical Study of Some Springs of the Gapeau River Basin (Var),
W74-01288 2K

ST. CROIX RIVER (MINN AND WIS)
Designating a Segment of the St. Croix as Part of Wild and Scenic Rivers System.
W74-01619 6E

ST. JOE RIVER (IDAHO)
Report of Attitudes and Opinions of Recreationists Towards Wild and Scenic Rivers: A Case Study of the St. Joe River,
W74-01102 6B

ST. JOHNS RIVER BASIN (FLA)
Availability of Fresh Water in the East Central Florida Planning Region.
W74-01481 6D

ST. LAWRENCE RIVER
Quality of Surface Waters of the United States, 1968: Parts 4 and 5. St Lawrence River Basin and Hudson Bay and Upper Mississippi River Basins.
W74-01268 2K

STABLE ISOTOPES
Versatile Computer Generated Variable Accelerating Voltage Circuit for Magnetically Scanned Mass Spectrometers. Use for Assays in the Picogram Range and for Assays of Stable Isotope Tracers,
W74-01335 2K

STANOPHEN 1
Biodegradation of O-Benzyl-P-Chlorophenol,
W74-01552 5B

STATIC INVERTER SYSTEMS
Choosing a Static Inverter System,
W74-01547 7B

STATISTICAL METHODS
Population Dynamics of Pond Zooplankton, I. Diaptomus pallidus Herrick,
W74-01502 5C

STATISTICAL MODELS
A Stochastic Model of Streamflow Based on the Theory of Functions of Markov Processes,
W74-01123 2E

STATISTICS
A Profile of the Four Moment Measures Perpendicular to a Shore Line, South Haven, Michigan,
W74-01184 2H

STATUTES
Florida Pollution Statute Infringes Upon Exclusive Federal Maritime Legislative Domain, The American Waterways Operators, Inc. v. Askew, 335 F. Supp. 1241 (M.D. Fla).
W74-01460 5G

STOCHASTIC PROCESSES
A Stochastic Model of Streamflow Based on the Theory of Functions of Markov Processes,
W74-01123 2E

A Hybrid Model for Irrigation Planning Using Chance Constrained Programming and Hydrologic Simulation,
W74-01488 4B

STOMATAL DIFFUSION RESISTANCE
Stomatal-Diffusion Resistance and Water Potential of Soybean and Sorghum Leaves,
W74-01605 3F

STONEFLIES
Revisions and New Taxa in New Zealand Notonemouridae (Insecta: Plecoptera),
W74-01299 2I

Emergence, Reproduction, and Growth of Setipalpian Plecoptera in Southern Ontario,
W74-01359 5A

STONEWALL COUNTY (TEX)
Recognition of Natural Brine by Electrical Soundings Near the Salt Fork of the Brazos River, Kent and Stonewall Counties, Texas,
W74-01370 2F

STORAGE
Viability of Lyophilized Microorganisms after Storage,
W74-01538 5C

STORAGE VOLUME
On the Optimal Operation of Groundwater Basins: A Calculus of Variations Approach,
W74-01489 4B

STORM DRAINAGE
Promoting Environmental Quality Through Urban Planning and Controls,
W74-01470 5D

STORMS
Shoreline Processes Near Barrow, Alaska: A Comparison of the Normal and the Catastrophic,
W74-01193 2L

STRATIFICATION
A Note on Edge Waves in a Stratified Fluid,
W74-01194 2E

Estuarine Circulation Induced by Diffusion,
W74-01222 2L

STRATIFIED FLOW
Boundary Contractions as Controls in Two-Layer Flows,
W74-01276 8B

STRATIGRAPHY
Stratigraphy and Economic Geology of the Coastal Plain of the Central Savannah River Area, Georgia,
W74-01122 2J

STRAWBERRY
Effect of Flooding on the Twospotted Spider Mite and its predators on Strawberry in Southern California,
W74-01243 3F

STREAMFLOW
Single-Velocity Method in Measuring Discharge,
W74-01161 2C

Hydrologic Engineering Methods for Water Resources Development. Volume 2. Hydrologic Data Management,
W74-01642 2E

STREAMFLOW FORECASTING
A Stochastic Model of Streamflow Based on the Theory of Functions of Markov Processes,
W74-01123 2E

STREPTOCOCCUS FAECALIS
Litmus Milk Reaction as a Distinguishing Feature Between Streptococcus Faecalis of Human and Non-Human Origins,
W74-01549 5A

STROMS
Coastal Processes and Beach Dynamics at Sheboygan, Wisconsin, July, 1972,
W74-01130 2H

STRONTIUM
Sr-87/Sr-86 Ratios and Total Strontium Concentrations in Surface Waters of the Scioto River Drainage Basin, Ohio,
W74-01516 5B

SUBMERGED PLANTS
Element Constitution of Selected Aquatic Vascular Plants from Pennsylvania: Submersed and Floating Leaved Species and Rooted Emergent Species,
W74-01526 5A

SUBSTRATE UTILIZATION
Studies on Methanol-Oxidizing Bacteria. I. Isolation and Growth Studies,
W74-01535 5C

SUBSURFACE DRAINAGE
Murfee v. Phillips Petroleum Company (Action by Property Owners Against Oil and Gas Lessees for Diminution of Market Value of Land Due to Pollution of Underground Fresh Water Supply).
W74-01459 6E

SUBSURFACE WATERS
Recognition of Natural Brine by Electrical Soundings Near the Salt Fork of the Brazos River, Kent and Stonewall Counties, Texas,
W74-01370 2F

SUCCESSION
Algal Succession on Artificial Reefs in a Marine Lagoon Environment in Guam,
W74-01429 5C

Kinetics of Silicon-Limited Growth in the Marine Diatom Thalassiosira pseudonana Hasle and Heimdal (Equals Cyclotella Nana Hustedt),
W74-01431 5C

SUGAR BEET CROPS
Effects of Shading and of Seasonal Differences in Weathering on the Growth, Sugar Content and Sugar Yield of Sugar Beet Crops,
W74-01229 3F

SUGAR BEET YIELD
Effect of an Increased Water Rate in Liquid Dressing on Sugar Beet Yield, (In Russian),
W74-01211 3F

SUGAR BEETS GROWTH
System of Treating Irrigated Soil which is Sown with Sugar Beets, (In Russian),
W74-01606 3F

SULFATES
A Systematic Study of the Variables Involved in the Reverse-Phase Thin-Layer Chromatography of Oxyethylated Alkyl Sulfate Surfactants,
W74-01358 5A

SULFIDES
Isotopic Composition of Oxygen and Hydrogen in Sulfide Waters of the Sochi-Adler Artesian Basin (Izotopnyy sostav kisloroda i vodorada sul'fidnykh vod Sochi-Adlerskogo artezianskogo basseyna),
W74-01394 2K

SULFOBROMOPHTHALEIN
Metabolism and Biliary Excretion of Sulfobromophthalein by Rainbow Trout (Salmo Gairdneri),
W74-01411 5C

SULFUR COMPOUNDS
The Determination of Organo-Sulfur Compounds by Thin-Layer Chromatography Via a Ligand-Exchange Precess,
W74-01439 5A

Study of Chelated Mixtures of Ferric Ions with Nitrilotriacetic, Sulfo-5-Salicylic and Pyrocatechol-3,5-Disulfonic Acids, (In French),
W74-01440 5A

SULFUR CYCLE
The Effect of Microbial Activity Upon the Sedimentary Sulphur Cycle,
W74-01239 5B

SUNFLOWER
Water Regime of Sunflower Under Different Conditions of Phosphorus Nutrition, (In Russian),
W74-01227 3F

SUPERSATURATION
Supersaturation of Nitrogen in Water During Passage Through Hydroelectric Turbines at Mactaquac Dam,
W74-01432 5C

SURF
Long Surf,
W74-01203 2E

SURFACE-GROUNDWATER RELATIONSHIPS
Chemical Relationships Between Surface Water and the Ground in South Florida,
W74-01153 2K

SURFACE WATER
Regional Water Resources Studies -- A Spanish Experience,
W74-01622 4B

SURFACE WATER AVAILABILITY
Surface-Water Resources of the USSR and Their Change Resulting from Human Economic Activity (Resursy poverkhnostnykh vod SSSR i ikh izmeneniye pod vliyaniyem khozyaystvennoy deyatel'nosti),
W74-01133 4A

SURFACE WATERS
Surface-Water Resources of the USSR and Their Change Resulting from Human Economic Activity (Resursy poverkhnostnykh vod SSSR i ikh izmeneniye pod vliyaniyem khozyaystvennoy deyatel'nosti),
W74-01133 4A

Urbanization and Its Effects on Regimen and Quality of Surface Waters (Urbanizatsiya i yeye vliyaniye na rezhim i kachestvo poverkhnostnykh vod),
W74-01139 4C

The Circulation of Surface Waters in Raleigh Bay, North Carolina,
W74-01210 2L

Quality of Surface Waters of the United States, 1968: Parts 4 and 5. St Lawrence River Basin and Hudson Bay and Upper Mississippi River Basins.
W74-01268 2K

Techniques for Measuring Light Absorption Scattering, and Particle Concentrations in Water,
W74-01283 7B

Mercury in the Environment--A Global Review Including Recent Studies in the Delaware Bay Region,
W74-01373 5B

SURFACTANTS
A Systematic Study of the Variables Involved in the Reverse-Phase Thin-Layer Chromatography of Oxyethylated Alkyl Sulfate Surfactants,
W74-01358 5A

SURGES
Oscillations of Tide and Surge in an Estuary of Finite Length,
W74-01649 2L

SURVEYS
Agriculture, Forestry, Range Resources,
W74-01164 3F

SURVIVAL
Viability of Lyophilized Microorganisms after Storage,
W74-01538 5C

Relationships of Indicator and Pathogenic Bacteria in Stream Waters,
W74-01645 5B

SUSPENDED SOLIDS
A Simple Portable Field Nephelometer,
W74-01247 7B

Techniques for Measuring Light Absorption Scattering, and Particle Concentrations in Water,
W74-01283 7B

A Modified Filtration Method for the Analysis of Wastewater Suspended Solids,
W74-01318 5A

SWAMPS
Chemical Relationships Between Surface Water and the Ground in South Florida,
W74-01153 2K

SWEDEN
Swedish Lake Restoration Program Gets Results,
W74-01262 5G

Bottom Fauna as an Indicator of Water Quality in Sweden's Large Lakes (Lakes Malaren, Vattern and Vanern),
W74-01531 5B

SWEET POTATO PROCESSING WASTES
Wastewater Characterization of Sweet Potato Processing,
W74-01324 5A

SWITZERLAND (LA SERRIERE RIVER BASIN)
Study of the Speed of Water Circulation in a Water-Bearing Limestone Deposit by Tracing Tests (La Serriere River Basin/NE),
W74-01563 2F

SWITZERLAND (LAKE NEUCHATEL)
Prediction of the Variation in the Chemistry of a Lake Resulting from an Increase in Soluble Deposits: Application: The Sodium in Lake Neuchatel,
W74-01562 2H

SYSTEMATICS
Revisions and New Taxa in New Zealand Notonemouridae (Insecta: Plecoptera),
W74-01299 2I

Revision of Family and Some Generic Definitions in the Phaennidae and Scolecithricidae (Copepoda: Calanoida),
W74-01308 5A

A New Species of Boeckella (Copepoda: Calanoida) from Northland, New Zealand,
W74-01309 5A

New Records of Sargassum Hawaiiensis Doty and Newhouse (Sargassaceae, Phaeophyta), a Deep Water Species,
W74-01349 2I

Benthic Macroinvertebrates as Indexes of Water Quality in Whetstone Creek, Morrow County, Ohio (Scioto River Basin),
W74-01517 5B

SYSTEMS ANALYSIS
Physical System Modelling as a Tool in Water Resource Planning,
W74-01487 2A

TANNER BASIN (CALIF)
C 18-Isoprenoid Ketone in Recent Marine Sediment,
W74-01301 5A

TARBUSH
Brush Eradicating, Basin Pitting, and Seeding Machine for Arid to Semiarid Rangeland,
W74-01637 4A

TEMPERATURE SELECTION
Temperature Selection by Juvenile and Adult Yellow Perch (Perca Flavescens) Acclimated to 24 C,
W74-01353 5A

TENNESSEE
Overburden Related to Type of Bedrock and Engineering Characteristics of the Bedrock, Knox County, Tennessee,
W74-01144 7C

Categories of Relative Feasibility for Septic-Tank Filter Fields in Knox County, Tennessee,
W74-01145 7C

Soil Association Map of Knox County, Tennessee.
W74-01146 7C

Ground-Water Yield Potential in Knox County, Tennessee,
W74-01147 7C

Areas of Possible Flooding in Knox County, Tennessee,
W74-01269 7C

Areas with Abundant Sinkholes in Knox County, Tennessee,
W74-01270 7C

TENNESSEE (KENTUCKY LAKE)
Freshwater Mussel Ecology, Kentucky Lake, Tennessee, May 1, 1969-June 15, 1972,
W74-01641 5C

TENNESSEE RIVER
Freshwater Mussel Ecology, Kentucky Lake, Tennessee, May 1, 1969-June 15, 1972,
W74-01641 5C

TENNESSES
Engineering Characteristics of Overburden in Knox County, Tennessee,
W74-01143 7C

TERRITORIAL WATERS
Marine Pollution: A Critique of Present and Proposed International Agreements and Institutions--A Suggested Global Oceans' Environmental Regime,
W74-01449 5G

TETRANYCHUS-URTICAE
Effect of Flooding on the Twospotted Spider Mite and its predators on Strawberry in Southern California,
W74-01243 3F

TEXAS
Recreational Reuse of Municipal Wastewater,
W74-01103 5D

Recognition of Natural Brine by Electrical Soundings Near the Salt Fork of the Brazos River, Kent and Stonewall Counties, Texas,
W74-01370 2F

Murfee v. Phillips Petroleum Company (Action by Property Owners Against Oil and Gas Lessees for Diminution of Market Value of Land Due to Pollution of Underground Fresh Water Supply).
W74-01459 6E

Germination Responses of a Texas Population of Ocotillo (Fouquieria splendens Engelm.) To Constant Temperature, Water Stress, pH and Salinity,
W74-01591 2I

The Management of Bay and Estuarine Systems in the Texas Coastal Zone, Phase II.
W74-01620 5G

Underground Storage of Texas Playa Lake Waters by Injection Into the Ogallala Formation Under Moderate Pump Pressure,
W74-01627 4B

Effects of Leaf-Footed Bugs on Mesquite Reproduction,
W74-01638 4A

TEXAS (BARTLETT)
Effect of Partial Defluoridation of a Water Supply on Dental Fluorosis: Final Results in Bartlett, Texas, After 17 Years,
W74-01578 5F

TEXTILE INDUSTRY
The Impact of Water Pollution Abatement on Competition and Pricing in the Alabama Textile Industry,
W74-01101 5G

THALLIUM
The Determination of Thallium in Urine and Plasma by Delves Cup Atomic Absorption,
W74-01314 5A

THENOYLTRIFLUOROACETONE
Distribution Studies of Radium and Other Metallic Elements Between Thenoyltrifluoroacetone in Methyl Isobutyl Ketone and Aqueous Solutions,
W74-01494 5A

THERMAL DIFFUSION EQUATION
Thermal Stratification in Industrial Canals,
W74-01594 2E

THERMAL POLLUTION
Field and Experimental Studies on the Effects of a Power Station Effluent on Tubificidae (Oligochaeta, Annelida),
W74-01312 5C

Thermophilic Ostracod: Aquatic Metazoan with the Highest Known Temperature Tolerance,
W74-01327 5C

Dieldrin. Effects of Chronic Sublethal Exposure on Adaptation to Thermal Stress in Freshwater Fish,
W74-01408 5C

THERMAL SPRINGS
Isotopic Composition of Helium in Thermal Springs of Iceland (Izotopnyy sostav geliya termal'nykh istochnikov Islandii),
W74-01396 2K

THERMAL STRATIFICATION
Thermal Stratification in Industrial Canals,
W74-01594 2E

THERMODYNAMICS
Thermodynamics of Acid-Base Equilibria. II. Ionization of m- and p-Hydroxybenzotrifluoride and the Concept of Fluorine Double Bond-No Bond Resonance,
W74-01226 2K

THERMOPHILIC ANIMALS
Distribution Patterns and Population Dyanmics of the Micro-Arthropods of a Desert Soil in Southern California,
W74-01635 2I

THIN LAYER CHROMATOGRAPHY
A Systematic Study of the Variables Involved in the Reverse-Phase Thin-Layer Chromatography of Oxyethylated Alkyl Sulfate Surfactants,
W74-01358 5A

TIDAL CYCLE
Littoral Zone Tidal-Cycle Sedimentation,
W74-01192 2J

TIDAL CYCLES
Tidal Cycle of Changes in an Equilibrium Beach, Sandy Hook, New Jersey,
W74-01198 2L

TIDAL EFFECTS
Sediment Transport in a Coastal Plain Estuary,
W74-01185 2L

A Study of Tidal Dispersion in the Potomac River,
W74-01196 5B

On the Vertical Structure of Tidal Flow in River Estuaries,
W74-01205 2L

Erosion of Tidal Flats Near Georgetown, British Guiana,
W74-01216 2J

Some Consequences of an Inertia of Turbulence in a Tidal Estuary,
W74-01648 2L

Oscillations of Tide and Surge in an Estuary of Finite Length,
W74-01649 2L

TIDAL FLATS
Erosion of Tidal Flats Near Georgetown, British Guiana,
W74-01216 2J

TIDAL WATERS
Tidewater Shorelines in Broward and Palm Beach Counties, Florida: An Analysis of Characteristics and Changes Interpreted from Color, Color Infrared and Thermal Aerial Imagery,
W74-01220 2L

TIDES
Investigations on the Influence of Tides on Salinity, Content of Suspended Matter, Sedimentation and Bacteria Counts in the Elbe Estuary, (Untersuchungen Uber Die Einwirkung Der Tide Auf Salzgehalt, Schwebstoffgehalt, Sedimentation Und Bakteriengehalt in Der unterelbe),
W74-01175 2L

On Structure, Entrainment, and Transport in Estuarine Embayments,
W74-01178 2L

Tidal Period Oscillations of an Isohaline Surface Off the Mouth of the Columbia River,
W74-01188 2L

Oscillations of Tide and Surge in an Estuary of Finite Length,
W74-01649 2L

TISSUE
Fluorometric Quantitation of Gallium in Biological Materials at Nanogram Levels,
W74-01344 2K

TOBACCO
Determination of Meleic Hydrazide Residues in Tobacco and Vegetables,
W74-01418 5A

TOLEDO HARBOR (OHIO)
Currents at Toledo Harbor,
W74-01214 2H

TOPOGRAPHY
Beach Changes on the Outer Banks of North Carolina,
W74-01179 2E

A Profile of the Four Moment Measures Perpendicular to a Shore Line, South Haven, Michigan,
W74-01184 2H

Note on the Equations of Long Waves Over an Uneven Bottom,
W74-01189 2E

TOXICITY
Evaluation of the Response of Dugesia Tigrina to Aflatoxin B1,
W74-01404 5C

The Sensitivity of Suppressed and Unsuppressed Lon Strains of Escherichia coli to Chemical Agents with Induce Filamentation,
W74-01524 5C

Growth Rates of Sediment-Living Marine Protozoan as a Toxicity Indicator for Heavy Metals,
W74-01529 5A

TOXICOLOGICAL STUDIES
Epidemiological and Toxicological Aspects of Nitrates and Nitrites in the Environment,
W74-01386 5C

TRACE ELEMENTS
Evaluation of the Use of the Heated Graphite Atomizer for the Routine Determination of Trace Metals in Water,
W74-01316 5A

A Comparison of Fast Destruction Methods for the Determination of Trace Metals in Biological Materials,
W74-01317 5A

Pathways of Trace Elements in Arctic Lake Ecosystems,
W74-01401 5B

An Automated Method for the Dertemination of Trace Amounts of Metal Ions by Ion-Exchange Chromatography. Determination of zinc (II) in Waters,
W74-01438 5A

Concentrations of Some Trace Metals in Pelagic Organisms and of Mercury in Northeast Atlantic Ocean Water,
W74-01523 5C

Emission Spectrometric Determination of Trace Metals in Biological Tissues,
W74-01546 5A

TRACE LEVELS
Versatile Computer Generated Variable Accelerating Voltage Circuit for Magnetically Scanned Mass Spectrometers. Use for Assays in the Picogram Range and for Assays of Stable Isotope Tracers,
W74-01335 2K

Precolumn Inlet System for the Gas Chromatographic Analysis of Trace Quantities of Short-Chain Aliphatic Amines,
W74-01357 5A

A Procedure for the Estimation of Microgram Quantities of Triton X-100,
W74-01360 5A

TRACERS
Sr-87/Sr-86 Ratios and Total Strontium Concentrations in Surface Waters of the Scioto River Drainage Basin, Ohio,
W74-01516 5B

TRACING TESTS
Study of the Speed of Water Circulation in a Water-Bearing Limestone Deposit by Tracing Tests (La Serriere River Basin/NE),
W74-01563 2F

TRAINING
Graduate Courses Related to Water Resources.
W74-01119 9A

Educational Programs for Land and Water Resources Development and Management,
W74-01628 6B

TRANSLATIONS
Literature on Mercury: Availability of English Translations,
W74-01323 5A

TRANSPIRATION
Leaf Temperatures, Diffusion Resistances, and Transpiration,
W74-01254 2D

A New Type of Climatized Gas Exchange Chamber for Net Photosynthesis and Transpiration Measurements in the Field,
W74-01568 2I

Diurnal Changes in Transpiration and Daily Photosynthetic Rater of Several Crop Plants,
W74-01597 2D

Stomatal-Diffusion Resistance and Water Potential of Soybean and Sorghum Leaves,
W74-01605 3F

TRANSPIRATION CONTROL
Potential Usefulness of Antitranspirants for Solution of Some Water Supply, Plant Growth, and Environmental Problems,
W74-01105 3B

TRANSPORT
Mechanism of NTA Degradation By a Bacterial Mutant,
W74-01515 5B

TREATMENT FACILITIES
1968 Inventory of Municipal Waste Facilities, A Cooperative State Report: Region 5, Illinois, Indiana, Michigan, Minnesota, Ohio, Wisconsin.
W74-01282 5D

TREATMENT FACILTIES
Utility Provisions Analysis for East Central Florida.
W74-01480 6D

TREES
Hydrologic Nutrient Cycle Interactions in Undisturbed and Manipulated Ecosystems (Watersheds),
W74-01110 4C

TRIAZINE PESTICIDES
Microdetermination of Chloro-S-Triazines in Soil by Gas-Liquid Chromatography with Nickel Electron Capture or Electrolytic Conductivity Detection,
W74-01304 5A

TRICHOPTERA
Factors Affecting the Distribution of Some Phryganeaeid (Trichoptera) in Malham Tarn, Yorkshire,
W74-01586 2I

TROPHIC LEVEL
Bottom Fauna as an Indicator of Water Quality in Sweden's Large Lakes (Lakes Malaren, Vattern and Vanern),
W74-01531 5B

TROUT (DISEASED)
A Diseased Trout: Microbiological Study of Its Principal Organs and Its Environment,
W74-01267 5C

TSUGA-MERTENSIANA
The Vegetation of Findley Lake Basin,
W74-01587 5C

TUBIFICIDS
Field and Experimental Studies on the Effects of a Power Station Effluent on Tubificidae (Oligochaeta, Annelida),
W74-01312 5C

TUCSON (ARIZ)
A Cost-Effectiveness Study and Analysis of Municipal Refuse Disposal Systems,
W74-01631 5E

TUNDRA LAKES
Seasonal Variation of Chemical Parameters in Alaskan Tundra Lakes,
W74-01347 5B

TURBIDITY
Relationships Between Turbidity and Hydrographical Factors in Fresh and Brackish Water Region of the Elbe Estuary, (In German),
W74-01260 5B

TURBULENCE
Some Consequences of an Inertia of Turbulence in a Tidal Estuary,
W74-01648 2L

TURBULENT BOUNDARY LAYERS
Flow Visualization in Free Shear Layers,
W74-01271 8B

Turbulent Fluid Friction of Rotating Disks,
W74-01640 8C

TURBULENT FLOW
Flow Visualization in Free Shear Layers,
W74-01271 8B

TWO-PHASE SAMPLING
Estimation of Domain Means Using Two-Phase Sampling,
W74-01498 7B

ULTRASONIC THERMOMETRY
Ultrasonic Thermometry,
W74-01501 7B

UNITED KINGDOM (MALHAM TARN-YORKSHIRE)
Factors Affecting the Distribution of Some Phryganeaeid (Trichoptera) in Malham Tarn, Yorkshire,
W74-01586 2I

UNITED KINGDOM (PEN-FFORDD-GOCH POND)
The Structure of an Acid Moorland Pond Community,
W74-01508 5C

UNITED KINGDOM (RIVER TRENT)
Field and Experimental Studies on the Effects of a Power Station Effluent on Tubificidae (Oligochaeta, Annelida),
W74-01312 5C

UNITED STATES
Division of the United States into Regions According to Cophasal Fluctuations of Annual Runoff (Rayonirovaniye territorii SShA po sinfaznosti kolebaniy godovogo stoka rek),
W74-01140 2E

International Field Year for the Great Lakes.
W74-01162 2H

A Bill to Establish the Canaveral National Seashore in the State of Florida.
W74-01457 6E

A Bill to Establish in the State of California the Santa Monica Mountain and Seashore National Urban Park.
W74-01458 6E

A Bill to be Known as the 'River Basin Waste Treatment Authority Act of 1973'.
W74-01614 6E

Federal Water Pollution Control Act Amendments of 1972.
W74-01615 5G

A Bill Authorizing the State of Illinois and the Metropolitan Sanitary District of Greater Chicago to Increase the Diversion of Water from Lake Michigan into the Illinois Waterway.
W74-01618 6E

UNIVERSITIES
Graduate Courses Related to Water Resources.
W74-01119 9A

Educational Programs for Land and Water Resources Development and Management,
W74-01628 6B

UNSATURATED SOIL
Transient Movement of Water and Solutes in Unsaturated Soil Systems,
W74-01104 2G

UNSTEADY FLOW
Reservoir Mechanism in an Aquifer of Arbitrary Boundary Shape,
W74-01129 2F

UPPER MISSISSIPPI RIVER BASIN
Quality of Surface Waters of the United States, 1968: Parts 4 and 5. St Lawrence River Basin and Hudson Bay and Upper Mississippi River Basins.
W74-01268 2K

URANIUM
Extraction-Photometric Determination of Uranium (IV) with Chlorophosphonazo-III,
W74-01364 5A

URBAN AREAS
A Linear Programming Approach to Floodplain Land Use Planning in Urban Areas,
W74-01490 3D

URBAN GUIDANCE SYSTEMS
Promoting Environmental Quality Through Urban Planning and Controls,
W74-01470 5D

URBAN HYDROLOGY
Urbanization and Its Effects on Regimen and Quality of Surface Waters (Urbanizatsiya i yeye vliyaniye na rezhim i kachestvo poverkhnostnykh vod),
W74-01139 4C

Engineer's Report for South Valley Water System.
W74-01382 6B

URBAN RUNOFF
Leaves as Source of Phosphorus,
W74-01407 5B

URBAN SOCIOLOGY
Urbanization and Its Effects on Regimen and Quality of Surface Waters (Urbanizatsiya i yeye vliyaniye na rezhim i kachestvo poverkhnostnykh vod),
W74-01139 4C

URBANIZATION
Urbanization and Its Effects on Regimen and Quality of Surface Waters (Urbanizatsiya i yeye vliyaniye na rezhim i kachestvo poverkhnostnykh vod),
W74-01139 4C

Engineer's Report for South Valley Water System.
W74-01382 6B

Promoting Environmental Quality Through Urban Planning and Controls,
W74-01470 5D

Floodland and Shoreland Development Guide.
W74-01483 4A

Impact of Irrigation Investments on Regional and Urban Development,
W74-01625 6B

URINE
The Determination of Thallium in Urine and Plasma by Delves Cup Atomic Absorption,
W74-01314 5A

Metabolic Effects of Drinking Brackish Water,
W74-01632 5C

USSR
Problems in Hydrology of Glaciers and Glacierized Areas (Problemy gidrologii lednikov i lednikovykh rayonov),
W74-01132 2C

Surface-Water Resources of the USSR and Their Change Resulting from Human Economic Activity (Resursy poverkhnostnykh vod SSSR i ikh izmeneniye pod vliyaniyem khozyaystvennoy deyatel'nosti),
W74-01133 4A

International Scientific and Technical Cooperation in the Field of Water Problems (Mezhdunarodnoye nauchno-tekhnicheskoye sotrudnichestvo v oblasti vodnykh problem),
W74-01138 6E

Urbanization and Its Effects on Regimen and Quality of Surface Waters (Urbanizatsiya i yeye vliyaniye na rezhim i kachestvo poverkhnostnykh vod),
W74-01139 4C

Division of the United States into Regions According to Cophasal Fluctuations of Annual Runoff (Rayonirovaniye territorii SShA po sinfaznosti kolebaniy godovogo stoka rek),
W74-01140 2E

Problems in Regional Dynamics of Artesian Water (Problemy regional'noy dinamiki artezianskikh vod),
W74-01141 2F

Prospects for the Use and Conservation of Water Resources in the USSR (Perspektivy ispol'zovaniya i okhrany vodnykh resursov SSSR),
W74-01387 6B

Quaternary Shorelines of the Seas of Okhotsk and Japan (Chetvertichnyye beregovyye linii Okhotskogo i Yaponskogo morey),
W74-01391 2J

USSR (AGAPA RIVER)
Invertebrate Fauna of Waters of the Station 'Agapa' (Western Taimyr), (In Russian),
W74-01264 2I

USSR (ANTARTICA)
Use of Isotopic Methods to Determine Present Rates of Snow Accumulation in Antarctica (Ispol'zovaniye izotopnykh metodov dlya opredeleniya sovremennoy skorsti nakopleniya snega v Antarktide),
W74-01393 2C

USSR (AZERBAIDZHAN)
System of Treating Irrigated Soil which is Sown with Sugar Beets, (In Russian),
W74-01606 3F

USSR (AZOV SEA)
Zoobenthos of the Azov Sea After the Control of THE Don River, (In Russian),
W74-01257 2L

USSR (CAUCASUS MOUNTAINS)
Balance Estimate of Groundwater Resources on the Northwestern Slope of the Caucasus (Balansovaya otsenka resursov podzemnykh vod severo-zapadnogo sklona Bol'shogo Kavkaza),
W74-01136 4B

USSR (CRIMEA)
Two Harvest of Cereal Crops per Year with Irrigation, (In Russian),
W74-01202 3F

USSR (DESNA RIVER)
Effect of the Desna River Flood on Development of Vegetation and Flora of the Oster Outskirts (Ukranian)
W74-01362 2I

USSR (KALMYK ASSR)
Regional Estimate of Brackish- and Saline-Groundwater Yield (Regional'naya otsenka ekspluatatsionnykh resursov solonovatykh i solenykh podzemnykh vod),
W74-01137 4B

USSR (KANEVSKII NATIONAL RESERVE)
Spring Flooding and Fauna (In Russian),
W74-01261 2I

USSR (KIEV HYDROELECTRIC STATION)
Peat Floating in the Reservoir of the Kiev Hydroelectric Station and its Role in Water Contamination, (in Russian),
W74-01352 5B

USSR (KOLYMA BASIN)
Oxbow Cut-Off Bog Lake Zooplankton of the Kolyma Basin (In Russian),
W74-01265 2H

USSR (KOLYMA-INDIGIRKA LAKES)
Zooplankton in Kolyma-Indigirka Lakes (In Russian),
W74-01341 2H

USSR (KRASNODAR TERRITORY)
Isotopic Composition of Oxygen and Hydrogen in Sulfide Waters of the Sochi-Adler Artesian Basin (Izotopnyy sostav kisloroda i vodorada sul'fidnykh vod Sochi-Adlerskogo artezianskogo basseyna),
W74-01394 2K

Increase of Resistance of Carp to Dropsy by Means of Breeding. II. Course of Selection and Evaluation of the Breed Groups, (In Russian),
W74-01560 5C

USSR (LOWER DNIEPER SANDS)
Experimental Establishment of Forest Plantations on Sands, in Accordance with the Idea of G. N. Vysotskii (In Russian),
W74-01569 2I

USSR (MALYY AZAU GLACIER)
Geophysical Measurements of the Thickness of the Malyy Azau Glacier (Geofizicheskiye opredeleniya moshchnosti lednika Malyy Azau),
W74-01390 2C

USSR (MOSCOW RIVER)
State of Rare Earth Elements in Surface Waters (O sostoyanii redkozemel'nykh elementov v poverkhnostnykh vodakh),
W74-01395 2K

USSR (SOCHI-ADLER ARTESIAN BASIN)
Isotopic Composition of Oxygen and Hydrogen in Sulfide Waters of the Sochi-Adler Artesian Basin (Izotopnyy sostav kisloroda i vodorada sul'fidnykh vod Sochi-Adlerskogo artezianskogo basseyna),
W74-01394 2K

USSR (URAL INDUSTRIAL AREA)
Water Resources of the Ural Area and Basic Problems in Their Complex Use (Vodnyye resursy Urala i osnovnyye problemy ikh kompleksnogo ispol'zovaniya),
W74-01135 3E

UTAH
Seasonal Water Potential Patterns in the Mountain Brush Zone, Utah,
W74-01588 2I

UTAH (RED BUTTE CANYON)
Carbon Dioxide Exchange by Several Stream-Side and Scrub Oak Community Species of Red Butte Canyon, Utah,
W74-01590 2I

UTILITIES
Utility Provisions Analysis for East Central Florida.
W74-01480 6D

UTILITY EXTENSION
Functional Water and Sewerage Plan and Program.
W74-01469 5D

VAPOR PHASE INFRARED SPECTROMETRY
Simple Direct Combination of Gas Chromatography and Vapor Phase Infrared Spectrometry,
W74-01355 5A

VARIABILITY
Surface-Water Resources of the USSR and Their Change Resulting from Human Economic Activity (Resursy poverkhnostnykh vod SSSR i ikh izmeneniye pod vliyaniyem khozyaystvennoy deyatel'nosti),
W74-01133 4A

VEGETABLE CROPS
Determination of Meleic Hydrazide Residues in Tobacco and Vegetables,
W74-01418 5A

VEGETATION
Effect of the Desna River Flood on Development of Vegetation and Flora of the Oster Outskirts (Ukranian)
W74-01362 2I

Profile of the Vegetation of the Elburs Mountain Range (Northern Iran), (In German),
W74-01385 2I

Bryocenological Research in Some Areas of the Iron Gate of the Danube, (In Rumanian),
W74-01453 2I

VELOCITY
Longshore Current Velocity: A Review of Theory and Data,
W74-01187 2E

VENTURA COUNTY (CALIF)
Oxnard Basin Experimental Extraction-Type Barrier,
W74-01289 8B

VIABILITY
Acridine Orange-Epifluorescence Technique for Counting Bacteria in Natural Waters,
W74-01534 5A

VIBRIO PARAHAEMOLYTICUS
Microbial Flora and Level of Vibrio Parahaemolyticus of Oysters (Crassostrea Virginica), Water and Sediment from Galveston Bay,
W74-01548 5C

VIRGINIA
Sediment Transport in a Coastal Plain Estuary,
W74-01185 2L

Two New Chytrids from the Appalachian Highlands,
W74-01305 5A

Virginia Natural Resources Law and the New Virginia Wetlands Act,
W74-01448 2L

A Bill to Aid the Conservation of Natural Water Resources.
W74-01616 6E

VIRGINIA (ROANOKE RIVER TRIBUTARY)
Longitudinal Distribution and Habitat of the Fishes of Mason Creek, an Upper Roanoke River Drainage Tributary, Virginia,
W74-01592 2I

VIRUSES
Virus Concentration from Sewage,
W74-01533 5D

VISUAL CULTURAL VALUES
Valuation of Visual-Cultural Benefits from Freshwater Wetlands in Massachusetts,
W74-01643 6B

VOLATILE ACIDS
Improved Distillation Method for Volatile Acids Analysis,
W74-01322 5A

VOLCANIC ASH
Physical Properties of Some Volcanic-Ash Derived Soils of the Highlands of Pasto, Narino, Colombia, (In Spanish),
W74-01228 2G

VOLTAMMETRY (DIFFERENTIAL PULSE STRIPPING)
Analytical Applications of Pulsed Voltammetric Stripping at Thin Film Mercury Electrodes,
W74-01514 5A

VOLUMETRIC ANALYSIS
Chemical Constants of Metal Complexes from a Complexometric Titration Followed with Anodic Stripping Voltammetry,
W74-01332 5A

Indirect Coulometric Titration of Biological Electron Transport Components,
W74-01338 2K

Evaluation of the Accuracy of Gran Plots by Means of Computer Calculations. Application to the Potentiometric Titration of the Total Alkalinity and Carbonate Content in Sea Water,
W74-01365 2K

The Potentiometric Titration of Potassium in Sea Water with a Valinomycin Electrode,
W74-01442 5A

VORTEX OIL AND WATER SEPARATOR
Vortex Concept for Separating Oil from Water,
W74-01148 5G

VORTICES
Flow Visualization in Free Shear Layers,
W74-01271 8B

WASHINGTON (DUWAMISH ESTUARY)
The Relations of Periphytic and Planktonic Algal Growth in an Estuary to Hydrographic Factors,
W74-01571 5C

WASHINGTON (FINDLEY LAKE) *VASCULAR PLANTS
The Vegetation of Findley Lake Basin,
W74-01587 5C

WASTE DISPOSAL
Improved Waste Disposal Unit,
W74-01284 5D

A Cost-Effectiveness Study and Analysis of Municipal Refuse Disposal Systems,
W74-01631 5E

WASTE IDENTIFICATION
Characterization and Treatability of Pomace Stillage,
W74-01325 5A

WASTE TREATMENT
A Bill to be Known as the 'River Basin Waste Treatment Authority Act of 1973'.
W74-01614 6E

WASTE WATER DISPOSAL
Recreational Reuse of Municipal Wastewater,
W74-01103 5D

WASTE WATER (POLLUTION)
A Modified Filtration Method for the Analysis of Wastewater Suspended Solids,
W74-01318 5A

Heavy Metals in Wastewater and Treatment Plant Effluents,
W74-01319 5A

A Bill to be Known as the 'River Basin Waste Treatment Authority Act of 1973'.
W74-01614 6E

WASTE WATER TREATMENT
Water Quality Evaluation of Regionalized Wastewater Systems,
W74-01107 5D

Evaluation of the Bio-Disc Treatment Process for Summer Camp Application,
W74-01118 5D

Removal of Phosphate and Secondary B.O.D. from Tertiary treated Wastewater by Aquatic Animals,
W74-01124 5D

Study of Water Recovery and Solid Waste Processing for Aerospace and Domestic Applications: Volume 1 - Final Report Summary,
W74-01280 5D

1968 Inventory of Municipal Waste Facilities, A Cooperative State Report: Region 5, Illinois, Indiana, Michigan, Minnesota, Ohio, Wisconsin.
W74-01282 5D

Improved Waste Disposal Unit,
W74-01284 5D

Pressurized Sewer Collection Systems,
W74-01286 5D

Characterization and Treatability of Pomace Stillage,
W74-01325 5A

Comparative Evaluation of the Efficacy of Ozonization and Other Means of Treating Water Contaiminated With Oil Products (In Russian),
W74-01580 5F

Barrier Role of Water Works Installations in Respect to Chemical Contaminations Classified According to Organoleptic Properties of Hazards, (In Russian),
W74-01584 5D

WATER ALLOCATION (POLICY)
Water Resources Planning Mozambique (La Planification Des Resources en Eau au Mozamique),
W74-01629 6B

WATER ANALYSIS
Water. Examination. Assessment. Conditioning. Chemistry. Bacteriology. Biology,
W74-01236 5F

Evaluation of the Use of the Heated Graphite Atomizer for the Routine Determination of Trace Metals in Water,
W74-01316 5A

Wastewater Characterization of Sweet Potato Processing,
W74-01324 5A

The Importance of Chelating Agents in Natural Waters and Wastewaters,
W74-01326 5B

Chemical Constants of Metal Complexes from a Complexometric Titration Followed with Anodic Stripping Voltammetry,
W74-01332 5A

Investigation of Spectral Overlap of the Neon 359.352-nm and Chromium 359.349-nm Spectral Lines in Atomic Absorption and Atomic Fluorescence Spectrometry of Chromium,
W74-01337 2K

Fluorometric Determination of Selenium in Water with 2,3-Diaminonaphthalene,
W74-01399 5A

An Automated Method for the Dertemination of Trace Amounts of Metal Ions by Ion-Exchange Chromatography. Determination of zinc (II) in Waters,
W74-01438 5A

The Determination of Cadmium by Atomic Absorption in Air, Water, Sea Water and Urine with a R.F. Carbon Bed Atomizer,
W74-01441 5A

The Potentiometric Titration of Potassium in Sea Water with a Valinomycin Electrode,
W74-01442 5A

Sr-87/Sr-86 Ratios and Total Strontium Concentrations in Surface Waters of the Scioto River Drainage Basin, Ohio,
W74-01516 5B

Nitrogen/Argon Ratios by Difference Thermal Conductivity,
W74-01522 5A

WATER BALANCE
A Deterministic Parametric Water-Balance Model,
W74-01126 2A

Balance Estimate of Groundwater Resources on the Northwestern Slope of the Caucasus (Balansovaya otsenka resursov podzemnykh vod severo-zapadnogo sklona Bol'shogo Kavkaza),
W74-01136 4B

The Mass Balance of the Sea Ice of the Arctic Ocean,
W74-01374 2C

Short-Term Snow Melt and Ablation Derived from Heat- and Mass-Balance Measurements,
W74-01380 2C

The Carbohydrate and Water Balance of Beans (Vicia faba) Attacked by Broomrape (Orobanche crenata),
W74-01575 3F

Water Use by Perennial Evergreen Plant Communities in Australia and Papua New Guinea,
W74-01634 2D

WATER-BASED RECREATION SELECTION PROCESS
Simulation of Water Recreation Users' Decisions,
W74-01464 6D

WATER CHEMISTRY
Chemical Relationships Between Surface Water and the Ground in South Florida,
W74-01153 2K

Seasonal Variation of Chemical Parameters in Alaskan Tundra Lakes,
W74-01347 5B

WATER CIRCULATION
The Transverse Circulation Near a Coast,
W74-01206 2E

Estuarine Circulation Induced by Diffusion,
W74-01222 2L

WATER CONSERVATION
Prospects for the Use and Conservation of Water Resources in the USSR (Perspektivy ispol'zovaniya i okhrany vodnykh resursov SSSR),
W74-01387 6B

A Bill to Provide for the Establishment of the Guana River National Park in the State of Florida.
W74-01617 6E

Soil and Water Conservation on Arable Lands,
W74-01633 3F

WATER DEMAND
Agricultural Water Demand in North Carolina: Phases I and II,
W74-01112 6D

Availability of Fresh Water in the East Central Florida Planning Region.
W74-01481 6D

WATER DISTRIBUTION (APPLIED)
Tri-Agencies Pipeline: Engineering Report.
W74-01477 8A

WATER DIVERSION
A Bill Authorizing the State of Illinois and the Metropolitan Sanitary District of Greater Chicago to Increase the Diversion of Water from Lake Michigan into the Illinois Waterway.
W74-01618 6E

WATER MANAGEMENT
The Role of Universities in Water Resources Education: The Social Sciences,
W74-01467 6B

WATER MANAGEMENT (APPLIED)
Promoting Environmental Quality Through Urban Planning and Controls,
W74-01470 5D

WATER PARTICLE MOTION
Wave-Induced Water Particle Motion Measurements,
W74-01285 2E

WATER POLLUTION
The Shipowner and Oil Pollution Liability,
W74-01447 5G

Water Pollution in Louisiana: An Attempt at Control,
W74-01451 5G

Drinking Water,
W74-01466 5F

WATER POLLUTION CONTROL
Oxnard Basin Experimental Extraction-Type Barrier,
W74-01289 8B

Engineer's Report for South Valley Water System.
W74-01382 6B

The Interstate Water Pollution Compact--Paper Tiger or Effective Regulatory Device,
W74-01450 5G

Early Thoughts on Prosecuting Polluters,
W74-01613 5G

Federal Water Pollution Control Act Amendments of 1972.
W74-01615 5G

WATER POLLUTION EFFECTS
Effects of Paraquat on Invertebrates in a Cantebury Stream, New Zealand,
W74-01298 5C

Field and Experimental Studies on the Effects of a Power Station Effluent on Tubificidae (Oligochaeta, Annelida),
